I find the businessmen mentioned above all apparently have great confidence in the French people and believe that they would work their way out of this difficulty if they could get leadership and better government which would establish conditions providing adequate incentives. As it is now, the people, in general, work only 40 hours per week and make no special effort to sustain production.

They are, of course, short of coal because they are not able to import from England and the Ruhr production is away below normal.

Taking it as a whole, the great problems in France are bad government, encouragement of the people to believe that they can live without working, and the consequent failure of the people generally to produce.

Businessmen believe that France must work out its own solution by correction of the above weaknesses, and that if the United States continues to feed money into France under the present conditions it will not be helpful to them and will actually delay the return to normalcy in production.

France has the advantage over England in being able to produce practically sufficient food to support the nation and this, of course, is of basic importance.

It is the opinion of businessmen that the influence of communism is definitely declining, and certainly this opinion is shared by many of the rank and file of people with whom I talked.

SWITZERLAND

This country is in marvelous condition. People are working actively; it is clean, well kept, and well cultivated, and I have never seen greater order in any country. It is evident that there is great contentment among the people. Swiss money is at a premium as against that of the United States—this being the only place in the world where this applies.

ENGLAND

The country looks well and this applies to both the rural districts and the cities. Where bombing has taken place, as in London and other districts, the debris has all been cleaned up and in the cities, brick walls have been run along the pavements which hide the destruction to a considerable extent. People go about their business paying no attention to this condition, apparently having become accustomed to it.

In London the streets are full of people, dressed about the same as I have seen them in the past, with no evidence whatsoever of being inadequately fed. Stores are all open and have a good appearance. The theaters have capacity audiences all the time. In fact, it is said that they are having the greatest theatrical season in the history of London. Restaurants are full and the hotels are well patronized. We had no trouble securing ample food although the variety is not very great, but England has never been noted for good food as is France.

There is an absolute lack of confidence in the labor-socialist Government. Every businessman I talked with endorsed this thinking. The men in charge of government, mainly labor leaders and impractical thinkers, are considered incompetent as individuals and inefficient as a group, and this is borne out by the record of ineffective governmental operation thus far.

These businessmen were a unit in saying that England must work out its own salvation. Better government and more work must be had to bring about the necessary greater production. They say that the United States cannot solve their problems by pouring more money into England and, in fact, that this would be harmful. The loan of almost $4,000,000,000 has been largely wasted and there is no doubt that if this large amount of money had not been available, England would have faced her problems much earlier. As it is, they have drifted along and wasted both time and money. In the Government as it exists today there is a battle between the radical side and the more conservative group, and this situation does not, of course, improve their efficiency. The same lack of confidence exists among the rank and file of people, outside of the workers who are in labor unions. The latter are so pampered and encouraged by the leadership that they think they are better off, and are not worrying about the general conditions. Outside of this particular group, I would say there is no faith whatsoever in the British Government today.

There is no black market in England in money such as there is in France, but there is a black market in the day-by-day goods needed by people, which is natural, considering the Government's restrictions and controls. As an example of restrictions and controls, the manager of a fair-size, middle-class restaurant in Richmond told me they had to struggle with 1,227 orders and regulations and they did not know how long they could keep going. All business is handicapped in every way through this type of control.

There is no apparent evidence anywhere confirming the statement, reiterated in our administration's propaganda, that there is danger of a crisis and collapse—and just what is meant by collapse I have never been able to understand. The problem in England is the same as in France—the need for better government, more hard work, and greater production. What England needs basically is more coal, and yet they are producing much less than before the war. The prewar production of coal was about 240,000,000 tons a year, which gave the country an ample domestic supply and allowed a surplus for export. Compared with this, they will probably produce only about 180,000,000 tons of usable coal this year. This government, like others of the same type, completely misrepresents the true situation when it puts out statistics. For instance, they publish estimates of 200,0000,000 tons of coal this year but do not show that this figure contains 10 percent waste which would have to be deducted to put the 1947 output on the same basis as production before the war, which was after this 10 percent deduction. England has ample reserves of coal, and although their mines are not all modernized yet, there is no reason—if they work sufficiently hard—why their production should not come up to what it was before the war, at least. The additional coal tonnage would enable them to increase their own general production and also furnish coal to other countries in Europe, including France, bringing in a large revenue from this source. But now the miners work only 5 days a week as against 6 before the war. The recent coal strike, which was a severe blow to their over-all production, I consider the result of bad management and poor thinking on the part of the Government, which now, of course, owns and operates the mines.

In England, there is still a great amount of wealth, business ability, technical knowledge, and producing property. With intelligent support on the part of the leaders and the people, all of this could be used effectively to

bring England back to where it can again take care of itself.

GERMANY

There is universal agreement on the part of English businessmen that Germany must be rehabilitated and a great increase in production brought about by allowing the German people full liberty in the reconstruction of their country. I do not believe we can ever have a going Europe until this is started. The Morgenthau plan as applied in Germany by our country was one of the great crimes of history.

The report of Mr. Hoover, which was endorsed by the group of American businessmen that was sent to Germany, showed plainly what must be done. The administration in Washington stated sometime ago that they were putting this into effect. This is a complete misrepresentation to the people of this country, because nothing has been done so far as I can find. The slightly amended Morgenthau plan is still in control. This is one thing that Congress must take steps to accomplish—that is, a proper program for the rehabilitation of Germany. We, of course, will have to advance money to Germany to bring that about, but I believe it is one of the safest places in Europe to put funds for reconstruction under a proper plan.

GENERAL

I am fully convinced that the United States must discontinue at once the practice of loaning or giving money to foreign countries without the most critical investigation of their program for the use of the money. This investigation must not be left in the hands of regular officials of our Government, whether from the State Department or others. On the contrary, it should be put in the hands of industrialists and other practical men—according to the problem involved—who can make intelligent decisions, based on experience and free from political or diplomatic pressures.

I came back fully convinced that in France and England there is not the slightest danger of communism. I am also convinced there is no danger of ultimate communism in the United States. In my opinion, communism, as exemplified by Russia, can only be applied in a country such as Russia, where people are of low standard as a result of centuries of mistreatment. In England, France, and the United States people are very individualistic, and they will never stand for any government which destroys their individual freedom and keeps the iron heel of control on their necks. In my opinion, the bugaboo put out by our administration, namely, that unless we finance countries they will go communistic, is without the slightest justification. People who will stand for communism will go in that direction irrespective of what we may do to the contrary. I think Greece is an outstanding example of a waste of our money without in any way bringing into that country peace and stability.

I am more convinced than ever that this country must keep itself strong and active, with high production, improving standards of living for all the people, and a normal prosperity that will be a great example to the balance of the world as to the values of our type of government. Nobody can visit European countries with problems resulting directly from their form of government and low production without coming back to the United States with a deep appreciation of its fundamental values and of the great things it has done to improve the standards of living of all of the people.

In England this has not been the case in the past, nor in France—in fact, none of the European countries has offered opportunities for better living such as we have here.

The conservative government that controlled England practically up to the time of the last war operated on the old-fashioned basis of wealth for a comparative few. At the end of the Victorian period, England was a great power and the richest country in the world. Wealth from all sections of the world flowed into England. But productive enterprises of all kinds were largely controlled by rich families and, unfortunately, the younger generations of these families lost interest in work. In the main, they were interested only in the income of the properties left to them, such as coal mines, steel works, textile plants, and others, and made no effort to maintain and improve them. As a result, English industry as a whole is not modern.

In England the cartel system controlled industry. That is, manufacturers would get together, establish uniform prices, and then submit them to the Government for approval. The result was uniform prices that were high enough to allow the most inefficient operations to make good profits. These profits were largely paid out in dividends and very little was put back into the properties. This is the principal reason why England's coal mines, steel works, and other operations are to a considerable extent antiquated as compared with similar operations in the United States. Our standards have been constantly improved as a result of extreme competition which has forced the reinvestment of a great part of the earnings as well as new money. A competitive economy is the only one that can bring progress in any country, in my opinion, and this has not applied in England or in France but must apply if they are to progress in the future. Even today in both England and France, corporations are having large earnings and paying out large dividends, in both cases greater than we do in this country. In fact, some bankers and businessmen admitted to me that industry was making more money than it was actually entitled to.

In Europe, generally, friendly relationships between countries are made extremely difficult by the rigid customs methods. You are carefully checked when you go into these countries by the customs officials and also when you leave. There is an atmosphere of suspicion and criticism which certainly does not promote good feeling. How anybody could ever expect a one-world situation with these critical checks at the borders of each country is beyond me.

The net result of all this is that, interested as the United States is and must be in the conditions of foreign countries, the ultimate solution must be in their own hands and not in ours, and the quicker we realize this as a country the better off we will all be, both here and abroad. We have put great sums of money into China over the past 10 years and yet the recent report of General Wedemeyer shows that China is still being operated on the same old basis with bad government, graft, starvation, and a growing strength of communism.

I recommend the reading of an article by David Lawrence in the September 12 issue of the United States News and also the statement of Henry Hazlitt, "How Can America Rescue the World," which has just been completed. I think both of these strongly support the conclusions I have outlined above.

I am convinced that socialistic governments such as exist in England today, and in France to a considerable extent, can never succeed in bringing about prosperity and in giving the people higher standards of living. Invariably in this type of government authority is exercised by too many impractical and inexperienced people. One control leads to another until the whole economy is in a state of confusion. This failure to succeed brings about increasing discord within the government organization.

For relations with foreign countries—outside of the field of formal diplomacy—we must bring into Government practical and trained men of affairs who will earnestly and honestly give their time and best efforts to building up good organizations, putting in effective methods and systems, and freeing producing elements within the country from the multiplicity of Government controls. In other words, we must restore freedom of thought and action to the people both within Government and without.

Our so-called diplomats in foreign countries are now being put in charge of matters involving practical production for which they are in no way trained. Their reports on situations are not to be depended upon as a result. Too much propaganda is used within Government to support theories that come out of the discussions in which these diplomats sit in authority.

The great necessity here in the United States is that Congress and the people get the real facts, based on practical, thorough, and time-taking investigations by men who know, and not simply the opinions of theoreticians.

The situation in Europe is highly complex and, naturally, there is no one simple answer to the problems of the various countries. My definite impression, however, is that Europe is by no means doing all that it can to help itself. The various countries have great resources and manpower, and the margin between the present and the potential utilization of these advantages would far surpass any conceivable help that the United States can extend. Whatever help we give can do no more than palliate. The genuine recovery of Europe will start on the day that the people there roll up their sleeves and go to work—and not before. The great bulk of their needs can be filled only through their own production. In view of the statements of the English and French Governments that their countries are in a serious condition, it bewilders the visitor to see those countries operating on the basis of a 40-hour week and numerous holidays. Why don't they adopt a 6-day week which, of course, would greatly increase the production of all materials? Given the right kind of leadership and adequate incentives, there is no question in the minds of persons with whom I talked that the peoples of Europe would work harder and more productively. Certainly, if there is an emergency, a 6-day week will harm no one.

High Prices and Government Controls

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. KNUTSON. Mr. Speaker, pursuant to permission granted me to extend my remarks in the RECORD, I desire to insert a statement sent to the editor of the New York Times by Messrs. Aaron Director and Russell Nichols, of the law school; Milton Friedman and Lloyd W. Mints of the department of economics, and W. Allen Wallis, school of business, University of Chicago, entitled "High Prices and Government Controls," which I hope every Member of Congress will read. The statement follows:

NOVEMBER 12, 1947.

HIGH PRICES AND GOVERNMENT CONTROLS

We think that the Government is understating its responsibility for high prices and its ability to control the price level with its present powers, and that it is overstating the extent of price increases since the end of price control and the case for the reimposition or extension of controls. We argue herein that: (1) the Government is re-

sponsible for high prices; (2) there has been little or no price increase during the past 12 months other than that for which the Government must assume responsibility; (3) the Government has ample powers to control the price level; and (4) Government allocation or rationing of commodities and credit or control of specific prices does not promote the general welfare. In conclusion, we point to the type of action required to assure stability of the general price level, and to secure maximum flexibility of relative prices.

1. We agree with President Truman's statement in his October 24 speech that "the major cause of high prices in this country is the great demand among our own people for available goods", but it is equally true that the demand for goods (that is, the national income) is what it is because of the enormous increase in the volume of money since 1939. In the course of financing the war, the Government tripled the combined total of paper money and demand deposits in the hands of the public, from $36,000,000,000 at the end of 1939 to more than $109,000,000,000 in August 1947 (the latest figure available). As a consequence of this tripling of the money supply of the country, the national income has risen from $72,500,000,000 in 1939 to an annual rate of $200,000,000,000 at the present time. Because production is now some 50 percent greater than it was in 1939, the price level (wholesale) is only twice and not three times what it was before the war; without change in total output, we would expect a three-fold increase in the quantity of money to result in roughly a three-fold increase in the level of prices.

2. The President made certain comparisons of prices now with OPA prices and drew the conclusion that prices have been rapidly rising since the abandonment of price control. Such comparisons are meaningless, because of the widespread existence of fictitious prices during OPA. After its demise, such fictions were rapidly abandoned in the pricing of farm products and foods, less rapidly in other fields, and some fictions are still with us, as, for example, automobile list prices. It is of no consequence to the would-be purchaser that an automobile may bear a quoted price of, say $1,500 if it cannot be purchased for less than $2,000. Would it be reasonable to say that automobile prices had risen 33 percent, in the event that the quoted (fictitious) price were raised to the real price? Yet it is essentially the President's argument that a raising of a fictitious price to a real price is what is important, rather than change of real price.

There has until recently been little change in the real price level since Government controls ended. There have been changes in the prices of particular products, such as the rise in the prices of farm products occasioned by the wet spring, which reduced the combined supply of feed and food grains from 7,000,000,000 bushels in the 1946–47 crop season to 6,200,000,000 bushels in the current crop season. Even so, on July 5, 1947, the Bureau of Labor Statistics index of the wholesale prices of farm products was only 6 percent higher than the index for the month of November 1946. On the same date, the BLS index of the wholesale prices of foods was a trifle less than that for the month of November 1946; and the index of wholesale prices of commodities other than farm products and foods was 10 percent higher than in November 1946. Evidence from other sources suggests that this increase in nonagricultural prices reflected the gradual abandonment of fictitious prices rather than real price change. During the period in question there was little variation of the volume of money, the velocity of circulation of money, the national output of goods and services, or of the national income. It is not to be supposed that the general price level can vary independently of all of these.

The President referred to a recent rapid price increase, which was the proximate cause of the Administration's demand for more power to deal with high prices. From July 5 to September 20 the BLS index of the wholesale prices of all commodities increased by 7 percent. During this period of price increase the Government through the Federal Reserve System was permitting Federal Reserve member bank balances to rise by 7 percent, from $16,000,000,000 on July 2 to $17,100,000,000 on September 17. These balances are the basis of the country's monetary structure and had varied only imperceptibly except for seasonal changes during the 12 months prior to July 1947. It may be noted that neither the wholesale price index nor member bank balances changed appreciably from late September to early November.

3. By calling a special session of Congress to take legislative action to put an end to the continued rise in prices, the President has given the impression that the Administration does not now have adequate powers to determine the general level of prices. We think that the Federal Reserve System and the Treasury already possess such powers. In fact, at least from a technical point of view, their power to inflate is such that at a minimum they could double the present quantity of money in the country, and their power to deflate is essentially unlimited.

While the Treasury and the Reserve System are thus now amply equipped with technical power to control the price level, they apparently believe that exercise of that power might lead to incidental undesirable consequences. In particular, at the present time, they point out that strict adherence to a policy of monetary stabilization might entail a sizable decline in the price of Government securities, which, if recognized, would involve a large decrease in the book value of assets held by some financial institutions, and perhaps technical insolvency. Therefore, the Reserve System and the Treasury apparently feel that they must stand ready to support the prices of Government securities even at the expense of further inflation. We do not think they have a good case. A decline in Government security prices might be very welcome to institutional holders of both short- and long-term governments; they would benefit by the rise in interest rates which would accompany the decline in prices. (There is a legislative proposal—essentially designed to drastically raise reserve requirements of the commercial banks—which would remove this obstacle, chimerical as it may be, to the exercise of Treasury and Reserve System power to promote monetary stabilization, and which has the greater merit of curbing the inflationary and deflationary potentialities of the commercial banking system.)

4. Government allocation, or control of specific prices, is likely to be doubly harmful; first, because it is an ineffectual and misleading cure for inflation; second, because it does not permit the variation in relative price essential to the efficient organization of productive activities.

The consequences of wartime inflation may be intensified rather than mitigated if attempt is made to escape from the fact of inflation by resort to the pleasing illusion that by means of Government controls the inflation may be wished away. Controls of particular prices or rationing of particular commodities, or control of exports and imports, or of consumer credit and margins in stock and grain markets, and the like, fail to come to grips with the volume of money, which is the main factor in the price and income structure. With respect to the control of the general level of prices such expedients are valueless and even harmful if they divert public attention from the monetary responsibilities of the Government. In order to properly focus efforts toward monetary stabilization it is almost essential to first take cognizance of the fact that higher prices and incomes are here to stay.

A sharp distinction must be made between the highly desirable control of the general price level, and the highly undesirable control of relative prices, whether the latter is attempted by fiat or by rationing and allocation. Relative price changes are of the essence of the proper functioning of the competitive noncontrolled economy; for example, there is no surer or more efficient method of reducing the amount of wheat fed to livestock than relative price changes such that the use of wheat as feed becomes less profitable than other uses of wheat. The domestic use of wheat in the first quarter of the current crop year was less than that in the first quarter of the 1946–47 crop year; this saving which was induced by a high relative price for wheat was under way prior to the save-wheat campaign.

In view of the attention being paid to Europe (including England) just now, it is surprising that there should be support for additional controls here. It seems to be recognized by many, including members of the administration, that European recovery has been impeded by efforts to offset monetary inflation by pervasive governmental control of individual prices and rationing of commodities. It is especially surprising that there should be support for the continuation of export and import controls—which can also be regarded as attempts to control prices of world-trade commodities—beyond the February 29 expiration date, since there is little question but that the Marshall plan will have only temporary effect unless the various European nations join in some sort of customs union—i. e. lay aside their own export and import controls. It is not necessary to make grants to Europe to enable it to compete in the world market for American goods and simultaneously to control exports so that Europeans may obtain their "fair share."

5. We think that the citizen should be on the alert to the danger of discretionary monetary inflation or deflation. There is no established legislative rule for maintaining monetary stability, and hence there is no assurance that the administration will exercise its power to promote stability. The Congress should lay down stabilization rules; to these rules the Reserve System and the Treasury should always adhere, instead of pursuing such shifting objectives as maintaining the prices of Government securities. The Congress should also take account of the effect it exercises on the value of money through its control of revenues and expenditures, an effect which would become obvious were the monetary authorities bound by legislative prescription.

It is our aim to emphasize strategic factors in the present situation, rather than to suggest rules for monetary stabilization. If a long-range policy for monetary stabilization were to be framed, considerable weight would have to be given to some matters which we have neglected. For example, we have said nothing of the possibility of inflation or deflation consequent on changes other than those in the quantity of money; and in emphasizing the power of the Government to control the quantity of money we have only parenthetically touched on the fact that the task would be much easier were it not for the powers of expansion and contraction now possessed by the commercial banks.

In addition to providing for stability of the price level, there are measures which the Congress can take to improve the productive efficiency of the country by giving even more free play to relative price change, which will be of benefit to the world at large as well as

to ourselves. These measures would include: repeal of existing control regulations; repeal of the tariff; repeal of the legislation requiring the Department of Agriculture to support farm prices (and a searching examination of the Department's quarantine on meat and livestock imports to the United States); and strengthening of the antitrust legislation by repeal of the Tydings-Miller resale price-maintenance amendment and the Webb-Pomerene Act.

Premium Overcharges on National Service Life Insurance

EXTENSION OF REMARKS
OF
HON. JOHN C. BROPHY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. BROPHY. Mr. Speaker, acting upon a routine inquiry by a constituent suggesting the possibility that a huge sum of money has been accumulated as a result of premium overcharges by the Veterans' Administration on national service life insurance, I proceeded to check the authenticity of the reported accumulation of funds.

As soon as the check got under way a report of the checking being made was released in a news story, leaving me no alternative than to bring such information to public attention at once.

The surplus believed to be overcharge premium payments coming from veterans is reported to range between one and one-half billion dollars to two billion dollars, money which should never have been required of the GI's, the men and women of the armed services who helped to defend our country from aggression, and who, in many cases, made the supreme sacrifice.

As soon as checking started it was reported the Veterans' Administration wanted to put on two to four thousand additional employees in order to try to dispose of this huge surplus and return the money to its rightful owners, the veterans or the heirs of those who made the supreme sacrifice.

I would like to know how such an enormous "kitty" as this could be accumulated without somebody in the Veterans' Administration moving long before this to return the money to the veterans to whom it belongs instead of being held this long. Furthermore, I fail to understand why it it was necessary to accumulate this money in the first place, and why the outmoded methods and practices of the Veterans' Administration were not changed to start with so that the premium payments required of and paid by the veterans represented the lowest possible cost.

Furthermore, it would be interesting to know what kind of bookkeeping has been going on in the Veterans' Administration if it is going to take two to four thousand new employees, as reported in the press, to straighten these funds out, and determine what belongs to whom.

Since the press has reported the checking being conducted, my office has received additional offers of information concerning scandalous practices on the part of the Veterans' Administration working to the detriment of the veterans whom the Veterans' Administration is pledged to serve to the veterans' best interest. This offer of help comes from employees and former employees of the Veterans' Administration and from the veterans themselves, naming and identifying employees of the Veterans' Administration who may be responsible, or at least have knowledge of, some deplorable existing conditions within the Veterans' Administration.

It seems to me that this might be a fitting subject for investigation by a special committee of the Congress to determine just who is responsible for this condition of affairs. Whether or not I introduce a resolution asking that such a special committee be appointed will be determined by the answers I receive in reply to a letter I have addressed to the Administrator of the Veterans' Administration asking for complete and specific answers to the following specific questions:

First. The length of time this money has been accumulating?

Second. What obstacles, if any, stood in the way of the return of this money immediately to the veterans or the heirs of those who made the supreme sacrifice?

Third. Can you determine how soon this money will be delivered to its rightful owners, the veterans or the heirs of veterans who made the supreme sacrifice?

Fourth. Is it not a fact that you have just placed two actuaries on a study of this vast fund of overcharges?

Fifth. Is this the individual veteran's own money from premium overcharges, or is this a dividend?

Sixth. What will be the estimated additional cost to the Government for handling these refunds?

In conclusion, is this just another political football, or is it a Veterans' Administration "Fibber McGee closet"?

Turning Back the Clock

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. CLASON. Mr. Speaker, under leave to revise and extend my remarks, I wish to include in the RECORD the following editorial which appeared in the Springfield (Mass.) Daily News on Tuesday, November 18, the day following the President's message to the Congress. This newspaper is the leading Democratic journal of western Massachusetts with the largest circulation of a paper of its political complexion west of Boston. I believe it editorial position on the President's message fairly reflects the thoughts of a great many Republicans as well as Democrats.

TURNING BACK THE CLOCK

In declaring for rationing, price control, and wage ceilings to implement the Marshall plan, President Truman is asking Congress for powers equal to or surpassing those exercised by President Roosevelt during the war emergency.

The President asks for a return to government controls over business and labor and virtually every aspect of American life to control inflation while the Nation is dipping heavily into its resources to make the Marshall plan work. In other words, President Truman seeks to make America virtually a new form of totalitarian state with bureaucratic dictators in Washington telling all the people what they can and cannot do in the conduct of their businesses and in their daily lives.

There is no emergency existing now which justifies the complete surrender of American liberties to Washington bureaucracy. Prices are high, it is true, but people at least are getting enough to eat and wear with a few luxuries thrown in. There are no long butter lines, as was the case during the heyday of OPA. There is meat in market show cases offered at prices, which are the same for everybody. There are no under-the-counter transactions or black markets where well-heeled people can buy goods denied to the rank and file. In short, most people are a lot better off now than they were during the dreary war period when the OPA pegged prices at arbitrary levels, but failed abjectly in the task of getting goods to market. The failures of OPA manifestly offset its virtues. Bureaucratic theories on prices simply could not be made to work in practice. Wartime OPA in large measure was just another of the many departures dreamed up by the same New Deal brain trust, which failed to solve the late depression.

President Truman falls back on OPA, rationing, and wage ceilings as panaceas for shortages America's foreign-aid program are certain to create, because he hasn't anything better to offer. In all probability, President Truman realizes Congress will not adopt his proposals to restore bureaucratic controls over the life of the people. In other words, he is throwing the problem into the lap of Congress. If measures taken by Congress are followed by difficulties, President Truman can adopt an I-told-you-so attitude, in the hope of making political capital for the 1948 national election campaign without having to put his own ideas to an acid test.

In approaching the problem of aid to Europe and the repercussions the program is likely to have in America, Congress should be on guard in protecting the interests of the people of this country. It is obvious that the Truman administration's plans for European aid are of such mammoth proportions that a serious crisis can develop in this country. A little less aid for Europe to create more stability in America, should be a legitimate goal of Congress. In any case Congress should not turn back the clock as President Truman proposes.

United States Dollars Held Unable To Halt Russia's March

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. LARCADE. Mr. Speaker, under authority granted me to extend my remarks in the RECORD, and to include a newspaper article, in view of the discussions with respect to various plans for aid to the European countries, I wish to

submit an article by Constantine Brown, prominent Washington columnist and commentator, which article appeared in the Sunday Star, Washington, D. C., on Sunday, November 23, 1947, and which article I think will be of interest, and which is as follows:

UNITED STATES DOLLARS HELD UNABLE TO HALT RUSSIA'S MARCH—WESTERN EUROPE DESCRIBED MORE INTERESTED IN AMERICA'S MILITARY POTENTIAL THAN IN OUR ECONOMIC ASSISTANCE

(By Constantine Brown)

At the turn of the century a prospector in Idaho by the name of Norton discovered a rich gold mine near the Custer Mountain in the Yankee Fork mining district. He named it the Charles Dickens.

Norton struck it rich. His ore assayed $10,000 a ton. Norton's great passion was poker and when he could not find players he staked some and played against his own money. The $500,000 Norton had amassed vanished in thin air. He died in poverty.

A number of Members of Congress who know this true story wonder whether what happened to Norton may not happen on a much larger scale to Uncle Sam under the long-range program of the Marshall plan of aid to Europe.

LAWMAKERS SKEPTICAL

That we must leave no stone unturned to save western Europe from the Moscow octopus is admitted by everybody who considers the security of this Nation and the Western Hemisphere. But there is still a good deal of skepticism in the minds of our lawmakers over whether expenditure of twenty or thirty billion dollars will be sufficient in itself to prevent Russia's onward march into western Europe and China.

A miniature "Marshall plan" already has been applied by the administration in Greece. Last March President Truman enunciated his doctrine of helping nations which want to remain free and whose sovereignty is threatened by communism. The sequel of the Truman doctrine was Congress' appropriation of $300,000,000 for economic and military support to Greece and $100,000,000 to Turkey. Military support was given Greece because she was being attacked by Communist units organized and equipped in Yugoslavia, Bulgaria, and Albania.

Had it not been for that fact, the sums appropriated for Greece would have been earmarked exclusively for economic recovery. President Truman and has advisers proceeded on the theory that communism is fostered by hunger and poverty. Hence, in order to combat it, the American Government must support legitimate governments chosen in free and unfettered elections.

President Truman may not have thought last March of the possibility that the millions appropriated for Greece might have to be followed not only by more millions of dollars, but also by an American armed force if the Greek Army is to be supported against the more powerful enemies from across the border.

COMMUNISM NOW A TOOL

President Truman and his advisers were firmly convinced that dollars in the form of food and raw and manufactured materials would be more than sufficient to combat communism. This might have been a correct theory before World War II. But today communism is no longer the dogma of Karl Marx and Lenin. It is used as a tool by which Russia's dictators hope to reach their goal of world domination.

The slogan of communism in the day of Lenin and Trotsky was "Workers of the world unite." This has been discarded by the Politbureau in the Kremlin. The aims of the new communism differ in no way from those of Hitlerism—world conquest and domination, not for the sake of the underdog, but for the greater power and glory of "Mother Russia" and its dictator, Joseph Stalin.

In the Balkans, as in western Europe, we no longer oppose an ideology which is unwelcome to the peoples of these lands, as was the case after World War I. We, the Europeans and the Chinese face the militant power of a dictatorship which possesses less military skill, but far greater natural and manpower resources, than did the Axis. To imagine that this militant drive for world conquest can be halted by billions of dollars is like believing that the Atlantic can be bailed out with a soup ladle.

THE GREEK SITUATION

Our policy framers caused President Truman to embark on the plan for Greece and Turkey on the assumption that inprovement of economic conditions would stem Communist encroachments. If they had been correct, the Greek situation would have improved in the last 6 months. As it is, the money dispensed by Dwight Griswold in Greece has almost exhausted the $300,000,000 appropriation and the situation has deteriorated rather than improved. The Greek armies are exhausted, the funds are practically exhausted; some improvement in Greece's national economy is noticeable, but the danger of a Greek collapse is greater than it was a year ago.

The members of the Greek Government in private and off-the-record conversations say that an American force of at least 30,000 men, using the latest war equipment, would prevent a debacle soon. And this point of view is shared by worried American military men, who have so little available to do such big jobs.

All the elements of the long-range Marshall plan for western Europe can be found in the support-for-Greece program. And the lessons we are learning in Greece must not be overlooked when we discuss the salvation of western Europe through economic means alone.

EUROPEANS MORE REALISTIC

That France, Italy, and the other Western European States wish that assistance is undeniable. But the Senators and Representatives who crossed the Atlantic during the recess frequently heard the same desperate cry from the people they talked to during their extensive trips: "We must feel that the United States stands behind us with her potential military force to back us in case of a Russian aggression."

The most enthusiastic spokesmen for Russia must admit that there is nothing Moscow wishes more than economic disintegration of western Europe. Her attitude toward the Marshall plan at the Paris Conference last summer, the political strikes and riots touched off by Moscow's stooges in France and Italy, the venomous campaign conducted from Moscow and all her satellites against proposed plans for world economic recovery, all these show clearly that Russia is bent on preventing any such occurrence regardless of the cost.

European peoples are more realistic than we are. They are fully aware that within a few days' march of France, and a few hours of Italy, vast Red armies are poised to strike. No less than 100 Red divisions, supported by some 5,000 planes, are stationed between the Soviet-Polish borders and western Europe.

The peoples of Russia do not have to be consulted by their dictator. All that is necessary to set that mass of men and machines in motion is an order from Moscow. And the people of France and Italy fear that such an order may be issued if the Moscow stooges—the Communist organizations in France and Italy—are overwhelmed by peoples who don't want any part of Red totalitarianism.

Hence the question which Americans abroad hear so frequently, "Are you people willing to come to our rescue militarily if such a tragedy should happen?" It is no secret in Paris that we are not ready to intervene in force. But, as Gen. Charles de Gaulle is reported to have told a highly placed American, the French people, at least, can put up some show of force, provided the Americans are willing to come quickly to France's rescue.

LIKE OLD MAN NORTON?

This is the crux of the situation in Europe. To siphon billions of dollars to the Old World in the belief that money can prevent the spread of Russia's imperialism is to act like old man Norton, the owner of the Charles Dickens mine. The main aspect of assistance to Europe is America's physical strength, which, if our leaders deem it necessary, should be made ready to help those nations which are so anxious to lead a free life. But unless there is that determination on the part of the American people, the long-range Marshall plan unquestionably will suffer the fate of the Truman doctrine in Greece.

Wealth can win a war, but cannot prevent it when dictators like Adolf Hitler and Joseph Stalin make up their minds to fight. Germany was poor compared with France and Britain. Yet this did not deter Hitler from precipitating World War II. Britain and France were rich and could not be convinced that desperadoes would strike against those more richly endowed with worldly goods.

The same thing cannot be said about Russia, which has more potential wealth than any country in the world. But the Soviet leaders are not bent on making the U. S. S. R. a partner in world reconstruction. They want power, and that, they believe, can be obtained only by subjecting the rest of the world to the Kremlin.

We think in terms of sound economics to benefit all people; Russia thinks in terms of world conquest. The Soviet economy, so vastly strengthened by American lend-lease, is geared for war. Russian factories work 24 hours a day just like Hitler's did after 1934. But they are not producing consumers' goods. Everything is stock-piled for the use of the Soviet's vast armed forces.

This is known to Europeans much better than here. They all hope that the United States Congress will be liberal when help to Europe is discussed. But they hope even more that American armed forces will be prepared to intervene when the colossus from the East unleashes its forces. Without that last support, no amount of money can save them.

Asks for Blank Check

EXTENSION OF REMARKS

OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. BRADLEY. Mr. Speaker, as I am sure we all want to know the reaction produced throughout the Nation by the President's message of November 17, 1947, I quote below an editorial from the Long Beach Independent, of Long Beach, Calif.:

ASKS FOR BLANK CHECK

In recommending emergency relief for Italy, France, and Austria, the President asked for a $600,000,000 blank check. Congress was not told what the money would be

spent for or how the relief would be administered. Since there is little time to debate the issue, it is probable Congress will vote the money, hoping it will be spent so as to achieve the good intended. It is a blank check, but there is no time to fill in the details.

In his recommendation for power to control inflation the President again asked for a blank check. He asked for power to allocate materials, but did not name the materials nor to whom they would be allocated. He asked for power to ration and control prices of food, fuel, and rent. But he did not tell how nor on what basis this would be done. He was not even sure it should be done, but asked for a blank check to fill in when he and his advisers thought the time had arrived.

Concerning wages, the President asked for power to place a ceiling on wages if he found it necessary in some industries. It was almost identical to the way President Roosevelt asked for price control in 1942. At that time the President said he wanted to leave farm prices and wages open for him to control as he thought best. The result was disastrous in that prices on products were frozen, but wages which decide the cost of products were allowed to rise. The result of that was a complete dislocation of the economy with most scarce products sold in the black market.

For most of the last 16 years the country has been ruled by edicts of bureaucrats, rather than by laws. Under broad powers given by Congress, appointed officials pronounced edicts controlling this or that only to find most of their controls were unnecessary or unlawful. It is now up to Congress to set out definite rules enacted by laws which are clear and understood by the people.

If Congress believes rationing, price, and wage controls are necessary, then it should name the products and terms. Congressmen have available all the information of the executive branch, plus the reports from the districts in which they live. The emergency is not so great that a blank check should be given to a bureaucracy that has proved itself incapable of administering controls in the past.

If there is to be a ceiling on prices for certain products, then a ceiling should be set on wages and profits in that industry. Allowing a ceiling on prices without a ceiling on profits and wages has never worked and never will. But in the coming Presidential year it is doubtful the President would voluntarily place a ceiling on wages. He should not be given the power to do one without the other.

Asking that consumer and bank credits be regulated should have immediate attention. Rising prices make it important that all the suggestions be given immediate attention. But the people are not willing to again give a blank check to this or any other administration. If there are to be controls, they should be clearly presented in a measure by Congress. They should not be left to the whim of appointed officials whose antics in the past give little confidence in their soundness for the future.—L. A. C.

A Political Clan Call

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. RIZLEY. Mr. Speaker, two of the most timely statements that have come to my attention in respect to the President's message to the Congress on Monday last are contained on the editorial page of the Daily Oklahoman published Wednesday, November 19, 1947. The editorials speak for themselves:

A POLITICAL CLAN CALL

Congress is not going to give the President sufficient power to enable him to establish a police state. The President never believed that Congress would approve his request for such extraordinary power. Probably he would be the most surprised man in America if Congress should say to him: "All right. Here is the power you asked for. Let's see what you can do with it."

Then why did Mr. Truman ask for such sweeping authority if he never expected to obtain what he was asking for? The answer points directly toward the 1948 elections. If Congress rejects the Presidential program and prices continue to move skyward, the Republican Party will be held responsible for the burdensome cost of living. Throughout the campaign administration supporters will be heard to say: "We did our best to curb rising costs but the Republican Congress killed our program. If you want prices to remain high and go higher even, vote the Republican ticket." On such an issue as that it would be extremely difficult to defeat Mr. Truman.

If the Republican Congress were willing to stagger the country in order to defeat the President, they would grant to the President all the powers he has asked for. They would clothe the President with unlimited power of action and thereby make him completely responsible for the shortages and the black markets that would follow inevitably. They would bring back the turbulent days that preceded the 1946 elections when American housewives tramped the streets with empty market baskets and looked in vain for an ounce of meat while cattle on the hoof remained unmarketed all over the country. That would insure the defeat of Mr. Truman.

But that course would make of the country the police state that Mr. Truman envisaged only a fortnight ago. Of course that is what the left-wing element wants. They yearn for perpetual Government control and universal regimentation. But it is not what the popular majority wants. It is not what the President himself wants, as his recent disapproval of the police state amply proves. Then why does the President ask for the very thing he recently condemned?

The President wants to put the Republican Party into a hole and insure his own reelection. Therefore he asks for something that he had already pronounced abhorrent. He asks for something he does not expect to get. Hs asks for something that he doesn't even want. Poor statesmanship? Certainly. Doubtful public service? Certainly. But most promising political strategy. What better politics could the Administration play than to thrust upon the opposition full responsibility for the mistakes and inefficiency and ineptitudes of the party in power?

On its face the program of the President would restore the status quo of V-J day less the absence from their homes of several million service men. Such a program suggests that with the exception of the demobilization of our fighting forces our Government has not made 1 inch of progress since the sunflag of Nippon went down in surrender in Tokyo Harbor. We are asked to reshoulder all of the burdens imposed in a war for survival except the burden of supporting 10,000,000 under arms. As a matter of political strategy the President's suggested program is a masterpiece, but as a confession of administrative impotency it has no parallel in our history.

WHY MUST WE DEFEND IT?

Why are we constantly warned by writers, speakers, and politicians that we must be prepared to defend the American way of life in the eyes of the world?

Some day when one of these heavy thinkers is dealing out this line of guff an indignant citizen is going to rise and ask a few questions, something like this:

What's so wrong with a way of life which with 7 percent of the world's population clothed, fed, and armed half or more of the world against aggression?

What's so phony about a way of life that is right now engaged in helping rebuild most of the rest of the world with the fruits of their labor and ability?

What's so out of joint with a way of life that affords a slothful relief roll client a better standard of living than the hardest working folks in the rest of the world enjoy?

And when he does, the heavy thinker is going to be hooted out of the hall, dining room, or auditorium where he is delivering his carping tirade against the only way of life that gives his ilk the opportunity to grow fat by gnawing at the hand that feeds him.

Resolution of Hamilton Post, No. 20, American Legion, Baltimore, Md.

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas we are entering a period when our country and the whole world must intensify efforts to create conditions for lasting peace, social advancement, and economic rehabilitation and progress; and

Whereas more than ever it will be a period when the citizen and the organizations he works through must set broad policies for guidance and specific steps by which these policies may be effective; and

Whereas freedom, as world events have taught us, isn't free like the air we breathe. It isn't from everlasting to everlasting. It was won by bitter struggle, and it can be lost with tragic ease, if we Americans take it for granted; and

Whereas the lesson of our time is that freedom must be earned, in each generation, by our integrity and ability as citizens. Either we continue to earn it, or we shall wake up some morning to find it has slipped through our fingers, as it slipped through the hands of so many other people of the world. A dictatorship will have taken it from us; and

Whereas it is time for us to begin talking about what we are going to do about world rehabilitation—and about the threat of communism. It is time for us to begin talking about what we will do to make the American system of free enterprise an unbeatable combination of free and happy people living in a world of peace—which we have molded; and

Whereas the members of the American Legion have a tremendous stake in national and world affairs by virtue of having served their country in two World Wars and have a right to demand that our Representatives in Congress interest themselves in sound legislation in connection with problems confronting our Nation: Be it therefore

Resolved, That Hamilton Post No. 20 of the American Legion, Department of Maryland, at its meeting held at Baltimore, Md., Friday, November 21, 1947, go on record as insisting that our Representatives in Congress from the State of Maryland remember their oaths upon taking office, and be aggressive in their efforts toward the formation

of such laws as will further the objectives listed above; and be it further

Resolved, That copies of this resolution be sent to the Members in Congress from the State of Maryland, to the American Legion, Department of Maryland, and to the press in the city of Baltimore.

(Resolution was adopted unanimously.)

Letter of Philip Murray

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include a constructive letter received from Philip Murray, president of the Congress of Industrial Organizations, which I assume every Member of the Congress has also received. The letter of Mr. Murray is worthy of deep consideration of every Member.

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., November 11, 1947.

MY DEAR CONGRESSMAN: The American people are today greeting with fervent prayer the news that Congress is scheduled to reconvene in special session. Theirs is a prayer that this session may take constructive and immediate action in the grave crisis which produced the emergency call.

At home American families face with despair the specter of uncontrolled food prices carrying necessities of life beyond the grasp of the people. They face a threat of rent gouge in a period of critical housing shortage. They are overwhelmed by a picture of record profits while the savings of the common people are depleted.

When individual meat-packing companies double and triple their net income in a single year, when the textile industry is earning more than in any previous period in its history—all this while the American people are compelled to feed their families on less than adequate meat rations because of high price levels and are compelled to curtail their clothing purchases for the same reason—then we are entitled to look to Congress for courageous action and not for the farcical procedure of widespread hearings to discover whether the cost of living has gone up.

In the name of common humanity, in the name of the children whose diets are affected by current food costs, in the name of the housewives whose living budgets have been slashed, I urge that you exercise your leadership in Congress for the immediate institution of clear and strong measures to set and hold prices at a point within the reach of the American people by:

(1) Reestablishing price control and rationing of food, clothing, and other necessities of life.

(2) Instituting a tax program to recapture speculative and excess profits.

(3) Eliminating margins on the grain exchanges.

(4) Conducting an all-out attack upon monopoly and its attendant artificial curtailment of production, creation of scarcity for profit, artificial spiraling of prices and general strangulation of our economy.

This fight against hunger and privation at home is part and parcel of the urgent struggle against hunger throughout the world. Needy people everywhere deserve and must be given relief. We must help them to feed and clothe themselves, not merely as a gesture of humanitarianism but also because we must recognize that hunger in any part of the world is a threat to the peace and security of all the world.

These people must be helped freely, ungrudgingly, without discrimination, and without attempt to use their need and our aid as a means of coercing free but needy people in the exercise of their rights of independence and self-government or to fan the flames of civil warfare.

The American people are fully prepared to support their leaders in a fight at home and abroad against the enemies of all the world—hunger, cold, homelessness, and privation. We cannot win this fight on one front alone. If we undertake to furnish relief abroad and fail to control our domestic price levels, then every dollar which we elect to use for aid abroad may result in the actual delivery of only 50 cents' worth of food abroad.

With all the sincerity at my command, I urge and plead that all parties in Congress and all groups within all parties set aside their political differences in a common endeavor rising above party politics to reduce living costs at home immediately and to deliver food to starving people abroad immediately.

Sincerely yours,
PHILIP MURRAY, *President.*

Court-Martial the Brass—Don't Discriminate Between GI and General

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial from the St. Louis Post-Dispatch dated November 21, 1947, entitled "Scoundrel in Uniform."

The disclosures by the Senate War Investigating Committee of the fraud and corruption practiced by Major General Meyers has shocked and startled the people of America. This gross deceit and scandal has brought discredit and disgrace upon a high-ranking officer of the Army and greatly impaired the prestige of our Army Air Forces.

As is well said by this editorial, so far as the American people are concerned prosecution cannot begin a minute too soon. Prosecution should include not only action by the Department of Justice for income tax violation but also stringent court-martial proceedings. The latter, not only for fraud and corruption, but also for tending to reflect discredit on the millions of American soldiers who served with honor, those who died defending the principle of honor and the right, while a ranking officer sought personal gain and enrichment, thus bringing discredit upon the uniform of the United States.

Mr. Speaker, this editorial raises some question as to whether or not the military authorities have the right to try this general officer. There should exist no reservations regarding jurisdiction of the department of the Army to try this case. Should an enlisted man, a GI, have even been suspected of an offense, however, minor, he would quickly have been court martialed. There should be no discrimination in bringing to book offenders whether they be GI's or generals. There should be no whitewashing of this case. Although this officer is retired from the Army, court-martial jurisdiction to try him exists and has not terminated by reason of his retirement.

Courts martial; jurisdiction; termination: The general rule is that court-martial jurisdiction of officers, cadets, soldiers, and others in the military service of the United States ceases on discharge or other separation from the service and that jurisdiction as to an offense committed during a period of service thus terminated is not revived. * * * There are, however, some exception: (1 Jurisdiction as to certain cases of fraud and embezzlement is not terminated by discharge or dismissal. (Manual for Courts-Martial of the Army, par. 10, article of war 94.)

Article of war 94 provides, in part, as follows:

Frauds against the Government: Any person subject to military law, who, being guilty of any offenses while in the military service of the United States, * * * and (thereafter) receiving his discharge or his dismissal from the service, shall continue to be liable to the Army and held for trial and sentenced by a court martial in the same manner and to the same extent as if he had not received such discharge or dismissal.

The editorial is as follows:

SCOUNDREL IN UNIFORM

At last a good piece of news has come out about money-grabber Bennett E. Meyers, retired major general, who used his high position as Air Force deputy procurement chief to enrich himself. The Department of Justice will ask for Meyers' indictment on income-tax violations. Attorney General Tom Clark says the Government will start prosecution proceedings as soon as the subcommittee is through with him.

So far as the American people are concerned, prosecution cannot begin a minute too soon. They have been both humiliated and fired to anger by the disclosures of Meyers' many inside deals on wartime contracts. The parade of witnesses shows that he did not stop at behind-the-scenes stock operations and orders to companies in which he was financially interested. He set up dummy officers with phony salary accounts so he could rake in big sums. He tried just about every slick angle that occurred to his greedy brain.

The Federal Government should hit Meyers with everything the law allows. Income-tax prosecution should be only the start of it. While the Department of Justice is searching to see what else it may hold this bird to account for, the War Department should be combing its regulations concerning ways to punish this retired officer.

Although only 52, Meyers retired August 31, 1945. The cause was physical disability. This fact, taken with the passage of more than 2 years, may make it impossible to recall him to active service for court-martial proceedings. It is hard to believe, however, that the Army cannot bring Meyers to book if it sets out to do so. He draws retirement pay to the extent of $550 a month. There certainly must be conditions under which a pension can be stopped.

If the testimony given to the Senate War Investigation Subcommittee stands up—and the witnesses who have told of loans to Meyers in exchange for war contracts and the income set-ups refuse to be shaken—then Bennett E. Meyers was a saboteur of the American war effort. At a time when young Americans were dying for their country, this scoundrel was filling his purse, his bank

account and his lockbox because of official knowledge.

When a group of Purple Heart veterans went to the Meyers hearings, one of them spoke words that would have done for millions of veterans. "We heard lots of gossip about civilian war profiteers," said T/Sgt. Herman Oretsky, who was injured in the Battle of the Bulge, "but someone in the Army—you didn't expect that."

Bennett Meyers was a long way from the Battle of the Bulge, but he was right up front in the thrust for the bulging bankroll.

Carl R. Gray, Jr., New Administrator of Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. DEVITT. Mr. Speaker, President Truman has appointed Mr. Carl R. Gray, Jr., of St. Paul, Minn., as Administrator of Veterans' Affairs. Mr. Gray lives in my home city, and I have known him for many years. He is a competent and experienced business executive and has served with distinction in responsible military assignments in both World Wars. He is highly regarded and respected by his friends and neighbors who know him best. I feel confident that he will discharge the duties of this office with fairness, with intelligence, with dispatch, and with marked success.

Mr. Gray has had wide experience in the field of business. Presently he is serving as vice president of the Chicago & North Western Railway System with headquarters in St. Paul, Minn. He is the illustrious son of a former president of the Union Pacific Railroad. He has held important executive positions with large and successful business organizations of the country in the field of wholesaling, retailing, and banking. He is a man who has a reputation for getting things done.

His military career has been as successful as his business life. During World War II he successfully directed our far-flung military railway services in North Africa, Italy, and on the European continent. Previously he served with distinction in World War I and rose from the rank of captain to that of colonel in the military engineers. For his part in World Wars I and II he has been awarded many decorations from his own and foreign governments. Presently he is serving as president of the Society of American Military Engineers.

Mr. Carl R. Gray, Jr., has been closely identified with the civic progress of the city of St. Paul. In return for his community efforts he was rewarded by the citizens of that city by being chosen as "king" of the famous St. Paul Winter Carnival. This is an outstanding civic activity known throughout the Nation. St. Paul is the winter sports center of the United States.

Mr. Gray brings to his new office the fruits of many years of executive experience and close association with military life. He is eminently qualified to administer the huge veteran-aid program involving some eighteen million veterans at an annual budget cost of almost eight billion dollars.

I predict that Mr. Gray will enjoy an outstanding tenure of office. President Truman has manifested a high degree of intelligence in having chosen Carl R. Gray, Jr., of St. Paul, Minn., as the new Administrator of Veterans' Affairs.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an excellent address recently made by the Honorable Arthur Bliss Lane, former Ambassador to Poland, over Station WSBR, Springfield, Mass., on the "Justice for Poland" program.

Mr. Lane speaks with authority and knowledge and his remarks warrant careful consideration. It is clear that until the great injustice being presently visited upon Poland is corrected, there will be no confidence anywhere that our Nation and our wartime allies really intend to work for a democratic world.

The address follows:

Some 6 months ago I returned from Poland, where I had served as American Ambassador since July 1945. I returned because, contrary to the Yalta and Potsdam decisions to hold free and unfettered elections, a fraudulent election had been held in Poland on January 19, 1947. I felt that I could no longer conscientiously remain accredited to a Government which had established itself through the flouting of its solemn international obligations. And, furthermore, I wanted to be able to tell the story of the tragedy of Poland without any diplomatic restrictions on my speech.

The Poles, who had endured almost 6 years of Gestapo terrorism, were from the very moment of their expected liberation in 1944 compelled to undergo the same police-state treatment at the hands of their so-called Soviet allies, who were determined at all costs to destroy every organized nationalistic element within the country. The valiant underground army, which had rendered such an important service to the Allied victory, was the first to be purged. After exhorting the Warsaw underground, through the Moscow radio on July 29, 1944, to start an insurrection against the Nazis, the Soviets did not give the assistance which they had promised. Suddenly they termed the insurrection an adventurist undertaking. They even refused permission, until it was too late, for United States Army planes to land on Soviet territory after dropping supplies to the insurgents. The Soviets permitted this glorious insurrection to be suffocated. Why? Because its success would have meant that the communistic Committee of National Liberation, chosen by the Kremlin and then functioning in Lublin, was not to be the nucleus of the future Polish Goverment. It was a heartless, ungrateful decision. It showed plainly that the Soviet Government was still pursuing its policy of September 1939, which it made jointly with Hitler, to destroy the independence of Poland. Once the insurrection collapsed after 63 days of glorious fighting in the face of overwhelming Nazi odds, the Nazis took vengeance, as the Soviets knew they would. After moving the Warsaw population to a concentration camp at Pruszkow and elsewhere, the Nazis fired the city with incendiary bombs. Warsaw was destroyed block by block, house by house. Only those buildings which housed the Nazis were spared.

The Red Army entered Warsaw on January 17, 1945, followed by the secret police and the Lublin puppets, who had already been recognized as the Government of Poland by Stalin, despite President Roosevelt's earnest request to await the Crimean Conference. Not only did the Red Army drive out the Nazis to the west, but it deported to the east those Poles who were considered to be an element of opposition to Communist totalitarianism. And the Lublin puppets who profess to be patriotic Poles and who claim today to be sovereign government, signed a pact with the Soviets permitting them to deport to Russia those Poles who were judged to be dangerous.

As a result, in March 1945 15 Polish political leaders who had distinguished themselves in the underground fighting the Nazis were arrested and deported to Russia, where they were convicted of the oddly named offense of diversionary activities. Thus was broken up an important nationalist element within the country. From that time on, the Russian-educated secret policy in Poland little by little firmly secured control over the entire country. This is the normal means of the dreaded police.

Finally a so-called provisional government of national unity was formed in Moscov in June 1945, including within its numbers some democratic leaders from Poland and from London. The United States recognized this government. But the democratic leaders never had a chance. It was soon apparent that the Communist minority in Poland intended to rule the country with or without the aid of the Red troops in the country. It would be only a matter of time before the opposition would be obliterated. At the time we did not know whether it would be through arrests, Red army violence, or fraudulent elections. Actually it was through the intimidation of the voters by threat of imprisonment, loss of jobs, homes, and ration cards, through the suppression of freedom of speech of the opposition by denying newsprint and radio time, and through the deliberate violation of the election laws by not permitting the opposition to participate in the counting of the ballots. As a result, the Polish Peasant Party, comprising well over 80 percent of the total electorate, won only 28 out of 444 seats in Parliament.

And if by chance you might feel that I have exaggerated or misstated the situation in Poland, let me point out that in Hungary we have just had an almost exact replica of the Polish elections with the Communist minority gaining control of the government machinery through voting fraud and preelection intimidation. The only difference is that in Hungary a Soviet general with his army is in control, while in Poland the armed forces, secret police, and militia are, for the sake of appearances, in Polish uniforms. Nevertheless they take their orders from Bierut, Berman, Sypchalski, and Radkiewicz—all of whom are Soviet stooges. In Bulgaria you have read of the recent arrest and sentencing to death of Petkov, the leader of the agrarian party. Here again is proof of the Soviet aim to destroy all elements representing democratic strength. The Soviet army in Bulgaria is assurance that this aim will be fulfilled.

I speak to you all today as friends who, like myself, have a deep love for Poland and the

Polish people. But primarily I speak to you as American citizens who, in the defense of our own country and civilization, must reject emphatically all attempts of propaganda on the part of false prophets that communism is not directed against our institutions. Recently, Wladislaw Kiernik, a member of the Polish Peasant Party and former Minister of Public Administration, had the effrontery to say in the United States that the elections were free in Poland, that freedom of speech exists in the Sejm, and that Poland is not controlled by the Soviets. How does he then explain that his own party protested the fraudulent elections, that the speeches of Zygmunt Zulawski, an elected deputy on the Peasant Party list, were expunged from the CONGRESSIONAL RECORD; and that his party colleagues, Scibiorek and Kojder, were mysteriously liquidated? Obviously Mr. Kiernik wishes to retain the favor of the Communist ruling clique, so as to return to Poland.

I warn you also of false prophets who come in the guise of diplomats preaching the desire of the Polish Government for friendship with the west, while that Government continues to revile the United States for our refusing to contribute to the economic power which that clique desires for itself rather than for the Polish people. I had warned the Polish Government a year ago of its short-sighted policy of hostility toward us in the light of its needs for assistance. They do not seem to realize that they cannot eat the cake and have it too.

I warn you of false prophets who, in clerical guise, come to this country to bring about dissention in the Polish American community and who try to make apologies for the group which has trodden down all opposition by force and by fraud and which will when the appropriate moment comes, attempt to destroy religious freedom in Poland.

And lastly, let me warn you of those misguided or malevolent Americans who condone, under the guise of liberalism, the acts of tyranny of the Soviet-created police states in Poland, Yugoslavia, Hungary, and Bulgaria. Yet they were among the most vociferous to condemn the same Nazi outrages against the peoples of those unfortunate nations. Tyranny is tyranny, intimidation is intimidation, and murder is murder, no matter whether ordered by Hitler or by the puppets whom the Kremlin controls.

Aid to Maine and Europe

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mrs. SMITH of Maine. Mr. Speaker, when I returned from Europe at the completion of the Appropriations Armed Services Committee investigation and study of conditions there and in the Middle East, I found many requests to speak before various groups in Maine to tell them what I saw and what I had found. I received these invitations with gratification because I was eager to tell the people of Maine these things—to report to them on my mission of having been their ears and eyes in Europe and the Middle East. I particularly wanted to tell them how what I saw and heard made me all the more proud that I am an American—and how humbly grateful I am that I am fortunate enough to be an American.

I wanted to tell them—and I know that they wanted me to report—what the conditions are in Europe, not only because of the threats and dangers created by conditions that I saw over there, but also to describe those conditions as accurately as possible—so that they, too, would be as proud and as grateful to be Americans after hearing about the insufferable conditions over there.

I went to Maine and started reporting at various meetings. My message was simple—it was that the conditions abroad were so bad as to constitute grave threats to our country and to permanent peace—and that these threats made it imperative that we act unhesitatingly to bolster our armed forces and to provide emergency aid to the people of Europe.

But shortly after I had started my series of reports throughout the State, disaster hit Maine—the forest and field fires which destroyed whole towns and sections. It was Maine's greatest catastrophe. I canceled the rest of my scheduled reports so that I could do my part in Maine's hour of crisis. I called Washington for Federal aid. After I had done all that I could in Maine, I returned to Washington for conferences with the various Federal agencies to enlist all of the possible aid that I could for the Maine victims of the fires.

Maine people were and are sympathetic to troubles of the people of Europe. But they have had their own disaster and troubles. They want to take care of first things first.

Maine's loss took many forms. The immediate loss was suffered most by the people of southern and western Maine. Their loss was immediate for they lost their homes, their property, their livestock, and those things by which they gained their livelihood. The greatest future loss was in eastern Maine, particularly in the Bar Harbor area, where much of the summer vacation industry is located. Greater financial loss in this area was that of the summer residents. These summer residents are of such financial means that the loss of merely their summer homes is a financial loss rather than the loss of vital shelter, food, and health. But this is a future financial loss to Maine because these summer residents were sources of substantial revenue.

All of this was also a national loss, for the forests of Maine are one of our Nation's foremost resources. We could ill afford this timber loss in the midst of our housing and lumber shortages and ever-increasing prices that stem from shortages.

Maine's disaster and Europe's plight have much in common. The fires that destroyed so much of our forests, towns, and property were the result of atmospheric conditions of extreme dryness, caused by a long drought and shifting winds, and by lack of preventive measures and lack of facilities with which to fight the fires. Once the fires started, it was practically impossible to stop them. Men worked frantically to stop a fire and save a town only to find that other fires started in other places and that constantly shifting winds left them unprepared to fight the fires in several directions. The result was that forests and towns were levelled by the fires.

Symbolically, such a fire swept across Europe and the Pacific in World War II. That fire was war. European conditions now are such that the fire of communism can sweep across Europe and ultimately create a third World War. Like the drought-stricken dry fields and forests of Maine, which were ideal fuel for fire, so are the hunger-stricken people of Europe an ideal fuel for the fire of communism. The hunger drought of Europe must be eased lest the fire of communism spreads, for just as Maine had its shifting physical winds, so does Europe have its shifting political winds—political winds that are so delicately balanced that they may at any time turn from the direction of communism to democracy or from democracy to communism. Just as physical fires began at many places in Maine, so are smouldering political fires interspersed throughout Europe ready for open flames if fanned by Europe's shifting political winds and fed by Europe's hunger drought.

Just as Maine must now tighten up on its fire prevention measures and fight the carelessness of smoking and making campfires in the forests and fields, whether working or hunting—and just as Maine must augment its fire-fighting equipment and expand its fire warden staff—so must similar measures be taken to fight the spread of communistic fires in Europe. Our forests and fields in Maine needed rain—something that man could not produce. But Europe's hunger drought needs food—something which we can provide and thus avoid the fire of communism. Let Maine be a lesson to us and let us take the necessary preventive measures unhesitatingly while we can now stop communism in Europe. Let us do it now when it costs far less to prevent destruction than later to rebuild that which has been destroyed. We cannot let false economy eliminate our necessary preventive measures.

But let me make myself clear. The United States cannot be a permanent Santa Claus—it cannot foster and finance a world WPA, a permanent world dole program. Charity can be carried too far lest the other nations of the world become financial wards of the United States and their people permanently supported from our own money through the perpetuation of high taxes.

In this respect, the people of Europe can well follow the example of the people of Maine—and this is the most important part of my remarks and the matter on which I have the deepest conviction. The people of Maine have been victims of the fire disaster. They have received help from outside of the State—from the Federal Government—and they are most grateful, not only for that aid, but more particularly in the prompt manner in which Federal agencies responded. But they want no more aid than is absolutely necessary. The people of Maine pride themselves in their ability to take care of themselves—in not being a drag on anyone. We of Maine are taught from infancy to be charitable—but we are also taught to help ourselves and to be thrifty. Waste

is not tolerated in Maine. Independence and maximum self-sufficiency are emphasized in my State.

In applying our aid to Europe, we must make it quite clear to the European people that this is only emergency aid and that it is solely for the purpose of helping them get back on their feet. True—we must give them food until they can start planting their own fields. But we must tell them that they have a specific time and amount beyond which that aid will not be forthcoming. They must be told that they will be expected to be thirfty—that they will be expected to help themselves—that by a certain time they will have to produce for themselves—that waste will not be tolerated—and that there will not be a dole. We should send food only until such time as they can begin to harvest their own crops. In the meantime, we should concentrate on sending farm equipment rather than food, after the initial period of emergency.

In other words, my main point on the European aid and America's message to the people of Europe in aiding them is that they must be told in very clear terms that they must work for American aid—that there is a definite limit to the amount of aid we can furnish because we have our own troubles and our own problems at home, such as Maine's fire disaster, which we must take care of. This is the firmness that we need in the administration of the program. It is not an undue firmness or an un-American firmness. It is truly an American firmness for we require of our own people the same degree of work and cooperation as a prerequisite to granting aid. In other words, we ask no more of the Europeans we aid than we do of the Americans we aid. We ask them both to work for that aid.

The Late Hon. Raymond S. Springer

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. O'HARA. Mr. Speaker, it was indeed a profound shock to me to learn that death had called our colleague, RAYMOND SPRINGER, whom I considered one of my close personal friends during all the time I have served in Congress.

My first service was with him upon the House Judiciary Committee. There he demonstrated that he was a thorough student of the law. He had the type of judicial mind which made him as highly respected by the bar and the judiciary as he was by his colleagues in Congress.

He was preeminently qualified and fitted as a Member of Congress in these difficult times for he was an intense patriot and a student of our American form of government and possessed the training, background, and intellectuality which makes for the highest type of national legislator. It was natural for him to approach a legislative problem thoughtfully, to study and analyze it and to arrive at his judgments carefully, and I know of no Member of the House who was more conscientious about his duties and multitudinous responsibilities to his district and to the Nation.

Those of us in Congress who admired his sterling qualities, treasured his friendship and who sought his counsel and advice, share with his family and his friends the loss which we sincerely and deeply feel in his death.

For a tireless, conscientious, and most able public servant, we reverently ask, "Eternal rest, grant unto him, O Lord."

President More Interested in Shortage of Bureaucratic Power Than in Work Shortage

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following article by David Lawrence is very illuminating, and deserves the serious consideration of this Congress.

He clearly shows that the President is more interested in the shortage of bureaucratic power than he is in work shortage.

The public is demanding that Congress decrease the number of bureaucrats on the Federal pay roll. But the President apparently not only wants to keep all of the bureaucrats on the pay roll who are now so expensive to the taxpayers, but he wants to increase that number by setting up a new group to control the activities of our people. Mr. Lawrence's article follows:

TRUMAN'S TALK—POWER SHORTAGE BOTHERS HIM MORE THAN LACK OF PRODUCTION

(By David Lawrence)

WASHINGTON, November 19.—All possible remedies except the principal one were recommended by President Truman in his message outlining proposals to fight inflation.

The principal remedy, of course, is increased production. In a message of many thousands of words, Mr. Truman gave only a single sentence to this underlying difficulty in an inflationary era—a work shortage.

For everybody who knows anything about inflation knows that it is the lack of goods and the oversupply of purchasing power that bids up the prices of scarce articles. Likewise, prices come down only when the supply of products exceeds the demand.

Mr. Truman talked about the rise in industrial prices and made a reluctant confession that wages really have had something to do with the rise in prices. Up to now he has been inclined always to use the argument that high prices were due either to the ending of OPA or to the failure of industry to absorb rising costs without increasing prices. Mr. Truman in his message spoke of getting all sorts of authority and power which he promised not to use unless absolutely necessary. He intimated that voluntary controls would be more effective if the Government held the club of legal controls over the heads of business, labor, agriculture, and consumers.

This is a rather hazardous undertaking because so many businesses and industries are interrelated. If one is controlled and the other is not, all sorts of maladjustments arise. What is even more embarrassing is that the moment legal controls are imposed, black-market operations begin.

Mr. Truman's message assumes a grant of authority by Congress to permit the Chief Executive to threaten the return of controls whenever an industry or group in business or labor grows recalcitrant and refuses to accept the mandate of a committee or agency of government.

It is not likely that Congress will grant such unlimited or undefined powers. Congress has had some experience with wartime controls and knows the pitfalls.

The real answer to inflation is increased industrial production. Mr. Truman had only this to say about it in his entire message: "To expand industrial output, we need a long-range program to overcome basic shortages in capacity and equipment."

This is a vague statement which avoids the real issue. The real barrier to increased production is that which has been imposed by the Government itself on overtime production. The wage-and-hour law, for example, places a penalty on increased production. Some means of allowing straight time to be worked above existing overtime schedules which are payable at time-and-a-half rates would do more to increase production and bring prices down than any single proposal made in the President's message.

The United States today is suffering not from a goods shortage but from a work shortage. The materials are available if workers were permitted to work longer each day to get them into the hands of processors. Instead, in many businesses, there are six-hour days and 35-hour work weeks and the penalty of time and a half payable at high hourly rates is enough to deter production.

The Republicans will certainly be derelict in their duty if they swallow the President's program on inflation without accompanying it with some specific legislative standards for the exercise by executive agencies of such new control powers as are granted by Congress. Likewise the Republicans will be culpable politically if they do not sponsor an alternative program which removes the many barriers against increased production to be found in labor-union contracts. All agreements that ban labor-saving devices and all provisions thereof that endeavor to curtail production might well have attention.

It is unfortunate that the President did not deal with the work shortage but dealt only with the shortage of bureaucratic power which has been a source of great regret to the "planned economy" and Government-control folks hereabouts who sadly miss their wartime powers. Inflation is curable provided the President and the Congress care to avoid politics and give workers the incentives that will increase output.

Jewish Homeland in Palestine

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. HÉBERT. Mr. Speaker, at this time, when the eyes of the world are on this session of the United States Congress in our work to ward off starvation in Europe, it does not seem out of keeping for us to briefly note the conduct of

our country's delegates to the United Nations, in a movement which last week threatened not only the accord which has developed within the assembly on the question of the proposed partition of Palestine, but also the ability of the proposed Jewish state to accept as immigrants the more than 200,000 Jewish displaced persons who are at present in the camps of Germany, Austria, and on the Isle of Cyprus.

These displaced Jewish persons look to Palestine as the land where they can rebuild their shattered lives and once more acquire the dignity that comes to human beings who live in a community where they are loved and respected.

A subcommittee of the United Nations Special Committee on Palestine, which visited the assembly centers for Jewish people in both Germany and Austria recently, had this to say, and I quote:

Taken over all, it seems to us fair to say that practically all the persons in the Jewish assembly centers in Germany and Austria wish more or less determinedly to go to Palestine. The alternative to resettlement, namely, repatriation or absorption into the German and Austrian communities, were investigated. The prevailing reaction among the persons questioned, many of whom had returned to their former place of residence in order to trace relatives and property, was a refusal to repatriate. The reasons given were based on growing anti-Semitism, in spite of admitted efforts by the governments concerned to check such a development, and an incapability to start life again in a place haunted by the memories of endured horrors.

Further on, the report has this to say:

Although the morale in the centers is high in the sense of this virtually unanimous and in many ways fanatical urge for settlement in Palestine, most opinions which we heard agreed that the psychological state in general has deteriorated over the last year. Although superficially, some of the centers give the appearance of a kind of normality, even including certain well-developed contacts with life outside, signs of strain and emotional instability are not far below the surface.

It was with the hope of at last being able to alleviate the suffering of these people that the Jews of Palestine so willingly and hastily accepted the proposal of partition, although this proposal of the United Nations Special Committee on Palestine reduces to approximately one-eighth the land area accepted by the Jewish people for their homeland in Palestine.

With the acceptance of the major principles of the UNSCOP majority report by the United States and Russian delegates, it seemed that the establishment of the Jewish National Homeland was at last about to become a reality. Then, last week, the United States delegation, working within the ad hoc committee completing details of the partition plan, suddenly proposed a further concession to the Arabs. They requested the removal of all that land in the Negeb lying below the 31st degree of latitude. This proposed removal of further land from the Jewish state would take between 25 and 30 percent of the area granted them under partition as originally submitted. It is this land in the Negeb on which the newly created Jewish state would have to depend in order to bring about the economic conditions which would make it possible for them to accept and absorb these displaced persons awaiting entry into Palestine. The explanation which our delegates gave for this action was most feeble.

At this point, Mr. Speaker, I would like to remind you that although this country was not a member of the League of Nations the Congress of the United States twice went on record as overwhelmingly endorsing the establishment of the Jewish Homeland in Palestine. Further, our Government in 1924 signed a separate pact with Great Britain in recognition of her mandate to create the Jewish Homeland in Palestine.

The conduct of Great Britain in this connection is also depressing, in her relation to the acceptance of partition as suggested by the United Nations committee which was set up at her own request. Her refusal to cooperate by taking part in a progressive evacuation of the mandated territory and in otherwise contributing to the solution of this problem is deplorable.

At such a time I cannot help but recall the words of our former and greatly admired Under Secretary of State, Sumner Welles, speaking before the Maryland Christian Palestine Committee. He said:

In the annals of our modern civilization no greater wrong has been perpetrated than the attempt of powerful nations to proscribe the Jewish people. We here in the United States must help to find the means of solving the immediate problem now presented. It must be solved in such a way that in years to come, in the place of the Palestine that is now rent with disorder and misery we shall see a Palestine which will be a model and example for the civilized community of nations.

The removal of any further land from that left to the Jewish people by the original partition plan would make forever impossible that hope presented by Mr. Welles. It would perpetuate the status quo in Palestine, of a small area Jewish settled and governed communities, incapable of accepting immigration, or in any other way conforming to the concept of a national homeland. Accordingly I feel I must voice the sentiments of amazement and alarm I am informed my people in Louisiana, both Christians and Jews, feel at this action of our delegates, and I join with them in the hope that we will revert to our historic policy and work for the creation of a real homeland for the Jewish people in Palestine.

President's Proposals Endanger Political Liberty and Economic Freedom in America

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a communication from one of America's greatest economists. He has given me the benefit of his views, from which I have concluded that President Truman's proposals endanger political liberty and economic freedom in America. I trust that the clear and convincing reasoning of this statement will be studied by my colleagues, and by all who may have the opportunity to read the following statement, which I quote:

SOME IMPORTANT CONSIDERATIONS AND ASPECTS OF THE SO-CALLED MARSHALL PLAN

In reviewing the general problem of European relief, we believe that several vitally important considerations should be urged upon the Congress of the United States:

1. There has been much exaggeration and misrepresentation regarding the extent and nature of "relief" needed by European countries. The American people have been too much "sloganized" for political ends. There is too little knowledge of the comparatively low standard of living normal to most foreign countries.

2. Despite the fact that we are now in the third year of "peace", the taxes being levied upon the American people by the Federal Government are still almost at the wartime high.

3. Due largely to shortage of many important commodities and manufactures for domestic use, prices have continually risen, until the cost of living of the American people is now at the highest level in modern times.

4. The continually advancing cost of living has been accompanied by an ever-increasing spiral of wages, which in turn have still further increased costs of production and selling prices.

5. It should be obvious, therefore, that any future relief extended to foreign countries should be made in such a manner and with such safeguards as to protect our American economy in all reasonable respects, and to hold the burden upon the American taxpayer to the lowest practicable limits.

6. It is further obvious that the European relief problem is of a twofold nature:

(a) To provide immediate relief against hunger and disease.

(b) To assist those foreign countries, if that is deemed practicable by the Congress, in rebuilding their destroyed capital goods so that they can as speedily as possible begin to be self-sustaining.

The immediate task can be aided by outside charity, the long-run job can be done properly only by the unfortunate nations themselves.

7. In this connection, it should be clearly recognized that every gift or loan on our part should be made under definite stipulations and commitments on the part of the recipient countries that they will for themselves adopt and carry out those measures, whether legislative or economic, which will most speedily put them in a position to restore their status as free and sovereign powers among comity of nations.

8. Insofar as possible and reasonable, the means of production should be furnished rather than finished goods.

9. We also recommend that, rather than general credits to be used solely at the discretion of the recipient nations, we attempt, insofar as possible, to supply only goods and equipment which will serve a clear and definite purpose in reconstructing the economies of the respective countries.

10. In line with the foregoing suggestion, no relief of any sort should be extended to any nations which are under communistic, or radical socialist domination. Furthermore, any nation which, despite our assistance, turns Communist or falls under communistic, or other radical or despotic domination, should be stricken off our relief list.

11. In addition to the foregoing, the utmost care should be exercised by our Government to prevent any of our assistance by way of credits, goods for immediate consumption, or capital goods, from being siphoned off into any of those countries which are under the communistic sphere of influence, or have forms of government opposed to our way of life.

12. Underlying all the foregoing suggestions should be the definitely expressed philosophy and principle that there can be no real European recovery until the nationals of those countries go back to work. This means long hours, hard labor, and great sacrifice, while they are building back the destroyed capital which originally required many generations to construct.

13. Any relief or loans granted should be only for a period of 1 year, with reservations as to later assistance contingent upon the fair performance of their obligations by the recipient countries.

14. Further, we respectfully suggest that, in connection with the administration of immediate relief, it would be wise to consider whether such administration might more economically be put in the hands of well-recognized relief agencies, such as the Red Cross, the American Society of Friends—and on a voluntary basis, supported by the free contributions of United States nationals and descendants of the leading foreign countries now demanding relief.

15. Again, we fully recognize that, unless the various parts of pro-Hitler Germany, including the agricultural East now held by Russia, are put together again, so that she can have a reasonably balanced economy as between raw materials, foodstuffs, and manufacturing, no economic solution of the European problem will be possible either now or ultimately.

Further, the middle European countries now held by Russia behind the iron curtain have traditionally been the surplus-producing countries of Europe with respect to foodstuffs (grain and livestock), many metals, lumber, petroleum, etc. These countries have, in turn, for long years before the war traded most of their excess raw materials with western European countries, particularly with Germany, France, and England, for the manufactured products of these same countries. Unless Russia withdraws her strangle hold on these countries, and unless the normal prewar flow of trade in both directions is permitted, there can be little hope that the internal economy of western Europe, including that of Great Britain, can be reconstituted on a sound basis, no matter how much we may assist them.

16. Finally, the American Congress should clearly inform the American public that, despite all the measures which have hitherto been proposed or will be proposed for alleviating the suffering and hardship in Europe, there is, and from the very nature of the case can be, no assurance that the rest of Europe will be kept from going communistic, even despite our generosity.

In conclusion, we wish to emphasize above all the fact that, while trying to head off radicalism or totalitarianism abroad through our gifts and loans, we must to the utmost avoid forcing upon our own people a more or less similar form of government to that which we are opposing, through price controls, restrictions, allocations, priorities, export and production controls, etc., which many believe will be necessary, although ultimately ruinous, if we are to continue to supply so large a proportion of our goods and services to Europe as in the recent past.

If in the third year of peace, with a supposedly conservative political majority in the House and Senate, we should again impose wartime controls on the American economy, not only will our American institutions be undermined, but also it is highly probable that we shall not again in our generation enjoy any real political liberty or economic freedom in our own country.

[NOTE: Some are now suggesting that we must give substantial aid to China, although only a year or two ago, according to credible reports, on the recommendation of General Marshall, we stopped helping China because Chiang Kai-shek would not make terms with the Communists in China. Now, the same General Marshall, as Secretary of State, is asking for substantial and continuing European relief on the grounds that the spread of communism in Europe will thereby be checked. Also, it may be fair to ask why European countries demanding "relief" do not first "spend" the many billions of dollars of assets and of earmarked gold and bank balances which they still hold in the United States.)

Sound Advice

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. JENNINGS. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include therein an editorial from the November 17 issue of the Fairmont West Virginian. This editorial endorses and sets out the high lights of an able and timely address made by our colleague, Representative FRANCIS J. LOVE, before the Fairmont Life Underwriters' Association:

SOUND ADVICE

We think the address Congressman FRANCIS J. LOVE made before the luncheon meeting of the Fairmont Life Underwriters' Association last Friday was a sound one, a timely one, and one filled with logic and reason.

It is time to think again about the New Deal idea of tax and tax and spend and spend.

LOVE pointed out that the American dollar is the only monetary unit in the world that still is recognized as being worth something, but warned that unless something is done in the immediate future to correct the shaky condition of our financial structure, the dollar will go down the long road with other monetary units in other countries.

LOVE recommended three things as primarily essential to the correction of our financial structure.

1. Further reduction in Government expenses.

2. A real reduction in income taxes.

3. Correction of our present foreign policy.

All three of these proposals will be fought by President Truman and other New Dealers. They want no reduction in Government pay rolls, for instance, because taking persons off the pay roll might be reflected at the polls at the next election.

Truman and his like want no reduction in taxes at all, and certainly not in income taxes. They are forever seeking ways and means to make more taxes necessary.

And, of course, the present foreign policy, if any, will lead to more and more taxes. President Truman said the other day that aid to Europe would mean more taxes.

On the matter of aid to Europe we think Congressman LOVE took a sound view, when he said to the insurance men in part:

"All of us know that Europe has paid a terrific price and none of us would want to deprive starving people of food. However, Europe must not always continue to be a problem of relief. Europeans should have an opportunity as well as an incentive to work for themselves again.

"It is my opinion, not only for the best interest of the Europeans but also for our own domestic economy that there should be a condition attached to any major aid to Europe in the future and that such condition should be that European imports are far in excess of their exports which results in a poor monetary standard. In turn, Europeans then want to use the American dollar to buy American exports which, carried to the present extreme, cause our domestic prices to 'skyrocket.'

"Before our domestic food prices, in particular, can approach normality again, it is vital that we correct the cause. The major cause of the present high prices in this country is largely due to American dollars loaned to Europe and spent for Europeans in our markets. This situation must be corrected. There must be a definite policy of rehabilitation and reconstruction in Europe, and the American dollars that are sent to Europe must be used to increase production in Europe so that Europe's monetary system may be strengthened and also, so that European imports of food, in particular, from the United States will be substantially decreased."

Statement of James F. Fitzgerald

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a statement sent to me by James F. Fitzgerald, of Boston, Mass., as a result of a visit recently made by him to certain European countries.

From my observations on my trip to Europe in September 1947, on which I visited England, France, Belgium, and Germany, the rebuilding of war-ravished Europe and placing it on an economically stable footing so that she can stand on her own two feet, is the greatest challenge to face the American public.

It cannot be denied that if we are to win the peace we must take the leadership and work out a plan to alleviate the suffering and feed the starving of western Europe. The nations of Europe are looking to America as a beacon to guide them.

If we do not go to the fore, the people of western Europe will join the Russian bloc since they have a well-organized propaganda system, extolling the merits of the Russian way of life and condemning the democratic way of life. It is only human that a starving man is blind to realities and will grasp at anything that will stave off hunger.

In my opinion, we are in a more precarious position than we were from 1940 to 1943 when World War II was at its height. The peace of the entire world is at stake and unless America takes the leadership of the Western World, we shall lose the peace.

I do not believe that the economic matters in Germany should be managed by the American military as they are neither equipped nor qualified. I would suggest that there be set up an economic commission consisting of well versed, practical businessmen who would inspire the disheartened and downtrodden and give them the incentive to be self-sustaining. The motto "Work, work, and more work" should be instilled into the populace. Let the military cope with the military problems.

However, do not misunderstand. I do not mean that the military authority should be in any way lessened or decreased. On the contrary, I believe we should strengthen our military forces in the European zone. In my conversation with people in Europe, they stated that if the Russians so directed they could march through Europe and to the English Channel within a week.

The President should make a study of a group of expert economists and leaders and select the best qualified to aid the military in settling the problem of equipping Germany so that German business can develop between the rest of the world, thereby reducing our occupation costs which is approximately $800,000,000.

If Congress passes the Marshall plan, the money allotted to the various countries should be managed similar to the way RFC funds are.

The aiding of these foreign countries will entail a great sacrifice on the part of every American, but it is the only way to attain peace, and stabilize Europe in order to avoid war with Russia. If the people of America do not make the sacrifice, we shall be held responsible for losing the peace as well as losing our own way of life.

I do not feel that I am unduly pessimistic. I am just facing the facts. I served in World War I in France for one and a half years and have made several trips to Europe between the two wars, my last trip prior to World War II being in the late summer of 1939.

The above observations are entirely my own without prompting from anyone.

JAMES F. FITZGERALD.

Farm Commissioners Protest President's Price-Control Program

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, in the President's message before the joint assembly of the two Houses of Congress last Monday, November 17, the President recommended among other things that Congress "authorize consumer rationing on products in short supply, which basically affect the cost of living"; and that Congress further "authorize price ceilings on products in short supply, which basically affect the cost of living or industrial production, and to authorize such wage ceilings as are essential to maintain the necessary price ceiling." Mr. Speaker, in simple English this means the President asked Congress to give him dictatorial power over the most essential items of food, clothing, and housing. Stripped of all its phraseology, it was a bid for power that the President had himself voluntarily released months ago. It was a recommendation that OPA be revived or resurrected from the dead and given new life.

Mr. Speaker, in his message the President further said:

I am well aware that some of my proposals are drastic measures.

They certainly were drastic. Everyone knows that we cannot be half OPA and half not OPA. The program is designed after the New Deal scheme of planned economy, which has been so thoroughly repudiated by the American people. We all can recall the regimentation and dictatorial powers of the executive department during the OPA days. The enforcement, regulations, and practices under the OPA set-up were similar to the Gestapo of the Hitler days in Germany. During the war the people tolerated such things, but, although the President has not issued his proclamation declaring the war at an end, in truth and in fact, these are peacetimes, and the people do not want a return to OPA regimentation and price controls.

These drastic measures, as referred to by the President, met with violent opposition among the farmers of this country. They know too well that they would be harassed perhaps worse than they were during the war years, when OPA governed their activities. As evidence of the attitude of the farmers on this subject, and more particularly the attitude of the farmers with reference to the President's "drastic measures," proposed in his message to Congress last Monday, I am just in receipt of a letter signed by Mr. J. E. McDonald, commissioner of the Department of Agriculture in the great Democratic State of Texas. People of Texas and the other agricultural sections of this country certainly do not want to see Congress reenact price controls to any extent, and especially on farm commodities and farm products. Commissioner McDonald apparently felt so keenly his responsibility as commissioner of agriculture of the State of Texas, that he wired the President his opposition to the President's proposed "drastic measures." Mr. McDonald's letter to me follows:

NOVEMBER 19, 1947.

Congressman GEORGE B. SCHWABE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Perhaps you will be interested in reading copy of telegram I sent President Truman yesterday, giving Texas farmers' views on his request for power to establish controls:

"Hon. HARRY S. TRUMAN,
"President of the United States,
"Washington, D. C.

"In reference to your address to Congress asking authority to fix prices and wages, may I bring the following to your attention:

"First, this means return of OPA, black markets, and tens of thousands of Government bureaucrats. This would mean return to conditions which upset our economy and helped bring that existing scarcity in many commodities and goods. It would eventually result in our country having to import food.

"Second, despite existing shortages our country still has the most plentiful supply of food, cheapest prices, and best marketing system in the world. This is proven by the fact that foreign nations who have price and wage controls are now asking that we feed and aid them.

"Third, the only preventive against inflation is adequate production and economy in Government. Therefore, agricultural and industrial production should be encouraged and not discouraged through price ceilings.

"Fourth, our country has never been and cannot be prosperous with low prices. Furthermore, the national debt and taxes cannot be paid and the budget can never be balanced without a high price and wage level.

"Fifth, the economic and the American way is equitable adjustment of wages of both labor and white collar workers to meet the cost of living and not through Government bureaucratic control.

"Sixth, we know a government does not and cannot produce as this must be done by the people. Therefore, we must not swap our liberty for Government control and regimentation. It would be infinitely better for our people to suffer temporary inconvenience and privation than to lose our heritage of free and constitutional government.

"Free enterprise upon which this Nation was founded is functioning. Our farms and factories are producing. Let's don't return to bureaucratic controls which may destroy confidence, bring unemployment and throw our Nation into an economic tailspin."

Sincerely yours,

J. E. MCDONALD,
Texas Commissioner of Agriculture.

Apparently the commissioner of agriculture of the State of Texas is not alone in his views, expressed in his telegram to the President on this subject, for I am also in receipt of a letter from Mr. Math Dahl, temporary secretary of the Farm Commissioners' Council, which is an organization composed of the commissioners of agriculture and other heads of agriculture departments of the several States of this country.

I quote Mr. Dahl's letter:

NOVEMBER 21, 1947.

Hon. GEORGE B. SCHWABE,
Washington, D. C.

DEAR MR. SCHWABE: Although the special session of Congress has been called upon to deal with many pressing problems in a very limited space of time, the Farm Commissioner's Council sincerely hopes that some attention will be devoted to a program of combatting food shortages and high prices through increased agricultural production.

It is our belief that only by greatly expanding our output of food and fiber can this Nation meet the unprecedented demand for American farm commodities both at home and abroad. At the same time, we must cautiously consider any program designed to meet an immediate problem which does not take into account the long-range effects it may have.

Right now we are seriously concerned over the fact that the number of cattle and hogs on the Nation's farms is constantly declining. This can only mean that much less meat will be available during 1948 and the following year and also that its cost will be considerably higher.

High feed costs have accelerated the run of cattle and hogs to market in near-record numbers and at lighter weights, but this is not the only factor. The continuous barrage of official propaganda from Washington—always confusing and often conflicting—has completely befuddled American farmers on the question of what is in store for them. They are told that the prices of their products must be forced down, even in the face of constantly rising production costs. They are threatened with regulation and regimentation of their markets. Because of these uncertainties, they are decreasing their production at a time when they should be increasing it to meet the heavy foreign and domestic demands.

The Farm Commissioners' Council believes this dangerous trend can be reversed if Congress will assist by—

1. Easing the farm-labor shortage by recognizing that farm prices must be maintained at levels high enough to permit agriculture to compete with industry in the labor market.

2. Making more farm machinery available through encouraging labor and management to settle their differences without closing down farm-equipment plants.

3. Assuring the farmer that he will not be burdened with further Government controls at either the producer or consumer level.

We earnestly hope that the special session of Congress will consider every possible means of encouraging full farm production.

Sincerely yours,

MATH DAHL,
Temporary Secretary.

Mr. Speaker, I am also in receipt of numerous other telegrams and letters from my district and other portions of the Middle West, voicing bitter protests against the President's drastic measures and insisting that Congress refuse to follow the President's recommendations with reference to price controls. Democrats and Republicans alike, in overwhelming majority, expressed themselves freely and frankly against such action by Congress. The President's proposal certainly has incited turmoil and resentment on the part of the farmers of this country. His message has added to the confusion and perplexity of the farmers. Surely, he must have realized that the Members of Congress, who have the interest of the farmers at heart, will not support a program of such drastic measures. Surely, we all must realize that agriculture is the most basic industry of our civilization. The plight of our farmers is and always will be reflected through our economy. If the farmers are successful, happy and contented, the rest of our citizens usually are. But if the farmers are bewildered and confused and their future made uncertain by governmental and dictatorial regimentation, we may expect our whole economy to be in a state of turmoil and chaos.

Keep Watch for Liberty

EXTENSION OF REMARKS
OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. COTTON. Mr. Speaker, under leave to extend my remarks, I include an address by the Honorable ABE MCGREGOR GOFF, a Representative from Idaho, delivered yesterday at the Washington Memorial Chapel, Valley Forge, Pa., under the auspices of the Idaho State Society, DAR.

We who entered the Eightieth Congress early recognized Mr. GOFF's leadership and ability. During the first weeks of the session we elected him chairman of the Eightieth Club, which includes the 74 Republican Members who entered Congress this year. His subsequent services in this body have amply justified our expectations.

The speech which he delivered yesterday is a forthright statement. It is timely in that it applies the lessons of the past to the problems which we are today confronting on this floor. It is the creed of a soldier and a citizen. I felt that it should be inserted in this RECORD:

KEEP WATCH FOR LIBERTY

It is a great privilege to have this opportunity to speak to you today at this, the Twenty-fourth Annual Idaho State Sunday at Valley Forge. It is particularly fitting that this beautiful religious service should be under the auspices of the Idaho State Society of the Daughters of the American Revolution, and that the local sponsor is American Legion, Post 385, an organization in which I am happy to claim membership since shortly after the First World War. I have been impressed by the stately service and by this lovely memorial chapel, dedicated to the noble Father of Our County. But more than that, I am awed and overwhelmed by the historic surroundings, so rich in tradition and steeped in memories of the unselfish patriots who suffered in their frigid quarters here the rigors of the winter of 1777. This is my first visit to Valley Forge, and I am deeply conscious that I have walked on hallowed ground.

The State of Idaho, which I represent, played no part in the American Revolution. It was not admitted to the Union until July 3, 1890. President Harrison signed the bill by which Idaho became the forty-third State, and only 5 States are younger. Of our 48 States, Idaho is among the largest in area, being twelfth in size. With Washington and Oregon, it is one of the proud trio composing the Pacific Northwest, and while it has many high mountains, it is actually on the Pacific slope, and lies west of the main chain of the Rockies.

While the patriot army fought its grim struggle that winter here, against hunger, cold, frustration, and despair, the area that was to become the State of Idaho lay undisturbed, sparsely peopled only by the Nez Perces, the Coeur d'Alenes, the Blackfeet, and smaller Idaho tribes of our American Indians. It was a part of an illimitable wilderness, unknown and unexplored. Its snowy peaks, its high, rich, mountain valleys, its tumbling streams and clear mountain lakes echoed only to the lordly bugling of the elk and other voices of the deep forest. Fortunately, in this bustling, present-day world, much of that primitive beauty still remains. In spite of the great productive irrigated farming areas of the southern plains of the State, of its mines, its lumber mills, and broad wheat fields in the northern panhandle area, there still remains the largest stand of precious white pine timber in the world. While pavements of many a busy street feel the quick step of the worker, off on his morning journey to office or factory, or screech to the skidding tire of a bus, it is still a new country, and the pioneer tradition, only two generations removed, is still fresh and strong.

But we possess a strong link with the founders of the American Republic. President Jefferson, who had played so major a part in making articulate the basic longings and principles in every patriot's breast, in the year 1804 dispatched Meriwether Lewis and William Clark to seek the Pacific Ocean. These two young Army captains were both much too young to have served in the War of the Revolution. The great uncle and foster father of Meriwether Lewis was a brother-in-law of George Washington, an outstanding patriot and munitions maker of Fredericksburg, Va. Lewis met Clark while fighting the Indians at the Battle of Fallen Timbers in conquest of the then Northwest, while under the command of Mad Anthony Wayne, one of Washington's brigade commanders at Valley Forge. William Clark, of pioneer Virginia stock, had three older brothers in the Revolution, one captured at the battle of Germantown and who died as a result, and another was Gen. George Rogers Clark, the conqueror of Kaskaskia and Vincennes.

The journal of the expedition led by these two intrepid men clearly describes the country through which they passed, their trail through Idaho, and the enthralling incidents of their trip and their return are thus preserved. Their guide through Idaho was Sacajawea, who was born in the Lehmi Valley in Idaho, and whose father was a Shoshoni Indian chief. She was a brave, gentle, and patient Indian girl, who had been captured by an enemy tribe in what is now Montana when she had accompanied a party of her own tribesmen who crossed the mountain to hunt buffalo. Later, during her captivity, she married a French-Canadian trapper, and joined the expedition when her husband was hired as an interpreter. A dramatic and touching incident of the journey was the meeting of Sacajawea with her brother, then a chief of the Shoshoni. She was a true heroine, whose presence won the friendship of the Indians, and her name is honored much in the land from the Rockies to the mouth of the mighty Columbia.

The winter of 1777 was the grim period of the Revolution. It was a time of widespread disillusionment and almost of despair. In spite of all the brave and stirring statements, enthusiastically endorsed at the commencement of the struggle, independence and liberty seemed far off, and people had begun to realize the fearful sacrifices necessary to attain their freedom. Today, as then, many Americans ponder on whether, after all our struggles, after the fearful cost of what on the surface may seem a fruitless victory, we should continue with resolution our struggle for a better world in a war which is just as real as that which existed to the last flash of a shell's explosion. The American Revolution had a profound effect on the future of human liberty. The clash of ideals in the present economic and ideological conflict between the two great divisions of our modern world are a part of the same struggle, except on an infinitely larger scale. The next few years will tell whether the dark cloud of force, oppression, and brutality will blot out the sun which lightened the brows of the world's hopeful, enslaved millions. The sturdy founders of our Nation gave liberty to one country—and lit the torch of the French Revolution.

Today we seek peace for the world. The architects of the revolution had great vision. Ours, in proportion, must be even greater. The graceful chapel in which we now conduct this memorial service is dedicated to the everlasting honor of the illustrious Washington. Courageous, steadfast, and patient, General Washington shared his soldier's suffering here, ever upheld by a calm faith in the imperishable principles which constitute the basic rights of man.

While Idaho is far removed in time and distance from the original Thirteen States, we claim the same proud heritage of liberty. In every hour of trial since Idaho's admission to the Union, in all the fair days when there was work to be done, as our great Nation has gone forward to its destiny, Idaho has performed its full share. Like a strong young horse, it has arched its mane and stepped more briskly with each burden. The entire University of Idaho corps of cadets marched off as a unit to the Spanish War. Idaho's sons and daughters, the sturdy toilers in mine and meadow, the lumberjack, the stockman, and the Indian tribesman—none has failed you. When the Constitution needed a defender, when law and order sought a champion, we gave you Borah. We share now with you, of the glorious Thirteen, the responsibility to fashion a new world.

Today, one government, one hard, ruthless cordon of bitter, godless men who sit in the Kremlin, has ripped our post-war world apart. At the council table of nations other voices may have seemed to be heard siding with the Russian Republics, but a child could detect the projections of the ventriloquist as a satellite's mouth has snapped open and closed. We have seen Russian leaders, whom we so generously supported when in direst need, completely ignore that help. There can be no question as to the quantity and extent of our aid to Russia in World War II. You know how we depleted our own natural resources, how our people toiled, sweat, and sacrificed producing war materi-

als. A large share of these materials was dispatched in countless boatloads to this ally.

Early in the spring of 1943, while a member of our armed forces in the Middle East, I stood in our airplane assembly plant in the stewing heat of Abadan, at the head of the Persian Gulf, and saw its vast production. At windswept Ahwaz, I watched the long, loaded, lend-lease trains chugging northward, through that central Persian railroad center. From a plane, I watched the truck processions winding their way along the mountain defiles to Teheran, to go from there to the Caspian Sea. All this was but a part of our aid. The government to whom this was so freely given deliberately concealed our help from its people, because this fraud would best suit its ends. The Russian high command would permit no generous feeling to be raised toward a country which could produce so vast an array of material by private enterprise. The inner party circle reasoned that questions might be asked by the army private or the man on the street as to how such profusion could be possible in America where there existed private capital.

Each one of you knows how the American military and naval effort was minimized or left unmentioned. The ordinary Russian citizen outside the inner high party councils knew nothing of our army's halt before Berlin, to give the advancing forces of our eastern ally the honor and gratification of entering the city in triumph. According to the Kremlin, it was the formal Soviet entry into the war against Japan, the crumbling of the Japanese land forces before the all-conquering Red Siberian Army on the Asiatic mainland, which was the sole cause of the surrender formalized in Tokyo Bay.

We can pass over the ingratitude. We have almost become accustomed to that. The studied effort to wreck the effectiveness of the United Nations, upon which all peace-loving people of the world had put such hope, is infinitely of more consequence. We have seen our motives misrepresented and distorted, our leaders villified, and our Nation painted as a greedy, self-seeking giant, intent on domination over the rest of the world. Each concession that we made at the conferences immediately preceding and following the surrender of Germany and Japan only increased the demands upon us. Of course, we should have been less gullible. True, we should not have been taken in so easily. We could have had a definite understanding when Russia's back was to the wall. But it was not the first time that we sought no material benefit, nor failed to name a price for what we freely gave.

Then, long after the selfish aims of the Soviet were clearly unmasked—nay, brazenly and openly exposed—we took a firmer stand. We have taken our stand against a tyranny equally as menacing to the world as the Axis regimes so lately overthrown. Voices have been raised in this country, urging that we make further concessions, that we return to conciliation at any cost. We cannot temporize, we cannot concede, we cannot disavow principles before any government which rejects all reason. We deal with leaders who pretend to their people that a military attack by us upon them is inevitable. We cannot reason, we cannot cooperate, with such a group. There is no middle ground when complete repudiation of our Bill of Rights is alone acceptable. They say that our system and their system cannot continue to exist in the same world. We remember here at Valley Forge that men died because they believed in human liberty. And we also remember here that men came to Pennsylvania to escape tyranny.

To those deluded enough to counsel submission, I repeat the words of Hiram Mann:

"No man escapes when freedom fails,
The best men rot in filthy jails;
And they who cried, 'Appease, appease,'
Are hanged by men they tried to please."

The very nature of a dictatorship demands a continuing struggle to bring other nations into submission. I can see no other course if we have faith in our principles, than that we should stand by them steadfastly and be fully prepared to defend ourselves if attacked. We must be prepared to make sacrifices to help those nations who need our aid and are willing to exercise some self-help. It is an old, old struggle.

Patrick Henry voiced in a church his defiance of a foreign force which sought to subjugate freemen. Unpleasant as the thought may be, I find no incongruity in counseling, in this chapel dedicated to the noble Washington, steadfastness, patience, and preparation to defend ourselves, should that unwelcome necessity present itself. Since all our altruistic actions and all our attempts to promote a freer world have aroused only hostility, we must hold to the course of firm determination in the right. In every citizen's heart is the grim spectre of a possible armed conflict in the near future. That attack need never come. We shall never be the aggressor. Dictators do not start wars unless convinced they can win. We speculate with horror upon what might be the situation in the world today had the first atomic bomb been produced by the Soviet.

After all our confident predictions of world unity of a few years ago, what hope can I hold out for the future? Dismal as the prospect seems, there is still a factor which holds real promise.

Let me remind you that the instinct for individual freedom, for personal liberty is innate in every member of the human family. We know that there are four impulses common to all mankind, no matter what his state of civilization may be—first, man must satisfy his hunger; second, he is determined to perpetuate his own kind; third, he recognizes a God or supreme being; and fourth, man has an innate yearning for individual liberty. In spite of every effort to mislead, restrict, regiment, and extinguish personal liberty, no matter how great the tyranny, this yearning is bound to find its outlet. No chain can bind, no prison can confine, no slavery subdue this innate urge, natural to the human breast as is its measured heartbeat. No matter how complete seemed to be the subjugation under which men have been ground down, they have risen in freedom. However far distant the day, perhaps in the limitless sweep of Siberia, a leader shall rise who will kindle the cause of freedom. Surely in this modern world, millions of the human family cannot be kept indefinitely in mental or physical bondage. Education is a potent force to promote desire for human rights. The world does move forward. It will continue to do so, in spite of the crisis which now seems almost to overwhelm us. If we did not believe this, we could not reverently and in perfect trust raise here at Valley Forge our voice and spirit in words of supplication and of praise. That trust has sustained Americans in other times. It will sustain us now.

One hundred and seventy years ago, as a few dim lights glimmered through the darkness, some ragged sentinel, whose name has long since been forgotten, walked his lonely post. His weary feet crunched the snow along an earthwork which stretched on yonder hill. His then unheralded task was to keep watch for liberty. Cozy, warm, and well fed, the British Army rested in comfort in Philadelphia. No enemy disturbed that ragged sentinel, but vigilantly he peered into the intervening darkness, ready to protect his comrades from sudden attack. So may each one of us in another day, faced with another danger, strong in the faith of the brave Americans whose memory we cherish, keep now our own watch for liberty.

Radio Address to My Constitutents

EXTENSION OF REMARKS
OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on November 22, 1947:

Dear friends of the Triple Cities and my congressional district, some men I have known in Congress used to get hysterical and frightened when they were attacked viciously by big-shot labor barons and agitators.

One man I thought a great deal of said to me one day, "I never answer my attackers. I never pay any attention to them; I simply turn my other cheek."

"Brother," I answered, "if I did that back home in the Triple Cities, the racket boys would slap me around so much that my cheeks would not only be red, they'd be swollen."

"But what can I do," my friend wailed, "they'll organize meetings against me. They'll smear me worse than ever."

"Fight them back," I advised. "Fight them until they stop their lying about you."

"Look at my case," I continued, "there are 300,000 of the finest patriotic Americans in the country who live in my district. But there is also a noisy, lousy, vicious handful of troublemakers who work like beavers, day and night, trying to turn the great majority against their Congressman."

If I laid down an instant, if I did not remain on guard eternally, these large mice would gnaw the bonds of affection and confidence the rank and file of the people have shown for me in the past eight elections.

While I am in Washington, these same enlarged mice do a lot of playing at home. It takes all the vigilance and alacrity a man can possibly command to keep them in their holes.

Last week the editor of a labor weekly continued his harrangue about my vote for the Taft-Hartley Act. In so doing, he is harping on a wornout theme and is decidedly out of step with the PAC, with whom he and his pals are anxious to get together in order to lick me.

The PAC seems to have forgotten all about the Taft-Hartley Act, because they know to holler about it sounds like so much sour grapes. It's the law of the land, boys, and it's going to stick. Although, I've heard you big shots gripe and gripe about how this bill hurts you, not one real laboring man has written me expressing any concern about it.

Not one working man or woman has told me that the Taft-Hartley bill has caused working hours to be lengthened, wages to be cut, or working conditions made worse.

The truth is their toes haven't been stepped on and they know it. Congress was only after the racketeers. The patriotic union member is not in that category.

So PAC and the A. F. of L., for that matter, in other congressional districts are now concentrating on more important issues. They know they can't get anybody excited over something that hasn't hurt them and they are sure they can't make political capital unless they have an issue.

I want to ask our friend, the editor, then, why keep whistling in the wind when the rest of organized labor everywhere else is now soft-peddling criticism of the Taft-Hartley Act.

Is it because you are misinformed as to the contents of this law? Or is all your blast at me boiling down to the same old personal issue that it has been for the past 9 years?

Why should I get steamed up over opposition now loudly asserting itself when it has always been there ever since I first ran for Congress. It's just yelling a little more loudly, that's all.

The answer is, I couldn't please these babies if I had the patience of Job, the humility of Moses, the faith of Daniel, or the wisdom of Solomon. They would be anti-HALL first, last, and forever, regardless of how much I ever tried to kotow to them.

Well, I don't intend to please them. The people of this district would resent my trying to please any pressure group no matter how friendly it might be, which these boys aren't.

Fill your pages with smear, my friend; you can't scare me or reach as many folks in my district as are within sound of this program. As long as there is free speech in this country, I can defend myself from the attacks of a few bent on personal vilification.

And the grudge is personal. Outside this district, free American labor has already found salvation in the Taft-Hartley Act. Here in the Triple Cities, one labor leader publicly announced this law will allow him to march into a local shoe factory and organize the workers into craft unions.

Why all the stupid opposition to me, then, because I voted for a law this organizer says give him new privileges?

You know the answer. The undercover boys just want to start something. Well, bring them on. They've got to have an issue and every issue they've grabbed thus far has been a hot potato they couldn't handle.

The trouble with them is, they want to resort to personalities. They want you to fight the man you elected just because they are sore at him and are carrying the 9-year-old grudge.

You and I aren't interested in their grudges. We want to save America. We want to strengthen this country. We want to raise the standard of living so that all the people can enjoy the fruits of work and of far-sighted planning.

We haven't time to fuss with their picayune mouthings. If they want to yell, let them get behind us to build a greater Nation than ever before.

There's enough here for everybody. There's a chance for each American regardless of how humble his origin or from what race, creed, or color he springs.

Thank you.

Resolution of the Guam Congress

EXTENSION OF REMARKS

OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. BRADLEY. Mr. Speaker, during the hearings which have been held on bills which would provide an organic act for the people of Guam the question has been raised as to whether or not the people of that island desire to have their government remain under the jurisdiction of the Navy Department.

The Guam Congress, on July 5, 1947, adopted a resolution which sets forth the desire of the people "That the Navy Department retain control and administration of the government of Guam." The resolution is as follows:

Whereas the people of Guam through their official and duly elected representatives, the Guam Congress, are cognizant and appreciative of the Navy Department's endorsement of the Hopkins' Committee report regarding Guam's need of becoming permanently affiliated with the mother country by according its inhabitants with American citizenship and providing also, its people with civil rights by the enactment of an organic law; and

Whereas the Navy Department, throughout the 49 years of administration of the Island of Guam has enjoyed the full confidence and friendship of the people of Guam; and

Whereas the report that the Navy Department in harmony with other Departments of the Government of the United States has officially gone on record as endorsing and approving the Hopkins' Committee report and has strengthened the friendship, good will and confidence which the people of Guam has consistently held and maintained with the Department of the Navy; and

Whereas the duly elected representatives of the people of Guam, the Guam Congress, have always maintained that the Navy Department is deserving of commendation for its sincere interest and efforts for the betterment and general welfare of the people of Guam. The people's long and intimate association as well as the protection afforded them during the 49 years of Naval administration would surely be of sufficient reason for anyone to recognize, despite the overdue extension and recognition of the people's faithfulness and desire to become a component part of the American Republic; and

Whereas the people of Guam through their official representatives, having thoroughly familiarized themselves with that part of the Hopkins' Committee Report recommending immediate granting of United States citizenship, an enactment of an organic act for Guam and a civil government for Guam, fully recognized and concurs with that committee, for which the people of Guam understood the Navy Department has fully endorsed and approved, that the Navy Department which had a complete understanding of the people's conditions and handicaps brought about by the effects of the last disastrous war, through the long years of experience and administration of the government of Guam is not only better equipped to administer the island affairs and government of Guam but also is in a better position than any other department of the United States to administer Guam by virtue of its facilities and understanding of the economic situation and position of the people of Guam, to further and carry out the rehabilitation of the people of Guam: Therefore be it

Resolved by both houses of congress, the house of assembly and the house of council in joint session assembled, That in the light of present economic conditions on the island and by reasons of the economic plight of the people of Guam to adjust their economic position and to rehabilitate themselves and be in a position to compete economically with the outside world not affected by the disaster brought about by the last war, petitions the President of the United States and the Congress of the United States that the Navy Department retain control and administration of the government of Guam, if and when the bills in Congress of the United States, granting American citizenship to the people of Guam and the enactment of an organic act for Guam are approved by the United States Legislature, until such time as Guam and her people are fully rehabilitated and the economy of the island is fully recovered and until the people of Guam through their duly elected representatives decide to determine, with the approval of the United States Congress the ultimate political destiny of Guam and its people in accordance with the provisions of the Hopkins' Committee Report as regards the transference of the administration of Guam, from one Government agency to another; be it further

Resolved, That the governor of Guam, the official representative of the United States, be requested to transmit this resolution via the Navy Department to the President of the United States and the Congress of the United States and that copies of this resolution be furnished the Navy Department, Department of Interior, State Department, Labor Department, and other Government agencies concerned.

Done this 5th day of July in the year of our Lord 1947.

E. T. CALVO,
Assemblyman of Sinajana.

Communists and Bill of Rights

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Greensboro Daily News on November 23, 1947:

COMMUNISTS AND BILL OF RIGHTS

Americans are always talking about Communists in their midst but they don't seem to be doing much more about them than about the weather. This makes a lot of 100-percent Americans who believe in quick action nervous and is not too comforting to the more easy-going.

But the problem is more complicated than it looks on the surface. About the keenest analysis of it we have seen appeared recently in the Chapel Hill Daily Tar Heel, an article entitled "The American Dilemma" by Bill Crisp, a graduate student in the University Law School.

He raises three questions: (1) What can we assume about the Communists? (2) What can we prove about them? and (3) What can we do about them?

The answer in brief to No. 1 is: The worst. The answer to No. 2 is: Not that much.

But the answer to No. 3 is the gist of the article. We have a Constitution and the real question is what can be done under it. The author notes that the Supreme Court of the United States has decided that "freedom of speech and press can be legally prohibited only if its exercise is of such a nature as to constitute one of the following acts:

"(1) An advocation of the overthrow of government by force or violence; (2) an incitement to riot; (3) an advocation of changing the status quo by some unlawful means; (4) an intentional provocation of the commission of any crime; (5) an intimidation of parties concerned with an impending judicial decision; (6) a giving of aid to the enemies of the United States; or (7) a revealing of government secrets to any person or government not in the confidence of the United States for that specific purpose. The reader should keep in mind that anyone today may be punished for utilizing speech or the press, provided it is judicially established that his speaking of writing constitutes one of these acts."

Can activities of Communists be made illegal without infringing on constitutional guarantees of freedom of speech, press, and so on? The answer appears to be "Yes," if the activities are those mentioned above; otherwise "No."

Another pertinent question is whether courts can assume that proof of membership in the Communist Party is equivalent to proof that the member advocates overthrow of the Government of the United States by violence. Lower courts differ, but the Supreme Court of the United States, says Crisp, has indicated that it thinks not.

Crisp concludes that it would be better to listen to Communist lies than to so abuse constitutional safeguards that no one could be sure of proclaiming the simple truth with impunity, and that in the last analysis the antidote for communism is not suppressive legislation which tries to abolish an idea by making its advocacy illegal.

This point of view, of course, is in accord with our traditions. Under our system a man can be punished for what he does, not for what he thinks. This system has worked too well so far to be discarded in haste. Of course, if Communists commit illegal acts they should be punished as other criminals are. But we cannot make mental conviction equivalent to judicial conviction without bidding the Bill of Rights a long farewell.

Facts About the Hawkeye State

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. LeCOMPTE. Mr. Speaker, the great State of Iowa is first or close to first in so many achievements such as corn-fed cattle, poultry and eggs, corn, hogs, as well as being the State with the least amount of illiteracy and the fewest foreign-born citizens, that it is interesting to note that our State has achieved greatness in many other respects. Under unanimous consent to extend my remarks, I submit the following editorial by Mr. Will D. Allender of the Chariton (Iowa) Leader of November 18 in which he calls attention to a number of other "firsts" for the Hawkeye State:

FACTS ABOUT THE HAWKEYE STATE

Iowa is an Indian word meaning "This is the place" or "Beautiful land."

Iowa ranks first in the percentage of farmers owning automobiles and fourth in paved road mileage.

Iowa, exceeded only by Texas, Illinois, and Pennsylvania, ranks fourth in railroad mileage.

Iowa has 610,000 telephones.

Iowa has more frozen-food lockers than any other State.

Iowa has more than 9,641 miles of primary roads and 92,921 miles of secondary roads.

Iowa has 315 public libraries.

Iowa has 43 daily newspapers and 439 weekly publications.

Iowa has 28 commercial and 4 noncommercial radio stations.

Iowa's 701,824 families own 621,971 automobiles, 671,000 radios, 580,000 residence phones and have 612,706 electricity-equipped homes.

In 1946 Iowa's income from furs exceeded Alaska's fur income by more than a million dollars.

Iowa has 4,000 churches and 2,500 ministers and priests.

Iowa has the largest legitimate theater in the world.

Iowa had the first municipal golf course in the world.

Use of Surplus Foods

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. ROBERTSON. Mr. Speaker, I think it is very important when considering the over-all problem of relief to turn our thoughts to the problem of disposal of surplus foodstuffs handled by the Commodity Credit Corporation and the Department of Agriculture. Congress should make it possible for the Department to place these foodstuffs in relief channels before there is waste or spoilage.

We all sadly recall the unfortunate burning of potatoes with kerosene last spring. If these potatoes cannot be successfully shipped immediately before they spoil, then most serious consideration should be given to the possibilities of dehydration.

Similarly, poultry should be exported before it reaches a "subnormal" quality.

Today, I am told by the Department of Agriculture, the CCC has purchased 28,000,000 pounds of dried whole eggs and 61,000,000 pounds of frozen eggs, but these have not been sold in export as all bids have been below what the Department feels is a fair price for these eggs. When we are facing food shortages over the world, I feel we should find some method of putting these eggs on the list of foodstuffs for relief.

In all cases, we should provide some method whereby the Department of Agriculture can and will dispose of surplus food during this period of world food crisis.

I have recently received a letter from the Reverend George O. Parish, State director of the United Temperance Movement of North Dakota. I include herewith his letter:

UNITED TEMPERANCE MOVEMENT,
OF NORTH DAKOTA,
Fargo, N. Dak., November 11, 1947.

Congressman CHARLES R. ROBERTSON,
Washington, D. C.

DEAR FRIEND: Like all interested persons, I have been keeping close track of the proposed aid to European nations and certainly I would be very unchristian indeed if I were not in favor of doing all we can within reason to help. I think you must know that I am as much opposed to the advance of anything that looks like communism as any good American can possibly be. However, we have Christian ideals that would make us go to the rescue anyway.

The reason for this letter is that I have noticed by recent reports that we have possibly millions of dozens of eggs in cold storage and likely millions of pounds of poultry in the same type of storage and I do think that something ought to be done to see to it that these food items are moved out to feed the hungry of Europe rather than to remain in cold storage in this country so long that they will finally be dumped in the ocean or in some river, or kerosene poured over them and thus destroy them by fire.

The American public is fed up on the idea of destroying foodstuffs or permitting them to remain in storage so long that they have to be destroyed. I am very sure that you agree with me on this point and I think, without a doubt, this situation should be aired on the floor of Congress to try to force the administration into using these food supplies. As you know, we live in a state that grows a lot of potatoes and if potatoes can be kept in a warehouse all winter without much spoilage, surely potatoes can be shipped overseas to help to feed the hungry. And how much better this would be than to pour kerosene on them as has been done in the past and have ton after ton of good foodstuffs destroyed in this fashion. If it is not practical to ship potatoes in the raw it is practical to ship them after they have been dehydrated.

As a minister of the gospel I certainly wish to lift my voice against the wanton destruction of foodstuffs that might be used for the hungry people. I am certain that America cannot expect the good God of Heaven to smile upon her while we continue to use methods of this kind. I have just been covering a release to the press by one of our Congressmen and it has brought this matter to my attention. I am sure that we can count on you to do everything in your power to check the terrible waste that has been taking place under the former administration and possibly will continue to take place under the present administration unless someone raises the roof.

Very truly yours,

GEORGE O. PARISH.

Freedom Train

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert two letters, which appeared in the November 19 edition of the Buffalo Evening News, and which relate to an incident in connection with the Freedom Train:

LANA TURNER WAS WELCOMED, BUT NOT LITTLE LAME BOY

When our class visited the Freedom Train we waited in line for many hours, as did everyone else. We didn't mind because we knew that it was a great honor to be able to see our original documents of freedom. While we were there Miss Lana Turner arrived and was gallantly ushered through the train with much ado while everyone else was stopped.

A little later a tall man appeared with a little boy on his shoulder. This boy had braces on both legs. The man approached one of the guards and asked if they might see the train right away, but they were denied admittance. They turned away, a very dejected pair.

We think that this was a very poor sign of democracy on the very spot where the Freedom Train stood. This little boy could not see the documents of his forefathers just because he was not able and because he was not a great celebrity.

ELEANOR WOOD.
CONNIE WOOD.

KENMORE, N. Y.

ANOTHER SCHOOLBOY TELLS SIMILAR STORY OF TRAIN

Our class was fortunate enough to see the Freedom Train. While we were there Lana Turner came, so the officials stopped everybody from going in and let Lana Turner go through by herself. A man with a small, lame boy on his shoulders asked if they might be able to go into the train without having to wait in line.

They said no. What a treasured memory this little boy might have had.

RICARDO SCOFIDIO.

TONAWANDA, N. Y.

Poultry and the Steagall and LaFollette-Taft Amendments

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, Congress passed the Steagall amendment to the Price Control Act, and the LaFollette-Taft amendment to the Commodity Credit Corporation Extension Act of 1944. Ninety percent of parity was supposed to be guaranteed to certain producers. The poultry producer was one of them. I thought that the administration would follow the provisions of the Steagall amendment after the La Follette-Taft amendment was passed directing the administration to follow it, but the Steagall amendment was not lived up to.

First, in the winter of 1943–44 on eggs; second, in the winter of 1943–44 on hogs; third, in the spring of 1946 on milk; fourth, this very hour and minute on poultry.

First, we had the $300,000-a-year president of a foreign vegetable oil soap company, Mr. Charles Luckman, projected into the food program. While soap went up, chickens went down in price. Then under date of November 10, 1947, the Department of Agriculture announced its purchase program, which is in part as follows:

	Cents per pound
Fowl, producer prices (over 4½ pounds live weight)	20.00
Grade A fowl (New York style dressed weighing over 48 pounds net per box of 12 birds)	28.00
Fowl, producer prices (live weight from 3½ to 4½ pounds)	15.00
Grade A fowl (New York style dressed weighing from 36 to 48 pounds net per box of 12 birds)	22.50

However, the United States Department of Agriculture in its latest monthly report on agricultural prices states on page 5 "Chickens, live, per pound, parity, 27.2 cents." Ninety percent of parity, then, is, by any but New Deal arithmetic, 24.48 cents per pound.

Mr. Luckman not only was off on the wrong economic foot when he began his program to be the champion chicken killer of all time, but the United States Department of Agriculture itself now indicates a support of only 15 cents per pound on poultry when the law says 24.48 cents per pound. If the Steagall amendment is not going to be followed, it should be repealed; if it is a part of the law of the land, it should be followed without hesitation or circumvention.

The producer's hourly wage is determined by the returns which he received for his products. This administration again demonstrates its willingness to roll back the food producers' hourly wage, even if the law of the land is not followed when the roll back takes place.

Does Congress Have the Right To Ask if You Are a Communist?

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by Samuel B. Pettengill on November 9, 1947:

DOES CONGRESS HAVE THE RIGHT TO ASK IF YOU ARE A COMMUNIST?

If a committee of Congress asked you whether you were a member of the Communist Party, would you refuse to answer? Or would you say, "Of course not. I'm an American and proud of it." I am sure that is what you would say. But a campaign is now on to discredit Congress because the House Committee on Un-American Activities has asked that question of 10 Hollywood witnesses. They all refused to answer on the ground that Congress had no right to ask the question. The committee has, therefore, cited them for contempt.

I believe Congress did have the right to ask the question, and will give my reasons. But, first, let me say that it is to our credit that we are jealous of our civil rights. I have defended those liberties many times when it was unpopular to do so, and when these witnesses, now cited for contempt of Congress, were silent. But this case boils down to the single point: Did Congress have the right to ask the question?

Whether the congressional committee has had access to information the average person does not possess—such as the files of the FBI—we can only surmise.

I make no charge against anyone whatever. I assume that these persons refused only because they honestly believed that no one has any right to ask them what party they belong to; that that is their private business. Many well-meaning people, on the spur of the moment, seem to agree with them. But let us look at both sides of this case.

HOW MANY STARS IN THE FLAG?

I am reminded of a bright young Italian who was being given his final examination before being made a naturalized citizen. The judge asked him, "How many stars are there in the flag?" Tony answered, "Ninety-six, Your Honor." A large flag was hanging on the wall of the court room, and the judge said, "Tony, can you count?" Tony said, "Yes, Your Honor, but have you looked at both sides of the flag?"

I have always admired Tony for that. He had an honest and inquiring mind. Tony had taken the trouble to actually look. On both sides of the flag, there were 96 stars, even if there are only 48 States in the Union.

So, let us look at both sides of the flag. Let's take a glance at our primary election laws. They will show whether it is ever proper for a public official to ask what party you belong to. Our primary election laws may prove to be a lighthouse in a sea of nonsense.

Most States provide that in order to vote in a primary election the citizen must state what party he belongs to. This is to prevent cross-voting. I mean by that, Democrats voting a Republican primary ballot, or vice versa, in the hope of nominating a weak candidate on the opposition ticket who will be easy to defeat in the fall election. Does that invade anyone's rights?

WHERE YOU HAVE TO DECLARE

If a man wants to help nominate candidates on the Democratic ticket, he must declare that he is a Democrat. Same with a Republican, or a Socialist, or a Communist. If he refuses, he just won't be given a ballot. He can't vote unless he tells what party he belongs to. And the answer he gives may be challenged by others.

So there we have one case where public officials do have the right to ask what party you belong to.

Another example is found in our naturalization laws which require an examination as to whether the applicant owes allegiance to a foreign government.

You must keep in mind that modern communism is much more than a simple belief in government ownership of property, or the equal sharing of goods. I will give you evidence that it involves allegiance to a foreign government.

Now here is another case. Eight years ago, before the war broke out, Congress enacted "that it shall be unlawful for any person employed in any capacity by any agency of the Federal Government (for example, a postman, or an Army officer) * * * to have membership in any political party or organization which advocates the overthrow of our constitutional form of government." I am sure you think that is a good law. You, as a taxpayer and loyal citizen have the right to insist that your Government keep fifth-columnists out of Government offices, whether they are members of a German-American bund, or the Communist Party. That law makes it the duty of the employing official, whether a Cabinet member, or a postmaster, to ask and find out if the person seeking employment belongs to a "political party or organization which advocates the overthrow" of your Government.

So you see the law is that plain, homespun, honest, loyal Americans have some rights to this country and its institutions, as well as those who are able to charter an airplane from Hollywood to Washington to stage a mass demonstration to discredit the Congress of the United States.

THE PRESIDENT EXERTS THAT RIGHT

If a committee of Congress hasn't the right to expose Communists who attempt to secretly poison motion picture scripts that are shown in every American Army post, then President Truman has no business to ask for public funds to clean Communists out of Washington.

The argument seems to be that we must just fold our hands and wait for Stalin's men to take us over. Stuff and nonsense. Congress and the courts have a nation to defend. They have scores of millions of loyal Americans, such as you, to think of as well as a few persons, who for one reason or another, say that no one has the right to ask whether they are Communists. If we have gone so soft as not to understand that, we don't deserve to survive in this tough world.

That Communists have tried to invade Hollywood against the resistance of loyal Americans there, has, I think, been proven to your complete satisfaction, by the testimony of such men as Rupert Hughes, Robert Taylor, Robert Montgomery, Adolph Menjou, and Gary Cooper, to mention but a few. These

men need your support to protect this great and important industry from a foreign invasion.

This matter is important to you, not only because you and your children go to the movies, but because it is Communist tactics to discredit Congress and all parliamentary bodies.

THE AIM OF COMMUNISM

Listen to this from an opinion by the late Chief Justice Harlan F. Stone, of the United States Supreme Court, quoting from the Statutes, Theses, and Conditions of Admission to the Communist International. This is what Judge Stone found modern communism to be.

"The aim of communism is to destroy parliamentarism." That is, it repudiates the republican form of government guaranteed by our Constitution—a government by representatives elected by and responsible to all the people, and not to a tiny fraction of the people, as in Russia.

Now again from Chief Justice Stone, quoting from Communist sources:

"Each party desirous of affiliating with the Communist International would be obliged to render every possible assistance to the Soviet Republics in their struggle against all counterrevolutionary forces. * * * It has become absolutely necessary for every Communist Party to join systematically * * * lawful and unlawful organizations. * * * They should create everywhere a parallel illegal apparatus, which at the decisive moment should do its duty by the party, and in every way possible assist the revolution. * * * A persistent and systematic propaganda is necessary in the army where Communist groups should be formed in every military organization."

And then Mr. Justice Stone quotes the father of modern communism, Lenin, himself, as follows:

"The doctrine of class war * * * leads inevitably to the recognition of the political supremacy of the proletariat, of its dictatorship; that is, of an authority shared with none else, and relying directly upon the armed force of the masses. * * * It is clear that where there is suppression, there must also be violence, and there cannot be liberty or democracy. * * * The proletariat needs the State, not in the interests of liberty, but for the purpose of crushing its opponents."

That is what Lenin said.

So, what do they care about civil rights? They demand that we protect them under our Bill of Rights so they can climb to power and then deny all civil rights to us!

NOT AN AMERICAN POLITICAL PARTY

These quotations from official Communist sources, cited by Justice Stone, show that the so-called Communist Party is not an American political party in the sense we, and our fathers, understood that term, but is a section of an international conspiracy directed, largely, from Moscow.

After considering these facts, after looking at both sides of the flag, I am sure all well-meaning Americans will hold that your Congress has every right to ask whether anyone is a member of the Communist Party.

Chief Justice Stone wrote the opinion from which I have quoted, 4 years ago. He did not live to hear Vishinsky bitterly attack the United States and carry on his subversive propaganda in the forum of the United Nations right in the city of New York.

PUT AMERICANS ON GUARD

If Justice Stone had lived until now, what might he say today? I think he would say, as Washington did, "Put none but Americans on guard tonight."

No, my friends, devoted as we are and must be to the civil rights of every loyal American, these rights must be harmonized with the right of this nation of freemen to live.

Abraham Lincoln once asked, "Is there, in all republics, an inherent and fatal weakness? Must a government of necessity be too strong for the liberties of its own people, or too weak to maintain its own existence?" Lincoln answered that question, no. He believed and died in the belief that the liberties of our people and the preservation of this Republic go up or down together.

Let me repeat that I make no charge against any of these 10 witnesses. I have limited my remarks to the one question upon which the whole matter turns—Did Congress have the right to ask whether they were members of the Communist Party? I believe Congress had that right. I hold that Congress has as much right to have Communists labeled as it has to require food and drugs to be truly labeled, as it has to require the ownership of newspapers to be honestly declared.

Justice Stone was devoted both to the civil rights of the individual and to the preservation of this Republic. If you agree that he saw the issue plainly, you should give active support to Chairman THOMAS and the House Committee on Un-American Activities. They are fighting to save our Republic against forces seeking its overthrow.

Problems Before the Special Session of Congress

EXTENSION OF REMARKS

OF

HON. FREDERICK A. MUHLENBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. MUHLENBERG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast made by me on November 16, 1947, over station WEEU, Reading, Pa.:

Tonight I go down to Washington to attend the so-called special session. It's really a continuation of our session that recessed the end of July. There are two main items—one, stopgap aid to Europe to cover the period before any final aid under the Marshall Plan can be made effective and, second, some consideration of whether or not prices can be held or reduced by new Federal legislation.

Now speaking of the first item, I wonder if we fully realize the extent of the foreign aid already given since the shooting war stopped. Well, from July 1945 to July 1947 it's between nineteen and twenty billion dollars. And whether our citizens know what is already pledged in addition to that amount—it's already, and before we go into session, about four and one-half billions more. Senator BYRD has just issued a report based on the Budget Bureau reports that gives some astonishing figures. Here are a few of them. Out of the total still promised sixty million is earmarked for Russia and her satellite nations; two and one-half billions for the eight other major nations of Europe; a billion dollars for the far eastern nations; China, Japan, Korea and the Philippines; and about half a billion to miscellaneous small nations both in Europe and the East. And in addition this does not include about eighty-six millions more which is the United States contribution to the IRO and ICEF (International Refugee Organization and International Children's Emergency Fund). And none of the figures I quoted include any funds for maintaining our troops abroad.

Do you want to know something more about the sixty million of new funds earmarked for Russian-controlled countries? I did. Well, it's a million to Poland in surplus property, thirty-two and a half million to her as loans from Export-Import Bank; ten and a half million to Finland in surplus property, thirteen million in Export-Import Bank loans. Nothing more at this time to other nations in the Russian string—but, mark well, we've already given them alone one thousand five hundred and eighty-seven millions—yes, one thousand five hundred and eighty-seven millions to nations controlled by Russia. Full knowledge on the good that has resulted from this twenty to twenty-one billions spent since the war ended and decisions as to the proper course to pursue in future will make our job in the session pretty hard. It will be pretty difficult to reconcile these figures with the real undernourishment already existing and sure to be added to this winter, and many questions as to the degree of trust we can put in these same managers will arise.

And now to speak of the second item for which Congress has been called—the possibility and practicability of controls and priorities and allocations, as against the free flow of supply and demand under an unrestricted economy. This, too, is a difficult matter to do anything constructive on or that will give promise of resulting in permanent good. The moment, for instance, anyone in authority begins to speak about shortages, that very moment hoarding begins. All you have to do (that is, if your voice can be heard by the public) to start a rush on supplies is to whisper that they are going to be short. Do you remember LaGuardia's letting the cat out of the bag on shoe rationing during a Sunday broadcast in New York during the war and what a frantic buying started that very day? So it would be with others! The moment you begin to talk about controls things are apt to get so panicky that controls are almost necessary at once. Then, too, the real troubles with controls is that it is necessities that are controlled most. This means that the price margin is small in these commodities so that both labor and money drift to manufacture or raising of other things where the return is higher, and thus the scarcity is made greater. Then as artificial price bargains increase consumption, we attempt to hold consumption down by rationing and priorities and allocations—just what they're talking about now. But then production is cut to meet the limited market and the vicious circle continues to the inevitable end—the black market.

I am sorry for Luckman who was drawn in to make the voluntary program work, for I think a lot of Washington bureaucrats want it to fail—their jobs as so-called "experts" depend on its failure. Look at the program they first laid out for him to sponsor—no poultry or eggs on Thursday, or another day each week, when, as I told you in my last broadcast, they had tremendous stocks in Government purchased surplus of both that is guaranteed not to compete in the open market. Where can that go wisely except into foreign food relief? And this is borne out by the new order that they now want us all to eat more poultry to save grain. I told you that too, in the last broadcast—that is, that the real effort was to save grain, not poultry. There are other instances, too, of orders by other agencies that must, and do automatically, tie into the program—orders such as those by the group in control of the potato program that those in the parity program shall grow fewer potatoes. Ask our farmers—they'll tell you such an order has been issued. And this with England rationing potatoes! Orders by others to kill off a proportion of our cattle and pigs to save grain, but these same people who issue that order make no effort to save grain by doing something about the rat and insect problem that spoils $550,000,000 worth of grain yearly—oh, well, I've talked about that too; and why these so-called experts didn't put up the surplus tomato and pea and bean crop, so much of which was wasted. They need a lot more practical men if they are going to get anywhere near sense—and how much plain sense and farm knowledge exists among

Washington bureaucrats? Not much, I am afraid.

We order our distillers to shut down for 60 days—Luckman said it was a great victory—thus we throw out of employment a lot of men. Yet all the time Scotland is using grain to make scotch whiskey to sell to us—probably to buy grain or potatoes. We are talking about the possibility of control over steel and necessity for allocations, yet at the same time we are sending a lot of raw materials for steel manufacture to England—ore and high volatile coal so that British people can be employed in steel making. We didn't do such a good job on our control over coal, did we? And the British aren't bringing up production much by nationalization, are they? Luckman has a real job on his hands coordinating all these matters, and if he doesn't do it, still someone must. Can there be such a thing as "just a little control—only a minimum"? I am afraid it will parallel Hester Prynne's apology in The Scarlet Letter for her illegitimate baby—it couldn't have been so great a sin for the baby was very small. It seems to me the plan proposed won't be so much of a remedy, for it, too, is very small.

The present troubles in Britain arising from restriction controls, the stranglehold of bureaucracy and overcentralization of authority bring into sharp contrast the two systems of people's government now being talked in Washington circles: One the philosophy of big government, the other of little government—one that social planners need additional authority, the other that the solution of the Nation's social problems can best be accomplished at the neighborhood level—one, in short, that bureaucracy plans best, the other, that community planning does best. It is worth while contrasting results, but both of these plans, whatever their defects, that defend individual liberty contrast brightly with the only other possible plan—the Communist theory that only the State counts; that the individual lives only to serve the State; that the State owns all. Part of this comment comes from workers themselves. The United Mine Workers Journal says in a recent editorial that the British coal miners—I quote: "were led to believe that nationalization of the coal industry would bring them higher pay and shorter hours" and charges it to "Socialist and Commie labor leaders." The same editorial says that the UMW convention has consistently voted down proposals for nationalization—quote: "and all other hair-trigger schemes born of political and economic confusion."

And now what I have said brings me rather naturally to think of a large part of what may be, really is, a danger to the future of this country—that is monopoly. Danger can and does exist in too great enlargement and centralization of enterprise of any kind. We must get more production without higher prices, and to do that we need competition, competition at all levels—manufacturer, middleman, and retailer, where low overhead means lower prices—competition between parts of the country, between cities and the rural sections, and competition in service where the man who serves best profits most. The real answer to communism is more and more free enterprise; yet free enterprise in America seems to be dying on its feet, from, I think, too much monopoly and too much big government with its tremendous tax demand. Mergers (95,000 of them since 1909), giant chain store systems, giant holding companies, giant labor unions are the order of the day. If this trend is not stopped, America is going to be stopped and instead of free enterprise we will have socialized everything—socialized industry, socialized housing, socialized banking, socialized medicine, socialized government. And what has killed other democracies that have died? The answer is surely concentration of power in the hands of the few.

Here's another part of the answer to the course to be pursued—it's General Marshall's own statement as to what we are trying to do in Europe, but I think it is a pretty good definition of our own aims for our own people too. Let me quote from Marshall's statement before the recent CIO convention: "The basic issue," he said, "is simply whether or not men are to be left free to organize their social, political, and economic existence in accordance with their desires, or whether they are to have their lives arranged and dictated for them by small groups of men who have arrogated to themselves this arbitrary power."

The 16-Nation Economic Report on European conditions is in Washington and is being studied. On the whole it talks in constructive terms and indicates a willingness by all interested nations to work cooperatively with others and to use their joint natural resources and their food for common benefit, not for their own nation alone. This is fine and constructive, of course, but there are some strange ideas in it too. One, for instance, that we have food enough to keep on feeding the world until it gets on its feet in its own slow way. Well, we can't of course. We grow about 12 percent of the needed supply and what must be done is to make them self-sufficient. A leading Grange man, Roy Anderson, of Iowa, has just come home from a tour of Europe to say that he believes that 100 of our Farm Agents with some fertilizers, some seed and some authority could make Western Germany self-sufficient in one growing season. And what about Russia's part in this picture of world food? The report makes no mention of what she claims blandly are large stocks. And another strange idea—rather a strange ignoring of a fact that is very obvious to every soldier who met foreign exchange—the fact of inflated currency having an effect on each country's internal economy.

Well, there is nothing in the report saying anything about plans to restore equality of exchange. Of course, cheap money, that is, inflated currency, increases imports tremendously—it pays them well to buy from us with their cheap money, just as it does not pay them to borrow from us and buy here at our relatively sound and expensive money, and thus it decreases their exports, for they get a better return, in their debased currency, by selling locally. The worst thing in the report, as I read it, is that it has, in a sense, gone off the deep end on social desires and a full life for all Europeans without stating the price of blood, sweat, and tears for themselves that such an end will entail; but indicating clearly that they assume such an end will be included within what we will be called on to do Surely we can't provide these things for them, but they will have our help To put it in common-sense language, it seems to me that our part in United Nations effort is largely to get together an organization to enable us all to live together in peace and without war. It is not our job, I think, to even try to create a Europe in our own image, or to put it another way, to pledge our money and our effort to build our heart's desire there when we have so many unsolved problems within our own land. Our job is to help the cause of peace world-wide and to do our part to relieve starvation and distress, but our primary mission is to our own. That is what I meant when I said in my last broadcast that any foreign policy, to be a foreign policy, must be a selfish one and have the true interests of American citizens as its first and cardinal mission.

Now, doesn't what I have just said check up with General Marshall's statement that I quoted a minute ago: "The basic issue is simply whether or not men are to be free to organize their own social, political, and economic existence in accordance with their own desires or whether they are to have their lives arranged and dictated for them by small groups of men who have arrogated to themselves this arbitrary power." I think so, and moreover maybe this should be part of our heart's desire for our own land, that here, too, our lives may be free and not dictated by small groups who have arrogated the power to themselves to order our lives.

My time is up again, so I'll be off to Washington. I'll be back on the air two weeks from today and then I'll be able to tell you first hand some of the day-to-day talk there, and possibly I may have some idea of the trend of the thought in the Congress. See you in 2 weeks.

R. C. Zuckerman Sets New World Record for Potato Yield From 1 Acre on Land in San Joaquin County, Calif.

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. JOHNSON of California. Mr. Speaker, R. C. Zuckerman has been a successful agriculturist of San Joaquin County, Calif., for many years. He operates in an area known as the Delta, which consists of the peat land of the San Joaquin River Delta.

Mr. Zuckerman is not only a successful agriculturist but is also an inventor, having invented several devices of use to farmers.

The story of his successful raising of the biggest crop of potatoes on 1 acre is well described in The Potato World, published in Chicago, Ill., which, pursuant to unanimous consent heretofore granted, is reproduced herewith:

R. C. Zuckerman, of Stockton, Calif., set a new world record this summer when he harvested 1,188.2 bushels (712.92 sacks of 100 pounds) of White Rose potatoes on a measured acre of land. The previous record made on McDonald Island was in September of 1933.

The potatoes were grown on Mandeville Island, San Joaquin County. Mandeville Island comprises 5,200 acres and is situated about 18 miles northwest of Stockton, in the center of the delta of the San Joaquin River. The land lies a little below sea level. Crops are irrigated and the irrigation is done by the method of sub-irrigating. Ditches, 8 inches wide and 2 feet deep, are dug in the crops. These ditches are from 25 to 40 feet apart in the field. Water is let into the ditches and the surplus water flows into drainage ditches and through a system of canals and is eventually removed by drainage pumps.

For the cropping year of 1947, Mandeville Island had 800 acres of table stock potatoes, and 125 acres of seed potatoes. The field in which the record crop was produced was 50 acres in area. The potatoes were planted in rows 28 inches apart and the plants were spaced 8 inches in the rows. The potatoes were planted on the 15th of March and the regular farming procedure was used, the same as on the balance of the crop. No special preparations were made and at the time of planting, there wasn't any expectation of a record yield. The seed used was grown on Mandeville Island in 1946. The fertilizer used was a total of 1,400 pounds, 1,200 pounds of 10-10-0 and 200 pounds of

13-34-0. The potatoes were still alive at 147 days old, the digging time.

In commenting on the record production, Mr. Zuckerman said:

"The 50 acres were planted on the 15th of March. They went through two severe windstorms and some bad growing weather. Notwithstanding, they made a wonderful growth. When the potatoes were 147 days old, many of the vines were still green and we sprayed the field, therefore killing some of the still green vines. I knew it was a heavy crop but even at that time (the time of spraying) I did not know it would produce enough to exceed the existing record of 693.5 sacks per acre. We started to dig and then found such a heavy production that we sent the digger through different parts of the field and when that was done, we determined that it was a record breaker so we stopped digging until we could get the County Agent to supervise the digging and this took about 4 days.

"As soon as these potatoes were dug, we filled the sacks with the weight 102 pounds. The sacks stood in the field through the hot sun and wind and when they were officially weighed, they had shrunk about 4 pounds to the sack. Had the potatoes been officially weighed on the day they were dug, the yield would have been 75,000 pounds per acre. That part of the operation was just too bad for us because of conditions beyond our control. I couldn't get the weighmaster to the ranch until 4 days later."

The picture on the front cover of this record-breaking production will give you some idea how closely the sacks lay in the fields. Many of the potatoes weighed as much as 3½ pounds. This record-breaking production should serve as another warning to the low-yielding areas that they had better keep thinking about some way to increase their yields. When we get back to normal, it is going to be very difficult for low-yielding areas to stay in the potato picture in competition with high-yielding areas.

China and Europe

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I desire to include what in my opinion is a well-reasoned editorial on the subject of China and Europe appearing in the Washington Sunday Star.

The editorial follows:

CHINA AND EUROPE

Like Senator TAFT, but in more extravagant terms, Governor Dewey, of New York, has raised a hollow issue in declaring that the Communist threat in China is even more urgent than in Europe and that the President either does not know of the situation or deliberately ignores it.

Mr. Dewey has based this remarkable assertion on the fact that China was not mentioned in the President's message opening the special session of Congress. But that is hardly enough to support his curious and strangely timed thesis. As far as the awareness of the White House and the State Department is concerned, the record simply does not justify the charge that the Chinese situation has been somehow overlooked, forgotten, or neglected.

Actually, as Secretary Marshall has made clear, additional aid to the Chinese is to be asked for in connection with the long-range European recovery program. This is but one piece of evidence contradicting Mr. Dewey. There are other pieces. There is, for example, the American policy being pursued in Japan. There is also our policy on Korea, a policy that has resulted in a United Nations decision to establish a special commission to promote the independence of that country. These and similar undertakings have an important bearing on the kind of peace to be established throughout Asia as a whole, and they thus have a significant relationship to China's future, a fact that does not jibe with the charge that the President either does not know of the situation or deliberately ignores it.

As for Mr. Dewey's argument that the Chinese problem is "even more urgent" than Europe's, it amounts to little more than a peacetime version of the wartime minority view that favored giving priority to the battle against Japan instead of to the battle against the Nazis. But the strategic choice was to defeat Hitler first on the reasonable assumption that our Far Eastern enemies would collapse soon after he fell, and that is what happened. The situation today is not identical, of course, but a similar choice has been made by the administration, and there is every reason to believe that it is an altogether sound one for countering Russia's political and economic offensive against western democracy.

After all, strictly in terms of the world balance of power, China, despite its potentials, still is predominantly agricultural and hence not of the same immediate significance as the highly industrialized European community of independent nations—a community where the Kremlin-directed activities of the French and Italian Communists have created dangers that seem far more immediate and pressing than those confronting the Chinese. Our projected emergency aid and long-range recovery program are calculated to cope with those dangers and prevent Soviet domination of all of Europe; if that objective is attained, then the menace of a Red Asia will rapidly diminish.

To say these things is not to minimize the fact that the Chinese are threatened and need help. It is simply to say that the situation calls for a first-things-first type of action at the most decisive points and that Europe, in this instance and at this particular moment in history, is certainly more decisive than China. To argue otherwise is to be less than realistic. Whether politically motivated or not, Mr. Dewey's views on the subject are scarcely impressive.

Aid for Great Britain

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. SMITH of Ohio. Mr. Speaker, would the Socialist regime of Britain use the lend-lease proposed under the Marshall scheme to rehabilitate the economy? Or would it use such aid as it has used the $4,000,000,000 gift-loan and other gratuities provided it to aggrandize its power and further enslave the people of that country?

The very nature of socialism ought to supply the answer.

Winston Churchill said something that pretty sharply points up the answer to this question. He stated in the House of Commons:

What is so particularly odious and mean, and what has caused this deep schism in our island life, is that the sacrifice so nobly made for victory * * * should be used and exploited for party purposes and for the institution of a system of socialism * * * the Government's Socialist policy comes first and the welfare of the people comes second.

If, as Churchill says, the Socialist forces of Britain preyed upon the blood bath, through which the people of that country so valiantly struggled, to gratify their lust for power, for what other purpose could those forces possibly use any aid our country might provide them?

Mr. Vishinsky

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, a few days ago, I noticed an article in the New York Sun of Monday November 3, 1947, written by Mr. E. F. Hutton, which apparently appears as paid advertisement.

This article certainly is calculated to stimulate the thinking of anyone who will read it. It draws a definite dividing line between the American ideals and system of Government, and those which exist in Russia, today. If one will only ponder these statements and consider the many things for which we should be thankful in this country, which cannot be and are not enjoyed by the people of Russia, due to our differences in forms of government, I am confident that we will not want to exchange our form of government for theirs. Nor will we want to substitute their lack of liberty for our liberties guaranteed by our Constitution and Bill of Rights.

I am pleased to quote Mr. Hutton's article, as follows:

MR. VISHINSKY, WHEN YOU GO HOME, YOU CAN TELL YOUR PEOPLE THESE TRUTHS ABOUT THE U. S. A.

You could do it in Pravda, which means truth. You could use Radio Moscow to tell them. You could tell it to your people who are not members of your Communist party but who are owned, body and soul, by your party.

You could tell your people that we Americans are not seeking war and are not warmongers. We hate war. We want peace. We want the whole world to have the opportunities and freedom upon which lasting peace can be brought to all nations. You know that.

You could explain that we are not a capitalistic monopoly. Tell your people that our railroads, telephones, radios, air lines, shipping lines, factories, stores, mines, and forests are not owned by government but that they are owned by the people as private citizens. You could tell them that millions—and many more millions—of the people's dollars are invested in our railroad, automobile, and our steel industries—and all other industries—all of which came out of the savings of the people.

You could tell your people that we are not a capitalistic nation, but that your Russia today is the only complete capitalistic nation on earth. It owns everything, including the people and the profits the people could make on their own labor.

In America, the people own everything, including the Government. In the U. S. S. R. the government owns everything, including the people.

Tell the Russian people that in America, through the industrial know-how, we have turned luxuries into mass production within the reach of everybody. Explain that telephones, bathtubs, gas stoves, radios, refrigerators, electric light, vacuum cleaners, and automobiles are not luxuries in America. Tell them we have over 80 percent of all the automobiles in the world—and they are owned—not by the rich—they are owned by the people. They are the capitalists. Every bit of property our people own is owned because they have saved money out of the greatest earnings ever earned by any people. All because of the free competitive system, made possible by liberty.

Tell your people about our courts of justice. Explain our jury system by which 12 of our equals decide on the guilt or innocence of anyone charged and brought to the bar. We do not have judges who decide on guilt or innocence. We the people decide. The judge pronounces sentence. We elect the judges.

Also tell your people that we sent to your country $11,500,000,000 of lend-lease war material to win your war over Nazi Germany, your former ally, who turned on you. Marshal Stalin said that the war would have been lost without the productivity of America. You might tell your people that all the material and food sent to you was produced by America in addition to what we needed to win our own war and help England win hers.

Tell your people how much greater American production is than that of Russia. But tell them why. The secret is that U. S. A. production is free and every producer is free. Explain how every family in America is self-regulated and runs itself better than you or the inner circle run all of the Russians from the Kremlin.

Explain, Mr. Vishinsky, that in the U. S. A. every man, woman, and child has the right to progress—is automatically given liberty and freedom—can pick out any educational opportunity they want, the job they want, and decide, personally, what they want to be.

Tell your people about our simple form of government. How it is based on the Constitution and Bill of Rights. How nothing can be done that is not constitutional and how, if the people want something that is not constitutional, they get it when two-thirds of the States vote, by a majority of the people, to amend the Constitution.

Tell your people that no commissar, no dictator, can give an order that is law in America, unless it is constitutional. Tell them America believes in the rights of man and that we make the state a servant of the people. That is just the opposite of the Russian communistic system where man is nothing and the state is everything, the sole possessor of liberty and freedom.

Tell your people the U. S. A. is a Republic. That the same legal rules which enable us to continue as a Republic also enable our businesses to continue with constant change and modification. Would you tell them that America has achieved the highest living standard, the greatest tolerance, the truest charity, all because of giving liberty and freedom to all people? Tell your people that we in America regard the police state as a horror, as a crime against the body and the soul of man.

Tell your people that we resent the charges that we are a war-mongering people. It is not only unkind and uncalled for, but a malicious statement.

If you were a citizen of the U. S. A., Mr. Vishinsky, and came home after a visit to Russia, you could state publicly what you discovered. You could say it in print, by radio, even in moving pictures. You would have that right as an American citizen. You are one of the big men of the U. S. S. R. Can you go home and tell the truth?

As a private citizen of the U. S. A., I have freedom to make this statement in public print as often as I please. Recently, I was invited to make a radio broadcast. I will be glad to send it to you. It is something about our country and the freedom of every individual in it. Would you like to read it? I can send it through the United States mail. Any citizen can have it.

That is freedom, Mr. Vishinsky. That is the byproduct—just one of the byproducts—of the most priceless secret that you could carry back to Russia. The secret is the system by which the U. S. A. has made progress. A system of liberty and freedom for the individual. If you would see your own country move fast into a great, productive nation of happy people, set your people free. Take capitalism out of the hands of your Government and put it in the hands of your people—where it belongs. Capitalism then ceases to be what you have called it, and becomes the secret by which common wealth is created for all the people.

Not a single word of this message has a double meaning. We owe a debt of gratitude to those who established our way of life and only by preserving and spreading the dignity of man—the rights of freedom—can we pay that debt.

You can answer this message, Mr. Vishinsky, in this same newspaper for the same price I pay for it. You have unlimited funds at your command. Why, you are the agent of the greatest capitalistic power on earth. I am just an American citizen, one of the millions you have referred to as capitalists.

We, the people of America, want freedom and liberty. We want to preserve the dignity of mankind. We want to continue to own our own country and our Government.

We in America believe in the spiritual as well as the material side of life. They must go hand in hand. We realize we cannot abolish nature, the handmaiden of God. Nor can we or any other country control nature—the flood, and ebb tides, or the changes of seasons. Only God controls that and makes the seed that creates your harvest. Nature insists that man be free in order that he may reach his highest possible position and be of service to his fellow man—not to any state.

When you return to your country, Mr. Vishinsky, why don't you tell your people about our way of life in America? "When peace shall once more be acclaimed, the work of the world will have begun."

E. F. HUTTON.

WESTBURY, LONG ISLAND.

Air Academy at Randolph Field, Tex.

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. KILDAY. Mr. Speaker, I have today offered H. R. 4547, a bill to establish the United States Air Academy at Randolph Field, Tex. Now that we have created an independent Air Force, it is necessary and desirable that it have its own institution for the training of officer personnel.

In this connection, I call attention to the fact that Randolph Field, at San Antonio, Tex., was established as "The West Point of the Air," a descriptive title. That title describes the character of airfield built there. The field was built at one time for the express purpose of training military aviators. All of the facilities for such training were incorporated in the field. Its physical properties are now the equivalent of those available for Army training at West Point or naval training at Annapolis, if not superior to those stations.

Adequate barracks for cadets are now in existence. The dining hall, recreational facilities, and flying facilities are worthy of the character of institution I know the Air Force wants to establish. I need not point out the ideal climatic conditions for flying training in that area, the Air Force has the figures which establish those conditions as superior—the year around.

Budgetary limitations for the armed services of the country trouble all of us concerned with the problem. They will present a practical difficulty in the establishment of the United States Air Force Academy. At Randolph Field all of the facilities and properties necessary for such academy are now available, in existence, and ready for immediate use.

The nature of the training to be given to future Air Force officers must be determined by those long experienced in aviation training. However, I believe the Air Force is fortunate in beginning as a service which has devoted its efforts to professional training entirely, rather than to elementary educational subjects. Consideration should be given to retaining the postgraduate nature of such training. In that manner, the cadet's entire time can be devoted to his professional subjects. In addition, the Air Force can continue to receive a fair allocation of graduates of the Military and Naval Academies without the complications which would otherwise result. I believe that the integration of graduates of the other service academies into the Air Force would be a very healthy situation for all of the services. Not only would the Air Force have officers trained in the problems of the other services, but good will would result.

If organized as a postgraduate school the Air Force will also be able to secure a fair proportion of the pool which has produced such excellent officer personnel for all of the services in the past, the ROTC graduates, including the graduates of the land-grant colleges. These college graduates might not be willing to enter an air academy in which they would be required to review their academic studies.

The Honorable W. Stuart Symington, Secretary of the Air Force, has informed me that his department is giving very careful study to the question of the desirability, necessity, and probable scope of such an institution. The Secretary has added: "If it appears that the establishment of an Air Force Academy will be required for the training of our person-

nel, you may be assured that the many facilities currently available at Randolph Field, together with the experience gained from training activities so long conducted in that area, will be thoroughly evaluated before any final decision is made."

I hope, in view of the present world condition and the importance of the Air Force to our national security, that my bill may secure prompt, favorable action.

On What Grounds?

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following:

President Truman in his message to the Congress on November 17, 1947, stated among other things that "in our efforts however, to achieve the conditions of peace, we have encountered unforseen and unwelcome obstacles. We have found that not all nations seem to share our aims or approve our methods." While he does not say so, presumably the President is referring to the Soviet Union.

The Honorable EVERETT DIRKSEN, a member of the joint special committee, who went abroad to investigate conditions, reported to the House on Tuesday last and called attention to the fact that Russia is producing weapons on a large scale that might be regarded as defensive in nature, but every informed person knows very well that these are also the weapons of offensive warfare.

Walter Winchell several weeks ago in his report to the people stated that—

> The Government at Moscow has sworn to destroy us. Last week the Communist organizations of nine nations under Moscow leadership publicly declared fifth-column war against the United States. They mean business.

He also demanded that America stop shipments of all materials to Russia which can be used for war and laid particular stress on our oil shipments. He indicated that congressional action was required to stop these shipments, although every well-informed person knows that the President has had the authority all along to control exports, and particularly petroleum products, and could stop these shipments at any time, the authority for his so doing having been extended by the first session of the Eightieth Congress until February 1948.

Iran has seen the handwriting on the wall and has voided an agreement granting oil concessions to Russia.

According to a statement made by the President to the Associated Press on November 21, the President says he sees no need to halt heavy machinery, farm-tool and freight-car shipments to Russia, and presumably the shipment of oil is still going on as in the past, notwithstanding we hear rumors of rationing of petroleum products in this country, due to shortage of supplies.

One of my constituents, a farmer, met me the other day and stated that he had been attempting to obtain some farm machinery for the last year and a half without success, and he is only one of the many farmers who are in the same predicament. I wonder—I wonder—what he will say when he finds out that during the first 9 months of this year the Russians have purchased from this country $113,700,000 worth of machinery and farm equipment.

Point three of the President's program announced to the Congress on Monday last is as follows: "To extend and strengthen export controls." On Friday we find him announcing that he does not intend to exercise the control over exports he now possesses and particularly over material of which there is an acute shortage in this country at the present time.

This latest inconsistent position on the part of the President is admirably commented upon in an editorial of the New Haven Register of Saturday, November 22, reading as follows:

ON WHAT GROUNDS?

President Truman has stated he sees no reason to stop the sale of heavy machinery and other equally short-supply equipment to Russia at the present time. Millions of Americans would like to hear from the President a statement clarifying the line of reasoning he followed to arrive at any such conclusion. An equal number, including many in high official places within our Government, today stand convinced that there is no reason why we should supply the Russians with anything, in light of present conditions, and every reason why we should not.

Pending such clarification from the President, it must be remembered this is the same Mr. Truman who a short time ago rushed to the record with the statement that he considered peacetime controls the instrument of the police state, having no place in our American system. Within the span of a few days he reversed himself by going before a special session of Congress to ask for the very brand of controls he had found so repugnant to democratic principles and interest. This was but one of many instances where the President appeared as the author of bad guesses or of statements hastily made and swiftly reversed. His statement on Russia's right to receive shipments of American goods represents one instance where a reversal would be more welcome than confusing.

It has been revealed that the Russians have purchased goods valued at some $113,700,000 in this country during the first 9 months of 1947. Official records likewise show that some 216 freight cars found their way by undisclosed sources into the Soviet during a period running from April through October. The fact that these were built to the broader-gauge specifications of Russia's railroads and thus presumably unsuited for use on our own hard-pressed and under-equipped railroads constitutes thin excuse for any such sales, shipments, or deals of whatever variety they may prove to be.

It must be remembered these sales and shipments of goods, freight cars, machinery and equipment came at a time when cries of our own steel, equipment and rail shortages are raised in support of domestic control, allocation and supervision schemes.

Cognizance must be taken of the fact that we are holding open house programs for Soviet purchasing commissions at a time when Congress in special session is being pressurized to act on a $597,000,000 interim European aid program as a prelude to an Administration program calling for $22,000,000,000 4-year program to halt the spread of communism, in so many words.

Is the President now proposing that we spend billions to halt communism on the one hand while on the other we make haste to supply them with the equipment with which to carry on their campaign, or fight back? This appears a matter calling for explanation and clarification.

Price Control

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. MICHENER. Mr. Speaker, the outstanding national issue at the moment is the high cost of living. Of course our people are mindful of the international problems now facing us; however, human nature is such that we are prone to be more concerned about conditions existing in our own community than we are about the affairs of other nations of which we read. Consequently, it naturally follows that the folks back home are demanding a reduction in the cost of living. They do not know how this is to be brought about other than that a majority of them are adamant against the return of price controls, rationing, and other regimentation.

My attention has been called to a temperate, logical, and fair editorial appearing in the Jackson Citizen Patriot, one of the leading outstate newspapers in Michigan. This paper is published in the center of one of the best agricultural communities in the State, while the city itself is industrial. The editorial reads as follows:

PRICE CONTROL

Contemplating the President's appeal for restoration of price controls, the conviction grows that Mr. Truman has put the Republicans behind the eight ball. He has asked for something he earlier had said he didn't want. But, if the Congress refuses to give it to him, he is going to be in a position where next summer during the political campaign he can say, "Sure, prices are high, inflation is weakening our economy; but I wanted to do something about it and Congress wouldn't let me. The Republicans are to blame, not me."

And that argument isn't going to be easy to answer unless the GOP can produce a rabbit out of its campaign hat which will make it possible for the average family to eat, clothe itself and keep warm without resort to armed robbery.

The plain fact is that inflation is the gravest current problem facing this country. Prices are too high, and they keep going higher.

Of course, the remedy which the President proposes isn't palatable, and it is fraught with danger.

Inevitably price control in peacetime would produce the most widespread black-market in all history. We have just a small sample of what would happen in the contemporary automobile situation.

Automobile prices are not being fixed by the law of supply and demand. They are being held down by manufacturing companies partly through honest determination to oppose inflation and partly because of competitive factors. What is the result? A new automobile, delivered legitimately by a dealer, can be taken down to the nearest used car lot and sold for more than it cost. A car, which will bring $3,000 in the open market, sells for only $2,000 on the dealer's floor. That's why there is a so-called black market.

Just as sure as the Government fixes the price of beef, pork, potatoes, or shoes at a figure lower than the market will pay, there will be black markets in these commodities. And they'll grow and expand.

The American people do not lend themselves readily to regimentation. They go along grudgingly in war; but in peace the obligation to stay out of black markets will be inconsequential in many minds.

Mr. Truman himself said only a few weeks ago that he wouldn't ask for a return of controls, because those were the methods of a police state. Yet now he calls upon Congress to make such controls possible.

There are too many times when Mr. Truman seems to be swayed by an almost juvenile hysteria. It was he, who within hours after Japan surrendered, removed the first controls. It was he who, without urging from Congress, took the ceiling off wages. And, just as soon as wages were out of control, it was inevitable that the OPA had to be abandoned.

Perhaps, in thus criticizing him, we are guilty of second-guessing. Certainly all of us were glad to welcome the relaxation of controls. But the responsibility is the President's, not the obligation of the man on the street.

The trouble with the opposition to restoration of controls is that it offers no alternative as a means of meeting inflation. Americans don't like controls. But high prices and the inflation of which they are a symptom can ruin us.

Of course, increased production in all scarcity fields would force price reductions; but Mr. Truman and the administration refuse to raise a finger in support of that effort.

There is a tendency among many Americans to blame inflation to farmers, manufacturers, retailers, or labor. That is by no means fair. The basic reason for inflation is scarcity. In many fields, such as automotive manufacturing, prices are, as we have said, lower than the market will pay. In other words, manufacturers could make a quick and honest profit by raising their prices; but none of the old established automobile companies are doing that.

Quite aside from domestic demand, foreign buying is a chief contributor to scarcities. Beef, pork, and grains are bound to be up in price when foreign shipments exceed our surpluses, as is the situation now.

A further and inexcusable factor is the Government's persistence in bolstering prices of some farm items instead of letting the market take its course. The thousands of dozens of eggs in storage, for example, constitute a national scandal at a time when eggs are selling for 6 cents and more each at retail.

Not only do Americans naturally resent controls such as the President proposes to establish, but they are properly skeptical of granting added authority to an administration which still bolsters certain essential markets and thereby further bleeds the householder.

Mr. Speaker, the last two paragraphs in this editorial question the soundness of the agricultural parity support program which is now provided for by law. The fact is that by virtue of this price-support program the Government purchased eggs in the egg-laying season in the spring, and potatoes in the potato-harvest season—months ago—in order to keep the farmer's prices in line with the prices of the things he must buy. The farmer produced these surpluses because the Government urged him to do so, and upon the promise that he would be guaranteed at least the cost of production, even though he produced a surplus. Yes, these were incentive subsidies. It so happened that the supply of eggs and potatoes was momentarily greater than the demand. No one can defend the destruction of food when people are hungry. The farmer, however, must not be condemned because he answered the call of his Government and in doing so produced more than the amounts contemplated. The fault is not his and some way must be found to protect the farmer against loss or he will not take the chance. Industry and labor can control their output; the farmer cannot. When he plants he has no assurance as to the harvest. Sometimes he has too much; then again he has too little. The weather may change the whole picture.

I am not justifying all subsidies or support prices, but I do want it remembered that the farm problem has been with us for many, many years, is most difficult of solution, and is not to blame for the general high cost of living today. Other than eggs, potatoes, and two or three other commodities, the law of supply and demand has brought prices to the producer far above parity support prices guaranteed by the Government. For instance, wheat is 126 percent of parity. May I repeat that, in my opinion, the above editorial on the whole expresses the thinking of a majority of the people residing in my section of the country.

Modernizing Voting System

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. MILLER of Nebraska. Mr. Speaker, I am this day introducing a bill authorizing the Architect of the Capitol to install in the House of Representatives mechanism for visual recording and automatic counting of the yeas and nays and quorum calls.

In this age as never before time is important. Congress has recognized this fact in its action to streamline the proceedings of the committees. The outmoded method now in use for taking and recording roll calls is one of the worst time wasters. To date there have been 136 roll calls in the first session of the Eightieth Congress, each one taking an average of 45 minutes. By allowing 15 minutes for a warning there could a saving of 30 minutes on each roll call. That would amount to approximately 11 days of the present session. The time-wasting parliamentary practice of demanding quorum calls would be eliminated. On the other hand such a system would encourage more record votes on important bills. Today is an appropriate time to call this matter to the attention of the Members when we will be voting on citing 10 individuals for contempt of Congress. If the ayes and nays are demanded on each of the 10, it will take 450 minutes for roll calls alone—a total of 7½ hours just waiting around to vote. With an electric voting system this could be easily accomplished in an hour or less.

We have too many big problems confronting the country today for the Congress to be dilly-dallying with a voting system adopted in horse and buggy days. There is no excuse for continuing with it. I trust the proper committee will give earnest consideration to this problem at an early date.

Preparing for the 1948 Campaign

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Portage (Wis.) Daily Register of November 18, 1947:

PREPARING FOR THE 1948 CAMPAIGN

President Truman's request for a restoration of rationing and price controls was just part of the political maneuvering preparatory to the 1948 election.

The President knew he could never get such authority during peacetime from a Congress dominated by Members of the opposition party. In fact, it is doubtful if he could get such legislation from a Congress made up largely of Members of his own party.

But the request made in his message is one way his party can pass the buck later for the inflationary developments of the postwar years. During the time when campaign oratory will jam the air waves we may expect to hear how the Republicans are entirely to blame for the high cost of living because they declined to give the President the broad peacetime powers requested in his message.

The entire scheme may work but we doubt it. Americans are not so easy to fool as that. They know what the causes of inflation are, and they know that many of these can be charged up to the wasteful policies of the present administration.

It doesn't take an economist to understand that a policy of heavy Government spending, high taxes, and extensive aid abroad with heavy exports can cause high prices at home. If we are going to give away the products of our industry and agriculture to indigent nations of Europe and if we are going to maintain a colossal Government bureaucracy we're bound to have high prices. If we impose an excessive tax burden on business and industry, that burden in one way or another will be passed on to the consuming public.

Taxes are an essential item of costs in any business, for taxes imposed upon pay rolls must indirectly be paid in the price of the products of labor, while taxes imposed upon business, large or small, must ultimately be paid by the customers of that business.

If the President would propose a cut in Government spending and a reduction of

taxes as an anti-inflationary measure, he would win widespread applause. But evidently such a program is not in the Democratic Party's program for 1948. Evidently it still sticks to the policy of spend and spend, tax and tax, elect and elect.

What the Truman Program Means

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. O'HARA. Mr. Speaker, the problems which are before the Congress have been very ably analyzed in an editorial in the New Ulm Daily Journal, New Ulm, Minn., of November 19, 1947. Under the leave to extend my remarks in the RECORD, I include the following editorial:

WHAT THE TRUMAN PROGRAM MEANS

In his speech Monday, President Truman sketched briefly and vaguely what his campaign to rescue Europe from the aggressions of Russia is going to mean to the United States. Perhaps the President went as far as he could go at this time, but he must know for dead certain the controls he proposes will not be strong enough to check inflation his program will cause.

He is suggesting controls of strings and twine when he must realize that he will need the steel of regulation, price fixing, and controls the like of which we may never have seen in this country.

Before we let the hysteria of the hour sweep us off our feet we ought to give the situation a thorough look-see, estimate the costs, the alternatives, and then decide whether we are willing to pay these costs or face these alternatives.

Europe has been ravished by the second war in a generation. Hundreds and perhaps a thousand billions of dollars in property, factories, and homes have been smashed by war. What America can afford to spend in the rebuilding of Europe is a trifle compared to the effort, work, sweat, and sacrifice the people of Europe must spend. They are now starting on the hard, discouraging, heartbreaking road back.

Right now the people of Europe and Asia are hungry and cold. Many die from malnutrition. Children will carry the blight of these times as long as they live. The curse of war will be carried to the seventh generation.

The people of Europe are bewildered. Most of the people of the Continent have little tradition of democracy as we know it. They have lived under autocratic kings, rulers, or dictators all their lives. Theirs has never been a choice between a semifree economy as we know it and dictatorship. Instead, they have had to choose between a Communist dictatorship, state socialism, or cartel control. It has never been an easy choice for them. Most of the time they have had no choice at all.

Today Europe is churned in a ferment of hunger, disease, unrest, and cold. Hungry and cold people are never reasonable. They are seeking a way out—almost any way out.

Communism offers them one answer. The government will take over all property, all jobs, all opportunity, and all the people and all their lives. Then the people will be slaves and pawns of the government. Those who will not knuckle down will be sent to slave camps or will be shot. Everyone will work for the state wherever the bureaucratic dictatorship tells them to work. They will eat and live only as long as they serve the state. The leaders on top will live well as long as they serve the dictatorship. Those below will live in the hopes that some day things will be better—maybe sometime they will build a better world—some day all will be free again.

The alternative on the Continent seems to be a form of democratic socialism where men retain some of their democratic rights but surrender many of the economic and personal rights to a strong, central government. Except in the Scandinavian countries where they have a limited form of socialism, state socialism demands more and more control until the state becomes supreme as it is in Russia and was in Germany and Italy.

This seems inevitable because if a state is going to be strong enough to tell people where they are to work, how long and for what pay, they must have strong enough controls to enforce their rule. Socialism everywhere seems to lead to inevitable dictatorship.

The Truman program assumes that by giving immediate food and clothing help now and reconstruction equipment later, we can help to stave off an immediate rush toward communism in Europe. Then with new factory equipment we can help these countries rebuild. In this way we can keep Enrope from going into the arms of a Russian Communist dictatorship or its puppet regimes.

Such a program will take a few billions of dollars now and many billions in the future.

If Stalin is stopped in Europe he will turn to China and we will be asked to send food and billions of dollars to stop the Communist rush there. It is entirely possible that the Kremlin is using Europe as a dodge while its real push will be in Asia.

The entire Truman program raises many questions and doubts, and all of them this Congress will have to decide soon and in a feeling of hysteria and worried frenzy.

Here are some of these questions:

Just how far can a country two hundred and fifty-eight billions in debt go in trying to save the world?

Will we weaken ourselves to such an extent that we won't be able to fight Communist propaganda from within or Russian aggression from without?

What will we do here at home if we have a serious crop failure in America next summer? Can we safely ship the enormous amount of food abroad and safely lower stocks in America?

Will our aid encourage people of Europe to work for their own salvation or will it leave them dependent upon us?

If we are going to send all this food and material to Europe, how can we prevent inflation without more severe controls than we had during the war?

If we submit to all these controls, will we be fighting dictatorship abroad while we are adopting many of the measures of dictatorship at home?

Will we be able to stop the march of communism in Europe and Asia after this tremendous drain on the earnings of the people?

Or will we weaken ourselves so we won't be able to resist any dictatorship at home?

Will the Truman program prevent war or lead to war?

If we avoid war now, can we win a war when Russia has gobbled up Europe?

These are some of the questions Members of Congress will have to ask themselves before they vote to commit America to a program from which we may never be able to extricate ourselves.

It calls for sober thinking, careful examination, deep thought. Too much is involved to be moved by the hysteria of the hour or the publicity stampede by which most of these questions are usually decided.

Palestine Partition

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks, I wish to include the text of the statement made by Herschel V. Johnson, United States delegate, in the Ad Hoc Committee on the Palestine Question of the United Nations General Assembly. The text of Mr. Johnson's address appeared in the New York Times of Sunday, November 23.

TEXT OF JOHNSON ADDRESS ON PALESTINE PARTITION

LAKE SUCCESS, N. Y., November 22.—Following is the text of the statement made today by Herschel V. Johnson, United States delegate, in the ad hoc committee on the Palestine question of the United Nations General Assembly:

"With respect to the legal issues which have been raised in the course of our discussions, my delegation agrees with the conclusion expressed this morning by the representative of Poland, who was speaking as the chairman of subcommittee I. The plan recommended by that subcommittee is legal under the Charter. In addition to the considerations advanced by the representative of Poland, my delegation believes that the following observations are relevant to the legal issue.

"We are dealing here with the means by which the United Nations might facilitate the transition of Palestine from the status of an international mandate to independence. No further period of tutelage is required in the case of this class of mandate. It has been unanimously agreed by United Nations Special Committee of Inquiry on Palestine and generally accepted, as far as I am able to judge, in this Assembly that independence in Palestine should be attained as rapidly as possible.

"The practical role which the United Nations is called upon to play in the recommendations of the United Nations Special Committee on Palestine, as modified in the report of subcommittee I, is, except in the case of the city of Jerusalem, of very short duration. The role of the United Nations is to be that of assisting in the actual transferral of authority from the mandatory power to the independent states, which, it has been recommended, shall succeed to the authority previously held by the United Kingdom in Palestine.

"There is another aspect which we believe deserves mention. Much of the report of subcommittee I might be subject to some misunderstanding. In practice the United Nations Commission would not physically administer Palestine when authority is transferred to it by the mandatory power. This commission will be a small body without governmental machinery to make such administration effective, if we are to suppose that the commission itself would actually exercise governmental authority.

"Actually, although retaining the responsibility, it will have to transfer immediately to the provisional councils of government or to other provisional organizations the practical duties of administration upon the withdrawal of the mandatory power."

NO GAP CONTEMPLATED

"It is not contemplated that there is to be a gap in which there is no effective governmental authority. That gap will be avoided

by immediate assumption of these tasks by provisional machinery as soon as they are relinquished by the mandatory power.

"The gap, if there is to be one, is at most a formal gap due to the fact that the mandatory power wishes to avoid responsibility for turning administration over directly to the successors who might be named by the General Assembly.

"One of the principal difficulties with which the ad hoc committee and the subcommittee have been faced is the situation created by the declarations of the mandatory power. It was essential to find some plan of implementation which would make possible the utilization of the experience of the mandatory power and its presence in Palestine and its present responsibility without involving the mandatory power in responsibility for implementing a plan which, according to its own words, "does not have the approval of both the two principal parties concerned." Taken in a literal sense, that condition was one impossible to fulfill.

"There is no present plan before the General Assembly of the United Nations with suggestions for a solution of the Palestine question, and none which has been presented or suggested, that could possibly meet that requirement. I would ask the honorable delegates to take into full consideration that almost insurmountable difficulty in working out a plan for implementation.

"I most respectfully disagree with an inference which I drew from a remark made by the honorable representative of New Zealand—if I understood it correctly—that under the plan proposed by subcommittee I the mandatory power is being given the sole responsibility for implementation. I don't agree with that as a conclusion. It was that situation which the subcommittee I, with very desultory assistance from the mandatory power, endeavored strenuously to avoid."

RESPONSIBILITY NOT SOUGHT

"We believe that the suggestions contained in subcommittee I's report successfully avoided that issue. We did get assurances from the mandatory power that they would not obstruct or endeavor to prevent the carrying out of the implementation program.

"There are many possibilities for failure in this plan or in any other plan. We must postulate cooperation of the members of the United Nations and cooperation in fact, not necessarily by way of implementation, but cooperation with the machinery which would be set up by the United Nations Commission, on the part of the mandatory power.

"The situation is an anomalous one. It was not contemplated in the Charter of the United Nations. It is a responsibility which falls squarely on the United Nations, not through its having sought that responsibility, but because of a unilateral declaration on the part of the mandatory power that they were relinquishing their responsibility and requested the United Nations to make recommendations for solution of the problem. The mandatory power made no suggestion whatever regarding a succeeding government in Palestine.

"Because of this background my delegation is inclined to believe that such legal objections to the action of the General Assembly as may be raised are formal in character and do not seriously affect the substance of what is proposed. My delegation will support and vote for the partition plan recommended to this committee by subcommittee I.

"If this committee and the Assembly in its turn approve the recommendation of the subcommittee, the Assembly, in the view of my delegation, will have properly discharged the function of making recommendations 'concerning the future government of Palestine'. It was for this purpose, as set forth in the request of the mandatory power to the United Nations that, as members of the committee will recall, the special session of the Assembly was convened last spring, and a special commission of the United Nations was sent to Palestine and the question of Palestine was placed on the agenda of this Assembly."

NO ILLUSIONS OF INFALLIBILITY

"Subcommittee I, I am convinced—I speak only for the United States delegation, not for the others, and I only speak of what is our conviction—had no illustions of infallibility nor did any of its members. We were confronted with the task of offering recommendations to implement a majority recommendation of the United Nations Special Commission, and we reached unanimity on every important point.

"Concessions were made by practically all of the delegations on that committee to the views of other delegations in order to achieve this unanimity. It is too much to hope that there will be unanimity or anything approaching unanimity in the final decision of the General Assembly. But my delegation fervently hopes that the General Assembly will approve this plan by as large a majority as possible and that all members will cooperate loyally in giving it full effect and implementation. If there is a complete loyalty in support of what may be the majority decision of the United Nations, many of the difficulties and troubles which haunt the minds of many delegates will disappear.

"It seems to my delegation that the plan of partition with economic union proposed by the subcommittee carries with it sufficient flexibility to be readily adjusted to the situation on the spot by the United Nations Commission and the joint economic board which is contemplated in the plan. Through this process and with the loyal cooperation of all concerned, the effective independence of the peoples of Palestine can be achieved.

"It will be recalled that the special committee which was sent to Palestine was given a very special instruction to take account in its work the interests of the Jewish, Moslem and Christian faiths in Palestine. A special section of the report of UNSCOP was devoted to this question, and both the majority and minority plans recommended by the subcommittees took this matter into account.

"The United States delegation has taken a very particular interest in this problem and we are satisfied that the plan recommended by subcommittee I contains effective guarantees for the holy places of all the three great religions represented in that country.

"The special status provided for the city of Jersusalem and the additional powers of the Governor of Jerusalem with respect to other holy places elsewhere in Palestine should provide full assurance to the faithful adherents of the three faiths throughout the world that the legitimate religious interests of the world community in Palestine are fully protected.

"My delegation is keenly aware, Mr. Chairman and fellow delegates, that the issue before us is torn by strongly conflicting opinions. We have had ample evidence of that throughout the debates on this question, both during the special session of the Assembly and the early sessions of this ad hoc committee, varying expressions of those differences have been given in the subcommittee. There are, however, certain points which form common ground for all of us."

A "NOTABLE CONTRIBUTION"

"One, and foremost, is this: That the United Nations is the proper forum for the solution of this question, and, furthermore, the governments who believe in partition think that it is not perfect, but that it is humanly just and workable and if adopted will make a genuine and notable contribution to the solution of one of the most thorny political problems in the world today—a problem which I am certain no delegation at the United Nations Assembly would like to admit even to themselves that the United Nations is incapable of solving.

"My delegation refuses to believe that any member of the United Nations, whatever may be their opinions on this highly controversial and bitter question, will attempt to defy the decision which may be taken by this Organization. In that sense it is the greatest test which has ever been presented to the integrity of the United Nations as a whole.

"During the discussions in the subcommittee I my delegation was compelled to voice the doubts which my Government had regarding the territorial division in Palestine and the rather uneven balance of the division of land in terms of square kilometers between the Arab and Jewish states. We were therefore compelled to make a reservation to our position on the Negeb.

"I am very glad, therefore, to have heard the declaration which Mr. Chertok has made before this committee today, in which the Jewish Agency agrees that the town of Beersheba and the adjacent land to the northeast will be incorporated in the Arab state.

"Also, that, in addition, certain land on the Egyptian side of the Negeb, amounting to about 2,000,000 dunams, will be added to the territory of the recommended Arab state.

"My delegation remained convinced that some adjustment in this region was necessary, and while we would have preferred a greater adjustment in that area, we think that the Jewish Agency has made, from its point of view, an equitable and fair proposal, and whatever reservation the United States delegation maintains with respect to this area is withdrawn.

"I do not wish to take any more time of the committee, Mr. President, except to voice again the deep belief of my delegation that this partition plan with all its imperfections offers the most practicable and the most just present solution of the Palestine problem. And we hope that those who have doubts will not be deterred from taking a stand because the Assembly's committees have not been able to attain an impossible perfection."

AAA

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. TRIMBLE. Mr. Speaker, during the summer I spent almost the entire time traveling in the district which I represent, that is, the Third Congressional District of Arkansas. I visited with the farmers and talked with them about their problems. I found them, as usual, game to the core, battling away for what they consider to be their rights.

I met with a group of them on October 31 at Harrison, Ark., at which time they passed the following resolutions which I insert in the RECORD at this point:

County triple A committeemen for the 10 counties in the Third Congressional District assembled at Harrison, Ark., October 31, 1947, passed the following resolutions:

1. That the ACP funds for the program year 1948 and future program years be appropriated by Congress in the amount of not less than $300,000,000, and that administrative funds for each of the years be appro-

priated in the amount of not less than $35,000,000.

2. That the agricultural agencies operating in the State, such as AAA, SCS, and Extension Service, etc., are all accomplishing much and merit the support of Congress and should be continued with adequate support, however, in the event that any combinations are made by Congress involving triple A that such combination should remain under the direction of triple A farmer-elected committeemen.

3. That price support be continued at 90 percent of parity on all commodities now covered and on such additional commodities that are necessary for national economy.

4. That community and county committeemen be elected as at present and that State committeemen be elected by county committeemen and that representatives of the various State committees act as an advisory board to the Secretary of Agriculture.

Good and Bad in Message

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Milwaukee Journal:

President Truman's message to the special session of Congress properly points to the imperative need of immediate relief for Europe and to the equally imperative need of sound measures to control inflation in this country.

Nobody who understands the grave situation abroad or the menace of rising prices at home can deny that Congress must face the immediate problem of Europe and the equally immediate problem here.

The problem of Europe, being largely a money problem so far as Congress is concerned, will presumably be quickly met. The $597,000,000 needed for emergency European aid will presumably be provided. The President's program for inflation control will, however, meet resistance, not only from the Republicans but from some Democrats. At least part of that resistance will, moreover, be justified, for 2 of the President's 10 proposals are impractical and unrealistic at this time.

The Journal must join the opposition to the proposal for possible consumer rationing (point 9) and the proposal for selective price and wage ceilings (point 10), not because they would create a "police state" as Senator Taft charges but because they would not work.

During the war, when patriotic fervor was high, selective rationing and general price controls did not operate too effectively. There was counterfeiting of ration coupons and there was black markets—and these things were preceded and accompanied by hoarding. A new system, created in peacetime and partial rather than complete, would work even less smoothly and less effectively.

How could we, for example, ration flour under price controls and with wage controls for workers in flour mills, when many other items and the workers producing them were completely free? We might end with the flour mills closed down for lack of employees and with what flour there was selling on the black market.

The President indicates that he wants authority to ration and to fix wage and price levels merely as a threat to those who misbehave, but what kind of a threat would it be when the controls themselves might play into the hands of the very worst elements among us?

The remainder of the President's program can, however, have the support of reasonable people in both parties. Surely there can be no sound objections to regulation of speculation, resumption of credit controls, continuation of some form of rent ceilings, the allocation of transportation facilities, and the strengthening and extension of export regulation. There is need for power in the Department of Agriculture to encourage food conservation at home and food production abroad, as well as to induce the marketing of livestock and poultry at the most economical weights and grades.

Finally and fundamentally, there is need to authorize allocation and inventory control of scarce commodities which basically affect the cost of living. This is the so-called second line defense against inflation, which at a time such as this offers the greatest hope for real pressure.

This, too, is a type of rationing, but on the production and trade level rather than on the consumer level. Under it, a flour mill is restricted as to the amount of wheat it can buy and the amount of flour it can mill, and the retail store and the baker are put on allotment. Grain is thus saved by the simple expedient of providing less wheat for one of grain's major uses. The job of dividing the shortened supply is then put on the retailer.

There are of course difficulties and unfairnesses in such a system, but the difficulties at least are much smaller than the difficulties which might be expected from resumption of the OPA type of control at this time.

The President's first eight points, if stress is put on allocation and inventory control, constitute a sound inflation control program by themselves. If Congress will put them into law—and many Members have already espoused one or several of them—we can at last do something about the upward spiral of prices, which is a threat not only to our domestic economy but to our European relief program.

These eight points should become the basis for a bipartisan program to bring our economy out of the clouds and to enable us to set Europe on its feet in a minimum of time. The other two points? No.

General Meyers' Hearing Underscores Good Work of Congressional Probes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Griffin which appeared in the Boston Sunday Post, November 23, 1947:

GENERAL MEYERS' HEARING UNDERSCORES GOOD WORK OF CONGRESSIONAL PROBES—SUCH COMMITTEES HAVE DONE ALL THE REAL EXPOSING OF CROOKEDNESS IN GOVERNMENT IN PAST 25 YEARS

(By John Griffin)

There have been many efforts to discredit the investigating committees of Congress. A group of naive Hollywood movie stars tried it not long ago, and for a time it appeared that the Hollywood technique would work. Eventually it developed that the movie group were superficial and unknowing, and couldn't possibly stop the proceedings.

They couldn't do it for one plain and simple reason. That is the common sense of the American people. The flash and flare of the movie boys and girls blinded many people momentarily, but soon they were seeing straight. What they saw was not pleasant.

It was a scene featuring a group of flamboyant characters who refused to say whether or not they were members of the Communist Party. They tried to present themselves as heroes, willing to endure martyrdom in order to protect "the right of free speech."

CHANGING THE TUNE

They made quite a fuss, but they don't appear to be quite so brave now, for they have learned that not only most of their own Hollywood confreres are denouncing them, but the people who support them by attending movies have turned against them.

Another demonstration of efforts to discredit congressional committees came when the Senate war investigating committee undertook to look into the facts of the allotting of contracts for aviation material during the war.

Howard Hughes, adopting the Hollywood technique, put on quite a show and boasted that he had succeeded in killing any further investigation. That was when the committee had suspended hearings a few months ago.

But it didn't stop the committee at all. It did jar the members a bit, and they wisely halted hearings until a clearer atmosphere could be obtained. Then they went back to work in public. The results, or some of the results, are obvious now in the case of Maj. Gen. Bennett E. Meyers.

The picture now coming into focus as the result of the investigation is a sordid one, and it may be that there are more to come. It cannot be fairly considered a condemnation of the Army, for there is no question that most of the high Army authorities have been honest, courageous, and hard-working men.

MUST BE WATCHED

But it does show again that there is always the possibility of people without a sense of honor getting into places where they are able to indulge their greed. There is always the chance that in cases where millions and billions of dollars are involved, there will be trickery and deceit.

Whether General Meyers has committed any illegal acts is yet to be determined in the proper place, which is the courts. Certainly his sense of chivalry is nonexistent, and it may be that his name will live a long while as a synonym for lack of chivalry.

His dragging the name of a married woman into a hearing that was being highly publicized all over the country will not be condoned by anybody. There is only a feeling of revulsion. Adding to the disgust expressed by so many people is the fact that General Meyers brought the woman's name out himself. It was not that he was backed into a corner by committee questioning; he volunteered the information.

General Meyers can have his day in court and perhaps he can explain all the strange tales that have been told about his activity in companies producing war materials, about his falsification of documents, about the many charges that witnesses have leveled against him.

The important point is that the committee is bringing things into the open which should be laid out for everyone to see. If General Meyers is innocent of wrongdoing, he can show it in court. In the meantime, the American people are fully entitled to know what was going on.

There have been cases of individuals wronged by congressional committees. The committee on Un-American Activities, under

the chairmanship of Martin Dies, did damage to a lot of people who were unjustly given wrong labels by Dies.

HAVE DONE WORK

Other committees have hurt reputations because of the domineering ways of certain committee members. But congressional committees have done all the real exposing of crookedness in Government that has been done in the last quarter of a century or more.

It hasn't been the prosecuting authorities in State or Government that have turned up the bad conditions. It has been congressional committees such as the one that exposed the Teapot Dome scandal.

The Committee on Un-American Activities, despite its repeated faults, has, over the years, revealed a lot of bad situations in which persons who tried to hurt the United States have been exposed for what they were.

The so-called Thomas committee, which demanded information of a number of Hollywood writers as to their Communist connections, has not been an ideal committee as far as technique goes, but it has exposed certain activities that the American people wanted to know about and were entitled to know about.

Despite all the howling from Hollywood, they didn't violate anyone's rights by asking a man if he was a member of the Communist Party. And they had some idea of the background of those to whom they were putting the question.

The Senate War Investigation Committee didn't violate anyone's rights, either, in questioning Howard Hughes and General Meyers and others, even though Mr. Hughes tried to convey the idea that this was all a personal vendetta against him.

What they have done is to produce a great deal of information and set it out in the light where it ought to be. Without such committee work there would be little protection for the people against the persons who prey on them.

Equal Rights of Women

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. PATTERSON. Mr. Speaker, I believe that the following clipping from the November 5, 1947, Waterbury (Conn.) American will prove of interest to many of my colleagues in the House. The issue discussed is particularly pertinent as legislation has been introduced into the Congress on this same subject:

EQUAL RIGHTS OF WOMEN GRANTED IN JERSEY'S NEW CONSTITUTION

To the EDITOR OF THE AMERICAN:

The action taken by New Jersey yesterday is of greater significance in the progress of women than Wyoming's act in 1869 in granting women the vote. For Wyoming gave the vote to a subject class called female. The new constitution in New Jersey says females are persons. For the first time in the United States, women have been given equal constitutional rights, as publicized by the New Jersey Constitutional Convention on September 8.

We had long supposed that women were persons. But in various ways the law says "no." A 25-year-old effort in Massachusetts to declare that women are persons is still being waged. The General Court is still arguing over an amendment to the jury law so that women may serve as jurors. The basic change would be the addition of the phrase "of either sex" after the word "person" which has been legally defined in that State as a male noun.

How did this historic decision happen in New Jersey? Women lawyers led the way, the New Jersey State Bar Association added its impressive weight, and the New Jersey Federation of Business and Professional Women's Clubs came in at the critical moment. For there was a critical moment.

The first woman admitted to the bar in New Jersey, Mary Philbrook of Tenafly, was one of those who induced the State Bar Association to appoint a committee to study the status of women. In 1941 the Bar Association approved in principle the proposed Equal Rights Amendment to the Constitution of the United States, and in June of 1947 these men—and women—lawyers recommended to the State Constitutional Convention that equal rights for men and women be embodied in the new charter. The Bar Association's detailed appeal ended with this paragraph: "In spirit women have attained a legal status equal with men, but in fact they are still in a subject class. This is incompatible with the right to vote and with the responsibilities women are assuming. The proposed equal rights clause would confirm the rights women now enjoy and clothe them with the power and dignity to assume full responsibilities as citizens, and an untrammeled right to opportunity and self-development."

In the years since the National Woman's Party introduced in Congress the equal-rights amendment, traditional misunderstandings have grown about it like moss and barnacles. Groups came to the New Jersey convention declaring that they would fight equal rights tooth and nail, even if their respective organizations had indorsed this basic human principle in the Charter of the United Nations. And then a committee of the New Jersey Federation of Business and Professional Women's Clubs stepped into the picture. Among their leaders were Attorney Marguerite Carpenter, of Newark, and Judge Libby Sachar, of Elizabeth. They offered a little proposal which finally was accepted, even by the opposition. They said, "Let's call this rose a daisy; it will still smell as sweet."

The procedure is as follows: The first article of the New Jersey Constitution, Rights and Privileges, is a bill of rights of 21 paragraphs. 1. "All persons are by nature free and independent * * *." 2. "All political power is inherent in the people." 5. "No person shall be discriminated against in the exercise of any civil rights * * *." But not a word about equal rights.

Turn the pages to article X. It reads, in parts, as follows: "Wherever in this constitution the term 'person,' 'persons,' 'people,' or any personal pronoun is used, the same shall be taken to include both sexes." This was the proposal of the State federation committee.

May we hope that men and women of other States and of the Congress of the United States will be as clear and clever in winning this last legal fortress of fundamental democracy.

FLORENCE L. C. KITCHELT,
Chairman.
MILLICENT POND,
Vice Chairman.
HONORE P. COPPINGER,
Secretary, Connecticut Committee for the Equal-Rights Amendment.
ANNA B. PLATT,
Legislative Chairman, Connecticut Federation of Business and Professional Women's Clubs.

WATERBURY, *November 4, 1947.*

They Won't Dig Coal, So We Must

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. HOFFMAN. Mr. Speaker, under leave granted, I insert herewith two advertisements from the Nashville Coal Co., Inc., together with my comments.

Just how long some Republicans will continue to back the foolish give-away policy of the emergency creators and those whose greed points to the necessity of a third world war is a question which is worrying a lot of our people.

The administration has followed a policy of giving to Russia billions upon billions of dollars, of giving other billions to the countries which come under her control and whose resources she can use. At the same time, the administration tells us if we do not continue this policy, Russia and communism will overwhelm us.

Just why we should weaken ourselves to make a so-called potential enemy strong, the average citizen cannot understand.

With reference to one item—coal—which we are exporting, the Nashville Coal Co., Inc., of Nashville, Tenn., has something to say in two advertisements. They read as follows:

NO COAL SHORTAGE? HUH

Out of a conference called recently by Secretary of Interior Krug, there came this gem of double-talk:

"There have been reports from various groups that there is a coal shortage in some sections of the country, particularly for high-grade coals. It was the consensus of this group that there is no general shortage, except for certain of the better grades in localized areas."

Well! Well! Well!

On November 4, 1947, we received the following telegram from the Chief of the Bureau of the Supplies and Accounts, Washington, D. C.:

"About 2 days' coal stocks now on hand Fort Knox, Ky.; 14,800 tons washed screenings need this winter. Advise if you could supply any portion of this requirement stating price, mine name, approximate analysis, shipping point, and desired shipping schedule."

Unless coal shipments can start at once hospital at Fort Knox will have to close down.

From the press release by the Krug committee, it would appear that the Fort Knox Hospital is a localized area.

If this were an isolated instance, we might be constrained to agree with the Krug committee's finding. But it isn't! It is simply one of the many frantic appeals for coal which we and other coal shippers, who have the interests of their customers at heart, have been receiving for months. The hospital at Fort Knox is about to close but coal is going to Europe, boatload after boatload of it. Three and one-half million tons during November. At high prices to be paid for with our money. And because of delays to coal cars hauling it to and from the ports and at the ports, many mines in this country are running about half time.

This business must be stopped. It will be stopped if you tell your own story to your

Representatives in Congress and demand that they do something about it.

Misleading statements filled with half-truths, issued by bureaucrats and their hand-picked committees, won't keep your home warm this winter or keep your factory from closing down because you can't get coal.

An insistent public demand can stop the export of coal to Europe until the situation here clears up. That it be cleared up at once is absolutely necessary to our own economy.

The remedy is in your hands.

NASHVILLE COAL CO., INC.

NASHVILLE, TENN.

BLACKMAIL

The countries of Europe threaten that they might adopt a form of government which we do not like if we do not give them billions in cash and ship them our coal and foodstuff.

What they apparently mean is that we must give them enough money and goods to make it unnecessary for their labor to work more than 30 to 40 hours per week.

We already have a public debt which is probably larger than the combined debt of all Europe, at least that part of Europe's debt which will ever be paid.

We already have on our back the greatest number of Government employees of any nation, with the possible exception of Russia.

We already have a serious coal shortage and an equally serious car shortage which is contributing to it. This condition is attributable both to the tonnage we are exporting to Europe and the British Isles and to the waste of car efficiency in hauling it to tidewater.

Still, we are told we must furnish money and goods to Europe to keep certain countries there from going communistic.

Paying blackmail, whether you call it "aid to Europe" or "the Marshall plan" or any other name is idiotic on our part and bad for those to whom we pay it.

Let's spend our money for our defense and the reduction of our public debt and our tax burden. Let's keep our coal at home where it is desperately needed.

England and Europe have a supply of coal in the ground large enough to take care of them for a thousand years or more. Let them dig it, like we are digging it here.

Frankly, we want to supply our customers with coal and ask that you help us do that by writing your United States Senators and Congressman to stop this blackmail.

NASHVILLE COAL CO., INC.

NASHVILLE, TENN.

Read them again. Do they make sense?

Then, do not forget that coal is not the only essential commodity that is being given away. Sit down, think things through and if you can find just one good reason why a Congressman should support the Marshall plan, let me have it.

Shipment of Heavy Machinery and Farm Equipment to Russia

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. SEELY-BROWN. Mr. Speaker, I hope the President explains to the people of the Second District of Connecticut why we as a Nation are being called upon by him to spend billions of dollars in our "cold war" with Russia while he with the power to control exports given him in Public Law 188, Eightieth Congress, reports to the press that he sees no reason to stop the sale of heavy machinery and farm equipment to Russia at this time.

The Wool Industry Gets Clipped

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two articles taken from editorial pages of the Denver Post, Denver, Colo.

These editorials concern tariff reduction on wool, and the information and sound reasoning so carefully and skillfully analyzed should be of great value to our Members in understanding our livestock production problems in the West.

THE WOOL INDUSTRY GETS CLIPPED

Of all the tariff reductions resulting from the Geneva trade conference, the one most likely to injure a domestic industry is that reducing the long-standing duty of 34 cents a pound (clean basis) on wool to 25½ cents.

The fact that the wool growers are guaranteed a good price for wool through 1948, in spite of the tariff reduction, does not compensate for the fact that the easing of the import restrictions raises serious doubts regarding the future of the sheep business in the West.

In the years just before the United States entered World War II, the domestic industry supplied approximately 80 percent of the wool consumed in this country.

During the war, foreign wools, in spite of the 34-cent tariff, moved into the American market in unprecedented quantities to be made into uniforms and blankets, and since the war they have kept on coming. As a result approximately 80 percent of the wool consumed here in 1946 was foreign wool and only 20 percent came from the domestic clip.

Foreign wool imports last year were six times the average imports during the 5 years before Pearl Harbor. Under the circumstances, it hardly could be claimed that the 34-cent tariff was preventing a thriving American import business in wool, yet for reasons best known to themselves the American delegates at Geneva agreed to a tariff reduction as a further trade stimulant.

Domestic wool growers are worried because now that American processors have learned to handle foreign wools they are showing a preference for them as compared with domestic wools. Part of the reason for the preference may be that the foreign wools arrive already sorted to some extent.

The domestic wool clip this year is not expected to exceed 300,000,000 pounds, the smallest in many years. The number of stock sheep in this country is the smallest since 1867.

The big worry of the sheepmen, as raised by the new tariff action, is what should they plan for the future? Can they look ahead with confidence and make plans to rebuild their flocks? Or must they try to reconcile themselves to the thought that a large part of the American market for wool already has been taken over by foreign growers who now may take over even a larger share?

Even those, including the Denver Post, who agree heartily with the principle of stimulating world trade by removing tariff and other restrictions should not be blind to these important considerations:

1. Since the start of the war, the present wool tariff has not been restrictive.

2. The world's largest wool-producing countries in general are not those whose economies are in the greatest need of help.

3. Many acres of western land will not add any new wealth to the American economy if the wool industry is forced into further liquidation.

4. Wool is a strategic war commodity in which the United States should be at least partially self-sufficient.

5. The United States would have no protection from possible exorbitant cartel-fixed prices for wool if it had no domestic industry to serve as a price yardstick.

We grant that in raising such objections we may be open to the accusation of talking out of both sides of our mouth on the subject of liberal trade policy. It may be said that we are for free trade to the point that our own ox is gored. But even at that risk, we think these considerations deserve more careful study than they have received at the State Department, which negotiated the Geneva agreements.

THAT'S THAT

(By Bruce Gustin)

American wool producers fear they have been "sold down the river." They have plenty of reason to think that. At the Geneva trade conference, the United States agreed to slash the tariff on wool from 34 cents a pound to 25½ cents, effective January 1. That will be fine for the Australian sheepmen. The tariff cut will boost their profits, help them to take more of the American market from American producers, and American consumers probably will pay just as high prices for woolen goods as now. But in no conceivable way can this tariff cut help the wool producers in Wyoming, Colorado, New Mexico, Texas, and other American States.

What will the wool tariff cut do to American producers? "Western flocks which supply 70 percent of the domestic wool have been reduced 35 percent since before the war," says Congressman HILL, of Colorado. "The tariff cut will mean a continuation of the liquidation of the flocks." Senator ROBERTSON of Wyoming brands the tariff slash a "damaging and unnecessary blow to the wool-growing industry." Nobody has shown how it can possibly help the American wool growers.

Of all the 3,500 tariff reductions agreed to by the United States at the Geneva conference the wool slash apparently will hit American producers the hardest and the earliest. On other items, the effects of cuts in American protective tariffs may not be felt for several years. Most foreign countries have little, if anything, to export to the United States now. Demands upon our domestic markets are so far ahead of supply that it can take both foreign and domestic production.

Why protective American tariffs should be determined at an international conference in a horse-trading deal with countries which have nothing to sell the United States and no money with which to buy American exports is hard to understand. Tariff-making is one of the constitutional powers of Congress. But Congress had no voice in the Geneva Conference. It does not even have a chance to approve or reject the agreements made in the name of the United States.

Exercise of congressional tariff-making power by an international conference is a result of the Reciprocal Trade Agreements Act of a New Deal Congress which surrendered that power to the President. At first, these agreements were negotiated with individual countries by the State Department. Now, it seems, the question of how much tariff protection American industries are to have in the future is determined by international conferences.

Lodi, Home of "Flame-Tokay Grapes," Holds Grape and Wine Festival

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. JOHNSON of California. Mr. Speaker, Lodi has frequently been referred to as the "biggest little city in California." It is in the center of a very rich agricultural section, in which tokay grapes is the predominant crop. Many Members of the House have received tokay grapes from the 'Tokay Agreement"—a cooperative organization of tokay growers. Others have eaten the tokays in the House restaurant when we have placed them on the tables, a token of one or more growers to their Representative.

To pay tribute to their major produce the people of Lodi each year hold an annual celebration in honor of the grape and the wine.

The annual grape and wine festival held in September has become a tradition and has come to the front in fairs and recognized as an outstanding specialty show with the largest display and variety of grapes shown under a single roof; together with outstanding booth exhibits by wineries and shippers.

This 3-day event is officially opened at 8 p. m. in the Grape Bowl on Friday night with the crowing of Queen Tokay presented with her court. Saturday morning a kiddies parade in downtown Lodi, Saturday night a professional show and Sunday afternoon a street parade of drum corps, drill teams, bands, mounted entries, floats, and so forth, and this year after the end of the parade in the Grape Bowl a horse show was presented. Another feature of this 3-day event is participation of the California Federation of Folk Dancers in colorful costume put on an exhibition. This event attracts 85,000 to 90,000 people during the 3 days.

The 1946 tonnage, grapes for wine, 367,464 tons. Carloads of grapes shipped in 1947, 6,200 including table and wine grapes. Lodi population, 15,000.

In addition to being a prosperous town, Lodi is a very progressive city, with one of the lowest tax rates in California and without any bonded debt. Part of this is due to the fact that many years ago Lodi acquired an electrical distributing system, the profits of which have furnished most of the many municipal improvements in Lodi.

A stadium appropriately called the Grape Bowl was built several years ago in which football games are played and where the grape and wine festival is held. Governmentally Lodi is a model city with intelligent officials, a low tax rate, and many municipal improvements.

Cutting Our Own Throats

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. HOFFMAN. Mr. Speaker, prior to, during and ever since the end of World War II, we have been pouring billions of dollars worth of materials into foreign lands on the theory that unless first Hitler and his philosophy, later communism and Russia, were prevented from spreading throughout Europe, our national existence would be imperiled, our Nation destroyed.

More recently, under pressure of the Administration, $400,000,000 was given to Greece and Turkey to stop Russia and the Communists. $100,000,000 of this went to Turkey strictly for military aid—not for food, clothing or shelter.

Now here is the point, is it not absurd and foolish for us to continue with one hand to give billions to stop communism and Russia, while with the other we extend aid to the Russians and Communists our potential, if not our actual, enemies?

Please take a glance at our export trade with Russia. The record is as follows:

Examination of available documents relating to our export trade with the Union of Soviet Socialist Republics (Russia) for the calendar year 1946 and the first 9 months of 1947 shows the following:

Calendar year, 1946:	
Lend-lease shipments	$152,100,000
UNRRA shipments	[1] 152,200,000
Cash purchases	53,600,000
Total	357,900,000
Calendar year 1947 to Sept. 30:	
Lend-lease shipments	16,200,000
UNRRA shipments	31,900,000
Cash purchases	65,600,000
Total	113,700,000
Combined shipments, 21 months:	
Lend-lease shipments	168,400,000
UNRRA shipments	184,100,000
Total	352,500,000
Cash purchases	119,200,000

[1] Included in UNRRA shipments was exports paid for by private charities in the amount of $10,663,000.

NOTE.—President Truman ordered lend-lease be stopped on September 2, 1945.

Goods and supplies then on order and in process constituting the so-called pipe line could be shipped during the liquidation of lend-lease until December 31, 1947. Later Congress, but not with my vote, amended the Lend-Lease Act, by allowing shipments to the countries named (Russia was not named) under limited circumstances. It appears that in their zeal to expedite shipments to certain countries including Russia employees of the Government agencies concerned with the administration of the program, have sought and used ways and means to circumvent the plain intent of Congress.

Notwithstanding the efforts of Congress to end supplying Russia with the materials which will aid her in making war against us, the administration still continues doing things which strengthen the hands of the Communists in Russia.

The press of the 20th quotes President Truman as saying he sees no reason for halting shipments of heavy machinery to Russia.

In the total of $113,700,000 worth of goods sent to Russia, there was included $80,500,000 worth of heavy machinery and vehicles. As the President well knows, the machinery can be used to construct plants which, if war comes, will turn out munitions of war to be used against our soldiers.

It carries me back to the days when prior to the last World War, I endeavored to get before the House legislation to stop shipments of scrap to Japan. The bill then was pigeonholed. The scrap came back later, part of it perhaps at Pearl Harbor.

The country should know what the administration now is doing. The fault lies squarely with the administration which all too often circumvents the legislation passed by Congress.

The Debate Begins

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star:

THE DEBATE BEGINS

The President's message to the special session of Congress and Senator TAFT's reply may be regarded as the opening passages in a debate which will shape the future of the world. At this stage of the matter the outlook is not reassuring.

Whether one agrees or disagrees with his proposals, Mr. Truman's message was admirably direct and to the point. There was no beating about the bush.

He asked Congress, first, for $597,000,000 as an emergency-aid program to tide Austria, Italy, and France over the winter. It is expected that these funds will suffice until next March 31, when it is hoped that the long-range Marshall plan will be ready to go into effect. The details of the Marshall plan will be submitted to Congress in a later message.

Mr. Truman then outlined the measures which he thinks are necessary to deal with inflation in this country—an inflation which has already assumed serious proportions and which will be aggravated by the European aid program.

The counterinflationary steps advocated by Mr. Truman are 10 in number, with the political dynamite being confined mainly to the last 2. In these, Mr. Truman asked Congress to authorize consumer rationing on products in short supply which basically af-

fect the cost of living; to authorize price ceilings on products in short supply which basically affect the cost of living or industrial production and to authorize such wage ceilings as are essential to maintain the necessary price ceilings.

It is almost a foregone conclusion that the President is not going to be given these powers. The comments of Senator TAFT and other Republican leaders are just about conclusive on this point. Perhaps the President did not expect to get them, for in discussing his proposals he said that first five taken together, would "aid substantially in relieving inflationary pressures."

The worst that can be said of the other proposals, however, especially the last two, is that they would be apt to prove unworkable. In an economy as complex as ours, selective rationing and selective price control at the consumer level is a doubtful business. If the experience with OPA serves as a guide, a resort to such measures now would be apt to do more harm than good, especially in view of the President's none-too-firm attitude in the matter of wage controls.

Still, to repeat, the worst that can be said of these proposals is that their workability is doubtful. And in fairness to the President, it should be recognized that mounting inflationary pressures may yet drive us to them.

Most certainly there is nothing in the message which justifies Senator TAFT's extreme attack on the President. He was justified in attacking the soundness of the proposals. But when he went on to impugn the President's motives, to picture him as wanting a police state in this country, and to cast doubt on the genuineness of Mr. Truman's desire for world peace, he was going much too far.

The exact position of Senator TAFT in this matter continues to be unclear. He blames high prices on the excess of consumer dollars competing for scarce goods. Yet he would increase the supply of dollars in the hands of consumers by cutting taxes. He says that he favors "reasonable" aid to Europe as a means of combating communism, yet he talks about aid at the rate of $8,000,000,000 a year. He must know that no such figure is contemplated under the Marshall plan. He dwells upon the generous manner in which this country has dealt with Europe and concludes that we cannot afford to be more generous.

The trouble with this is that it seems to miss the point of what we are trying to do. If it were simply a question of whether we should be generous, one might agree with the Ohio Senator that we are doing enough. But generosity, as such, has little to do with it. The real reason for going to the aid of Europe is to prevent Communist domination of that continent, to head off the peril for us which would follow such domination.

Senator TAFT seems to give little weight to this cardinal point. And until he and his colleagues accept it, with all of its grim implications, the European aid debate will continue to be muddled and our own future will continue to be in jeopardy.

Report of the President's Committee on Foreign Aid

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 25 (legislative day of Monday, November 24), 1947

Mr. HILL. Mr. President, in the Washington Star for last Sunday there appeared an article by Mr. Richard L. Stokes concerning the report on President's Committee on Foreign Aid. It is an interesting discussion, and of particular interest is the account of the most important part played on the President's commitee by our former colleague, Senator Robert M. La Follette. The article tells of the many notable contributions made by him to the work and report of the committee.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPORT ON EUROPE'S NEEDS HAILED AS A MASTERPIECE—CLARITY AND CANDOR OF HARRIMAN COMMITTEE DOCUMENT LEAVE NO ROOM FOR DOUBT AS TO WHAT IS REQUIRED AND WHY

(By Richard L. Stokes)

In the brief period since its publication on November 8, the report of the President's Committee on Foreign Aid, popularly known as the Harriman Committee, has become recognized as a classic.

It surveys with authority and realism a huge expanse of detailed information. Its judgments are sagacious and independent. The text, lucid, easy and on occasion eloquent, is wholly devoid of the bureaucratic jargon called "gobbledygook." But the unique virtue of the document is a tone of moral elevation which rings from the heart, conscience, and courage of its editor in chief, former Senator Robert M. La Follette.

HOW THE WORK STARTED

There is natural curiosity as to how a work of such merit and magnitude could have been executed at headlong velocity. The purpose of this article is to throw some light upon the achievement. It began last June 22 with President Truman's appointment of a bipartisan committee of 19 distinguished private citizens from the topmost ranks of industry, finance, agriculture, labor, science, and scholarship, with W. Averell Harriman, Secretary of Commerce, as chairman.

Its mission was to determine facts concerning the kinds and amounts of resources available for economic assistance to foreign countries and the limits within which the United States might safely and wisely plan to extend aid.

The committee held its first meeting on July 23 and 24. A subcommittee on organization was named under the leadership of Owen D. Young, honorary board chairman of the General Electric Co. This, in turn, appointed nine other subcommittees, which were instructed to prepare reports covering pertinent areas in their respective fields.

A HERCULEAN TASK

The next task was the organization of a staff. As executive secretary, the committee retained Richard Mervin Bissell, Jr., associate professor of economics at the Massachusetts Institute of Technology. Among his assistants were Herman Wardwell Liebert, an associate fellow of Davenport College at Yale University; William W. Remington, a youthful economist from Dartmouth, who was loaned to the committee by the Council of Economic Advisers, and John Davenport, an editor of Fortune, and brother of Russell Davenport, chief editorial writer for Life magazine.

Appointed also were secretaries of the nine subcommittees. It became their function in every case except one to do the actual drafting of subsidiary studies published in the second volume of the over-all report.

In addition to these studies, the committee was faced with the ordeal of digesting and evaluating three basic documents of encyclopedic proportions. The first was a two-volume survey of foreign needs which was compiled by the conference on European economic cooperation at a meeting of 16 nations in Paris.

The second was a voluminous account of American natural and industrial resources by an interdepartmental committee under the chairmanship of Julius A. Krug, Secretary of the Interior. The third was a report of some 36,000 words on the impact of foreign aid upon the domestic fiscal economy, which was submitted by the Council of Economic Advisers, with Dr. Edwin G. Nourse as chairman.

REPORTS SLOW TO ARRIVE

The job was made more difficult by the tardiness of the documents. The committee and its staff were in full-scale working order by the middle of September. At about the same time sections of the Krug report, which was transmitted in installments, began to arrive. The Paris Conference report did not become available until the end of September, and the Nourse survey until the middle of October.

Nevertheless, the committee found it possible to analyze and pass judgment upon the three reports. It accepted as valid the Paris study of emergency needs, such as food, fuel, fibers and fertilizer, but made a searching attack upon its estimate of long-term capital requirements. The factual background of the Krug report was pronounced to be, on the whole, accurate.

The Nourse survey is tactfully described by committee spokesmen as having proved "less directly useful" than the others. Most of the facts presented were already known to the committee, which took sharp issue with the conclusion of Dr. Nourse and his associates that the current inflationary trend is due chiefly to excess of domestic consumption, rising from an economy of full employment and high wages.

CROSSED SWORDS WITH TRUMAN

The committee made bold to cross swords with President Truman himself, who declared in a radio address on October 24: "An attempt has been made to place the blame (for higher prices) upon our foreign-aid program, but this is not borne out by the facts."

In direct opposition, the committee not merely declared inflation to be the most pressing danger to American well-being but asserted flatly that "every shipment abroad of scarce goods—particularly food—adds to inflationary pressure at home," and that "these marginal amounts may tip the scale between stability and inflation."

The over-all report consist of three parts. The first is a summary, used as a preface; the second is the report proper, a document of about 150 pages, and the third is a collection of 18 special reports from the subcommittees.

The actual drafting of the summary and report proper is chiefly the work of five men—Messrs. La Follette, Bissell, Liebert, Remington, and Davenport. Professor Bissell probably wrote more of the text than any of the others. Mr. Liebert had final responsibility in reading the proofs for errors. Mr. Davenport spent 10 days in Washington putting ultimate polish on the style. He is credited with such telling phrases as "the United States is no limitless cornucopia," "it is not wise to underestimate the steepness of the climb," and "aid must not be viewed as a means of supporting Europe but as a spark which can fire the engine."

ABLE AND YOUTHFUL

A characteristic of the group of five is not only outstanding ability but youth. Mr. La Follette, the oldest, is 52. Mr. Bissell is 38, Messrs. Liebert and Davenport 36, and Mr. Remington about 30. Only the years of resilience could have endured the stress of sustained and intense labor to which they were subjected. There was also a distinct

literary flavor. Mr. Davenport is a professional writer. Professor Bissell has published numerous articles in topside magazines. Mr. Liebert is at work on a biography of Dr. Samuel Johnson.

As the only political member and an old hand at committee work, Mr. La Follette was made chairman of a one-man drafting subcommittee. His was therefore the supreme editorial responsibility. He was also 1 of 2 out of the 19 members who made direct contributions to the text.

The other was Chester C. Davis, president of the Federal Reserver Bank of St. Louis and head of the Agricultural Adjustment Administration from 1933 to 1936. As chairman of the Subcommittee on Food Resources, Mr. Davis himself wrote the sapient and exhaustive special report on food, with Dean William I. Myers of Cornell's college of agriculture as principal adviser.

Toiling often at his desk until 4 a. m. and scribbling feverishly on pads of yellow paper, Mr. La Follette composed with his own hand the climactic section of the report under the title of "The Interest of the United States in European Recovery." The opening paragraph states the creed which from beginning to end invests the document with irreproachable candor. "The committee has faith," wrote Mr. La Follette, "in the sound judgment of the people and of the Congress when they have learned the whole truth."

PRINCIPLE NOT ARGUED

As author of this chapter, Mr. La Follette was responsible for the report's insistence on the humanitarian aspect of the foreign-aid program, which too often has been forgotten; for its blasting indictment of the communist system as "one where iron discipline by the state stamps out individual liberties and obliterates all opposition," and for an analysis of what would happen to the American way of life and form of government if bolshevism occupies Europe—an analysis cool and dispassionate, and partly for that reason one of the most formidable prophecies ever written.

It is the recollection of men present at the time that Mr. La Follette supplied the wording of the summary's famous passage regarding America's attitude toward the Socialist governments of Britain, France, and Italy. The question was threshed out at a full meeting of the committee.

Strangely enough, in view of the number of conservative businessmen who were members, there was no controversy over the principle, but only about the energy of the language to be employed. Suggestions were tossed about, to be accepted or rejected. At last Mr. La Follette took his pencil and yellow pad and wrote. What he put down was offered as a motion by a businessman and unanimously adopted.

LA FOLLETTE HAD BIG HAND

Commercial interests were reassured by the statement that "this committee firmly believes the American system of free enterprise is the best method of obtaining high productivity." Then came a declaration as strong as well could be: "It does not believe that any foreign-aid program should be used as a means of requiring other governments to adopt it. The imposition of such conditions would constitute an unwarranted interference with the internal affairs of friendly nations."

Mr. La Follette also had a ruling hand in compiling the admirable summary, which is based on other sections of the report, including particularly his own chapter. The writing itself was done chiefly by Mr. Liebert and Mr. Bissell. As head of the Subcommittee on Program Administration, Mr. La Follette determined, but did not actually write, the section proposing an independent agency, preferably of a corporate nature, for operating the program, with a single administrator in charge and with major policies to be determined by the State Department.

Thanks to the policy of telling the whole truth, this masterpiece among reports leaves the American public in no doubt as to what will be required under the foreign-aid program, and why, as well as the precise risks and sacrifices to be undertaken. Whatever action Congress may adopt, it will not be entered upon blindly. Though agreed as to the necessity of foreign aid, the committee never for a moment lost sight of protections due to the domestic economy and American taxpayer.

If the committee's recommendations are followed the administrator of the European recovery plan will occupy one of the strategic posts of civilization. All operational decisions would be in his hands. Thus far only two men have been publicly mentioned for the appointment—Mr. La Follette and Lewis W. Douglas, Ambassador to Great Britain.

Should La Follette be named, the American peole could be assured of a humane and efficient administration of ERP. It would also be realistic and just, with a constant eye upon welfare at home.

And thereby would hang a tale of irony. The chief of the greatest peacetime enterprise of international collaboration ever undertaken by the United States would be the son and namesake of the late Senator Robert M. La Follette of Wisconsin, leader of a group denounced by President Wilson as "12 willful men," because of their stubborn pacificism and isolationism.

FBI Protects Civil Rights

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. CRAWFORD. Mr. Speaker, we hear a great amount of discussions these days about infringement of civil rights in connection with the new Government loyalty check. Questions submitted to FBI Director Hoover by correspondent Bert Andrews also include a clear statement on this subject. Further questions by Mr. Andrews and the answers by Mr. Hoover follow:

PROTECTION OF CIVIL RIGHTS

Question. Does the FBI strive to protect the civil rights of persons it investigates, and, if so, in what manner?

Answer. The best answer to that question is the record of the FBI itself. The 11,812 convictions which resulted in cases investigated by the FBI last year represented 96.8 percent of the total number of cases taken to court. It is, of course, a well-established technique of some criminal lawyers to defend their clients by attacking FBI agents. This is particularly true when they have no facts to use in their defense except perjured testimony.

If we violated civil rights in criminal cases, it can be expected that some of our powerful and influential adversaries would have established the truth of their charges in open court. They have not been able to do this because the FBI does not violate civil rights.

In connection with the loyalty program, every care is being exercised to establish the innocence of the falsely accused employee as well as the true facts on the disloyal employee.

Every experienced investigator is quick to spot the individual who furnishes information and who is motivated by personal bias, prejudice or some other ulterior motive. Whenever the agent has facts to indicate this is the case, he is under instructions to set these facts out in his report in order that Government officials and loyalty hearing boards can take this into consideration in evaluating the information furnished.

In the final analysis, the character and background of the men of the FBI are insurance that the civil rights of others will be respected. They are graduates of recognized law schools, accounting schools or college graduates. Prior to appointment each is carefully investigated and all doubts are resolved against their appointment. Upon entering our service they undergo an intensive training course covering all phases of our work, and special emphasis is placed upon the protection of the civil rights of all individuals.

STAND ON SUBVERSIVE GROUPS

Question. Does the FBI establish lists of organizations ruled to be subversive?

Answer. No. The FBI does not make policy, recommendations, conclusions, or rulings based upon our investigations. The FBI, since I became its director in 1924, has adhered strictly to the premise that it is a fact-finding agency. It does secure information on organizations upon receipt of information that they are engaged in subversive activities under the President's loyalty order. The facts it gathers are then submitted to officials of the Department of Justice, and the Attorney General rules on whether the organization is subversive. The FBI investigates alleged membership in subversive organizations of Federal employees after the Attorney General has ruled the organization to be subversive. Even then the FBI realizes that all members of front organizations are not subversive and there always exists the possibility that one might be attracted by an appealing name or duped as to the organization's real intent. In each case special agents will look for facts other than membership alone which will establish his activities and real intent, such as overt acts. In case of doubt as to whether we should or should not investigate we will refer all the facts to the Attorney General for his decision.

POLICY ON KEEPING FILES

Question. Does the FBI keep files on citizens and important Government officials?

Answer. We keep files only on those people and organizations we investigate as a result of information or a complaint coming within our jurisdiction. What a citizen says, thinks or does is his business, not ours, so long as he is not alleged to violate Federal laws. Contrary to popular belief, the FBI does not keep files on all people in the United States. We keep files pursuant only to the discharge of the responsibilities imposed upon the FBI by law.

PROTECTION OF LOYAL WORKERS

Question. Suppose a Federal employee is reported to be a member of the Communist Party, and assume that there is a person by that same name who actually is a party member, what protection does the loyal Federal employee have?

Answer. The FBI is interested only in facts, and if the facts will prevent an injustice we will vigorously seek to secure them. One of the problems we are confronted with in the loyalty program is that of establishing the identity of the person mentioned in the complaint with that of the Federal employee. In one case we received a report from another Government agency that a person having the same name as a Federal employee was observed distributing Communist literature. We assigned the matter to the field for in-

vestigation. It was established that the person engaged in Communist activity, although having the same name, was not the Federal employee.

The first step in any loyalty investigation, upon the receipt of allegations of disloyalty, is to first establish whether the Federal employee is identical with the person on whom the allegations are made. Once it is established that there was a case of mistaken identity the case, of course, is promptly closed.

POLICY ON ALLEGATIONS

Question. If a citizen says the Federal employee is a Communist, fellow traveler, parlor pink, Fascist, or a member of the KKK, what does the FBI do?

Answer. We are not satisfied with bare conclusions. Whenever a citizen labels a Federal employee as a Communist, Fascist, or Klansman we ask for the facts upon which he bases his conclusions. If the person interviewed has no facts to support a conclusion, that is set forth in the investigative report, and the agent specifically points out that while a Federal employee was thus labeled, the person interviewed had no facts upon which he predicated his conclusion. Additional investigation is, of course, conducted for the purpose of establishing the truth or falsity of conclusions advanced by persons interviewed.

POLICY ON PROSECUTIONS

Question. If a Federal employee is alleged to be a Communist, why does not the FBI initiate criminal prosecutions as in the case of Carl Marzani, the former State Department employee whose conviction for failure to disclose his Communist affiliations is presently pending appeal?

Answer. Criminal prosecutions are initiated in proper cases, but not by the FBI. It has no authority in this regard. That is the responsibility of the prosecuting officials of the Department of Justice and the various United States attorneys. It is not a simple matter to prave that one is a Communist. In fact, the most dangerous Communists in the Nation today are always not the open, avowed, card-carrying party members. They are the ones who seek to attach themselves to liberal and progressive movements; they employ every subterfuge to conceal their real Communist affiliations, because they know that once exposed they will outlaw themselves in the hearts and minds of loyal American citizens. His real loyalties, however, can frequently be established by his acts. If in everything he does he follows the party line, if he espouses the party's causes, and if he furthers the party's aims by overt acts, then his acts will supply the necessary proof for the loyalty hearing board to act upon.

The FBI is the investigative arm of the Department of Justice and reports to it all facts developed in the investigations.

DANGERS OF COMMUNISTS

Question. Throughout the war years the FBI was more concerned with Nazi or Fascist brands of disloyalty. Can you, therefore, furnish some idea as to the dangers today of the Communist brand of disloyalty, and why?

Answer. The Communist Party has long regarded infiltration of the Government service as a project carrying the highest priority. They have sought to accomplish this under the guise of secrecy. Several months ago high officials of the party, recognizing the growing sentiment against the party and anticipating vigorous protective action, issued instructions that party members in the Government and in other strategic positions were not to attend party organizational meetings. Informal social meetings which could not be identified as Communist meetings were permitted. Party members in the Government and in other strategic positions were ordered to destroy their party-membership cards, and under no consideration were their names to be carried on party rolls, nor were they to be openly contacted by high party functionaries. This emphasis upon secrecy, it appears to me, is a confession on the part of the Communists that they have something to conceal.

The menace of Communists in the Government service is a threat to our national security because of:

1. The opportunity to engage in espionage to the detriment of our national defense.

2. The opportunity to influence the formulation and carrying out of governmental policies.

3. The opportunity to further Communist propaganda, creating disruption and undermining public confidence.

4. The opportunity that is presented them to recruit party members in Government service, or soliciting the aid of innocent coworkers in assisting them to carry out party assignments.

5. The opportunity to place other Communists in Government service.

One person whose loyalty to the Communist cause exceeded his loyalty to the United States, properly placed, could do irreparable harm to our security, and should there ever be another grave emergency he could conceivably be responsible for loss of American lives.

HOW EMPLOYEE UNIONS STAND

Question. Has the FBI received any opposition from the leaders of unions of Federal employees to its part in the loyalty program?

Answer. James B. Burns, president of the American Federation of Government Employees (AFL) has said: "AFGE members have nothing to hide and therefore offer no objection to our Government's desire to weed out disloyal employees. The AFGE is confident that the loyalty program will be carried out by the Civil Service Commission and the FBI in a truly American fashion. Certainly there is no reason for hysteria or the notion that this is a witch hunt."

Mr. Luther Stewart, president of the National Federal of Federal Employees (an independent union), has this to say: "Federal employees who have nothing to conceal—and they are in the overwhelming majority—are not those who are crying out most passionately against the loyalty program and raising the bogey of 'persecution.'"

Mr. Abram Flaxer, president of the United Public Workers of America (CIO), on the other hand, has had few kind words for the program, and his remarks have generally followed the theme: "Every member of every trade union * * * is in grave peril as long as this type of union-busting witch hunt is allowed to continue." The fact, of course, is that the FBI is not engaged in any program of union busting, and we have no interest in and are not compiling any lists of union members.

Mr. Leo. George, president of the A. F. of L. National Federation of Post Office Clerks, on the other hand, said, "None of our union members has protested against listing their union connections, and we expect no protests."

ANSWER TO "WITCH HUNT" CHARGE

Question. What is your over-all answer to the charges of critics that the FBI either initiates or is used by other agencies to prosecute witch hunts and Red scares?

Answer. The FBI starts an investigation on the loyalty program exactly as it does in any other type of case, only after the receipt of information or a complaint which comes within the clearly defined responsibilities imposed upon us. If the allegations later are proved to be false by a thoroughly factual investigation, the Federal employee is rendered a service by having the facts presented establishing the falsity of charges, and this provides the means whereby he may be cleared of suspicion. No loyal Federal employee has anything to fear from an FBI investigation. If he is loyal and has been unjustly accused, we will develop the facts to prove his loyalty.

The loyalty program for the overwhelming majority of Federal employees will be over as soon as they have filled out the required questionnaire and had their fingerprints taken. The so-called witch hunts, so far as I can ascertain, exist only in the minds of those who oppose the loyalty program either through ignorance or for more sinister reasons.

In 1940, when the Communists were allied with the Nazis, a hue and cry was raised that the FBI was a menace to civil rights, inspired chiefly by forces that were opposing our defense efforts. They based their charges primarily on an honest statement that I made to the House subcommittee on Appropriations to the effect that we were compiling indices on known Nazis and Fascists who were potentially dangerous to the United States. That list was used on December 7, 1941, in the arrests of dangerous enemy aliens, and as a result this Nation came through the war with no enemy-directed acts of sabotage. The enemy espionage efforts were thwarted, and all of this was accomplished without violation of civil rights.

The FBI, which has been given the responsibility for investigations under the loyalty program, today remains unchanged from the FBI which functioned throughout the war years. If anything, it is a better organization because of the experience we gained during the war years in coping with disloyalty.

I am not conscious of any attempts on the part of other Government agencies to use the FBI to promote "witch hunts," and if they tried it would not take long to find this out. The FBI would never permit itself to be used for such a purpose.

NO ANSWER TO WALLACE

Question. Would you care to comment on the recent charge of Henry Wallace that the FBI is conducting a ampaign of terror reminiscent of the early days of Hitler?

Answer. I would not care to dignify Mr. Wallace's charge with a denial.

Question. As you probably also know, the assertion is frequently made that you, Mr. Hoover, were the man in charge of the Mitchell Palmer "Red hunt," after World War I. Is there any foundation for such an assertion?

Answer. The facts are a matter of record. I deplored the manner in which the raids were executed then, and my position has remained unchanged.

I entered the Department of Justice in 1917, and after being assigned to various positions was designated as a special assistant to the Attorney General. At the direction of the Attorney General, the late A. Mitchell Palmer, I devoted my time to prosecuting the deportation proceedings. The so-called Red raids were carried out by the then Bureau of Investigation under the direction of William J. Flynn, who formerly had been associated with the United States Secret Service. Reports submitted by agents of the Bureau of Investigation were referred to me just as the reports of the FBI agents today are referred to the prosecutive officials in the Department of Justice and United States Attorneys. My specific assignment was to collate the evidence for presentation to the immigration authorities.

Following several complaints, the Senate Judiciary Committee made a thorough and searching investigation of the so-called Red raids. The Judiciary Committee could never agree on a report, and the late Senator

Walsh, of Montana, was instrumental in inserting the various reports which the committee could not agree on in the CONGRESSIONAL RECORD. In none of these reports was there any accusation against me as a member of the Department of Justice.

The late Chief Justice of the United States, Harlan Fiske Stone, raised his voice in vigorous protest of the manner in which the raids were carried out long prior to his appointment as Attorney General in 1924 to reorganize the Department of Justice. He had investigated the raids in detail, and I am sure he would never have appointed me director of the Bureau in May of 1924 had I been responsible for the manner in which the raids were carried out.

Pounds, Francs, Yen, and Yuan—and World Business

EXTENSION OF REMARKS
OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. GEARHART. Mr. Speaker, because of its timely nature and undoubted worth, I hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD an article entitled "Pounds, Francs, Yen, and Yuan—and World Business," which first appeared in the November issue of Banking, the official publication of the American Bankers Association.

From the competent pen of one of Washington's abler correspondents, Mr. Herbert Bratter, I am sure that that which is contained within its four corners will commend itself to the most discerning reader. It constitutes a worthy contribution to the economic writings of the day which should be accorded a permanent place in the annals of the Republic. That that may be accomplished, let it be spread upon the pages of the RECORD—this in accordance with the unanimous consent of the membership already expressed.

Mr. Speaker, the article to which I have just referred is the following:

POUNDS, FRANCS, YEN, AND YUAN

WASHINGTON, D. C.—With the advent of the Paris report on Europe's requirements from us Secretary of Commerce Harriman's press conferences have become so heavily attended that they have been moved from the Secretary's conference room to his more spacious office. There the correspondents sit on rows of folding chairs, arranged in classroom fashion. More and more, Washington press conferences are taking on aspects of educational institutions, with the scribes guided through the intricacies of postwar world economics and politics by Government technicians. In the case of the Harriman conferences, explaining the progress of the committee of distinguished citizens studying the implications of the Marshall plan, the Secretary usually has at his side Richard Bissell, a former Commerce Department employee, whose frankness the press finds very gratifying.

Mr. Harriman's office is the same paneled room used by Henry Wallace, Jesse Jones, Harry Hopkins, and others. The white-enameled telephone which connects directly with the White House is still there on a small table. Large stuffed leather chairs, both red and brown, a fireplace, and blue carpets are calculated to put the Secretary's individual callers at ease.

In the State Department's new building press conferences are held in a small and very comfortable theater, a facility appreciated by the dozens who attend. At the foot of the center aisle Acting Secretary Lovett, a tall and friendly figure, flanked by his public relations officers, dispenses the Department's announcements and anxieties; and in answering questions from the floor frequently addresses the questioners by name—surname, that is, and preceded by Mr., of course, for after all this is the Department of State.

WHY CURRENCY REFORMS FAIL

We have witnessed in this postwar period in Europe several national attempts at currency reform, but with varying degrees of success or lack of success. In a number of cases the replacement of an inflated unit by a new currency has provided only a temporary solution. The Paris report on Europe's economic needs in part calls for currency stabilization following any necessary devaluations. This raises the question of whether the failures alluded to above have been merely cases of too little and too late, or whether other considerations have played a part.

According to one view which the writer has come across in Washington, currency reforms and related fiscal measures have reduced or eliminated idle balances forming potential rather than actual sources of inflation and therefore not really closing the inflation gap. Unless confidence is restored, such measures fail to hold wages and prices steady. The underlying tendency is for businessmen and individuals in a country where there has been a currency reform to reestablish the accustomed level of cash holdings, together with the great reluctance of the authorities to resist that tendency. Also, reform has been weakened by government expenditure of funds acquired by taxing blocked balances.

You just can't get around human nature.

STERLING AND FRANC

While the world's economic weakness is conveniently summed up in the phrase shortage of dollars, which somehow seems to imply that the troubles can all be remedied from this end, the fact is that the United States alone cannot perform such a miracle. The sad state of the franc and the pound, among many other currencies, indicates economic and political diseases calling for what physicians describe as the will to live. Sterling's relapse into inconvertibility vis-à-vis hard currencies, with its far-reaching repercussions on world trade, reflects a lack of confidence by outsiders in Britain's management of its economy. The temporary suspension of convertibility in August may prove to be as short-lived as the temporary suspension of the gold standard in 1931.

France, while drawing on the World Fund and all possible other sources, grimly maintains the franc at an official parity left high and dry by the currency's receding purchasing power at home, so that France cannot export. Washington seems to be perpetually confronted with an endless series of French crises. Under such conditions world business comes to depend ever more on decisions reached around some mahogany table in Washington.

JAPAN, TOO, IS DOLLAR-HUNGRY

The postwar dollar shortage threatens to circle the globe more or less indefinitely, like the dust spewed into the stratosphere by Krakatoa, the Indies volcano in 1883. General MacArthur had the idea that an Anglo-American bank-syndicate loan would enable Japan to finance needed imports until the income from exports should come in. But Japanese business operating under the policy of limited private trade thus far has been able to sell very little goods for dollars. Most of Japan's customers are of the soft-currency variety, with consequences you can imagine.

It wouldn't be quite so hard a problem, were Japan free to buy Indian raw cotton as before the war; but the press reports American cotton exporters as insisting that Japan supply its raw cotton needs in India to no greater extent than 28 percent. If this keeps up, we taxpayers will simply have to continue footing the bill for Japan's upkeep. And if it doesn't' keep up, it will mean that American exporters will have a bit more competition some day.

THE SOUTH AFRICAN PLAN

The South African Financial News, Johannesburg, is sponsoring a "plan for world monetary salvation" embodying international control of the world's undug gold resources and their use as a backing for world currencies. The journal cites the last report of the World Fund as proof of the inadequacy of the world's monetary gold stocks and of the Bretton Woods institutions' inability "to cope with the present impasse." The plan's authors see as the most crippling defect of the Bretton Woods institutions that they "are mere instruments of policy in the hands of the major contracting powers * * * in the great power game of international politics * * * frustrating the very aims they seek to promote."

So the South African planners would create, initially within the British Commonwealth, an international authority controlling proved gold areas. Secondly, they would create a World Gold Loans Credit Bank "to replace the authority now existing under the BW arrangement which is considered subservient to American policy." Thirdly, a new special body would incorporate the World Fund, which "would then take a lien on all the undug gold resources in the world." Within the British Commonwealth a "Commonwealth Bank" with note-issuing powers would be a "super state reserve bank" for the whole sterling area.

After all, the plan's sponsors state, "the Bank of England was founded on a hypothetical gold backing contained in a mythical Spanish galleon in the brain of an ex-Scottish pirate named William Paterson."

FUND AND BANK MEETING

In September at the London Fund and Bank meeting, two general press conferences were held jointly by Camille Gutt and John McCloy, with Hugh Dalton officiating. In attendance was the bank's director of public relations, who, with two aides, had come from Washington for the occasion. According to the transcripts, some of the British reporters evidenced disappointment that so many of the world's finance ministers and central bankers had come together in the midst of a European crisis only to hold a routine meeting and without doing something substantial then and there to help solve that crisis. Messrs. Gutt and McCloy sought to explain.

Mr. Gutt took the opportunity to correct certain errors he had noted in the British press. The fund had just made $60,000,000 available to the United Kingdom, a fact which Mr. Dalton admitted he had "let out of the bag," presumably as part of the effort to dramatize abroad Britain's needs. It was incorrect, Mr. Gutt said, to call this a "loan." Nor did Mr. Gutt accept British press descriptions of the cost of the operation to Britain as "punitive interest." Actually, Mr. Gutt said, the interest rates of the fund "are moderate * * * about as low as any in the world." Yet at his earlier London press conference Gutt himself had called the fund's operations

"loans." And, in answer to a question as to why more members have not used the fund's resources, Mr. Gutt stated: "Maybe one of your colleagues touched on a sore point when he mentioned * * * 'punitive interest.'" As Gertrude Stein would say: A word is a word. In Washington it is understood that the fund has heretofore frowned on operations which would dissipate its resources.

Mr. McCloy, replying to a reporter's inquiry, observed that the World Bank is "not in the stop-gap business"—although the Paris Conference thought it should be. At the press conference and in his London broadcast the bank's president called attention to a little known fact, that of all the institution's members, only the United States and Belgium had given permission to the use for lending purposes of the capital they had paid in. It would seem that the supposedly international venture in lending so far boils down to little more than international supervision of the lending of American money. Mr. McCloy expresses the understandable view that the bank should "consider ways and means whereby, even in this transition period, the currencies of member countries other than the United States may be made available to the bank for lending purposes."

DOWN PENNSYLVANIA AVENUE

Passing the Mayflower Hotel the other day I noticed a long line of taxis waiting for customers. The contrast with wartime, when guests seeking taxis cluttered the sidewalks in front of the hotels, struck me. On Constitution Avenue, in front of the Federal Reserve Building during the war you could see a regular flow of taxis rounding the corner and unloading their fares in front of the Munitions Building. Now everything there is reasonably peaceful. But if the European aid program is going to mean a lot of Government controls of one sort or another, hotel rooms here may again go to a premium and visiting businessmen may again be looking up their friends for a place to sleep.

I don't mean to suggest that things in Washington have got back to prewar normal by any means. Just because taxis are easier to get and mufti has replaced beribboned khaki on the streets and other public places doesn't imply that everything is again on a peacetime basis. If you want a table for two in the Cosmos Club dining room, overlooking the park which served as Barney Baruch's office, you still had better get there pretty close to noon. Living quarters in the capital are still scarce and landlords are obtaining rent increases from the local rent-control administration while they try to shake off the last vestige of the wartime controls. In the shops it is rare to find an unoccupied clerk. Everywhere you seem to have to wait on yourself or just wait.

In various Government offices the interdepartmental activity on the Marshall plan and the Paris report is somehow reminiscent of our prewar days when the Federal Reserve Board made available a few rooms at the head of the marble stairs for the use of several businessmen, including a mail-order man named Nelson, who had come to town to advise the Government on problems posed by the trouble in Europe.

HOW VITAL ARE EXPORTS?

Despite the large volume of United States exports of merchandise, heavily financed by loans and gifts, the ratio of exports to total domestic production indicates that a material shrinkage in exports would hit heavily only a relatively few industries. A study by the Commerce Department's Special Programs Division has calculated this ratio for a large number of industries for three prewar and two postwar periods.

Comparing January-June 1947 with the full year 1939, the Commerce Department finds the above ratio for cotton cloth has risen from 4.1 to 13.5 percent; hosiery from 0.9 to 6.1; bituminous coal from 2.9 to 9.6; anthracite from 5.0 to 14.3; and freight cars, reflecting especially large French orders, from 0.7 to 41.0. Various other industries, however, show no spectacular changes. The corresponding prewar and current ratios for electrical machinery and apparatus exports, for example, were 5.9 and 8.3; machine tools, 44.5 and 42.5; passenger automobiles, 5.7 and 7.7; lumber, 4.2 and 4.2.

While exports are much larger than prewar, so too is our productive capacity. Commerce Department officials point to the large backlog of domestic demand as justifying the conclusion that, under present circumstances, a collapse of the export boom would not be disastrous to American industry in general.

PARDON THE RUSSIAN ACCENT

To escape being crushed by these grim times one needs a little humor, which is our only excuse for injecting in this otherwise serious report on the state of the world the following observations broadcast from Moscow in German the other day—as reported by the Washington Evening Star, to wit:

"War is the favorite occupation of dapper robbers such as the financial magnates of the ruling dynasty of capital. In this the United States monopolists are particularly successful. World War I gave them a clear profit amounting to the dizzy sum of $38,000,000,000. This immeasurable wealth was created out of the blood of scores of millions of victims of that war. But still greater was the stream of gold which flowed into the United States banks during World War II. The United States monopolists made $52,000,000,000 out of war, out of ruined and devastated Europe, out of despoiled China, out of the oceans of blood—for blood drips from each of these 52,000,000,000 dollars."

GO EAST, YOUNG MAN

Owing to rising costs, the Shanghai Evening Post has had to raise the price per copy from 3,000 to 5,000 yuan; that is, to the equivalent of about 10 American cents. When the writer arrived in Shanghai in 1921 he was content to take a job which paid 200 "Mex" per month.

A member of the Wedemeyer mission to China tells about an American news correspondent who, on his periodic visits to Japan, lives in great style. It seems that the correspondent privately syndicates some of his articles to Japanese newspapers, which can pay him only in inconvertible yen. His salary from his American connection is about average, but in Japan the correspondent has already accumulated a couple of million yen.

An American businessman just home from Shanghai by way of South Africa and South America tells me he thought nothing of giving his Chinese cook 1,500,000 or 2,000,000 yuan to go out shopping. Shanghai is out of this world.

But, another returned traveler observed, probably 80 percent of China's daily business is done by barter, outside the money economy.

Topside Chinese seem to have no trouble getting along. The people take it for granted that their officials will get rich in office, and pronto. This has always been so, and is still the case. I hear of one American, an old China hand, who has made more than a million dollars (U. S.) managing the investments here of "the Young Marshal," Chang Hsueh-liang.

ITO

The November international conference in Havana is planned to put the final stamp of approval on a charter for an International Trade Organization, preparation for which has occupied American Government departments for several years and has involved two preparatory conferences, at London last year and at Geneva this summer. The struggle of the Administration to build a postwar trade world on a multilateral, nondiscriminatory basis has been a treadmill task. Ever since the Atlantic Charter our Government has sought to obtain acceptance of a world trade policy which would give maximum play to individual free enterprise—in the Lend-Lease agreements, the Bretton Woods program, the British loan, etc. But the house has been crumbling as fast as it has been built. Abroad, and even to some extent here, the world crisis is putting business more and more under government control; and people are saying that our attempts to set up an ITO are a case of nostalgic economics. Of more immediate importance than an ITO would seem to be the various trade agreements negotiated at Geneva. These embody important principles of the proposed charter.

The Amputees Program

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. TRIMBLE. Mr. Speaker, on August 8, 1946, President Truman signed a bill authorizing $30,000,000 for the purchase of especially equipped automobiles for approximately 16,000 amputees of World War II who lost use of their lower limbs.

This great humanitarian program which benefited so many disabled veterans is nearing completion and it is fitting to recapitulate the events that led up to the introduction and passage of this legislation.

After months of preparation and conferences a committee of seven veterans called upon Congresswoman EDITH N. ROGERS on March 6, 1946, with a petition signed by 350 patients at Walter Reed Army Hospital requesting the adoption of the cars for amputee program.

This committee was headed by J. H. Leib, then legislative director of AMVETS and the other members of the committee represented the amputees from Walter Reed Hospital. A few hours later Congresswoman ROGERS took the floor of the House and made a speech in favor of the plan.

The uphill battle that finally won the approval of the Congress is now a matter of history. The following reproductions are self-explanatory:

[From the CONGRESSIONAL RECORD of March 6, 1946, p. 1998]

WALTER REED HOSPITAL AMPUTEES

Mrs. ROGERS of Massachusetts. Mr. Speaker, I would like to state that I am very thoroughly in accord with the views expressed in the petition of the 350 amputees of Walter Reed Hospital. I believe that the Government should provide an automobile as an aid to their recovery and conditioning. It is our duty to do as much as we can to send the veterans out from the hospital as nearly whole as possible. The War Amputees Car Committee came to the Capitol today and asked me to present their case to the Congress. Mr. Joseph Leib, their national legislative director, joined them in their request.

AMVETS URGE AUTOMOBILES FOR WAR AMPUTEES

(Extension of remarks of Hon. EDITH NOURSE ROGERS, of Massachusetts, in the House of Representatives, Wednesday, March 6, 1946)

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I desire to include the following correspondence and a petition signed by 350 amputees at Walter Reed Hospital, also a clipping that appeared in the Washington Daily News:

"The drive for cars for leg amputees is sponsored by AMVETS."

"FEBRUARY 28, 1946.

"Gen. OMAR N. BRADLEY,
"Veterans' Administration,
"Washington, D. C.

"DEAR GENERAL BRADLEY: AMVETS are launching a movement to obtain specially made vehicles for amputees either through Government purchase or through the patriotic cooperation of automobile manufacturers. We would appreciate very much learning the position of the Veterans' Administration in regard to this matter.

"We are contacting individual manufacturers to see if we can secure these automobiles at a reduced cost and we wonder whether or not you will cooperate with us in submitting legislation to Congress in order that the Government may secure these vehicles for those who are now permanently disabled.

"Your early attention will be appreciated.

"Very truly yours,

"JOSEPH LEIB,
"National Legislative Director."

"Letter sent to following automobile companies: Dodge Motor Co., Studebaker Corp., General Motors Corp., Ford Motor Co., Kaiser-Frazer Co.:

"MARCH 2, 1946.

"GENTLEMEN: AMVETS are launching a movement to obtain specially made vehicles for amputees. We have contacted Members of Congress and the Veterans' Administration for support in this endeavor in behalf of those who have lost part of their body in defense of their country. In this endeavor we need the patriotic cooperation of all automobile manufacturers and we trust that your company will take an active interest in this worthy cause.

"We are extremely anxious to know how far your company could go in making these cars available to the thousands of disabled veterans. Also advise as to approximate price and whether or not your company has engaged in any research along these lines.

"Trusting that we shall hear from you as soon as possible and with many thanks, I am,

"Very truly yours,

"JOSEPH LEIB,
"National Legislative Director."

"WAR AMPUTEES CAR COMMITTEE,
"ARMY MEDICAL CENTER,
"WALTER REED HOSPITAL,
"Washington, D. C.

"The Army has given us a prosthesis to prepare us for civilian life. We, however, feel that this hasn't proven adequate to place us on an equal basis with the able-bodied, because of:

"1. Weather hazards (snow and mud).

"2. Public crowds (pushing and shoving).

"3. Prosthesis break-down.

"4. Terrain (difficulty in climbing hills, etc.).

"5. Transportation difficulty (subways, busses, trolleys).

"We, the undersigned, are therefore resolved: That every veteran, who because of war-inflicted injuries, is seriously hampered in walking, in order that he may compete on a basis relatively equal to those who are not so handicapped, be supplied an automobile by the Government.

"Frank W. Monico, chairman; Thomas N. McKenna, New York; Kenneth L. Colbert, Indiana; Thomas Allison, Pennsylvania; John H. Zundel, Ohio; Echmund C. Anschutz, New York; Harold L. Frank, Pennsylvania; James Mullary, New York; John D. Hull, Maryland; Sidney Schuman, Washington, D. C.; Patrick T. Byrne, Joseph F. Seesman, James J. Burke, New York; Roy F. Russo, Ohio; Howard Bland, Kentucky; Charles H. Rossman, New Jersey; Earl V. Walls, Jr., Pennsylvania; Harry W. Hinebaugh, Jr., Washington, D. C.; Charles C. Bochanis, Connecticut; Joseph E. Kuspul, New Jersey; John J. Kellery, Massachusetts; George Skalski, Warren Huffman, West Virginia; Grant G. Sullivan, Kentucky; Cecil G. Gough, Jr., Maryland; William Kettler, Ohio; Joseph F. Stork, Pennsylvania; etc.—350 signatures."

[From the Appendix of the CONGRESSIONAL RECORD, p. A1396]

AMVETS SEEK PRESIDENT TRUMAN'S AID FOR AMPUTEES

(Extension of remarks of Hon. JOHN R. MURDOCK, of Arizona, in the House of Representatives, Thursday, March 14, 1946)

Mr. MURDOCK. Mr. Speaker, under leave to extend my remarks I wish to include copies of a telegram that was sent to President Truman by AMVETS—American Veterans of World War II—and a letter sent to the White House by a committee of amputees stationed at Walter Reed Hospital representing more than 350 disabled veterans, also a statement issued by Henry Ford Co. pledging assistance to all amputees who desire to operate automobiles. The documents follow:

"MARCH 8, 1946.

"Hon. HARRY S. TRUMAN,
"The White House, Washington, D. C.:

"A committee representing 350 amputees at Walter Reed have requested an appointment with you relative to securing special made automobiles for these disabled veterans. Please advise.

"J. H. LEIB,
"National Legislative Director, AMVETS."

"WAR AMPUTEES CAR COMMITTEE,
"WALTER REED GENERAL HOSPITAL,
"Washington, D. C., March 11, 1946.

"The Honorable HARRY S. TRUMAN,
"The White House, Washington, D. C.

"DEAR MR. PRESIDENT: A large number of amputees, as a result of our service-inflicted injuries, have come to realize the importance of having a car. We cannot live on an equal basis with the able-bodied without it. The hazards and difficulties of day to day existence now, crowded transportation, faulty artificial legs, and a rough terrain—all this has imposed on us the necessity of having a car.

"To this end some 350 amputees of this hospital have signed their names to a petition stating that they be supplied with an automobile by the Government.

"We, the committee representing these men, feel that if a meeting could be arranged with you, with the object of soliciting your interest and advice it would help considerably in advancing the cause of the disabled who have lost their legs.

"Sincerely,

"FRANK M. MONICO, *Chairman."*

[From the Appendix of the CONGRESSIONAL RECORD, p. A1622]

REHABILITATION OF WAR AMPUTEES

(Extension of Remarks of Hon. ROBERT HALE, of Maine, in the House of Representatives, Monday, March 25, 1946)

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by J. H. Leib, national legislative director, American Veterans of World War II, and a letter addressed to him from the Veterans' Administration:

"CONCERNING THE REHABILITATION OF WAR AMPUTEES

"(By J. H. Leib, national legislative director)

"AMVETS—American Veterans of World War II—have been sponsoring a campaign to secure automobiles for amputees as part of their prosthesis. We have attempted to secure the assistance and approval of the Veterans' Administration. Also, we are now in touch with leading automobile manufacturers in the hope of making arrangements to obtain priorities for these disabled war veterans who have given so much to their country, etc."

"VETERANS' ADMINISTRATION,
"Washington, D. C., March 16, 1946.

"Mr. JOSEPH LEIB,
"National Legislative Director, American Veterans of World War II,
"Washington, D. C.

"DEAR MR. LEIB: Your letter of February 28, 1946, addressed to Gen. Omar N. Bradley, Administrator, pertaining to furnishing automobiles for amputees by Government purchase, has been referred to this office for reply.

"A prosthetic advisory committee has been formed by the Veterans' Administration to work with the prosthetic appliances on the needs of veterans who use artificial aids. In order to give your proposal full consideration, it is suggested that you contact any of the committee members so that concerted action can be initiated.

"For your information, a list of the members of this committee, together with their addresses, is herewith supplied you:

"Col. Robert S. Allen (arm amputee, World War II), Pentagon Building, Washington, D. C.

"Mr. Aaron L. Danzig, 350 Fifth Avenue, New York City.

"Col. John Haskell, New York Stock Exchange, New York City.

"Capt. John H. Pratt, 905 American Security Bank Building, Washington, D. C.

"Sgt. Harold M. Dixon, 3711 Thirty-sixth Street NE., Mount Rainier, Md.

"Hon. AUGUSTINE B. KELLEY, House of Representatives, Washington, D. C.

"Hon. EDITH NOURSE ROGERS, House of Representatives, Washington, D. C.

"It is understood that the Honorable EDITH NOURSE ROGERS, Member of Congress, is keenly interested in the furtherance of your proposed program.

"Very truly yours,

"PAUL R. HAWLEY,
"Chief Medical Director."

[From the Appendix of the CONGRESSIONAL RECORD, p. A1824]

CARS FOR AMPUTEES

(Extension of remarks of Hon. CLIFFORD R. HOPE, of Kansas, in the House of Representatives, Monday, April 1, 1946)

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by J. H. Leib, national legislative director, AMVETS:

"WHAT IS THE VETERANS' ADMINISTRATION POSITION ON CARS FOR AMPUTEES?

"(By J. H. Leib, national legislative director, AMVETS)

"War amputees have petitioned Congress and the Veterans' Administration for automobiles as part of their prothesis. They contend that only with the aid of a car can they compete with the able-bodied veterans in the postwar period. Unfortunately, their requests have fallen on deaf ears.

"Even more discouraging is the fact that conflicting statements have emanated from Veterans' Administration officials as to their stand on this issue.

"For instance, on March 25, the Washington Times-Herald and other newspapers directly quoted Walter M. Bura, Veterans' Administration director of prosthetic appliance services, as being definitely opposed to supplying these disabled soldiers with such additional benefits.

"The next day AMVETS and an amputee committee representing 350 patients at Walter Reed Army Hospital, demanded a clarification of the Veterans' Administration published statements. Whereupon, Mr. Bura hurriedly visited the Army hospital to assure all that would listen to him that he had been misquoted by the newspapers.

"But during this meeting, however, every attempt to ascertain exactly how Mr. Bura felt about this proposition was met with further negative remarks.

"The boys at Walter Reed feel that they are being given a grand run-around by this Administration. They are deeply resentful of the procrastinating and utterly deceitful tactics being employed by high Veterans' Administration officials to sidetrack their car proposal. They are being referred from one committee to another.

"These boys who lost part of their bodies on foreign soil fighting in defense of this Nation deserve more respectful consideration than they are now getting from the bureaucrats in Washington. The least that the Veterans' Administration can do for these heroes is to be sincere and straightforward in their dealings with them, etc."

[From the Washington Post of August 2, 1946]

UNITED STATES TO GIVE GI AMPUTEES FREE AUTOS—HOUSE UNIT ACCEPTS SENATE PROPOSAL; 20,000 EXPECTED TO RECEIVE CARS

A House conference committee last night accepted a Senate proposal to provide some 20,000 war-maimed GI's with free autos.

The conference committee action is expected to be accepted by the House today, etc.

[From the Washington Post of August 8, 1946]

AUTO MONEY FOR LEGLESS VETS O. K.'D

WASHINGTON, August 8.—The bill signed today also carries $30,000,000 for the purchase of specially-fitted automobiles for veterans who have lost their legs, etc.

Report to Hon. Clifford R. Hope, Chairman of the House Agriculture Committee

---

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, I attended the conference at Geneva. My report to Mr. HOPE is as follows.

You will note that in the last paragraph of the report I stated:

I made other observations in displaced-persons camps and observed foods and crops in other countries, but the Herter committee will no doubt present this food picture in broad detail in its report.

I hope the Herter report will justify the confidence indicated when it is released.

REPORT TO HON. CLIFFORD R. HOPE, CHAIRMAN OF THE HOUSE AGRICULTURE COMMITTEE, BY REPRESENTATIVE REID F. MURRAY, OBSERVER AT THE FAO CONFERENCE IN GENEVA, SWITZERLAND

SEPTEMBER 30, 1947.

Hon. CLIFFORD R. HOPE,
Chairman, Committee on Agriculture,
House of Representatives,
Washington, D. C.

DEAR MR. HOPE: I herewith submit my report as an observer at the FAO conference held in Geneva, Switzerland, beginning August 26, 1947:

The FAO conference consisted largely of statements and discussions of the world food situation. The United States representatives from the Department of State and the Department of Agriculture made a very impressive and constructive approach to the problems of the conference. The presence of Mr. Albert Goss of the National Grange and Mr. R. Ogg of the American Farm Bureau Federation added much to the conference. Such men tend to direct the proper thinking and keep the actions taken along practical lines.

The conference appeared to obtain a factual picture of the grain situation in the various countries. However, no factual picture of the general world food supply was presented. One could not but feel that consideration of long-range activities overshadowed consideration of the immediate food needs of certain peoples. The time for action in providing food is now.

A movie sponsored by the Food Ministry of Britain, but tied up in its presentation with the FAO, was shown. It was an absurd approach to the food problem. It was not factual and was resented by certain nations that have made such a determined effort to feed the hungry of the world.

The FAO having been in existence now for several years, and having had several annual meetings, it appeared to me that as an organization the time has come to do something about the food problems and not just talk about them. Some countries seem to feel that the United States should contribute more than the 25 percent of the funds now allocated by the United States. Others felt that the United States should be making larger food contributions to other countries, even if such countries have more of the United States market for their own food products. Many of the conclusions arrived at by the delegates of other countries no doubt were due to an erroneous concept of America's net available food supply.

The organization should get its gears in motion now to do the things it was set up to do. One suggestion would be not only to have data on world grains but to have a more comprehensive picture of the entire world's general food supply. The governments themselves should be a position to furnish this information on all important food products and not just on grains. The FAO should have ample funds, as well as personnel, to keep these food facts right up to the minute. Some people seem to think of food only in terms of grain.

The second avowed purpose of the FAO, to allocate foods to the places where they are needed to feed hungry peoples, will not be attained in approaching the problem by showing the type of movie that was put on at the Geneva Conference. The present world food problem is so serious and so much in need of prompt attention, that I am sure the long-range food program can well be held in abeyance until the immediate food problem is given attention. The world conference of national farm organizations will enter into the world agricultural pool undoubtedly in time.

My proposal to you, Mr. Chairman, is to have some person, or group of persons or organizations, take the leadership in making available foods that can be provided for relief purposes. It does not do much good for group after group to sit around a conference table with pencil in hand and tell the world just how many bushels of wheat would suffice if we do not have the wheat.

We have far too long been talking about grains and doing little or nothing about foods in general. Surely, we have heard many, many times that grain fed to human beings provides more calories than when fed to livestock and livestock products fed to human beings. There is nothing new about that. This fact has been recognized for years and years. That is not an answer to the question of providing all available food to those in need. Everyone should know that billions of pounds of milk are produced on land not suitable for crop-farming. Most anyone should know that millions of acres of land produce beef where dairying cannot easily be expanded. They should know that millions of pounds of mutton are produced on land not adaptable to the most successful beef and dairy production; that the acreage of a crop like peanuts has been expanded during the war on land suitable for this crop; that the expansion of dried skim milk production increased from 200,000,000 pounds plus, before the war, to 600,000,000 plus in 1945–46 and has never obtained its deserved recognition as a food product. Most people are aware of the stock piles of dried fruits and canned vegetables.

With the foregoing facts in mind, I am listing certain definite proposals which I believe should be made at this time:

1. Once and for all—have our own administration stop wasting food which only gives rise to criticism that cannot be explained.

2. Promote the processing of horse meat. The people of certain countries do not eat cattle, some do not eat hogs and others do not eat horse meat. The British have horse-meat shops and are now also eating whale meat. France has eaten horse meat for years. It is my understanding that Canadian horse meat is being bought for the child-feeding programs in Poland and other countries out of the $15,000,000 that the United States appropriated for that purpose. Canada and the United States have millions of available horses and if something were done about providing food instead of talking about it, many, many pounds of this meat could be furnished. With the use of this meat a greater use of vegetables could be made and less grains would be required.

3. An immediate step-up in dried skim milk production and diversion from animal to human use. This product has 35.6 percent digestible animal protein and has only a 9 to 10-cents per pound support price. Even the OPA put a 14.5-cents per pound ceiling on this item. Wisconsin, incidentally, uses most of its skim milk in the production of cheese and evaporated milk, so I am not necessarily putting in a plug for Wisconsin. I am, however, endeavoring to approach this problem from a nutritional standpoint. Some skim milk is now available in Europe and when served hot has proven a delicious product. When it has been allowed to go begging at 9 to 10 cents per pound, which means less than 3 cents per quart or less than a penny a glass, it is time that some food experts and food purchasing governments obtain the facts about this product.

4. Acquire a stock-pile of dried fruits now available at reasonable and fair prices, which may find domestic uses at a later date as well.

5. Procure a stock pile of peanut products which may be acquired anyway through the support-price program. Here is a fine food product, high in oil content and vegetable

protein. This protein may be partially substituted in the ration for proteins found in grains. It will make more sense to divert these peanut products to human consumption than to be spending millions of dollars on a support-price program. We saw what happened to the potatoes in the potato support-price program under the present administration when millions of bushels were burned. A surplus peanut crop might meet the same fate and they would make a better fire because of their oil content.

6. Give the world the facts about the United States food supply. There has been altogether too much boasting about the possibility of the United States feeding the world. Surely we have had above average crops for several years, but the special-privilege crops like cotton and tobacco do not now add to the world's food supply. Some news articles would lead the reader to believe that one man was doing this furnishing. The fact that the United States has but 20,000,000 of its 140,000,000 population on farms—and these 20,000,000 people are called upon to provide food for the entire population—is evidence that the 20,000,000 people are not, and have not been, in the position of feeding the 2,000,000,000 people in the world. It is easy to boast about the $3,000,000,000 of agricultural exports the last fiscal year, but how about the $2,300,000,000 agricultural imports in the last fiscal year? Two billions three hundred millions in dollar imports, when translated into pounds, bushels and tons, may equal the three billion exports in pounds, bushels and tons. Surely the United States has been a large agricultural exporter, but it has been at least the second largest agricultural importer in the world as well. We have had as the result of good weather conditions, a wheat, cotton and tobacco export. These crops, with their special-privilege domestic legislation, are at this moment receiving special-privilege foreign considerations, but the 3,000,000 additional bales of cotton and the one-third increase in tobacco volume do not add to the food supply of the world at this critical time.

7. Hint, gently or otherwise, to some of the European countries that it would be desirable for them to divert more of their grains to food production and less to nonfood production. Why has rye sold for more than wheat? Why is this true now?

8. If millions or billions of dollars are to be sought to feed the hungry world, we must keep in mind that a billion dollars will not provide much wheat at Argentine prices plus transportation.

9. We need less politics mixed in this food problem. If our administration colleagues want to continue to inject politics, then they will be called upon to answer for their actions. We, as Republicans, have certain definite responsibilities if we maintain our position that what is best for our country is best for our party. The authority or power of the President over allocations of exports expires in February 1948. Personally, I feel that you as chairman of the Committee on Agriculture; Hon. JOSEPH MARTIN, our Speaker; Senator VANDENBERG, President pro tempore of the Senate; and Senator ARTHUR CAPPER, chairman of the Senate Agriculture Committee, should make a public statement to the effect that no partisan politics should be injected into the question of the extension of these powers. I feel that a public statement of some kind would clarify this situation, otherwise other governments might think that the United States was going to throw the allocation of food overboard. First, the nations with the price would secure the foods in scarce supply without regard to needs and, secondly, the domestic prices in the United States may become too high on items in short supply and jeopardize the rations and nutritional standards of many of our citizens.

10. How about the 160,000,000 dozens of eggs now held by the Commodity Credit Corporation? Is this not a future source of good digestible animal protein? How about the other stock piles? With all of these factors to consider, why get so excited about one certain vegetable protein? It is noted that the CCC is now offering 29,000,000 pounds of dried eggs. Why have not adequate supplies of vegetable proteins as found in dried peas and beans been produced to supplement the vegetable protein of wheat?

11. When the Administration erected a strawman and knocked it down, as shown by the various positions of the Government departments in connection with the wool bill, it was my opinion they were rendering a disservice to an orderly approach to the question of allocations. If there is an allocation of exports, by the same token there should be an allocation of imports. A World Food Allocation Board might well give more attention to foods directed to the United States and instead direct them to places where they are needed, especially when the products of the same industry in this country are not provided benefits of the support program as set up under the Stegall amendment. If you will have your office staff prepare a table for you showing the imports of food into the United States in the past year, you will no doubt be surprised to note the countries of origin. I realize the dollar exchange demand and the necessity of it, but I do say there is much inefficiency in operation.

12. The fact that we are dealing with State traders injects itself into the picture. We must have a coordinating set-up or a United State Board that will not only have some control over the dollars appropriated but also have influence in directing any surplus food of the world to the places where it is most needed.

13. Much food relief could and should have been done through the churches of the various countries. I discussed this with some of our own United States relief people and they concurred in my opinion. This cooperation with the churches could still be put into effect.

14. If we had a United States board composed of people thoroughly familiar with food and nutritional values as well as good business methods, and sincerely interested in feeding the hungry, the millions of dollars already used by UNRRA and other direct appropriations would have been more effectively used for the purpose for which the Congress appropriated the money. These funds should not be wasted and it is regrettable that better use has not been made, and is not being made, of public funds obtained for charitable purposes.

15. The present food prices in America are causing much difficulty. The farmer is being criticized although he obtains but one-third the price that the consumer pays. Milk in many cities would bring 11–12 cents a quart even if the farmer gave the milk away. Domestic food prices can be kept within the bounds of reason and fairness. There is nothing complicated about it. The Administration, with the billions of dollars at its disposal, can maintain price sanity any time it deals in facts. Remember, the farmer takes what he is offered. The Administration is trying to drive too many horses down too many food streets and politics, partisan attitudes, and economics do not mix well or operate for public welfare.

16. The Administration with its authority and power to control exports, and with the billions of dollars at its command, controls the price at the market place. Any suggestion of a domestic control of prices at the retail level does not make sense. Neither does it make sense to criticize the markets and the marketers so long as the Administration has the control over exports. The control over the exports can be used to lower and raise food prices and there is nothing to be gained by putting the blame on some one else. The recent grain market prices, after Secretary Anderson's speech, is adequate evidence. This control of the over-all supply and price would be reflected, and is reflected, in the retail price. Former Secretary Wickard once stated that "Food will win the war and write the peace." It surely made its contribution to winning the war, and if food is to write the peace it must be used with nutritional values in mind.

I made other observations in displaced persons camps and observed foods and crops in other countries but the Herter Committee will no doubt present this food picture in broad detail in its report.

I appreciate the apportunity of having attended the FAO Conference and am grateful for the experience gained and consideration extended to me.

Sincerely yours,

REID F. MURRAY,
Member of Congress.

Address of Eric Johnston

EXTENSION OF REMARKS
OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. McDONOUGH. Mr. Speaker, Eric Johnston, president of the Motion Picture Association of America, Inc., recently spoke at the annual dinner of the Picture Pioneers in New York.

As spokesman for the motion-picture producers of America, Mr. Johnston made a positive statement of the policy of the industry toward communism when he declared:

There is no place in Hollywood for anyone who is subversive or disloyal to this country.

Mr. Johnston added:

Let me tell you what I think about the American Communist—I think he is a foreign agent, real or potential, owing his first allegiance to a foreign government.

I believe Mr. Johnston has voiced the convictions of the motion-picture industry as a whole with regard to communism and Communists in the industry.

However, with the spotlighting of Hollywood and the motion-picture industry through the investigations of the Un-American Activities Committee, in spite of the cooperation given to the committee by leading producers, directors, writers, and actors, adverse publicity has been directed against the motion picture without regard for the small number of employees who may be communistic in comparison to the thousands of men and women of unquestionable loyalty to the United States who work in the industry.

Mr. Johnston's address which follows sets forth the problems of the industry at this time as well as the stand it has taken against communism:

The motion-picture industry has been on the spot this year, here at home, and over there. And the letter X has literally marked that spot. Gentlemen, we've been hexed. We've been excised by the British, excluded from some of the iron curtain countries, and X-rayed for communism by the House Committee on Un-American Activities.

All three of those hexes are loaded with unknown quantities of future consequence. They are mysterious equations, so to speak, and our job in each case is to find out what X stands for. I've looked hard myself, but so far I haven't found any easy answers in the back of the book. There aren't any.

But those are the things I want to talk about tonight—first, the House committee hearings, and then the foreign situation.

Where have the House committee hearings left us?

Let's look:

When the hearings resume the industry will defend itself as vigorously as it did before—and if necessary, with added forcefulness.

We had our tough times the last time around, but we had our 10 strikes, too. You know what happened—

The committee made a blanket indictment against the industry—

The committee charged the industry had knuckled down to White House pressure to make pro-Communist pictures. We knew it hadn't; and we said it hadn't. So did the committee's own witnesses, and that damning accusation of knuckling down to political pressure suddenly buckled at the knees and fell flat on its face.

Just as emphatically and for the same good reason, we denied that Hollywood is overrun by Communists. We knew it wasn't so, so we said it wasn't so. We said: Sure, there undoubtedly are Communists, or reasonable facsimiles thereof, in Hollywood. The Hollywood spotlight being what it is, we knew that one Hollywood Communist can be magnified to look like a thousand Communists in any other business. We knew that some of the comrades live in the hills around Hollywood on the best America has to offer. I understand that on a clear day they can see the class struggle for miles around in all directions.

But we also knew that whoever they are, they don't by the wildest range of imagination influence the motion-picture industry. So we said so. And once again, witnesses in whom the committee conceded it had every confidence, bore us out. Officers past and present of the talent guilds used language parallel to ours.

The net of that was positive proof that Hollywood is not an outpost of the Kremlin, as some loose language before the committee indicated, and we asked the committee to say so through some sort of public declaration. It didn't. There is still time for it to do so, and I think it should. The record is there, and it's well entrenched and documented.

The third big charge was the biggest flop of all. The committee said it had a list of pictures which contained communistic propaganda. We said: Name the pictures. We asked repeatedly for that list of pictures. And the committee adjourned without releasing it.

In short, gentlemen, no corpus delecti was shown, and no crime, therefore, was committed.

There is no subversive propaganda on the American screen and there isn't going to be. Management accepts the responsibility for the content of pictures. It's a sacred trust. We will continue to defend the industry from that point of view.

But in defending our industry, we don't want to be misunderstood or misinterpreted. We don't want our defense of the industry to be confused with the attitude of the 10 men who refused, on alleged constitutional grounds, to give responsive answers to the committee's questions.

Let's face the fact that some people have completely misunderstood our position, and some still do. They thought we were defending those 10 men because they are connected with our industry. I don't want to leave the slightest doubt on this point.

We did not defend them. We do not defend them now. On the contrary, we believe that they have done a tremendous disservice to the industry which has given them so much in material rewards and in opportunity to exercise their talents. Their refusal to stand up and be counted for whatever they are could only result in a confusion of the issues before the committee—and it did.

They may have had a right to challenge the committee as they did. I don't know. I am not prejudging. This is something to be tested in the courts. We need a determination on that score in the traditional American way, and after that there can be no argument about it.

But if they believe they had a right to carry on the way they did, I have a right to characterize their actions. I believe their actions hurt the cause of democracy immeasurably. I believe they played into the hands of extremists who are all too willing to confuse the honest progressive with the dishonest red. And they fed fuel to the fires of hysteria.

The difference between the position we took before the committee and the line those 10 men followed is as broad as the backside of a barn.

We criticized the committee's procedure—and we'll do it again if we don't think it's fair and just and equitable.

But we didn't challenge the right of the committee to investigate alleged communistic influence in Hollywood or anywhere else. Unlike the 10 men cited for contempt, we wanted to answer questions. If there was any counting to be done, we wanted to stand up and be counted—so everybody can count on where we stand and what we stand for. We offered the committee our cooperation, and we kept that pledge. We recognized, and we said it, that investigations are a proper function of the Congress. We meant that, and we still do.

And we said not once but over and over again that we're for exposing Communists wherever they may be.

Let me tell you what I think about the American Communist.

I think he's a fool and a faker at one and the same time. I think he's disruptive and disloyal, and he'd be dangerous if he dared to be. I think he's a foreign agent, real or potential, owing his first allegiance to a foreign government.

If communism, gentlemen, is going to bring us the paradise on earth for everybody that it says it will, I'd be proud to stand up and be counted as a Communist, if I believed that story.

But that's where the fakery comes in. That's where the hypocrisy comes in.

The Communists have no intention of bringing heaven down to earth. What they want to do is to raise hell.

Communists garb themselves in the mantles of better men and call themselves democrats—one of the two big lies of the last hundred years. It is only equaled by Adolf Hitler, the Fascist, who called himself a socialist. Every real democrat down through all history has had one prime goal; a greater share of liberties for the individual, and that's about the last thing the Communists are for.

The Communist calls himself a peace-loving democrat, but he wants a police state. The men who gave us the Bill of Rights believed in the sanctity of men, the individual, the free agent. The Communist clutches the Bill of Rights around him when he's on the spot today, but the first thing he'd do if he had the power would be to put a match to it so nobody else could use it.

And that's why they're afraid to admit what they are. And the American people are wise to the American Communist. They know him now for what he is, and they are fiercely angry about it.

There is no place in Hollywood for anyone who is subversive or disloyal to this country. I am even more convinced of that today than I was last March when I first testified before the House Un-American Activities Committee. At that time I endorsed the stand of William Green, president of the American Federation of Labor, that labor and management must work together to expose and to eliminate Communists in industry and in unions.

In the final analysis, Government must adopt a national policy with respect to the employment of Communists in private industry.

But labor and management must not shirk their responsibilities by waiting for Government to act.

The motion-picture industry, like every other industry, must, therefore, take positive steps to meet this problem and do so promptly.

A terrific fury against communism has whipped itself together in this country, and the wrath of the American people cannot be taken lightly. That wrath is going to increase, should our relations with Russia grow from bad to worse.

America has poured out $20,000,000,000 to help a war-torn world recover and get back to the ways of peace. But Mr. Vishinsky says we're imperialistic and war mongering. Mr. Vishinsky doesn't seem to know he's ringing the bell on communism and American Communists. He seems to think he can pay back $20,000,000,000 in cash and goods with 20,000,000,000 words of vituperation.

Gentlemen, I believe the bell has rung for the American Communist who follows the Kremlin line, but there's a danger in the wrath we've kindled. There's a danger of being swept away by hysteria, a danger of our anger getting out of hand until every American who stands for progress is damned as a Red and a Communist.

We can't let that occur. It mustn't be a crime in this country to criticize. We know the real answer to communism is to make democracy here in America work so well that no man would want to be a Communist. We know there'll have to be improvements to strengthen our democracy and correct inequalities. And adjustments take some advance criticism, some thoughtful and searching analysis, and some frank speaking.

There's a difference between honest criticism and subversion. There's no defense for subversion. Self-criticism is our sacred privilege. It sets us off from the total state.

We can't let hysteria of any kind rob us of our right of free speech—our right to criticize.

Gentlemen, when we said the issue of free speech—free films—was involved in the inquiry by the House committee, some people laughed. They said we were setting up straw men. But what has happened?

Hard on the heels of the first round of the investigation has come a demand for Federal censorship of motion pictures by the William Randolph Hearst newspapers.

Obviously, if the motion picture is to be censored, then the newspapers must be too—and the books—and the magazines—and the radio.

If this congressional inquiry established one fact for all time to come it's this; the motion picture is an instrument of expression; it is a partner of the press among the mediums of communications, and most of the American press has vigorously and heartily welcomed it as such throughout the hearing.

Freedom of speech is not a selective phrase. We can't shut free speech into compartments. It's either free speech for all American institutions and individuals or it's freedom for none—and nobody.

To me Federal censorship is unthinkable and frightening.

Who would be on the board of Federal censors? Federal officers, of course; Federal employees; bureaucrats, if you please—and politicians. But they are also human beings—subject to all the frailties of the rest of us, including prejudices.

How do we know that the censors might not turn out to be Communists or fellow travelers? I'm told there are some on the Federal pay roll now.

It's conceivable that Federal censorship could be a high road to planting propaganda on the screen instead of keeping it off the screen.

The Federal censor of motion pictures would be among the most powerful men in America, a maker of kings—and political parties. He might perpetuate in power the men to his liking and the party of his choice. The power he could conceivably wield is almost incalculable.

For my part, I am prepared to fight forever against Federal censorship of motion pictures. I propose to fight it in fact and to fight it wherever I suspect it. I propose to keep my eyes open for smoke instead of waiting until they're blinded by flames.

Now let's look abroad—

And again we run smack into the issue of communism.

While our industry is being X-rayed for communism at home, Russia and some of its satellite states are excluding our films as instruments of capitalist propaganda. That is the No. 1 paradox of the generation.

Russia doesn't hesitate to let out how she hates and fears the American motion picture. Her official propaganda organs spray a steady stream of abuse at our films. The Soviet magazines Culture and Life and Soviet Art rip our pictures apart at every opportunity.

I want to quote briefly from these official Russian propaganda organs.

Culture and Life recently said this: "The skill, inventiveness, and technical mastery of the American cinema are used in the service of darkness and oppression—fundamental characteristic features of the cruelty and unjust system of imperialistic society."

And Soviet Art said that "Hollywood bosses are now using the film as a weapon at the side of dollar diplomacy and atom politics."

But I think the prize goes to the Russian critic who said the Lost Week End is one of those psychological pictures which "are intended to convince the public the difficulties are caused not by the bad social conditions caused by capitalism, but by secret impulses in the human heart."

Gentlemen, that's the best alibi for a drunk I ever heard. He can blame it on capitalism and not on himself. By the same token, I suppose, vodka is nonintoxicating, having been purified in the crucible of communism. That ain't the way I saw it when I was in Russia.

If there is anything encouraging about the situation abroad, it is the retreat of communism in recent months. It was clear to me when I recently visited 12 countries in Europe. Communism is slowly, grudgingly giving ground wherever men still have a chance at a free ballot and the chance to use it.

Give us six more months, with American aid to western Europe becoming a reality instead of a blueprint and making itself forcefully and helpfully felt, and the retreat of communism will be even more pronounced.

Who could have dreamed that the little nickelodeon of yesterday would today be a great issue and a great factor in the giant conflict between two contradictory worlds of ideology?

Gentlemen, the shoestring on which you pioneers founded this industry ties the communistic world today in knots of pain whenever they think about it—just as it helps to tie together freemen and freewomen everywhere.

As a comparative newcomer in the industry I marvel at the glorious instrument you have created, this powerful instrument for good, for enrichment and betterment of human lives, this marvelous genie in the service of truth and freedom.

The Communists hate our films because they show a way of life they hate—a life where freemen work and play in the ways of freedom; a life where men are masters of their own destinies, and not pawns in the chess game of autocracy; where no one man is at the mercy of another, and where the virtues of justice and charity are still enthroned.

What a heritage the pioneers of America in all walks of life have left to us. And the greatest is this: That those who come after us can still pioneer, can still adventure, can still construct, still build, for ours is no congealed society; if we are faithful to our traditions and our institutions, it will always be a society of pioneers—dynamic and forever young.

VJ-Day Plus 2 Years

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include a speech delivered in Newport, R. I., on August 14, 1947—the second anniversary of VJ-day, by Chat Paterson, national commander of the American Veterans Committee. The speech follows:

It is difficult to believe that only 2 years ago the people of the United States, like people everywhere, were celebrating a day of great victory and even greater promise. American guns stopped firing. The last of 250,000 American men who had given their lives in defense of a dynamic faith and in the hope of a better future fell before enemy fire. Fascism—cynical, brutal, denying all values except unlimited power—had been defeated. The victorious nations, united in war, were molding a new unity for peace. Two months earlier they had signed the charter of the United Nations in an act which not only seemed to give hope for peace but, even more important, the promise of a decent fruitful life to the billion and a half people of the world whose past has been a hard relentless struggle for a meager existence. And just a few days before Japan capitulated, President Truman, Prime Minister Attlee and Premier Stalin at Potsdam had reached agreement on scores of important issues, including the future treatment of Germany.

Today, the hope and promise of 2 years ago seem little more than a bitter dream. A deep pall of gloom has gripped the world. The belief in the United Nations has all but disappeared and, with it, people have become disillusioned. To many it appears that the UN does not exist as an instrument which stands apart from conflict, but, on the contrary, is actually being used by the big powers to further their own interests in particular conflicts or else is ignored. Moreover, the positive side of the United Nations program—the promotions of the economic and social well-being among all people—has hardly gotten beyond the talking stage. Hunger, not politics, is still the one important fact in large areas of the globe. Railroads, roads, and bridges are idle for want of machinery and raw materials; farms lack even the most elemental implements; fertilizers are still scarce and the livestock population of Europe, which in some countries was more than 80 percent destroyed by Hitler's new order, is still far below the inadequate prewar levels; and tens of millions of people are still without homes to live in, save the cellars of bombed-out buildings and caves dug into the piles of rubble and brick.

As for the atomic bomb, the creation of a powerful world authority to control its uses is still as far away as it was in August 1945 when President Truman declared that international control of atomic energy was the only possible means of assuring peace and security for all peoples. Now it is almost certain that several years at least will pass in which tension over the bomb will increase and not decrease; and, if we are to accept the word of every atomic scientist, we must expect that in that time other nations, including Russia, will acquire the skill and technical know-how to manufacture the bomb. And overhanging all this is the spectacle of two colossal Great Powers jockeying for position and advantage and prestige.

It is not a pleasant scene to contemplate but it is one that is impossible to ignore. It would be equally foolish to ignore the fact that the United States and what we choose to call the American way of life is faced by a very real challenge. The challenge of Russia takes two forms. In the first place, it is the challenge of a great and powerful country which must be reckoned with for what it is—a land of tremendous size, with a population expanding at a rate much greater than ours, with extensive sources of raw materials and natural resources, with an industrial structure that has expanded to an incredible degree in the past 20 years and will continue to expand, and finally with a Russian people who are motivated by a deep love for their country and a deep faith in the possibilities of the economic system under which they live. We must understand this fact—that Russia is a growing and expanding country internally—but we must also understand the fact that much of Russian foreign policy is motivated by external objectives which have their roots deep in the history of Czarist Russia. Soviet policy in the Far East, its desire for a window on the Baltic Sea, its pressure for a security zone of friendly nations on its western borders, its anxiety for control of the Black Sea, and its demands for control of the Dardanelles—all of these objectives may be traced back many centuries into Russian history. They are not simply the creations of a Bolshevist government which came into power with the revolution of 1917.

In the second place, the challenge of the Soviet Union lies in the fact that it has an appeal to hungry and depressed peoples. It does us no good to blind ourselves to this. For whether we like it or not, rightly or wrongly hundreds of millions of Europeans and Asiatics are now choosing between our democratic forms and the promises of Russia.

In the past 6 months, the United States has attempted to meet this challenge. The Truman doctrine declared that we would provide military and financial assistance to any government, no matter what its character, which is threatened either actually or potentially, from the outside by Russia or from the inside by communism. It was essentially a negative approach and therefore doomed to failure. It did not represent a positive approach aimed at containing communism by removing the factors of desperation which create communism.

In sharp contrast is the Marshall plan which attempts to meet the challenge in a positive approach by offering to the nations of Europe such additional aid from the United States as may be necessary to revive the European economy on the basis of a unified plan which takes into account the possibilities of these nation's helping themselves and each other. In proposing his program Secretary Marshall stated: "Our policy is not directed against any country or doctrine."

The Marshall plan for the first time offers an alternative which places the United States in its real light and which, if properly implemented, may well give rise throughout the world to a new faith in a kind of democracy which is not static and which does not resist change. In the revival of democratic governments, such as the Remadier government in France, we have our greatest stakes. Should we fail to assist this kind of government—a government which is non-Communist, yet liberal, economically and politically—we will have given Europe by default over to the Russians. And if we lose democratic hope in Europe, we have lost the bridge to peace, the one link that can prevent another war. The Marshall plan has regained for America the confidence so missing in these past 2 years.

Up to this point, I have spoken of the Marshall plan insofar as it appears as a magnificent new conception of American foreign policy. There are, however, a number of disturbing signs and trends in the press and in recent speeches of some irresponsible political spokesmen, which would distort the Marshall plan.

First of all, there are some who publicly heave great sighs of relief that Soviet Russia and the eight countries on her western frontier refused to participate in the so-called Marshall plan. These same people object to any further attempt to convince all of Europe that they should join the plan. Certainly it was the greatest tragedy of the postwar period that the Soviet declined to participate. It was rank stupidity on Molotov's part to leave the Paris meeting. It was a tragedy for nations like Czechoslovakia to have refused—Czechoslovakia, which could have found in the Marshall proposal the link between the East and West, so necessary to prevent another war. We must realize that the consequence of the Soviet action will be a sharpening of the division into two worlds. For this, Soviet leaders must bear the chief responsibility. At the same time, we must not close the door irrevocably. It will be a sign of American greatness, if, without rancor or spite, we hold to our positive generosity.

Secondly, there is a growing tendency to regard the revival and rehabilitation of Germany, and particularly the Ruhr, as a keystone to the whole plan—a tendency which should be resisted by the American people. It is true that Europe cannot be healthy unless the Ruhr's production of coal and iron is raised to a considerable degree—no nation will deny that. But the problem is not simply one of production. The more fundamental question is whether the Ruhr is revived and rehabilitated for the benefit of the German people or for the benefit of the countries devastated by Germany; whether the nations on Germany's borders are to be given security against a new Germany with a revived industrial might or whether they are once again to be left prey to new aggression; and finally, whether the control of the Ruhr is to be placed clearly and definitely in the hands of a responsible international authority.

Thirdly, a number of statements have recently implied that the United States should establish as a condition for aid under the Marshall plan the rejection by European nations of programs for nationalization and systematic extension of government participation in the economic and social life of the people of those nations. We are going to have to live with a socialist Europe. This is apart from the merits of liberal American capitalism. American liberal capitalism will never be revived again in those countries which suffered under fascism and Nazi aggression. But, through our own efforts, we can prevent a Europe of planned economy or socialism from becoming a satellite of Russian communism.

For the issue in Europe today is not between a capitalist or Communist economy; to some degree, every country in Europe and many in Asia has some form of planned economy, and the role of economic planning is expanding rapidly in response to the needs of these countries. Unless we accept this trend, unless we recognize that the real issue is between a planned economy which succeeds in retaining vital democratic liberties, such as the Marshall plan can bring, and a form of planned economy which denies such liberties, such as the Russians believe in, our position will be hopeless. It means that Americans, while retaining a basically free enterprise system as one best fitted for ourselves, must at the same time accept the fact that democratic economic planning in one form or another may well be best suited to most of the countries whom we are trying to help.

In the last analysis, it is up to the people of this country to give flesh and life to the skeleton of the Marshall plan. It is up to the people to see that the President and the State Department and the Congress do not permit the plan to be distorted and twisted from its original conception.

And when it comes to the actual appropriation of funds—even if it means interrupting the vacations of our Senators and Representatives by calling a special session of Congress—it is up to the people to show the Congress that they do regard the Marshall plan as something more than a generous humanitarian gesture—a program which, in the deepest sense, is in the self-interest of a dynamic democratic America. For communism cannot thrive in a world which is economically healthy and prosperous. Moreover, unless the productive capacity of Europe is rehabilitated and revived and expanded, American export trade will suffer a severe blow—with its inevitable consequences in depression and reduced standards of living for ourselves.

In fact, unless we have a continued high degree of export trade, three and one-half million Americans may automatically be out of jobs. The difference between depression and sustained prosperity for America lies in the enactment of the Marshall plan.

But American foreign policy is being determined by American domestic policy. The paradox in American foreign policy and in all I have described above is that we cannot expect to pursue a policy of vigorous aid to democratic governments abroad when the Congress fights even mild liberalism at home. The bulwark against communism abroad will be a democratic trade union movement. But at home the Congress strikes blindly at labor while doing nothing to prevent the basic causes of strikes—which are inflation, bad housing, inadequate health facilities, and unsteadiness of employment. Blindness of this nature in domestic affairs can hardly be expected to be turned into intelligent enlightenment in foreign affairs. Domestic affairs and foreign affairs are as close together as the nail on the finger which is pointing the way to a better world.

It is up to the American people to demonstrate that they are prepared to accept a positive way of thinking in our approach to the world and our relations to it. We must give substance and reality to the Marshall plan at home. We must have ever greater production—and this means a willingness to expand our basic facilities, not to restrict them as our big steel companies have decided; it means a willingness to control inflation in a direct and purposeful manner, not just to recite plaintive and puzzled cries at the rising cost of living; it means a willingness to ensure full employment, not just in the technical papers of economists, but in reality; it means a willingness to apply the TVA idea to other regions of the country, an idea which in little more than a decade has made a backward, ruined and unproductive area one of the most productive and fruitful in the whole country. Harold Stassen has ably pointed out that the major gamble of current Soviet foreign policy is that there will be a major depression and resultant isolationism in the United States. Above all, we must revise our way of thinking about cost and the value of the dollar. We didn't stop to think about cost during the war, when our very existence was threatened. But today, we again tend to think in terms of whether we will be repaid in a specific financial and material sense for our investments. It is up to the American people to show that they believe such an approach to be inadequate, that they are ready to support, regardless of cost, any program the success of which is measured only by its contribution toward building an enlightened America and, in so doing, to extend the idea of a vital, living democracy for all men everywhere.

Why Are Not Chicken Prices Supported in Accordance to the Law?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, although the champion chicken killer of all time has resigned, the evil and the effect of his manipulations are still with us. The Congress has appropriated ample funds, if properly used, to carry out the provisions of the Steagall and the La Follette-Taft amendments. Congress has appropriated sufficient funds to administer the program, and yet, chickens are being purchased at 60 percent of parity when the law says "not less than 90 percent of parity."

How long do you think the Secretary of Labor would allow employees to receive 60 percent of the 40 cent per hour minimum wage? How long should we allow the poultry producer to receive 60 percent of parity for his wages, when the law of the land states "not less than 90 percent of parity"?

Surely we have many words about a long range agriculture program, but how about the short range one?

I have today sent the Secretary of Agriculture the following letter in regard to this situation:

NOVEMBER 24, 1947.

Hon. CLINTON P. ANDERSON,
Secretary of Agriculture,
Department of Agriculture,
Washington, D. C.

MY DEAR SECRETARY: A situation has developed in connection with poultry prices that is very disturbing. The market price

is evidently not equal to the support price. The purchase program of your Department, which according to the press release of November 10, 1947, is as follows:

	Cents per pound
Fowl, producer prices (over 4½ pounds live weight)	20.00
Grade A fowl—(New York style dressed weighing over 48 pounds net per box of 12 birds)	28.00
Fowl, producer prices (live weight from 3½ to 4½ pounds)	15.00
Grade A fowl (New York style dressed weighing from 36 to 48 pounds net per box of 12 birds)	22.50

The average price received for chickens by farmers in the United States in 1946 was 28¢ per pound, and the average price in Wisconsin was 26.9¢ per pound. In 1946 there were 2,260,000,000 pounds of chickens sold in the United States, and in Wisconsin there were 61,929,000 pounds sold. The cash receipts for chickens in 1946 plus the value of the chickens consumed on farms amounted to $821,000,000 in the United States and $22,000,000 in the State of Wisconsin.

This does not appear to me to be in keeping with the provision of the Steagall and the La Follette-Taft amendments. You no doubt recall that the Steagall amendment was not supported in accordance to the law on: (1) Eggs in the winter 1943 and 1944. (2) Hogs in the winter of 1943 and 1944. Hogs were allowed to sell during that period for as low as 60 percent of parity when the law plainly stated 90 percent of parity. Light hogs were allowed to be purchased at 6 and 7 cents per pound and the packers converted these hogs into products that were supported on the basis that they had paid the 13 cents per pound for them. In the spring of 1944 the La Follette-Taft amendment was passed. This was an amendment to the Commodity Credit Corporation Extension Act of that year. The La Follette-Taft amendment, in fact, again directed the administrative branch of our Government to follow the provisions of the Steagall amendment without hesitation or circumvention. (3) In the spring of 1947 certain dairymen of the United States received as much as 30 cents per hundredweight less for their milk than the 90 percent of parity provision of the Steagall and La Follette-Taft amendments. Weather conditions and price advances changed this picture.

Now we are faced with the present chicken prices. According to the last monthly report of the United States Department of Agriculture on page 5 of the Agricultural Prices it states, "Chickens, live, per pound parity, 27.2 cents per pound." Ninety percent of parity then is 24.48 cents per pound.

There are many reasons why the Steagall and La Follette-Taft amendments should be lived up to religiously. (1) Commitments of a government to its people should be fulfilled without any hesitancy. (2) If these provisions of law embodied in the Steagall and La Follette-Taft amendments are not lived up to it has a very detrimental effect upon all other agricultural programs. AAA committeemen and county agents are surely handicapped in talking about a farm program when the provisions of the Steagall and La Follette-Taft amendments are not most carefully fulfilled. (3) If the Steagall and La Follette-Taft amendments are not adhered to, it is going to be difficult to put a long-range agricultural program into effect as those charged with responsibility of working out the long-range agricultural program will constantly be faced with an attitude on the part of the people saying, "What good is it to talk about another long-range program when a short-range program which is on the statute books is not being carried out in accordance to the law of the land?"

I am willing to assume my share of the responsibilities for the small part that I have had in supporting the Steagall and La Follette-Taft amendments before the Banking and Currency Committee of the House, and by personal contact with former Senator La Follette in connection with his amendment. However, I belong to the legislative branch of the Government and there is nothing I can do to compel the administrative branch of our Government to live up to these legislative commitments. All I can do is to offer my protest, and that is what inspires me to write you this letter. I have been a member of the Agriculture Committee for 9 years, and I have as high a regard for the United States Department of Agriculture as any individual could have. I have not supported any special privileged legislation for any crop or any commodity. I have cooperated with the United States Department of Agriculture former Secretaries, Mr. Claude Wickard and Mr. Marvin Jones, and with you whenever possible in an effort to make the Steagall and La Follette-Taft amendments followed in accordance to the law.

Please accept this letter in the spirit in which it is sent.

Sincerely yours,

REID F. MURRAY.

The Meaning of an Independent Judiciary

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, November 25 (legislative day of Monday, November 24), 1947

Mr. WILEY. Mr. President, on September 18, 1947, it was my privilege to speak at Grand Rapids, Mich., before the annual meeting of the State bar of Michigan. I ask unanimous consent that the text of my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

(Address by the Honorable ALEXANDER WILEY, United States Senator from Wisconsin, before the annual meeting of the State Bar of Michigan, Grand Rapids, Mich., September 18, 1947)

THE MEANING OF AN INEPENDENT JUDICIARY

Mr. Chairman, members of the bar, distinguished guests, at the outset of these comments, permit me to express my gratitude for this opportunity to appear before the annual meeting of the State Bar of Michigan, and may I pay a deserved compliment to two great American Senators, the Honorable ARTHUR VANDENBERG and HOMER FERGUSON.

We have assembled for information and light. We have come to charge our batteries anew, so to speak, with constructive thoughts on the legal problems of our day in the State and the Nation, and I am honored by the opportunity to make some small contribution to our mutual thinking this afternoon.

It is good to be in Michigan today and to see so many old familiar scenes. It is particularly good to meet with the bar association and to have the privilege of visiting with many old friends.

As you know, it was my privilege to study for 2 years at the University of Michigan at Ann Arbor, and I learned then to have a very wholesome respect for the legal minds of this State.

I am very grateful for the lessons which I learned during that early formative period of my life, because they provided more than a mere legal background for me.

I feel that it is a tribute to the Law School of the University of Michigan, for those of us who are graduates, to report that in addition to our legal training, the schooling we received at Ann Arbor served to equip us for the grand adventure that is life.

MY EUROPEAN EXPERIENCES

As you may know, I have just returned to these shores from a brief trip in several European countries. Although it was not my primary intention to do so, my experiences during this trip furnished me with some observations on which to base my comments to you today.

OUR SUBJECT TODAY

The focus of our interest now is "The meaning of an independent judiciary" in our times. You and I know that the concept of an independent judiciary is as old as the United States Constitution itself and even more venerable than that, based on the most advanced thinking of the great French and English political scientists of the eighteenth and earlier centuries. It is as old as the concept of checks and balances, the concept of dynamic interplay between separate and distinct branches of government. The fulfillment of this concept is perhaps America's greatest single contribution to modern civilization. In every field of our national endeavor, economic, political, social, religious, the miracle of checks and balances has proved its values.

FORCES WEAKENING INDEPENDENT JUDICIARY

I would like to turn our attention now to the forces which operate and have operated against an independent judiciary, both in our land and in other lands.

1. One of the most dangerous forces destroying the independence of the judiciary is the force of so-called political expediency, expressing itself, for example, in the nomination of nonjudicial judges, of political hacks in payment for partisan favors, the nomination of men lacking the three essentials for a good judge:

(a) Judicial ability and temperament.
(b) Integrity.
(c) American-thinking philosophy.

If you will be good enough to pardon a more or less personal reference to the work of the Senate Judiciary Committee, of which I am honored by being chairman, let me reaffirm the sincere and honest desire of that committee to do a very conscientious job in reviewing the qualifications of every nominee for Federal judicial office who comes before the committee for confirmation.

It has never been the intention of our committee to indulge in any kind of witch-hunting, but we have felt very strongly that it was incumbent upon us to eliminate any unqualified nominees. You may recall that in the Eightieth Congress, our committee initiated the policy of cooperating very closely with the American Bar Association and the various State bar associations.

COOPERATION OF BAR ASSOCIATION

The committee is extremely grateful for the cooperation which we have received, and the reports from the various State associations and from the American Bar Association have been tremendously helpful to the committee.

The American Bar Association and the various State bar groups, such as this one, are to be complimented on a job well done.

It is a tribute to the essential, innate integrity of any group when it can honestly and conscientiously pass on the qualifications of members of its own group when they are nominated for high judicial office.

LACK OF BALANCE

I should like to interject at this point that there has been evident in the last decade and one-half an unfortunate over balance of one type of philosophy in our judiciary.

This is not conjecture. It is borne out by a report which I secured from the Attorney General.

It is a natural enough development for one administration to perpetuate its philosophy in its nominations. But regardless of how natural a process this may be, it must still be scrutinized very closely as a dangerous potential menace to the integrity of the thinking in our judiciary.

Obviously, in courts dominated by one type of thinking, there is little room for the free interplay of ideas which is so essential to the impartial judicial evaluation of the great issues of the day.

I do not say this as an indictment against the courts, and I want to make it clear at the outset that in anything I say here today it is not my intention to disparage or in any way minimize the stature of the Federal judiciary for whom I have the highest respect. It is my intention, however, to comment on certain painfully obvious factors which must be considered in any impartial over-all evaluation of the Federal judiciary.

NO ONE PHILOSOPHY SHOULD DOMINATE COURTS

Please understand also that I am not speaking merely in the narrow partisan terms of Democrat or Republican. I am endeavoring to speak in the infinitely broader terms of "political philosophies," and it is my contention that no one political philosophy, be it Republican or Democrat, collectivist or noncollectivist, States-righters, or Federal-centralization school of thought, should dominate the courts.

Any executive of any political label should be concerned with maintaining an adequate balance in the political philosophy of the Federal courts, so that the independence of the judiciary may be maintained to the end that no judiciary should ever become the mouthpiece for any one administration, or any one political philosophy.

It is evident from the factual record that it may take at least two decades to halt a dangerous trend toward overweighting of the judiciary with one brand of thinking—and by that I do not mean to indict the integrity of the bench—but rather a shortcoming in the executive branch which has made the nominations.

USURPATION OF POWER

2. Another potential menace to an independent judiciary is the usurpation by any of the three coequal branches of government. If the Executive oversteps the bounds of his authority, or if indeed the national legislature itself interferes with the rights and privileges of the judiciary, or if the judiciary attempts to legislate, then the integrity of the judiciary is threatened.

The Father of our Country, George Washington, in his Farewell Address on September 17, 1796, stated:

"The habits of thinking in a free country should inspire caution in those intrusted with its administration to confine themselves within their respective constitutional spheres, avoiding, in the exercise of the power of one department, to encroach upon another."

The history of European dictatorship is invariably marked by usurpation by one branch of government, invariably the executive branch, of the prerogatives of other branches. We must not let that happen here.

UNDESIRABILITY OF JUDGES IN EXECUTIVE POSTS

I should like at this point to comment briefly on the fact that too frequently the Executive has used judges to perform nonjudicial functions in the Federal Government.

The growing practice of drafting judges to fill executive posts is properly a matter of serious concern. Justices of the Supreme Court have been used in this manner, as in the case of Justice Roberts in the Pearl Harbor inquiry, and Justice Jackson in the Nuernberg trials.

Federal circuit judges, district judges, and justices of the Court of Claims have been called upon to perform executive and other nonjudicial functions.

In some cases the assignment has resulted in the permanent withdrawal of the judge from the Nation's judiciary. At other times the judge has merely been "borrowed" for temporary executive duty and then been returned—presumably unsullied—to the sanctity of the judicial robes.

On other occasions the judges have left one judicial post to engage in executive activities and have subsequently been appointed to another judgeship—sometimes higher in rank than the one previously held.

I am seriously disturbed by the growing frequency of this practice.

DANGERS OF SUCH SHIFTS

The propriety of taking men from the bench to fill executive posts is governed in part by the immediate situation and in part by judicial ethics and public policy.

The statutory restrictions on the practice are somewhat limited. We know that when the architects of the Constitution built into that magnificent structure the principles of the separation of powers—legislative, executive, and judicial—they wisely gave to each branch of government the power to resist encroachment on the part of others.

The founding fathers were particularly concerned with preserving the integrity of the judiciary, and, consequently, they sought to underwrite the independence of the judges by security and tenure of office, by fixed salaries and by a clear delineation of jurisdiction.

Hamilton once wrote that "the judiciary is in continual jeopardy of being over-powered, awed, or influenced by its coordinate branches."

It is conceivable that it would be difficult for judges to maintain the integrity and independence of the judicial office if the practice of appointing them to executive offices carrying exceptional privileges and prestige continues unabated.

When this happens, there is always present some lingering suspicion that the Executive can gain desired ends by placing judges in executive appointments.

It is possible that the whole independence and integrity of the judiciary can be embarrassed, if not compromised, by an easy, toll-free route from the bench to a political office.

We who are members of the bar realize, of course, that the canons of ethics of the American Bar Association admonish a judge not to accept "inconsistent duties," and we know that there are other Bar Association canons relating to this practice.

We may safely conclude that the high standard demanded of the Federal Judiciary should not be subjected to the disintegrating erosion of unwarranted exceptions.

It is safe to say that the basic business of judges is and should remain judging.

WEAKNESSES IN JUDICIARY ITSELF

3. Still another force operating against an adequate judiciary might be inherent weaknesses in the judiciary itself, perhaps expressed in the inherent weakness of the judges, in their possible attitude of servility, or in corruption. We must ever be on guard that every judge, who is after all a trustee of the values of the people, conducts himself in a manner befitting that trusteeship.

An independent judiciary is a strong judiciary, a fearless judiciary, having respect for its coequal branches of government, but respecting even more its paramount obligation to the American people in interpreting the supreme law of the land.

There was a time in Anglo-American history when judges were in low repute because of their improper conduct both on and off the bench. Now we know that the personal touch in judicature can be a blighting touch where even slight deviations from the standards might destroy respect for courts as tribunals of impersonal justice.

Judge Bond once said: "Perhaps it is only by preserving the conception of a court of justice as something larger than the men who carry it on, as something which transcends them, and compels their reverence, that the ground gained through the centuries and left to us of later generations, can be held secure."

It is disturbing to read that members of the highest court in our land have engaged in public verbal altercations.

ONE-TRIP JUSTICE

4. A great many lawyers throughout the land, and a great many laymen also, are becoming increasingly concerned with the rapidity with which old established judicial landmarks are being razed and ruthlessly replaced by a whole new judicial sky line of precedent-shattering decisions.

It has been estimated that of all the occasions when the Supreme Court of the United States in effect overruled previous case decisions since the very first days of the Supreme Court, some 37 percent of those overrulings of earlier decisions occurred in the period between January 1939 and June 1946.

This is, indeed, rewriting judicial history with a vengeance. It is perhaps not for you and for me to say that these overrulings of earlier decisions are not entirely proper in view of the fast-moving changes in the political, economic, and social structure of our land.

Nevertheless, it is evident that we are charting whole new highways of case law with new milestones and highway markers replacing old familiar judicial landmarks.

In some cases the old judicial landmarks have been completely eliminated by court legislation.

Justice Roberts in a dissenting opinion in the case of *Smith* v. *Allwright* (321 U. S. 649, 699) commented on the fact that the decision "overruling that announced about 9 years ago, tends to bring adjudications of this tribunal into the same class as a restricted railroad ticket, good for this day and train only."

JUDICIAL NO-MAN'S LAND

Now, that is the opinion of a Justice of the Supreme Court, who recognized a growing feeling of insecurity—a judicial impermanence—a kind of judicial no-man's land, where laymen and lawyers and judges could no longer look to the old established judicial landmarks for guidance.

Justice Frankfurter of the Supreme Court in a dissenting opinion handed down January 6, 1947, in the case of *Katzinger Co.* v. *Chicago Metallic Manufacturing Co.* (329 U. S. 394, 416), referred to another decision of the Court where he evidently felt that the overruling had not even had sufficient judicial decency to completely eliminate the possible confusion attendant upon an earlier decision. He said: "If a doctrine that was vital law for more than 90 years will be found to have been now deprived of life, we ought at least to give it a decent public burial."

Lawyers are familiar with these dissents and with other historic dissenting opinions.

I mention them only by way of side commentary on the fact that many such historic decisions are made with a sharply divided Court.

INSULATION OF JUDICIARY

There is one other aspect of judicial integrity which warrants at least a passing comment, and that is the insulation of the

judiciary from public opinion. In a dissenting opinion handed down on May 19, 1947, in a private lawsuit between individuals in Texas which, however, involved a publisher, Justice Jackson referred to a brief filed by the American Newspaper Publishers Association which pointed out that the association had a membership of more than 700 newspaper publishers.

Justice Jackson commented: "This might be a good case to demonstrate the fortitude of the judiciary."

I am not in any sense endeavoring to comment on the merits or demerits of these dissents, nor would I want them considered as they relate to a specific case. I do believe that Justice Jackson said something very basic when he said that we must demonstrate the fortitude of the judiciary.

In conclusion, I reiterate that I would not want my remarks interpreted as being in any sense a reflection on the judiciary of our land, because I feel that it is imperative that no unwarranted reflections be cast on the judiciary.

In fact, it is only from a concern with protecting and safeguarding both the integrity and the stature of the Court that I venture even to make these observations. I want to make it perfectly clear that I have a high respect for the judiciary, but just as members of the judiciary themselves have observed the need for continued vigilance in protecting the judicial chastity of the bench so must all conscientious lawyers join in continued vigilance to maintain inviolate the sanctity of our judicial system.

OUR OBLIGATION TO JUDICIARY

It is the obligation of every member of the legal profession to seek to maintain a strong and independent judiciary in our land against whatever force would weaken it. To do so requires cooperation from every public-spirited lawyer and judge, from every Member of the Congress, including, of course, in particular, the Senate and House Judiciary Committees, and, indeed, from every citizen.

Each of us has the obligation, whatever our profession, to uphold the judiciary as the supreme protector of our American birthright. In protecting the American judiciary from attack, from whatever quarter, we are simultaneously protecting ourselves, our rights, and our liberties, and those of our children and our children's children, from whatever menace the mind of man can mistakenly or maliciously conceive.

The mind of man is indeed a source for infinite good or infinite evil. Here on this blessed continent the minds of all generations of America have been dedicated to building and enhancing the noblest values of men. It is up to us to continue in that tradition. To do so we must maintain unimpaired the strength and independence of our American Constitution.

CONCLUSION

In this age of material splendor and achievement we must not forget the spiritual wisdom which constitutes the real framework of our national life. We must fight moral decadence at every turn. The world needs spiritual splendor, spiritual ideas of honesty, purity, unselfishness, love more than it needs goods. Without these ideas, goods will only be a palliative. Material remedies for moral ills are ineffective. Many nations are at the ebbtide of spiritual vitality. Our age will determine which of the rival, revolutionary philosophies shall sweep the generations of men. You and I cannot stand idly by. We are called to a great purpose—to serve God, humanity, and our country—by seeing to it that there is a spiritual rebirth. It is a momentous hour in history, and we ordinary folks can be truly great if we do the great job before us.

Tribute to the Late Chief Justice Stone by Herbert Wechsler

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 25 (legislative day of Monday, November 24), 1947

Mr. HILL. Mr. President, as one who was privileged to be a student under the late great and beloved Chief Justice of the United States, Harlan F. Stone, when he was dean of the Columbia University Law School, I ask to have printed in the Appendix of the RECORD the very fine and scholarly tribute paid by Mr. Herbert Wechsler at the meeting of the bar of the Supreme Court of the United States in memory of the late Chief Justice on November 12 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The custom of this bar for almost a century was to lament the passing of a Justice by wearing the badge of mourning during the term. It is well that the practice has been altered; for the man in whose memory we are assembled was no believer in such outward signs. He warmed both hands robustly before the fire of life, but when it sank—though suddenly—we may be certain he was ready to depart. His counsel for today would be to think not on his death but on his work. His hope would be no more than that the effort and the product of his years may yield for us, whose work is yet undone, some signal of the path we wish to follow, some token of our duty.

Such title as I have to speak about the meaning of this useful life is held in common with a score of others. He took us from the classroom, as you know, acting with that special faith in youth and in the schools that somehow is maintained upon this Court. We held a perch beneath the rafters of his chambers usually for but a single term. Though jointly we bear witness to the full span of his judicial service, each of us knows nothing but a fragment of the whole, fragments that inevitably differ with all the changes in the issues and the emphases of more than 21 exciting years.

If all could be heard, the seniors of our number would speak of the time of the novitiate, when fresh from teaching, practice, and the Cabinet he took his seat upon this bench. These were the terms of first impressions—of initial soundings in the sea of controversy that constitutes the business of the Court. Others would tell of terms when this was over, the bearings taken, and the directions setted upon many of the major issues of the time. This was the period when the name of Stone was so often joined with those of Holmes and Brandeis or later of Cardozo in the great triumvirates that gave warning of the storm approaching before the lightning was seen by others or the thunder generally heard. A third group would dwell upon the years of crisis, the direction of the Nation's polity hinging on the trend of the decisions, conflict within the Court no less acute or less portentous than the challenge to the very institution mounting swiftly to a climax in another place upon this Hill. Still other voices would describe the time of the judicial readjustment, the unfolding of what the Justice called "the historic shift of emphasis in constitutional interpretation" that began before the great debate was through. This was for him the period of the prophetic realization, the dissents of former years delivered now as judgments on so many basic questions, the whole a triumph of persistent conviction that has its parallel in the lives of few judges, its analog in the stories of few men.

Finally, there are among us some who know the years of service as Chief Justice, judicial labor no less heavy for the addition of administrative duties, the challenge of the great responsibility sharpened by the awful fact of war. Change in the contentious areas of constitutional controversy was by this time clearly delineated. So, too, was it made plain that controversy itself had not been ended by the change; that here, as elsewhere, no solutions can be final and definitive—for all give birth to new issues rising from the ashes of the old; that powerful forces and high values, pursuing their persistent competition, ever generate fresh dilemmas to challenge the wisdom of this Court.

Within these changing settings, different themes stand forth throughout the years. The largest point in the beginning had to do, of course, with insular experimentation, the power of a State's democracy to fashion changes in the legal order by laying on the enterprise within its borders restraints or taxes deemed by it—but not by many others—to advance the common weal. The point, thereafter, has to do with matters far from insular, the power of the men who represent the full constituency to marshal the resources of the Nation in ways they think constructive—though many men in every State believe the measures baneful and their purpose even worse. The point in other contexts is concerned with the policing of our federalism, assessing the authority of some one State to force its will on men or institutions centered within other borders or engaged in commerce among many States—their standing with the local legislature little more than that of strangers in the gates. Another point, in many ways the most perplexing, centers in the differences that mark controls upon the ways of men in getting and in spending and those that touch affairs of conscience or expression, involving an assault upon the final bulwark of the single human spirit facing other men, his country, and his God.

On such great themes as these, the Justice, as occasion offered, brought to bear his full creative power, knowing that to men of law there are no deeper problems, certain of the title and the duty of this Court to fashion from our basic charter answers that will stand against the cries of faction and the test of time: certain also that no answer stands merely on the ground of its authority, that what maintains a judgment in the end is its appeal to reason for support.

This is, of course, to point to what for us could not but be the highest moments—the days in which the justice shaped—whether for the Court or in dissent—opinions drawing on the final sanction—the instrument "intended," as he often liked to quote "to endure for ages to come, and, consequently, to be adapted to the various crises in human affairs." His insight was that both the Constitution and this Court are "instruments of government," that government is an intensely practical activity, its problems centered in the areas of deepest conflict in the interests and affairs of men, its measures born far less of changing theories than of changing facts. He had, therefore, the firm conviction that the basic law must stand above the normal reaches of the conflict and the pressures; that when it speaks to problems of such practical dimension it must direct itself to actuality and cannot rest on vague or flimsy formulae so often scattered in the books. It shocked him always to discover how much there was in the decisions or opinions offered as authority in argument before this Court that did not satisfy these crucial standards;

and nothing pleased him more than the belief that he had made sound principles articulate in working over some such area of barren ground. He sought throughout, within the great tradition of this Court, to show that the inherited document has few absolutes to limit democratic action, that those it has are in the fields where only absolutes—or something very close to them—will keep the action democratic or will preserve those final decencies on which Americans have always been prepared to stake their title to survive.

Men whose fashion is to press their power to the utmost—and they are always many—will never understand how much there was of self-subordination in this great work; the talent and the passion—not to speak of craft—so often given to sustaining measures that the Justice, had their merits been for him, would certainly have held pernicious; the strength of the conviction that, except within the narrow limits where the Constitution speaks most firmly or the highest values stand, the antidote for legislative error must be found not in this Court but at the polls. An age which ever tends to specialize its interests does well to ponder and to honor this capacity for disinterested judging, this ability to etch a standard of adjudication that sustains the governmental structure—whatever party has its transient dominance, whatever claims to power or advantage win political acceptance for the time.

And even in the reaches where the Justice thought the Constitution posed a bar to legislation—a field in which he did not hesitate to stand alone—the men or doctrines or activities he deemed entitled to protection would not often have achieved a shred of his approval, were the issue what he thought was good or useful rather than the right of other men to do or hold or urge what in their wisdom and in God's broad grace they deemed desirable, however much their fellows disapproved. I say an age which seems progressively to specialize its interests can do no better than to contemplate this man whose greatest work inhered so largely in affirming the power or the right of others—be they officials or the victims of officials—to do or to maintain what in his private view he would have thought quite base or wrong.

Not all men who viewed their duty thus would find the work congenial—despite the dignity and honor that attaches to the highest court. In this case, though, I think the mission was completely sympathetic. The reason is, in part, that one who viewed all power as a public trust, its only satisfactions in the chance to render service, was devoted necessarily to abstract and ideal ends. The deeper reason is that Justice Stone was of that small group of men who really have the democratic spirit—to use a term that has been much abused and never more than at this time. I use it, let me add, in none of those strange senses that distort the minds of men today—nor even in the sense in which democracy is taken to bespeak benevolent compassion. I mean no more and certainly no less than the hard faith that other men—both in and out of office—however much we disapprove their natures or their works, have rights that are entitled to respect; that to define these rights, to cherish and support them is the very heart of the enduring quest for liberty and justice under law.

The quality of which I speak is that which more than 60 years ago a Massachusetts judge named Holmes declared "the deepest cause we have to love our country—that instinct, that spark that makes the American unable to meet his fellowman otherwise than simply as a man * * *." This, indeed, if nothing else, we know who shared, however briefly, the democracy of Justice Stone's own workshop. I dread to think—even at this distance—how often our youthful discourse must have seemed to overlook the fact that the Justice rather than his law clerk was the man a President had chosen and a Senate had confirmed. The dread is softened by the thought that no man found transgression less in such presumption, no man had less pride of place or was more genuinely eager to hear stated any relevant idea.

To speak of self-denial in Justice Stone's conception of judicial duty is not, of course, to mean that he believed the judge's task mechanical or even marginal—and least of all the task of judges of this Court. Needless to say, the "shift in emphasis in constitutional interpretation," to use his words again, involved the most creative adjudication, premised on the view that, as he said, "judicial interpretations of the Constitution, since they were beyond legislative correction, could not be taken as the last word," were "open to reconsideration, in the light of new experience and greater knowledge and wisdom."

The spirit was the same—though the limits and desiderata somewhat different in the areas that are not beyond the pale of legislative correction, the normal work of law administration that yields the largest quantity of grist for this Court's mill. No one could more firmly hold an issue closed because a valid statute gave the final answer. But no one would more candidly conclude, when all was weighed, that Congress left the issue open, or shrink less from the view that in such case judicial choice is free and must be made on what amount to legislative grounds. He said that recognition of these truths gave "high distinction" to the work of Justice Brandeis. No recognition ever has been clearer than his own. Within the limits that he set himself, his conscious purpose was to practice what he called the "creative art by which familiar legal doctrines have been molded to the needs of a later day," the "process," as he put it, "which throughout the history of the law, has in varying degrees served to renew its vitality and to continue its capacity for growth."

To state such principles is not, of course, to give the measure of their application. The art of which he spoke, like other arts, achieves its greatness in the judgment of the artist, the instinct or the talent that knows where and how to draw the lines between competing values, to find results that have the quality of median proportion that men, wherever reason has its dominance, perceive as the constituent of justice. This is, I think, the final standard that the country used in placing such consummate confidence in Justice Stone's judicial work; it found his judgment true. There are no better words in which to give the spirit of this sentiment than those that Ezra Thayer used of Gray of Harvard, he was a "rock of trust." Men had the sense that in his hands a balance had been struck between the polar claims of States and Nation, Government and enterprise, groups and individuals, progress and tradition.

I have a final word that is concerned less with the Justice or the chief who gave us access to his chambers than with the man who gave us entry to his home. Young lawyers have a tendency to view the law as all-absorbing, forgetting that the richness of a life inheres as much in range of interest and appreciation as in the rule of service and devotion to the daily task. On this point, too, his law clerks could but note with awe the Justice's example. For while no other interest could compute with his judicial duty, he managed somehow to despatch his work without exhausting either time or energy. Somehow within the framework of this busy life he found the moments to devote to living; the house and study Mrs. Stone and he designed with scrupulous attention to detail; music and the arts, including most discriminate collecting; Amherst, the Folger Library, and later the gallery and Smithsonian; evenings of the widest reading; visitors of grand and humble station, received with equal grace; the garden as a place to work as well as linger; long and, if a weaker man may say so, brisk walks each day, with small regard to weather; a joy in talk, and growing things, and company, and knowledge; a taste for wine when it is good; an abiding interest in affairs of scholarship and education; a helpful word to other men who sought advice or lacked encouragement.

Somehow, I know not how, all this was fused with his judicial labor; the life we had the privilege of witnessing was simple, natural, and untroubled—to borrow words the Justice used in speaking of the birthplace of the President who gave him his original commission. In a phrenetic age, he was unruffled and unhurried. His household had the calm of a New England landscape. He prized the things that make up a developed civilization. He loved the things that in the end we have law for.

Most of our number saw him last when in the spring of 1945 he and Mrs. Stone dined with his law clerks at the close of 20 years of service on this Court. There was a moment in the evening when some lines were read from the first law lecture given at Columbia College, that of James Kent in 1794.

The passage began: "The events which are rapidly crowding the present era are to be deemed among the most solemn and the most important in their consequences of any which have hitherto been displayed in the history of mankind. Great revolutions are taking place in the European world, in government, in policy, and in morals, and a new turn will be given to the habits of thinking and probably the destination of human society. But amidst the universal passion for novelty, which threatens to overturn everything which bears the stamp of time and experience, we in this country ought to be extremely careful not to pass along unconscious of the labors of the patriots who effected our Revolution; nor let the admirable fabrics of our Constitutions, and the all-pervading freedom of our common law, be left unheeded or despised."

The passage from Kent's lecture ended: "I am most thoroughly, most deeply persuaded, that we are favored with the best political institutions, take them for all in all, of any people that ever were united in the bonds of civil society. The goodness of these institutions will brighten on free investigation, and faithful experiment, and be respected according as they are understood."

It seemed to me that, as the words were read, the twelfth Chief Justice—once the third Kent professor of law in Columbia University—smiled with interest and approval. I know that many thought, as I did, of the miracle by which ideas project themselves across the chasm of the years, the thoughts enduring as their applications change. In our mind's eye we saw a Chief Justice yet unborn surrounded by his law clerks born much later; and we knew that when their discourse touched the great men of the past who had sustained their country's institutions it would include high tribute to the work of Harlan Stone.

Vicious Lobby Invading Nation's Capital To Destroy Farm Cooperatives

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. PATMAN. Mr. Speaker, permission having been granted for that purpose, I am inserting herewith a copy of

my statement before the Committee on Ways and Means, November 20, 1947, on cooperatives. It is as follows:

Mr. Chairman and members of the committee, I appreciate the opportunity of appearing before this powerful committee of the House of Representatives on a question of great importance. It involves farm cooperatives and title 101 of the Internal Revenue Act.

ISSUE MISUNDERSTOOD AND MISREPRESENTED

The age-old question, "Have you quit beating your wife yet?" is similar to the question that is generally asked by misinformed and uninformed people concerning cooperatives. The question usually asked is, "Do you favor taxing co-ops the same as private corporations and other businesses?" If you answer "Yes," it is implying that cooperatives have not been taxed like other businesses; if you answer "No," it implies that you are for the cooperatives dodging taxes. Never in my experience in public life—25 years—have I known an issue to be more misrepresented and misunderstood than this very issue involving farm cooperatives.

COUNTRY SOLD ON FALLACIOUS THEORY

It is true that one national organization backed by unlimited funds has sold the country, including many Members of Congress and many of the small businessmen of the Nation, on the fallacious theory that cooperatives are tax dodgers, tax evaders, a menace to private enterprise, and should be destroyed as a way of doing business. I shudder to think what might happen if a similar organization backed by like funds, with the same assistance that has been given by the press and radio news commentators, might accomplish in the way of selling our country on a different form of government if they so vigorously attempted to do so.

SHORT SLOGAN REQUIRES HOUR TO ANSWER

The most effective and devastating campaign that can be carried on is one in which short slogans or phrases are used. Speakers appearing before civic clubs, chambers of commerce, and other groups in towns and cities in this country, incidentally where cooperative members are not likely to be found, repeat such slogans as "You favor tax equality," "You believe in paying your fair share of the taxes," "Do you know that a large segment of our business economy, the cooperatives, are escaping taxation; that they are tax dodgers; that they are putting you out of business through subsidized Government help and by evading taxes?" You can imagine the response where there is no opposition. Yet, when the facts are obtained and evaluated, it is quickly discovered what a deceitful and untrue campaign is being conducted. The truth is, farm cooperatives pay taxes like all other free-enterprise concerns. They are not tax dodgers or tax evaders and are not a menace to other forms of business and they represent a healthy addition to our economy. In a country like our own where people are in such a big hurry and pay so much attention to slogans and headlines without taking the time to know fully the facts, such a campaign as has been conducted against cooperatives can be a very effective one, as has been demonstrated. It is not a difficult matter to use a devastating phrase or slogan that will require an hour of logic and reason to answer, but how many people will listen to an hour of logic and reason for an answer?

DIFFERENCE BETWEEN INCOME AND SAVING

A lot of the misunderstanding of the question of cooperatives has been brought about by the failure of those who are misinformed to understand the difference between income and savings. If a purchaser of an automobile secures it for $1,500 from his dealer when the market price of the vehicle is $2,500 and the purchaser could immediately sell it for $2,500, that does not mean that the purchaser of the automobile should pay income taxes on the $1,000 he has saved. The sixteenth amendment to our United States Constitution authorizes the levy of a tax on income, not savings. There cannot be an income without a sale. If 100 farmers get together and collectively buy through a cooperative that they form to act for them 5 tons of commercial fertilizer each and in this way they save $10 a ton or $50 each, no one can logically contend that each farmer should pay a tax on the amount he saved. On the other hand, if a farm selling cooperative handles the products of a hundred farmers and advances each farmer the then current market price, and then by selling in large quantity and being in a position to bargain collectively with the buyer of the 100 farmers products and in that way get 25 percent more, which is remitted to each farmer, there is an income that is subject to tax. It is not an income to the cooperative, because the cooperative is a mere agent of the farmers, but it is an income to each farmer, which enters into his tax liability to the Federal Government, and there is no tax evasion.

TAXING PATRONAGE DIVIDENDS OR REFUNDS MAIN QUESTION

It is proposed—and I consider this question the major one involved—that patronage dividends or refunds that are made by a cooperative to its members be taxed to the cooperative for Federal income tax purposes. I am opposed to this proposal for the following reasons:

1. It would be unconstitutional, since refunds by a farmers' buying organization to its members are not income but are savings; dividends by a marketing cooperative to its members belong to the member and are subject to tax in the hands of its members.

2. It would be a penalty or death tax against cooperatives, which is not imposed upon any other form of private enterprise.

3. A partnership occupies exactly the same tax status as a cooperative, insofar as patronage refunds or dividends are concerned. A partnership, as an entity, does not pay taxes, but the earnings of the partnership when distributed to its members are liable for Federal income taxes. A cooperative does not pay taxes as a business entity, but earnings of the cooperative as an agent of its members when distributed to the members are liable for Federal income taxes just like the members of a partnership. They occupy exactly the same status for Federal income tax purposes.

In the consideration of the question involving charges that cooperatives do not pay their fair share of Federal income taxes, the statement is often made that a certain cooperative would pay so much in taxes if the cooperative paid the same taxes as it would pay as a corporation. Although I do not agree that the comparison is fair or should receive consideration, it is so often made that the same comparison should be given about the amount of taxes partnerships would pay if they paid taxes as corporations. The Treasury, at my request, has estimated the amount of taxes partnerships would have paid in 1946 if the partnerships had paid taxes as if they were corporations. Allowing 20 percent of the income of each partnership as salaries and making proper deductions therefor, partnerships in the United States during the year 1946 would have paid $1,860,000,000. If 50 percent is allowed for salaries, the partnerships would have paid $1,120,000,000.

4. Individual proprietorships operating under assumed names do not pay taxes as a business entity, but the individual receiving the earnings of the assumed-name business concern must pay Federal income taxes, if due.

5. To impose such a tax would be unduly and unmercifully oppressing to a large group of our population who are using the cooperative as a self-help institution and as an effective means of improving their lot and manner of living. The individual farmer, unorganized, is at the mercy of the buyer of his products.

6. It would be favoring big interests, big wealth, and monopolies, and discriminating against the poor people of our country, especially the hard-working farmers of the Nation.

WHY ODIOUS PHRASE ATTACHED ONLY TO FARM COOPERATIVES

Why should the phrase "tax exempt" be used against cooperatives insofar as it relates to patronage refunds and dividends? If a cooperative gives a patronage refund, it is referred to as tax exempt. The law merely states that no taxes shall be required of the partnership, which has the same practical effect as being tax-exempt. The law does not state that patronage refunds given by private corporations to their customers, under certain terms and conditions, are tax exempt; the law merely provides that the private corporation shall not be required to pay taxes on such refunds. I wonder why the odious phrase should be attached to farm organizations, and under identical facts and circumstances such a phrase is not used against other forms of private enterprise like partnerships and corporations?

COMMITTEE ON SMALL BUSINESS REPORT ON COOPERATIVES, 1946

From the time of the creation of the Committee on Small Business of the House, which was a few days before Pearl Harbor in 1941, until the beginning of the Eightieth Congress, January 3, 1947, I had the honor of being chairman of the Small Business Committee of the House. In 1945 our committee was very much impressed by the charges made by the National Tax Equality Association, and our committee agreed to investigate these charges for the purpose of determining whether or not they were true in whole or in part and if so, to make recommendations to the Congress concerning the charges. We spent more than a year investigating the charges of this association. We heard witnesses on both sides all over the country. We gave each side as much time as it desired and heard every witness either side requested be heard. After the testimony was all in, the staff of our committee commenced preparation of a report to Congress in consultation with committee members. That report was agreed to by all the nine members of that committee—five Democrats and four Republicans—and was filed April 9, 1946. It is report No. 1888, Seventy-ninth Congress, second session. It is entitled "The Competition of Cooperatives With Other Forms of Business Enterprise." It contains 43 pages. On page 2 of the report the issues are set forth as raised by the National Tax Equality Association. They are 14 in number and carefully enumerated. On page 3 the answers of the cooperative officials are summarized. On page 5 there is a chart that discloses the different kinds of taxes paid to the city, county, State, and Federal Governments by corporations, partnerships, individuals, proprietorships, consumer cooperatives, and farm cooperatives. The report contains a discussion of the legislative history of cooperatives under income-tax regulations. It also discusses the types of cooperatives. It is not unusual for arguments to be made about one cooperative when another cooperative is intended. This discussion attempts to clear up the issue on that point. This report also discusses the organization of farmer cooperatives, operation of farmer cooperatives, financial structure of farmer cooperatives, income-tax status of farmer cooperatives, nonexempt cooperatives, exempt cooperatives, comparison of farmer cooperatives with other types of business. Charts 1, 2, 3, 4, 5, 6, 7, and 8, on pages 26 to 30, inclusive, disclose the type of

associations that are cooperatives and federations, the amount of business done annually over a period of many years by each, the number of members of each and other valuable information. The conclusions of our committee are contained on pages 39 to 42, and our recommendations on pages 42 and 43 of the report.

This report of the Committee on Small Business of the House was submitted, before it was authorized by the members of the committee, to the officials of the National Tax Equality Association for comment, as well as to the officials of the cooperatives. Our staff and members of our committee sat across the table with these groups and discussed every sentence and paragraph in this report with them. The report was only agreed to after it was determined that the National Tax Equality Association could not present a logical or reasonable argument against any statement contained therein. This report represents the first report, to my knowledge, that has ever been made by a congressional committee after a study and investigation involving the question of cooperatives. It is unique in that it is the only congressional report that we have on this subject. It may be considered a bible on the subject, because to this day no one has been able to point out any part of the report that is untrue, unjustified or wrong in any particular.

RECONSIDERATION OF REPORT NEVER CONSIDERED

This report stands as a report of the Committee on Small Business of the House. Before your committee, witnesses have testified that the report has been repudiated. This is not true. The only way it can be repudiated is for the Committee on Small Business to meet, discuss it and then vote to repudiate it. This has not been done. Furthermore, no meeting of the Committee on Small Business has been called for the purpose of discussing a repudiation of this report. In addition, the question of repudiating this report in whole or in part has never been discussed, to my knowledge, at a meeting of the Committee on Small Business and I believe I would know it if it has been discussed, since I have attended practically all of the meetings of the committee, and being the ranking minority member, I am sure it would have been brought to my attention if it had been discussed.

A copy of our report filed in 1946 is being presented to each member of this committee, and since it involves almost 2 years' work of a committee and an efficient staff and is material in this investigation, it is my suggestion that it be made a part of these hearings.

DEATH TAX PROPOSED ON COOPERATIVES

Who are these people trying to impose a death tax upon cooperatives? The National Tax Equality Association, of Chicago, raises a huge amount of money every year for that purpose. It employs agents, speakers, and lecturers to mislead the people and pays them enormous salaries and expenses. Where does it get the money to fight what are called tax-exempt cooperatives? They get tax-exempt money for that purpose. It is easy to persuade one who is in the higher-income brackets to contribute to a cause like this if the taxpayer is in the 90-percent bracket, for every $100 paid this association, $10 will represent a contribution by the taxpayer and $90 will represent a contribution by Uncle Sam. A large part of the money used in this vicious attack by propagandists has been diverted from our Treasury into the pockets of these lobbyists.

RACKETS SHOULD NOT BE ENCOURAGED BY TAX LAWS

Corporations are not permitted by law to make political contributions, but there is nothing in the law to prevent them from paying a big price for printed literature, pamphlets, and books from an association of this kind, which will result in enormous profits to the association. I suggest that this committee look into the abuse of the law, which permits contributions made to such concerns as the National Tax Equality Association to be exempt and which permits tax money to be diverted for purely partisan, selfish propaganda purposes. This policy encourages rackets at the taxpayers' expense.

FASCIST TREND IN THE UNITED STATES

That is the way fascism started in Italy. If the members of this committee will refer to page 18 of the booklet Fascism in Action, House Document 401, Eightieth Congress, first session, prepared by the Legislative Reference Service of the Library of Congress, it will be discovered that in the discussion of the rise to power of the Fascist Party in Italy that it was financed along similar lines that the NTEA and many other organizations are being financed in America today. Concerning Italy in this book, page 18, an exact quote is as follows:

"Financed at first by men of wealth as a defense against socialism, the Fascist Party later depended upon membership fees and annual dues, special levies and assessments which furnished it ample funds."

This is the way many of our organizations are operating today.

FASCISTS FIRST DESTROY COOPERATIVES

It will also be discovered from reading the book, Fascism In Action, that one of the first things that a Fascist leader does is to destroy credit unions, farmer cooperatives, labor unions, and all other forms of cooperatives for the obvious reason that they are too democratic. References in this book, which fully prove this point, may be found concerning Germany on page 88; on Italy, Spain, and Japan, on page 106; and as a general pattern of fascism in general for all countries, on page 201.

BOTH COMMUNISM AND FASCISM BAD FOR UNITED STATES

In the operations of many of these organizations in America today, one may easily and quickly discover strong fascistic tendencies. We must continue to fight communism with all our power and might, and as long as we have a better government than the Communists can offer—and I cannot conceive of our Government ever getting as bad as communism—the intelligent people of our Nation will be able to hold back the spread of communism. However, while we are fighting this enemy that is approaching us from the left in the form of communism, let us not overlook an equally vicious enemy approaching from the right in the form of fascism. We want neither, and may I urge you to consider changing the laws relating to tax exemption for these so-called educational organizations, such as NTEA, for the purpose of preventing the diversion of taxes that should go into the United States Treasury and also for the purpose of discouraging the growth of fascism in our country. I do not say that every person who is against cooperatives is a Fascist. Some of our finest and best citizens have been honestly misled into believing that the cooperative movement is harmful to our country, but I do say that every Fascist in our country and every Fascist-minded person in our country is against cooperatives.

SMALL BUSINESS ALARMED ABOUT COOPERATIVES

Small business concerns over the Nation have been led to believe that cooperatives are their enemy and should be destroyed. Most of this type propaganda comes from the national corporate chains for the purpose of diverting attention from the menace they create and also in the hope that it will divide cooperatives, composed of small businessmen, and other groups of small business, which have so much in common.

Here and there independent merchants will be faced with the competition of the cooperatives, in certain lines of business where the profit margins are high. It is much better for the independent merchant to have cooperative competition than the monopolistic chain-store system. It is proven by decisions of Federal courts that it is the policy of national corporate chains to sell at a loss for the purpose of destroying the business of an independent merchant until the independent merchant is forced to close his doors and go into bankruptcy. One chain system, it was proven, followed this practice to the extent of 25 percent to 30 percent of its stores at all times. The national chain could afford to do this since its prices were higher where competition had already been destroyed and in addition the national chain was allowed to obtain a tax deduction on its Federal income taxes for the loss. Since the loss was tax deductible, Uncle Sam pays most of the cost of putting independent merchants out of business; in other words, our Government is placed in the position of subsidizing the national chains for putting independent businessmen out of business.

A list of the contributors to the NTEA will doubtless disclose that the national corporate chains are furnishing a large part of the money to fight cooperatives.

Which is better for independent business? The cooperative certainly cannot sell at a loss to put the independent out of business. Furthermore, the cooperative is locally owned and the profits and savings of the cooperative members remain in that community, which is helpful to the entire community. The profits of the national chain leave the community immediately. It has been proven that independent merchants are more prosperous where farm cooperatives are successful. In Norway and Sweden, there is no chain-store system covering either country; the cooperatives are strong there and a chain system cannot succeed. However, the independent merchants in those countries are prosperous; small business has a real opportunity.

A few years ago out in the Middle West a cooperative returned to its member owners all their patronage refunds or dividends in silver dollars. As those same silver dollars reappeared in the hands of the druggist, the baker, the shoe repairman, and all the other small businessmen, it was learned that cooperatives keep wealth and buying power at home and that the small independent businessman prospered thereby. Most of the checks that are given by cooperatives to their members for patronage refunds or dividends are cashed by independent merchants.

CONCLUSION

In conclusion, I would like to summarize some thoughts for the consideration of this committee:

1. Cooperatives are born out of economic necessity. They protect people from exploitation who would be helpless unorganized. In other words, those individuals who standing alone would be exposed to the greed of vested interests.

2. Cooperatives have done more to protect poor and helpless people from the chiselers, cheaters, and racketeers than any other one effort that I have known of during my lifetime.

3. Cooperatives build community life. They protect, preserve, and encourage the three greatest institutions on earth—the home, the church, and the school.

4. Cooperatives are the greatest protection to the little man of the farm, ranch, and orchard. A cooperative makes a businessman out of every member, regardless of how small an operator he is, which results in a better citizen. His one voice would never be heard but organized in the cooperative way, the collective voice of thousands of little fellows is heard through the length and breadth of the Nation, in the State legislatures, and also in the National Congress.

Incidentally, that is what the big lobbyists object to, being so successfully opposed by representatives of farmers' organizations who are permitted to be here with the aid of cooperatives.

5. Cooperatives keep their profits at home in the hands of its members and they are deposited in a local bank, thereby making additional credit available for people in that area to further help in building the community.

6. Cooperatives prevent the concentration of wealth in the hands of a few, which is the lifeblood of a democracy.

7. Cooperatives are the greatest bulwark against monopoly, communism, and fascism. No real cooperative association exists in Russia or any other totalitarian government.

8. Small business generally is in a more favorable position in areas in the United States where farmer cooperatives are the strongest. This is also true in other countries.

9. Cooperatives represent an important part of the free private enterprise system. They are not confined to farmer buying and farmer marketing cooperatives. Mutual fire, health, casualty, automobile, and life insurance associations, mutual banks, mutual building and loans, credit unions, and rural electrification associations are also involved. Credit unions protect the people from loan sharks where they would be charged from 50 percent to 1,000 percent interest on loans. The REA cooperatives have provided the farmers with one of the greatest blessings of mankind, electricity.

10. Farmers who are members of these cooperatives, handicapped by less manpower and more worn machinery than ever before, produced more food during our great war emergency in the Second World War than ever before despite these handicaps. Food was just as important in the winning of the war as bullets. Should we so quickly forget this great contribution the farmers made in the war effort by slapping them in the face with a death tax against their cooperative organizations?

11. Cooperatives usually prosper and survive either by their members having an interest in common which enables them to unselfishly work in the interest of the entire group or by reason of necessity to protect themselves from exploitation. There was no objection to farm cooperatives until they commenced to step on the exploiters' toes.

12. The charge is made that cooperatives should be stopped as a way of doing business because some of them are large. I am glad they are large. That is the only way they can bargain collectively with other large concerns. Until a cooperative becomes as large as the largest private corporation in that field, there should not be any complaint against the cooperative.

BIGGEST LOBBY IN NATIONAL CAPITAL

It is realized that the biggest lobby in Washington today is the anticooperative lobby. It is well-financed; it is putting up a desperate fight to destroy cooperatives as a way of doing business; it is one of the most sinister and vicious lobbies that has ever invaded the Nation's Capital financed largely by Uncle Sam, and I certainly hope that this committee will not permit its efforts to be successful.

Statement of Mayor William O'Dwyer of New York

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to present remarks of our able and distinguished mayor of New York City on the subject of housing:

STATEMENT TO THE JOINT COMMITTEE ON HOUSING, CONGRESS OF THE UNITED STATES, BY MAYOR WILLIAM O'DWYER, OF THE CITY OF NEW YORK, NOVEMBER 12, 1947

NOVEMBER 12, 1947.

To Joint Committee on Housing, Congress of the United States, Washington, D. C.

GENTLEMEN: I am glad to take advantage of your hearings in this city to bring our housing picture up to date. New York City is still in desperate need of additional dwellings to provide for more than a half million of its population living under trying and often demoralizing conditions. On any reasonable assumptions, and here I propose to be ultra conservative, there remain at the very least 150,000 families in this city who have no homes of their own, are doubled up with friends and relatives, and in many instances are split up among other families with all the attendant maladjustments and miseries which accompany such overcrowding.

The New York City Housing Authority, in a memorandum to the Senate Committee on Banking and Currency, at a hearing on the Taft-Ellender-Wagner bill on December 18, 1945, estimated the shortage at that time to be 187,000 family units. In March 1946 the New York State joint legislative committee on housing and multiple dwellings, headed by Senator McNeil Mitchell, estimated that the needs of New York City by the end of 1946 totaled 211,000 units. The same committee published a further report on June 15, 1947 in which it was stated that the number of families living doubled up on that date was estimated at 360,000, of whom 265,000 were doubled up against their wishes. Whatever set of figures is taken, whatever the precise measure of overcrowding, it is clear that the situation is still serious. Practically every family in the city can testify, from bitter personal experience, to the need of further prompt, drastic action.

This shortage in New York City, and elsewhere, was caused by a combination of factors, most of them in one way or another arising out of the war. These include obsolescence, cessation of civilian residential construction, marriages, and increases in population, shortage of materials, high prices, labor difficulties, exorbitant bids, mass migrations and movements of people to and from war industries, concentration of GI students in cities, general increase in employment and other postwar causes.

New York City, of course, has not, officially or otherwise, ignored this problem. We have not left the problem to Uncle Sam although many phases of the cure are on the Federal, not the local level. Even before taking office on January 1, 1946, I appointed an emergency committee on housing, headed by Robert Moses, our construction co-ordinator, to formulate a program. This commitee included outstanding leaders among labor leaders, businessmen, architects, engineers, insurance executives, builders, realtors, bankers and public officials. These were hard-headed, civic-minded people, with experience in housing and related fields. Their report to me on December 17, 1945, gave a minimum, rock-bottom program of construction which we have followed with some success and some disappointment. The committee, for example, counted on a fairly early resumption of large-scale private speculative building, but this has taken a long time to pick up.

Let me review what that program provided, show where we succeeded and where we did not, and why we need more help.

The program was divided into permanent housing and emergency housing. New York City's capacity to erect permanent housing before the end of 1948 was estimated at 127,000 family units; for emergency housing by the end of 1947 at 43,300 units.

Of the proposed 43,300 emergency units, 19,000 apartments for veterans in Quonset huts and other converted barracks units were to be produced by the joint efforts of New York City, New York State, and the Federal Government. The remaining 24,300 units were to be provided by private builders through rehabilitation of abandoned buildings, conversion of one- and two-family houses and the all-year-round use of summer-resort bungalows.

The rehabilitation of boarded-up buildings, except where buildings have been condemned and rebuilt with public funds, amounted to little because of impossibility of agreement on a local law. The conversion of summer-resort bungalows to all-year-round use was unsuccessful because this type of housing was exempt from rental limitations and because the owners could realize more money from summer than from all-year rentals.

Another disappointment came in the field of emergency conversion of one- and two-family houses as distinguished from new permanent housing. The expectation that private capital would be attracted to this field, through legislative and administrative encouragement by the State and city of New York, was not realized primarily because of inflationary costs. As a result, only about 1,000 apartments were produced in this part of the emergency program.

A better record, although also not up to our earlier expectations, was by city, State, and Federal cooperation in the plan to provide 19,000 Quonset and converted barracks units for the emergency use of veterans. In this category the Federal Government provided 8,600 units. These have been erected by the Federal Government on land provided and prepared by the city of New York at an expenditure by the city of about $10,000,000. The State of New York also has participated in the program to the extent of furnishing 3,200 additional units. Some of these units were put on former military installations, such as the Coast Guard and maritime bases at Sheepshead Bay and Fort Tilden in Rockaway, and some were erected on city-owned property. The combined total of emergency units under both Federal and State sponsorship thus amounts to about 11,800 units. Recently the State of New York, through an additional appropriation, sponsored some 1,000 more of these units in cooperation with the city which provides the sites.

It must be noted that these emergency units were intended for occupancies lasting from 3 to 5 years. By 1949 a start will have to be made toward relocation of some of the veteran families in these projects. These projects must not be allowed to become overcrowded and cannot be continued indefinitely. We had hoped that within 5 years at the most, sufficient permanent housing would be available to absorb these veterans. However, unless considerably more housing than is now in prospect is undertaken, we shall have a serious problem on our hands in maintaining these emergency projects in accordance with reasonably high standards. However, we must expect the growth of families in these projects and anticipate wear and tear on these temporary structures. Quonset huts, for example, now house two

families each. At the end of another year or two, each Quonset hut will be needed for, and should be used to house only, one family. The barracks are generally in excellent condition. The wooden demountable houses, on the other hand, will not have a long life and should be taken down within a maximum period of 5 years.

As to our permanent housing program, the 127,000 units called for by our minimum program consisted of 34,500 public housing units to be provided under then existing and anticipated appropriations and provisions of law; 16,000 units to be erected by insurance companies and savings banks through redevelopment housing projects; 54,000 units to be provided by private speculative builders; and 22,500 units of additional public housing to be provided under the proposed Taft-Ellender-Wagner bill.

Of the estimated 54,000 units to be provided by private speculative builders, about 13,600 units were completed between January 1, 1946 and October 1, 1947. Progress is more rapid now, and it is estimated that we shall have about 16,400 additional units by the end of 1948, a total by that time of 30,000 units or 55 percent of the 54,000 units estimated. The Federal Housing Administrator for the New York area has prepared charts which indicate the number of new dwelling units provided under Sections 203, 603 and 608 of the Federal Housing Act and also the number provided under the FHA rental housing program pursuant to Section 608 of the act.

With regard to the anticipated semi-public redevelopment company housing by insurance companies and savings banks, the original program called for 16,000 units. By the end of 1948 such projects will actually have furnished about 17,000 units. This phase of the program, however, was expanded by us in October 1946 to 21,000 units. Many factors have hindered its realization, including increases in construction costs, difficulties of moving tenants to comparable apartments elsewhere, etc., because of which some savings banks and other financial institutions have postponed their projects indefinitely.

A bright spot in the redevelopment field is the record of the Metropolitan Life Insurance Co., which has completed Riverton in Harlem and is now well along on Stuyvesant Town and Peter Cooper Village on Manhattan's lower East Side. Riverton will provide 1,232 apartments for about 3,500 people. Peter Cooper Village and Stuyvesant Town will provide a total of about 11,250 apartments for about 31,000 people. The slum area cleared for these three projects totals over 100 acres. The total cost of these projects is over $130,000,000.

The city provided partial tax exemption for Riverton and Stuyvesant Town. This kept the rental figures down to $14 per room per month for Riverton and $17 for Stuyvesant Town. Originally the figures were $12.50 for Riverton and $14 for Stuyvesant Town. Increases in construction costs, which amounted to almost 50 percent, required amendment of the original agreement between the city and the Metropolitan Life Insurance Co. to permit the higher rental figures. It should be added that the New York Life Insurance Co. and the Equitable are also building on a large scale in spite of price and other discouragements.

The savings banks, as distinguished from the life insurance companies, with a few exceptions such as the Bowery Savings Bank of New York City, have greatly disappointed us in our attack upon the housing problem. I refer to both equity investment and mortgage loans. The fault is largely but not altogetner with the banks. The regulations of the Federal Deposit Insurance Corporation and of the State Banking Department have encouraged large reserves and thus have driven more and more savings bank capital into Government bonds. At the same time the savings banks, with few exceptions, have clung tenaciously to their demand for 4 percent interest on mortgage loans and have thereby discouraged cooperative, limited dividend and even speculative housing.

In the field of permanent public housing for persons of low income, our minimum program anticipated 34,500 units. These were to be established in 24 projects—2 city projects, 1 Federal project, Jacob Riis houses, under the existing Federal laws and a financial contract, and 7 Federal projects under the Taft-Ellender-Wagner bill, and 14 State projects. It should be remembered that the city makes a substantial financial contribution, in the form of tax exemption, cash subsidy, and related improvements to these Federal and State projects.

This portion of the permanent program has lagged in spite of our efforts to speed it up. Only 11,000 units will be ready by the end of 1948. Eventually, under improved administrative arrangements, its realization is expected except as to the new federally aided projects. Funds for these projects have failed to materialize. Besides 7 originally proposed Federal projects providing 7,500 units, an additional 22,500 units were anticipated if the Taft-Ellender-Wagner bill became law, or 30,000 units in all. Increased costs would now cut this Federal total of 30,000 back to 20,000, but even these are not in sight.

The federally aided portion of Jacob Riis houses, which had been contracted for with the Federal Public Housing Administration, would not have been built if the city had not guaranteed funds for its completion. The Federal Public Housing Administration was not permitted to finance the project pursuant to its contract because construction costs per room exceeded the allowable legal limit fixed by the Federal Housing Act of 1937. It required the enactment of a special law by Congress this year to enable the Government to fulfill its original obligation and only to the extent of the original cost limits, thus requiring the city to contribute $4,000,000 to complete the project.

The State program is expected to be realized eventually. The State housing commissioner contracted to finance 13 new State projects and tentatively agreed to 6 additional projects, but rising construction costs threatened these 6 additional projects. At my request, Governor Dewey asked the State legislature to authorize a vote of the people on the question of additional State housing funds in the amount of $135,000,000. The vote was favorable. Of this amount $120,000,000 is earmarked for New York City and will be used to construct the 6 additional projects tentatively agreed upon which would provide somewhat in excess of 10,000 units. The people also voted affirmatively on two other propositions relating to housing. One of these propositions permits increasing the aggregate amount of State subsidy contracts entered into in any one year from $1,000,000 to $1,500,000. This will allow scheduling of a greater amount of work each year. The other increases the aggregate amount of State subsidy contracts outstanding at any one time from $9,000,000 to $13,000,000. This subsidy will support a total of $435,000,000 of loan funds.

It is common knowledge that since the end of the war, the shortage of equipment and materials has been one of the big bottlenecks in housing construction. This was due partly to repairing and replacing worn-out equipment in mills and manufacturing plants. Shortage of certain materials also caused delay. This situation is correcting itself now except as to local stringencies and a general lack of steel, soil pipe, and plywood.

Another new and very difficult obstacle in the way of slum clearance and new permanent construction in old areas is that of moving tenants to satisfactory substitutes for their present homes. In this connection it must be remembered that we are compelled to clear sites for hospitals, schools, playgrounds, and other urgent city improvements, as well as for new housing, and that there is a limit to the amount of disruption of city life which can be tolerated at one time. The cost of moving and rehabilitating closed buildings is a new factor in the public-construction business.

The housing emergency in New York City is still undeniably acute. The city still needs the full amount of anticipated Federal public-housing money required to finance the 20,000 units expected to be built under the Taft-Ellender-Wagner bill. Pressure for additional permanent public housing has been so great that, despite New York City's financial difficulties, we have initiated an additional program of six veteran housing projects, five of them on vacant land, to rent at $12.50 per room per month, entirely financed by the city, at a cost of $63,000,000. This program is expected to furnish 5,700 dwelling units in 1949.

In anticipation of passage of the new Taft-Ellender-Wagner bill at the beginning of the new congressional session of 1947, we prepared a list of top-priority projects in New York City. At the head of the list we put the seven projects which, as hereinbefore stated, we specifically selected and proposed under the original Taft-Ellender-Wagner bill. These projects included additions to four existing housing projects and three new ones. I hope that Federal assistance will be made available for these seven projects.

If you contemplate reducing the original program, may I recommend to your committee that a separate Federal public-housing bill be passed which will at least take care of the additions to four existing and wholly inadequate projects; namely, Vladeck houses in lower Manhattan, Kingsborough houses in the Bedford-Stuyvesant section of Brooklyn, South Jamaica houses in Queens, and Brownsville houses in central Brooklyn. These additions would cost approximately $62,000,000 at present prices, would add 6,100 additional apartments, and would care for approximately 25,000 additional people. Exhibit A is a proposed bill to carry out this recommendation.

May I further recommend that the provisions for public-housing funds be separated from the other provisions of the Taft-Ellender-Wagner bill so that they will not become involved with other and entirely different issues.

I also strongly urge that the top limit of the construction cost per room in the existing Federal law be advanced to allow for further recent increases in building costs. Room cost limitations in the Taft-Ellender-Wagner bill should be raised an additional $250. This would mean that the ceiling would be $1,750 per room, plus an additional $250 with special approval of the Housing Administrator, except for Alaska where a construction cost of $2,200 per room is already provided. If provision for these increases is not made, the bill should provide that any costs in excess of present ceiling of the Taft-Ellender-Wagner bill may be made up by the local government. Otherwise, available Federal money may not be usable at all, as in the case of Jacob Riis houses previously referred to. A proposed amendment to this effect is attached as exhibit B.

I should also like to recommend strongly, additional Federal guaranties for veterans' loans, especially for multifamily cooperative housing projects. The city and State of New York will find it much easier to stimulate such projects under limited dividend and redevelopment laws if the Veterans' Administration were permitted to guarantee real estate loans to veterans on the basis of $6,000 per apartment instead of the present $4,000, and to make a single guarantee of loans to an entire multifamily veterans' cooperative

project. I strongly urge that such legislation be adopted. A proposed bill to this effect is attached as exhibit C.

The city is here asking Congress for the absolute minimum to cope with a postwar legacy far beyond the resources and capacity of local governments. We have already strained our credit to the limit and reduced other requirements to demonstrate our sincerity. The State has gone a long way to help. Congress should not let us down when we ask for so little.

Very truly yours,

WILLIAM O'DWYER,
Mayor.

Resolutions Adopted by the Twenty-first Annual Convention of the Propeller Club of the United States and American Merchant Marine Conference

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the twenty-first annual convention of the Propeller Club of the United States and American Merchant Marine Conference, New York, October 15–17, 1947:

The Propeller Club of the United States is an organization of American citizens who are sincerely interested in promoting the best interests of the American merchant marine as a vital factor in the national defense and our country's economic security.

Each year, in conjunction with its annual convention, the Propeller Club sponsors the American merchant marine conference, inviting the participation of associations and groups affiliated with the American marine industry. Twenty-two such groups held open forums or panel discussions at the American merchant marine conference in New York, October 15, 16, and 17, 1947.

Many of these panel discussions formulated resolutions which were submitted to the Propeller Club convention resolutions commitee. These resolutions, after careful consideration by the committee were then presented to the Propeller Club convention session, and the resolutions set forth on the following pages were adopted by the convention.

These resolutions reflect the considered thought of the most representative group of men engaged in maritime pursuits, sincerely concerned with the future of the American merchant marine.

OBJECTIVES OF THE PROPELLER CLUB OF THE UNITED STATES

(a) To promote, further and support an American merchant marine.

(b) To aid worthy and justifiable river, inland waterway, and harbor improvements,

(c) To promote sociability and develop a fraternal spirit among men engaged in the marine industry,

(d) To present marine engineering and architectural ideas, and other plans beneficial to, and informative of, the American merchant marine.

1. PERPETUATION OF THE AMERICAN MERCHANT MARINE

One of the most important problems facing our Nation today is the urgent necessity for the adoption of a sound long-range program to provide a permanent American merchant marine.

1. Our large fleet of war-built vessels is fast becoming obsolete.

2. A program to provide an orderly construction of modern vessels from year to year is imperative.

3. A guarantee of permanent work for shipyards and constant employment in peacetime is required solely in the interest of national security.

4. Such permanent program will provide for design and construction to suit specific requirements for particular trades.

5. National defense features of the merchant marine will be maintained on a current basis.

6. World Wars I and II have taught that ships are indispensable for national defense.

7. The Merchant Marine Act of 1936 provides for a construction differential subsidy based on vessels built in American yards for foreign-trade operations but not for domestic trades.

8. Subsidized off shore operators of American-built vessels are permitted to deposit earnings in a fund for new construction which are subject to the tax deferment privilege but nonsubsidized operators, foreign and domestic, are denied this privilege.

9. American shipowners are limited in the depreciation which they may deduct which is not true of foreign shipowners who may deduct depreciation as earned.

10. Seventy percent of American flag tonnage before Pearl Harbor was engaged in domestic trades, all of which was requisitioned for war service.

The Propeller Club of the United States strongly recommends:

A. The immediate adoption of a sound long-range shipbuilding program.

B. The authorization of the payment of subsidies to American shipyards constructing vessels for all American-flag owners operating in foreign and domestic trades, and the foreign-cost formula for determining the shipbuilding differentials should be abandoned in favor of the principles of section 466 of the Tariff Act which provides for a 50-percent differential.

C. Restrictions upon vessels built under construction subsidies should be eliminated except while owners are granted operating subsidies in foreign trades.

D. All American-flag vessel owners should be permitted to deposit earnings in a controlled fund for new construction with the privilege of tax deferment.

E. Owners of American-flag vessels be permitted to write off depreciation in periods of large earnings.

F. That the sale, lease, charter, or gift of Government-owned ships to foreign nations or nationals be stopped because these nations have been restored to their prewar tonnage status.

G. That the proceeds received by the Maritime Commission from the sale or charter of its ships be placed in its construction fund and used to construct suitable modern ships.

H. That consideration be given to methods by which nonscheduled bulk carrier operations could be made practical.

2. SHIPBUILDING AND SHIP REPAIR

The development and maintenance of an active, adequate, and well-balanced fleet of modern merchant vessels constituting the United States merchant marine is vital to our national security, essential to the promotion of our foreign and domestic commerce; indispensable to our broad international responsibilities; and thus an important factor not only in the maintenance of our national prestige at a high level but also in the national prosperity.

The preservation and continuous active operation of the shipbuilding and ship-repair industry is a necessary prerequisite to the development and maintenance of such a United States merchant marine, and is equally vital to the national security.

Present prospects for the survival of the shipbuilding branch of the industry are extremely unfavorable, due to lack of new shipbuilding contracts for American flag seagoing vessels, with consequent imminent probability of loss of specialized technical staffs and skilled craftsmen vital to its successful operation and essential not only to the preservation of the art of shipbuilding but also to advancements in the art.

There is a widespread misconception on the part of the general public that no new ships are needed because of the surplus of war-built ships now in hand, not realizing that war-built ships designed for emergency war service are not suitable for normal commercial competitive services.

Certain vitally needed types of ships for various essential services are almost nonexistent, and it is essential to the perpetuation of the United States merchant marine in an orderly and systematic manner, that the merchant fleet be ultimately established on the basis of a normal age pattern.

The Propeller Club of the United States is deeply concerned over the failure to resolve the foregoing since the end of World War II, and recommends:

1. That the declaration of policy set out in the Merchant Marine Act of 1936 and again in the Ship Sales Act of 1946 be reaffirmed and aggressively implemented;

2. That there be adopted a sound long-range program to provide those types of vessels needed to establish and maintain an adequate, modern, and well-balanced United States merchant marine;

3. That such a program include passenger liners and combination cargo and passenger vessels required to furnish adequate service on essential domestic and foreign trade routes;

4. That such a program is vital to the continued existence of shipbuilding and ship repairing, as well as allied industries specializing in marine work.

5. That construction under such a program be commenced forthwith.

6. That private shipping operators be encouraged to place orders for such vessels under appropriate existing provisions of the Merchant Marine Act of 1936.

7. That if high costs and other conditions prohibit such undertakings in the case of any vessels deemed required for essential trade services, either domestic or foreign, the Government proceed to construct such vessels under appropriate existing provisions of the Merchant Marine Act of 1936, or in the case of vessels for domestic service, under an appropriate amendment thereto: *Provided, however,* That the Propeller Club of the United States continues to favor a privately owned and privately operated American merchant marine.

3. SHIP-CONSTRUCTION FINANCING

The Research Division of the United States Maritime Commission for the first time has made an extensive study on future replacements for the American merchant marine and the study has laid a systematic foundation for the construction of new vessels over a period of time, which study should be carefully considered.

The Propeller Club of the United States recommends:

That the Maritime Commission and the Congress should consult industrial bankers, insurance companies, steamship companies, and others as to the creation of more interest from private investors toward financing ship-construction programs, and the possible establishment by Congress of an American merchant marine bank.

4. OVERSEAS AIR TRANSPORT

The Propeller Club of the United States believes that American-flag steamship operators should have:

1. The right to operate aircraft as an essential part of the transportation business which they have pioneered and in which they are now engaged.

2. Treatment from the Civil Aeronautics Board in all particulars equal to that afforded others, and especially that afforded steamship interests of foreign countries in respect to sea-air participation.

7. TRAINING PROGRAM

The Merchant Marine Act of 1936 placed upon the United States Maritime Commission the responsibility of creating and maintaining a merchant fleet adequate for carrying a substantial portion of our water-borne commerce and as an auxiliary for national defense, manned with a trained and efficient citizen personnel.

It has been demonstrated twice within the present generation that there is a necessity for an adequate merchant fleet manned with well-trained officers and seamen.

The Propeller Club of the United States therefore recommends:

That the training program, as outlined and approved by the Congress for the fiscal year 1948, to be carried out by the United States Maritime Service, the United States Merchant Marine Cadet Corps, and the Maritime Academies of the States of California, Maine, Massachusetts, and New York, be approved as the minimum program consistent with the mandate of Congress to the United States Maritime Commission as expressed in the Merchant Marine Act of 1936, for the purpose of maintaining a high level of well-trained personnel aboard our merchant vessels with the training facilities now in operation as a nucleus available for expansion in the event of any future national emergency.

8. CONSTRUCTION OF TRAINING VESSELS

The Congress on July 29, 1941, enacted a statute entitled "Construction by Maritime Commission of Replacement Vessels for Nautical Schools" (35 USCA 1123b).

The Maritime Commission is authorized, from any money hereafter appropriated or made available to the Commission, to provide for the construction, by contract or otherwise, in accordance with plans and specifications prepared by the Commission and approved by the Secretary of the Navy, of suitable vessels with modern equipment and instruments to replace vessels otherwise furnished to States which are maintaining schools under sections 1121–1123 of this title. (July 29, 1941, c. 327, sec. 2, 55 Stat. 607.)

The war prevented the construction of the training vessels provided for in the above statute and after exhaustive search it has been determined that there is not available a vessel of the United States suitable for the use of the Maritime academies.

The Propeller Club of the United States advocates that the Congress of the United States be requested to appropriate sufficient money for the construction of suitable vessels for the use of the Maritime academies in accordance with the statute.

9. INLAND WATER TRANSPORTATION

Our inland waterways render a public service of incalculable value to our Nation. They have moved raw materials and finished products in tremendous volume. They have proved a most able and efficient partner in the great war transportation organization of rails, trucks, pipe lines, air lines, lake carriers and barge lines.

The Propeller Club of the United States:

1. Commends the wisdom of the Congress of the United States in having authorized and appropriated funds for the improvement of our national system of rivers, canals, lakes and harbors, and commends the United States engineers for the excellent manner in which they have carried out these improvements.

2. Urges the Congress to approve all legislation which contains waterway and harbor projects essential to the completion of our inland waterway system and which have been approved by the Army engineers.

3. Urges the Congress and the Administration to promptly authorize and appropriate funds for the construction of the canal across New Jersey and the Lake Erie-Ohio River canal, which are the two missing links in our national inland waterway system. The peacetime public benefits to be derived from these two projects fully justify their construction now. They would have returned their full cost to our country had they been available for use in the war emergency.

4. Urges the Congress to authorize and to provide the necessary funds for an economic survey by the Army Corps of Engineers to determine the value to the Nation of the proposed Allegheny-Genesee Waterway linking the Mississippi Valley system of inland waterways with the Atlantic seaboard, thus providing an unbroken slack water navigation route from New York Harbor to Pittsburgh, the Nation's largest inland port and the head of transportation on the Ohio River. The route follows the Hudson River to Troy, the New York State Barge Canal westward to Rochester, N. Y., a new Genesee Valley Canal to Olean, N. Y., and an improved Allegheny River to Pittsburgh, 72 miles of the Allegheny River being already so improved.

5. Believes that (a) inland water transportation should be extended to include all rivers, connecting waterways and harbors which have been approved by the Army Engineers; (b) present channels should be maintained in the highest state of efficiency; and (c) inland water transportation service should be fully protected from that type of competition which is designed to curtail their usefulness.

10. ST. LAWRENCE WATERWAY AND POWER PROJECT

Resolved that the Propeller Club of the United States after full study and discussion believes that the St. Lawrence seaway and power project is not in the best interests of the United States, and reaffirms its opposition thereto.

Tolls

Revenue from tolls would be insufficient to make the waterway self-liquidating and self-supporting. The use of tolls would constitute a departure from the historic national policy of the United States that public inland waterways be open without charge for purposes of navigation and commerce. Furthermore, adoption of a system of tolls on the St. Lawrence would establish a precedent for placing all national inland waterways on a toll basis, a proposal long advocated by land competitors of water carriers and revived in the recent report of the Association of American Railroads entitled "Transportation in America."

11. PANAMA CANAL TOLLS

The Propeller Club of the United States urges that prompt consideration be given to the revision downward of Panama Canal tolls to the greatest extent possible to assist the intercoastal commerce of the United States and to facilitate shipping in international commerce.

12. CHAOTIC ACCOUNTING SITUATION OF MARITIME COMMISSION

The present financial condition of American steamship companies has to be elaborated, footnoted, and explained due to the tremendous amount of unsettled claims and other vital questions accumulating during and since the war from the lack of sufficient and experienced personnel employed by the Maritime Commission.

The Propeller Club of the United States urges:

That the Congress and the Maritime Commission provide the necessary personnel and take promptly such other action as is necessary to settle these claims and questions with operators of Government tonnage.

13. LONGSHOREMEN'S DOUBLE OVERTIME DEMANDS

For many years the stevedoring industry of America has negotiated collective-bargaining agreements with unions representing all of the employees engaged in loading and discharging cargoes in every important port in the United States. These collective bargaining agreements have been honored by the industry both in letter and spirit.

Groups of individual longshoremen have instituted suits under the Fair Labor Standards Act of 1938 under which it is sought to require the stevedores to pay overtime on top of overtime. The basis for these actions rests in an abortive interpretation of the collective-bargaining agreements covering the industry. These suits have not been supported by the International Longshoremen's Association; on the contrary, the president of the International Longshoremen's Association has testified that if the position of these individual longshoremen is sustained by the United States Supreme Court, the efforts of the International Longshoremen's Association over a period of 25 years to obtain sound working conditions for its members will be negated.

The Congress of the United States has determined as a policy that an active merchant marine is essential to the defense of the United States. The merchant marine cannot operate without the assistance of the stevedores of America. An unsound and unrealistic distortion of an honest collective-bargaining agreement openly arrived at and sincerely observed by the stevedoring industry has placed that industry in peril.

In an effort to counteract the avalanche of lawsuits and to effectuate the obvious intent of the collective bargaining agreements between the stevedoring industry and the unions representing the longshoremen, there has been introduced H. R. 4387, entitled "A bill to define and limit the jurisdiction of the courts, to effectuate collective-bargaining agreements, and for other purposes."

This bill will be considered by the Eightieth Congress, second session.

The best interests of the American merchant marine, the stevedoring industry, and the workers employed therein will be protected and enhanced by the enactment of this bill into law.

The Propeller Club of the United States endorses the purpose of H. R. 4387, and recommends its passage.

14. COASTAL AND INTERCOASTAL SHIPPING

The fleets of the coastal and intercoastal steamship lines constituted the major part of the American merchant marine in 1939, and the War and Navy Departments of the United States have stated that the availability of the ships and personnel of these domestic water services are vital and essential to the national defense during war emergencies.

Many business and industrial firms throughout the United States rely on the availability of domestic water services to market their merchandise in competitive areas.

The operating costs of these water carrier services have sharply increased since 1939.

The Propeller Club of the United States agrees that the Interstate Commerce Commission should be urged to authorize the increased rates sought by the standard railroads, coastal and intercoastal water carriers now being considered in Ex parte 166 and other proceedings.

15. COAST GUARD HEARING OFFICERS

That part of the Administrative Procedures Act which became effective on June 11, 1947, requires that hearings looking toward the suspension or revocation of licenses or certificates be conducted by examiners appointed under civil service. The Coast Guard has no

funds which may be used for hiring such examiners.

Since that date the Coast Guard has been unable to act upon complaints against merchant marine officers and seamen who have committed acts of misconduct or negligence.

From 1943 to June 1947, commissioned officers of the Coast Guard conducted hearings against seamen's documents with fairness and dispatch. Many thousands of these hearings were held. The percentage of appeals was extremely low. Only four cases have been taken further to the Federal courts and in no case has a Federal court modified or reversed the action of the Coast Guard.

The Propeller Club of the United States urges that the Congress act favorably on the bill (S. 1077) providing that commissioned officers of the Coast Guard may act as hearing officers in proceedings against seamen's documents.

16. FINGERPRINTING OF WATCHMEN

Private corporations in the shipping industry throughout the United States either maintain a force of private guards or watchmen or contract with independent watching agencies for the furnishing of guards and watchmen for the protection of property.

The individuals so engaged are employed in positions of high trust to augment the services of duly constituted law enforcement agencies. They are potential witnesses in criminal prosecutions and should be persons of unquestionably good character.

The Propeller Club of the United States urges that the various States throughout the United States with port facilities which have no controlling legislation, enact same through their licensing powers to guarantee:

a. That persons making application for positions as guards and watchmen be persons of good moral character and free from criminal records;

b. That all concerned, employers and employees, be required to submit to fingerprinting;

c. That it be made certain that there is no statutory exception to those engaged in this business who exclusively supply guards or watchmen for the protection of piers, cargoes, passengers and steamship piers generally.

17. FOREIGN TRADE ZONES

The Propeller Club of the United States reaffirms its position approving legislation to so amend the Foreign Trade Zones Act as to permit the manufacture and exhibition of merchandise in the foreign trade zones.

18. REVISION OF FEDERAL SHIPPING LAWS

The Propeller Club of the United States urges the prompt modernization and codification of the navigation laws of the United States.

19. BRIDGE CLEARANCES

The inland waterways proved of inestimable value during World War II in transiting ocean vessels to tidewater. Particularly was this true of the Chicago drainage canal and the Illinois and Mississippi Rivers when, because of ice or for other reasons of security, the St. Lawrence route was not open or feasible.

A principal handicap to the use of the inland waterways for ocean and lake vessels in wartime was, in the popular mind, an inadequate depth of channel. However, a much more serious difficulty was inadequate bridge clearances, horizontal and vertical, and especially vertical clearances over the Ohio, Tennessee and Illinois River and waterway.

The Propeller Club of the United States urges:

1. That all maritime interests be represented at bridge hearings, and that those branches of the Army charged with military preparedness also be represented so as to lend support to the Corps of Engineers.

2. That it be made a general rule that no bridge shall be erected over any navigable river, waterway, or canal, which will have lower clearance than the minimums approved for the ultimate development and improvement of such waters by the Chief of Army Engineers.

20. IMPLEMENTATION OF RESOLUTIONS

The twenty-first annual convention of the Propeller Club of the United States strongly advocates:

That the recommendations of the annual American Merchant Marine Conferences and the annual conventions of the Propeller Club of the United States represent the views of that large portion of the population interested in the maintenance and development of an American merchant marine, but the mere formulation of such views without implementation leaves them relatively impotent. The several member ports of the Propeller Club are strongly urged to fully acquaint their members with such recommendations and to take such action to implement them as may be appropriate in each instance, including, but not limited to, urging consideration thereof by their Senators and Representatives in Congress, and the collaboration with other organizations of similar purpose, such as the American Legion, which has recently adopted a strong and practical program for the maintenance and development of an American merchant marine, and each port and each regional vice president is urged to regularly and frequently report to national headquarters what has been accomplished in this connection.

That the proper national officers of the Propeller Club of the United States be instructed to register with the Congress of the United States as a nonprofit patriotic national organization whose principal purpose is to do everything possible in the establishment, maintenance, and promotion of an American merchant marine.

21. APPRECIATION

Upon the conclusion of its highly successful twenty-first annual convention and American merchant marine conference, the Propeller Club of the United States expresses its sincere appreciation:

1. To the Propeller Club of the United States, port of New York, its board of governors, officers, committees, and members who have served so willingly and efficiently as hosts to this convention;

2. To the members of the American merchant marine conference committee and to the chairmen and cochairmen of panel discussions who, by their unselfish labors have contributed so generously to the success of this annual meeting, and by so doing, have continued the cherished tradition of providing an open forum for the American marine industry in all of its various aspects for the discussion and consideration of the many and serious problems with which the industry is confronted;

3. To the cadet midshipmen of the New York State Maritime Academy who, through their assistance, contributed so generously to the smooth functioning of the convention and conference.

THE WHITE HOUSE,
Washington, August 7, 1947.

Mr. ARTHUR M. TODE,
Honorary President, The Propeller Club of the United States, New York, N. Y.

DEAR MR. TODE: As I have stated publicly, the removal of restrictions on international trade is one of the most important steps that any government can take toward promoting good relations among nations through the free and mutually profitable exchange of goods and services. The United States is taking the leadership in this direction in its efforts to assist freedom-loving peoples everywhere in making their recovery from the consequences of the recent war.

To assert that leadership, and to protect its own interests and support its economy, the United States should maintain a merchant marine adequate to its needs. To that end I have, as you know, appointed a committee of citizens to study the present condition of our merchant marine and make recommendations for its maintenance and future development.

I am pleased to note that discussion along similar lines is planned for the American Merchant Marine Conference and the annual convention of the Propeller Club of the United States in October. Serious consideration of the future role of American shipping by informed groups such as yours will contribute materially to the final determination of our maritime requirements.

Very sincerely yours,

HARRY S. TRUMAN.

A Plain Citizen Comments on Uncle Sam's Role as Relief Agent for the World

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mr. VAN ZANDT. Mr. Speaker, we are now in the midst of a special session of Congress, called for the purpose of relieving the starving people of Europe and curbing the inflationary trend that threatens the economy of our Nation.

A large number of the folks back home find it difficult to understand why so much emphasis is applied to the problems of Europe, while underprivileged Americans are ignored completely.

In the following letter, appearing in a recent issue of the Clearfield (Pa.) Progress, the writer, Mr. William McMonigal, Madera, Pa., expresses the views of thousands of American citizens who are in dire need for assistance in an endeavor to keep body and soul together.

If America is expected to assume the responsibility for the problems of the world, we had better strengthen ourselves by first giving attention to our own problems.

Mr. McMonigal's letter is as follows:

LETTER TO THE EDITOR

MADERA.

DEAR SIR: I thought I would write a few lines to the Progress in regards to our old-age pension. I am like the late Will Rogers. I don't know anything except what I see in the papers.

First, I see where our Congressmen had to have a 50-percent increase in wages to make ends meet. Now, I don't believe any such story, for I read where their Sergeant at Arms put their surplus cash away for safekeeping. He had $125,000 in his hands and they can't get it now, when they want it. If it took all their wages to make ends meet, where did they get this $125,000?

Then, I see where they put a man by the name of Russell in under $100,000 bond. That bond is alright for the Congressmen, but it is only another burden on the taxpayer, as they will insure him through a Government bank, and if that man defaults, then, of course, the bank will have to make good. Then they will tax the people all over again to raise that money, so I can't see

where that $100,000 bond is anything but a curse to the public.

I also see where one Congressman from New York wanted to bar the Townsend paper from the mail. If I was in his place, I would be like the man that my friend and I met when we were out on the road a few years ago. This man was shearing sheep and he started at the hind end. My friend said, "I thought they always started at the head to shear sheep." "Well," he said, "I used to, but since Cleveland took the tariff off the wool, I am ashamed to look a sheep in the face." If I was in this Congressman's place, when I come home from Congress, I would be ashamed to look an old man in the face, let alone sending this man back to Congress.

Now Congress is about to adjourn without doing anything for the old people. One Congressman says it takes a long time to get a bill through Congress. It didn't take long to get a bill through to raise the Congressman's salary 50 percent. It went through in less time than it takes to tell it. It makes an old man sick when he reads about all these large appropriations to all the foreign lands and let the old people out in the cold. It looks to me like Congress thought they had the old people down where they can't help themselves and where they just have to take what they can't use down there.

The labor can strike and get something out of it. It looks like they want the old people to strike. You do not need to worry, the old people will always be with you. The Seventy-ninth Congress voted the old people a $5 raise and sent it to the State, and they kept it all but $1.80. Why didn't they send it to the old people direct? It should be given direct to the people, for if they ever get it in Harrisburg that is the last of it.

I see where our President wants $25,000,000 appropriation to get the Communists off the Government's pay roll. I believe in that, but they need to clean house at home first. If they send all that money over to these foreign countries, then send a Communist over to distribute the money around, we all know he will favor his own class of people. That is only creating more Communists, both here and abroad. I figure it is those people we have here that is taking up these foreign loans, who are our Communists in this country.

I also see where our good Governor has granted $100 per month to our Senators and a good, substantial raise to all judges of the supreme court, down to the school teachers who get from $200 to $1,000 per year. I admit they need good people for those jobs, but we also need good people to raise those teachers and officers. If it costs them so much to live there, why don't they stay at home? Why do they run after the old people to vote for them? After they get the old man's vote and tax, that is all they want with him until the next election and tax collection comes around.

All officers in our Government are not included in this statement as we have some very good officers in the Government that I think really want to do something for the old people but they have too much opposition. They allow the old people to earn $1 to help out but our Congressmen wanted and got $5,000 to help out and our State Senators wanted $10 a day but got $100 a month. I have to get along on 69 cents a day and pay taxes to help keep up their fat salaries. A great many will make you all kinds of promises before election but they never had any intention of fulfilling them. A good many of them would like to turn the old people out like an old horse or dog.

A question I would like to have answered if I can find any one in Congress, or out, that can or will answer it. If they do happen to give the old people and school teachers a couple of dollars a month increase they go to a lot of pains to explain to the people through the papers what it will cost the taxpayers to foot the bill, but why don't they explain to the people what it will cost the taxpayers to pay those Congressmen each $416 and better per month; besides all the other Federal employees?

I think I have paid taxes as long as any man down there, if not longer. If I haven't, they are too old to be in Congress. I have paid taxes for 58 years. I am just about 80 years old. My pension started in 1939 at $19.80 and now it is $20.70. We get groceries here that cost 4 or 5 times as much as they did in 1939. I see where they ask the people to have meatless days, and where you are to eat one slice of bread instead of three. I haven't been to but one movie in 50 years for when I get that much money I always find that I need it worse to pay taxes.

I think Dr. Townsend has the only honorable pension plan they ever had. During the war they asked the old people to hold off until after the war was over, which was 2 years ago.

It looks like they want us to wait until they get another one started. They want us to save all the food to send over to those other countries when they are sending stuff from there over here. When we go to the store for meat, they ask us to always pick a cheap cut of meat.

I guess that is to leave the choice cuts for them to send to other countries. Do they think we are not fit to have a good piece of meat. It looks to me like they want to feed these others up to get them ready for another war. I talked to a Jew the other day who had goods in his truck that were shipped from England and Portugal.

The miners are a class of people which I think needs as good a living as there is. I followed the business for 25 years and I know what they have to contend with. There are a lot of people who run the miner down when they really don't know what a miner looks like. I heard one person ask, What is a miner? He asked what he looked like and if he eats hay.

I don't want to offend anyone, but I have had several letters from Congressmen after they went in office asking me to let them know what the country needed, so I am trying my best to explain it to them. The most needed is to take care of our people at home first and to pass the Townsend pension plan without any more fooling about it. I think the Townsend people have just as smart people among them as there are down in Congress, but there are too many people against them.

They want to saddle a sales tax on the poor people to make them poorer than ever.

I see where the sales tax was defeated in Oregon.

That is what will happen to it in this State if it ever comes to a vote. When you plan for these high salaried people, don't forget my 69 cents a day, minus taxes. So many people talk about Dr. Townsend wanting $200 per month for the old people.

That is positively untrue. It is a 3 percent gross income and whatever that makes each month to divide it among them.

WILLIAM MCMONIGAL.

Don't Give Up the Ships

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. LATHAM. Mr. Speaker, there are now pending in both the House and in the Senate bills which, if enacted into law, would turn over to foreign nations on what would amount to a "loan basis" a substantial number of our war-built merchant ships. These vessels would be used to haul relief cargoes, on the assumption that they would save the American taxpayer a certain small financial burden by their use of cheap, foreign crews. Little thought seems to have been given to the effects such proposed legislation would have upon our maritime labor employment, and of the more serious consequences upon the international competitive situation.

Another proposal, more recent, is the request of 16 foreign nations to have the United States supply them with materials and money with which to build new merchant ships. In addition, they desire us to sell to them more of our surplus merchant vessels at the favorable terms of the Ship Sales Act, and with money we are asked to supply.

Mr. Speaker, with respect to the requests of the 16 foreign nations, if Congress should see fit to accept these requests, it would mean that, in the aggregate, these foreign nations by 1951 would possess nearly 7,500,000 more tons of merchant ships than they owned and operated in 1938.

We have not only the right, but the duty to examine these carefully. The important fact to remember is that all of these proposals are at the expense of the American merchant marine.

Add to these proposals a few alarming facts:

First. We are in desperate need of balancing our own present merchant fleet. We desperately need suitable passenger and passenger-cargo combination vessels, and certain other special types of merchant ships.

Second. Our shipbuilding industry, that performed so phenomenally during the war, is gradually disintegrating like the proverbial house of sand. By next spring, unless there is a program of ship construction started in the United States, there will not be a single American ship of any size under construction in the Nation.

The recommendations of the European Recovery Plan Transport Committee show that the 16 foreign nations actively plan upon engaging in new-ship construction to the extent of 15,500,000 deadweight tons. It is significant to note that included in this proposed giant shipbuilding program are a number of large passenger vessels, contrasted to our own position where we have but one really first-class passenger liner on the North Atlantic and none planned for construction.

Contrast with our present inadequate position, the *Caronia*, launched October 30 for the Cunard Line and christened by Princess Elizabeth; the new *Mauretania* and *Parthia*, recently placed in service by the British; the new *Willem Ruys* for Rotterdam Lloyd Line accommodating 842 passengers; and the two new Castle liners of British shipowners, the *Pretoria Castle* and the *Edinburgh Castle*, each over 28,000 tons. Where is the American flag in the passenger service on the North Atlantic?

In addition to the 15,500,000 tons of new construction, the 16 nations feel that the United States should sell at favorable terms, with money we are supposed to

supply, some 300–400 of our war-built merchant ships. There is not the slightest doubt that these nations are planning new, modern merchant fleets, in the aggregate greater than they had in 1939, at the expense of our own American merchant marine. By our own Government estimates, during the next 4 years our own fleet, even by the rosiest estimates, will be almost back to the position it occupied in 1938. And at that time, we were carrying less than 30 percent of our own foreign trade.

There is no logic, reason, or justification to increase foreign merchant fleets above their 1938 level at the expense and jeopardy of our own, and thus in an act of overgenerosity imperil our national security.

The Harriman report which will be submitted to Congress, agrees with the American shipping industry estimates, that the possible savings to be made by transferring our vessels to foreign registry would be only a small fraction of the estimate of required dollar tonnage as embodied in the report on the European recovery plan. To quote from the Harriman report:

> The limited financial savings (which would accrue by transferring our vessels to the 16 foreign nations) are not sufficient to justify the drain on United States resources for national defense which such transfers would involve.

Moreover, the Harriman report further emphasizes a discontinuance of further sales of our dry-cargo ships abroad:

> When such sales, instead of substituting for foreign construction, will merely add to the foreseeable future surplus of tonnage. The United States needs an active merchant marine for national defense, and we must not create conditions in which that merchant marine cannot survive.

Mr. Speaker, I doubt if there is a Member of Congress who is adverse to helping the European nations to help themselves to recovery and to their rightful places in the scheme of world affairs. Americans have always been known for their sportsmanship and for helping those who have been knocked down and trodden upon. I do not feel, however, that we should attempt to elevate these foreign nations above our own position, and particularly at the expense of our own national security.

In certain parts of our country, American seamen and officers even now are available in greater supply than there are ships to employ them. It would be senseless to contribute even further to unemployment of our maritime labor by turning over more of our vessels to foreign nations on the premise that by carrying relief cargoes with low-wage foreign crews the American taxpayer would be saved small amounts of money.

However, after such vessels were turned over to foreign nations, what guaranty would there be that they would be returned to the United States when the relief cargo movement had ceased? What guaranty would there be that they would not later fall into the hands of foreign governments professing a different ideology than our own? What guaranty is there that if vessels were turned over to foreign nations that they might not add further—with their low-paid crews—to the competition which will and is now facing American shipping?

I seem to recollect that we turned over a considerable number of our ships to the Russians during the war, and thus far we have not received even a reply to our inquiries as to what has become of them. We have just received a report that one such Liberty vessel has been chartered by Russia to Swedish shipowners, and that our State Department says this is legal under the lend-lease agreement.

Mr. Speaker, most of the proposals advanced thus far for helping us to dispose of our war-built ships have been put forward on the theory that the more ships we make available by sale, loan, charter, or by gift, the more dollars European nations will earn with which to purchase more of our products. Upon examination, this theory collapses like a toy balloon.

Several weeks ago, the shipping industry analyzed statements that ocean shipping charges paid to United States shipowners were a major factor in the exhaustion of the American loan to Britain. Upon analysis, it was shown that shipping charges paid to American ships by Britain amounted to only 2.6 percent of the British expenditure for the year ending June 30, 1947. Although there may have been some doubts about the industry analysis, these were dissipated when Britain's most influential shipping publication agreed in substance with the American analysis.

A similar analysis of the shipping aspects of the European recovery plan shows that ocean shipping charges which would be paid to American shipping would actually amount to about 2 percent of the total request for money said to be needed by the 16 nations.

Mr. Speaker, if I have been pessimistic, it is only that I realize that we now have the ships constituting the basis of a strong merchant marine. We have had two sad experiences, in 1917 and again in 1941, to remind us that we simply cannot permit our national American generosity to plunge us into a third fateful situation in which there will not be the time to recreate a strong merchant fleet.

Today, the American maritime industry is more closely unified than it has been in years. Without that unity, there can be no American merchant marine worthy of its name; and without a strong merchant marine, the United States cannot fulfill her obligations in world affairs.

We can keep the American flag flying on all of the high seas if we "don't give up the ships!"

Foreign Aid

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. KEATING. Mr. Speaker, on November 5, in New York City, the illustrious chief executive of the great State of New York, Gov. Thomas E. Dewey, delivered an address on the subject of foreign aid, which, under leave to extend my remarks, I recommend for the thoughtful reading and study of my colleagues.

We are faced with one of the most important decisions of all time. All the available informed opinion of experienced and able public servants should be carefully weighed and studied. I, like many others, approach the problem with completely open mind. It seems to me, however, that no more informative, helpful, and definite statement on this significant subject has been made anywhere by any person in high position.

I am sure I speak for all of my colleagues in the House in expressing to Governor Dewey our gratitude for giving us the benefit of the careful study he has made and thorough grasp he has acquired of world problems, while at the same time furnishing the people of the State of New York perhaps the most successful administration that State has ever enjoyed in its long history.

We meet during a period when most reasonable men are concerned for the future of our domestic affairs and are genuinely troubled as to the proper course of our Nation in foreign affairs.

Internally the Nation is suffering the cruel effects of an inflationary rise in the cost of living as a result of the economic ignorance of the national administration.

In foreign affairs, from Tehran through Yalta to Potsdam and since, we have seen our Government giving aid and comfort to Communist conquest. In Germany, the industrial heart of Europe, we have applied economic policies which have undermined recovery in all Europe. In the Orient, we have seen our own Government turn against our wartime Chinese allies and order them, under pain of losing American support, to accept into their government the very Communists who seek to destroy it.

We have seen reconstruction falter because people did not work, either because they were unable from lack of food, or unwilling, for lack of anything to buy with the wages they earned. We have seen Socialist experiments which we confidently believe to be tragic errors but which are the inevitable result of frustration and despair.

While Europe and China are struggling along at a bare subsistence level, their confused peoples turn from one promised remedy to another with a rising sense of loneliness and desperation.

SENTIMENT HERE HELD CONFUSED

In the face of such a dismaying picture it is not unnatural that sentiment in our own country should be confused. Many thoughtful people are saying we should withdraw from the world. They say Europe and China are finished and we should not dissipate our strength in trying to save them.

Meanwhile, a great program is being prepared for consideration by the Congress to help stabilize Europe, while nothing is yet proposed concerning China. It is very easy out of sentiment, to accept uncritically any program to aid starving millions of people and to help preserve free governments. It is equally easy to say we cannot afford any program at all on top of our own staggering war debt and destructive levels of present income taxes.

The serious economic and diplomatic blunders of the national administration make it even more difficult to reach sound decisions calmly and without partisanship. But I earnestly believe that is our duty.

Despite the blunders of the administration, real progress has been made in some directions. The bipartisan foreign policy,

which I had the honor to inaugurate during the summer of 1944, has been notably successful where it has been followed.

Through the distinguished leadership and labors of Senator ARTHUR H. VANDENBERG and Mr. John Foster Dulles, we were prevented in the early days of the peace from scuttling our other friends, as was done in the case of China, and our prestige in the United Nations has steadily mounted. I do not believe this country will ever know the tremendous debt of gratitude it owes to the unselfish labors and high patriotism of Senator VANDENBERG and Mr. Dulles.

It has been well said that we are in a cold war. We are in it for the simple reason we are being attacked by all means short of war. The attack is by the most violent form of propaganda, falsehood, political penetration and economic sabotage. The whole system of political and economic freedom for which our country stands is under attack by those who would establish a world-wide rule of a police state.

This attack is being hurled against us by able and purposeful men who know what they want and propose to get it. We need to understand their objectives. They are broadly two: First, to intimidate free governments everywhere into accepting Soviet leadership and, second, to mislead or intimidate the American people into refraining from giving aid to those who need it.

The Soviets believe the way to block our policy of restoring economic health to the world is to shout that this policy of ours will lead to war. Of course, the simple truth is that the only risk of war comes from the Soviet attempt to establish police states and dictatorship over people who have known and love freedom. The surest way to avoid war is to create a strong and determined world of free nations. The risk of war is that the Kremlin will repeat the mistake of other despots in 1914 and again in 1939—the mistake of believing that free people cannot or will not resist slavery.

COME-BACK HARD WITHOUT HELP

Nevertheless, there is a school of thought which says we should leave our friends in Europe and Asia to work themselves out of the mess alone or in the alternative that they are done for anyway. Let them try communism if they want to and then they will come back to free governments. But the unhappy fact is that once a Communist dictatorship is set up there is no peaceful escape. Moreover, after the spiritual and physical devastation of 6 years of total war people cannot easily come back themselves without some help. The whole basis of Europe's economy has been dislocated. On top of that a severe winter and a summer of drought have resulted in the worst European crop failures in a hundred years. In China the people are not only hungry but their economy is prostrate and they are under heavy military attack from the very forces into whose hands they were betrayed at Yalta.

In my judgment we have no choice today whether or not to act in this emergency. It is unthinkable that, after a successful war at staggering cost in blood and resources, we should now stop and surrender the fruits of victory. We will be doing just that if we permit the free nations to fall into economic chaos and then under Soviet control.

Our only choice is whether we act effectively or stupidly as we have in the past; whether we act in time or too late and, finally, whether we show our determination to succeed and inspire those we aid to the same determination.

I cannot say that we are bound to succeed. We cannot be positive that the further money spent will not be wasted. The Russians are confidently counting on our failure. They believe that their great allies, misery and starvation, will bring Communist revolutions the world over. That is why they are opposing us so violently in the United Nations. That is why they oppose every effort to restore economic health and well-being to the free nations. They also hope that we are going to bungle the job of using our resources, which are not unlimited, and thus bring on inflation followed by depression here at home.

All these are possible, but as reasonable men, we must make up our minds which course is most likely to succeed and then follow that course with a degree of perseverance and skill we have not yet shown.

BILLION AGAINST UNITED STATES HELD POSSIBLE

Only the quickest look at the alternative gives a ghastly picture. If, as a mere 140,000,000 people, we found ourselves in the midst of a conquered world, from France to China, we should find more than a billion people in an armed camp under the control of an aggressive dictatorship arrayed against us. In terms of dollars, such a condition would cost us in national defense alone a great deal more than any program of aid to Europe, and it would cost us that annually for years to come. In terms of living standards, we should sink to a level not seen by any living person in this country. In terms of our liberties, I find it difficult to see how we could avoid a degree of economic control which would cut the very heart out of our system.

We have only one choice and that is wisely to aid those who stand with us in the world in the hope that they will rise again as bulwarks of the institution of human freedom.

There are even more problems in determining the nature of such a program as in determining its wisdom. It has been suggested that we should not help any nation which has nationalized any industry.

Such a policy would, I think, be very unwise. There are two worlds today. That is enough. In fact, it is one too many. We should not adopt a course which would create three worlds. In the free world, economic systems are not all alike. We do not share the Socialist ideas prevailing in some nations and we believe some of their programs to be affirmatively dangerous to the welfare of their people. I am sure in my own mind that if those nations would restore initiative and free enterprise their progress would be immediately accelerated. But we shall not achieve that result by lecturing from afar or withholding aid if they do not change their practices. So long as human liberty is maintained as a principal objective of a government that government is our friend.

In a task as immense as this, we should find out to the best of our ability what needs to be done and then, learning from the errors of the past, chart a course which has a maximum chance of success. We have seen plenty of errors. In the 2½ years since the end of the war with Germany the United States has provided around $20,000,000,000 in assistance to foreign nations. Much of this has been handled in the most incompetent manner. Much has been so distributed that the Soviet got credit for it. Our motives have been suspected and our purposes grossly maligned. What is most important we have not succeeded.

Foreign borrowers have been allowed to use some of the money we have advanced to compete with each other in our domestic markets to purchase commodities in short supply. This has helped further to create speculation and price inflation.

DELAY ON RUHR ACTION CITED

Our Government has also failed to encourage initiative and enterprise. The Ruhr is a conspicuous example. For some time past we have shared a direct responsibility in the Ruhr and for a long time we have had a great opportunity if we had only seized it. As far back as the summer of 1944 I urged that an international status be worked out for the Ruhr so it could never become the mainspring of a new, warlike Germany but could, instead, start promptly to serve, without menacing, the free people of Europe. For 2½ years we have failed to do that job. So the American taxpayers will this winter supply coal and steel which ought to come from the Ruhr.

For our own sake and for the sake of the world, it is imperative that we avoid the blunders of the past. This will take hard thinking and straightforward action, and both are long overdue. First, as to the aid which is given to prevent starvation; this should not take the form of loans repayable in dollars and we know of no means of importing sufficient goods from Europe to repay ourselves without demoralizing both the European and American economies.

The governments which receive our aid, however, should not be allowed to sell the food and then use the proceeds for further deficit financing. These proceeds should be used to develop the productive resources of the nations so as more speedily to make them self-supporting. They should also be used to develop new productive resources out of which might later come the means of at least partial return on our investment through acquiring important strategic materials needed in our own defense.

On the second, or reconstruction, aspect of our aid, we can legitimately regard the money advanced as a straight loan. But it should be made for business purposes and not left, as during the last 2½ years in the hands of social planners who do not know a loom from a corn husker.

It is time we got businessmen into a business job. It would seem reasonable that the men who built the greatest productive plant in the world should be called on to help. Much of the best work being done in Europe today is by the American manufacturers who have plants in Europe and are speeding their own rehabilitation. One motor company alone has turned out since the war more than 250,000 cars and trucks in Europe and in one nation it recently made its fifty thousandth postwar farm tractor.

We shall want to make really certain, for once, that the aid we provide is not wasted. To provide firm and continuing management I should like to see the entire program closely supervised by a special authority created for that specific purpose. This authority should be under the direction of a genuinely bipartisan board. The chairman should be an individual of outstanding ability, equipped by training and experience to assume the enormous responsibilities involved and entitled by reputation to the full confidence of the American people.

POLICY BY CONGRESS ASKED

Having provided for a businesslike administration of our foreign-aid program, the Congress might well adopt a statement of policy which would make our purposes clear, so clear in fact that nobody could misunderstand them, not even the men in the Kremlin. The Congress could declare it to be a basic policy of the American Nation to assist freedom-loving peoples elsewhere in the world who are ready to work with us to find a way back to economic stability. Such a statement which might well be endorsed by the leaders of both parties will make it clear that the United States has a settled policy and the means of carrying it out; that we will not suddenly or capriciously abandon those in other countries who risk their lives to uphold the principles of freedom in the face of the menace of a police state.

Having made such a statement of policy, we should then make it clear that we expect results. Aid should be extended only

as a prudent person would, in installments, at frequent intervals, depending upon concrete demonstration that the aid is being wisely employed for the purposes for which it is intended. This does not mean that we need to dictate concerning the internal affairs of other nations.

The fact is that the program of European economic cooperation drawn up by the 16 nations in response to the suggestion of Secretary Marshall contains in broad terms solemn commitments on the part of these nations progressively to increase their output of food, raw materials, and industrial products, to take rigorous measures to stabilize their finances, to cooperate fully with one another in a program of mutual help and to work as rapidly as possible toward a European customs union. We may properly require of these nations that they spell out in detail the measures they will undertake to achieve these major objectives.

Having done so, we should firmly insist that they adhere to the program they themselves have formulated and that they demonstrate, country by country, a consistent and effective pursuit of those broad goals as a prerequisite to continued assistance.

The committees of Congress will soon report their findings. By the greatest of good fortune, both for our country and for the world, we have a Republican Congress. It understands the nature of business, and I am confident that these able men will bring forward a sound program. It may well eventuate that the election of a Republican Congress last year not only saved the domestic affairs of the United States, but it may well also save the peace of the world.

WOULD ADVERTISE AMERICA

I earnestly hope that the story of American achievement can be told at the same time that we bring American aid. It cannot be told, as in the past, by shipping around the world modernistic paintings done by Communists at the expense of the American Government. It can be told by the concrete demonstration that human freedom and free enterprise go hand in hand. Neither can succeed or survive without the other. When they are teamed together, they can bring elsewhere the freedom and economic achievement they have brought to us.

To help others make the choice wisely between freedom and slavery we should tell our story to the world. It is a great, an almost unbelievable, story. I am very tired of hearing our success attributed solely to our great resources. The truth is that our success is due to the American system of political liberty and competitive free enterprise which has proved to be the most efficient productive system in the world. It is that system which gives to the average man the highest rewards in improved living standards, increased leisure, and growing economic security.

In this time of world crisis we can demonstrate that the American system has succeeded. This success alone is a complete answer to the advocates of a return to the ancient systems of dictatorship and slavery. It is an answer in material terms—the only language they can understand. But what they cannot understand is that we would surrender all our material success and live on their own abysmal standards before we would surrender what is much more precious—the liberty which God has given us. We know that the exchange of freedom for the security of a police state brings only misery. We know that the spiritual liberty of the individual is the most precious thing on earth.

I am confident that the America we love will move forward, secure in the knowledge that it is the greatest nation on earth because it is generous, because it is free, and because it represents the whole cause of freedom on earth today.

European Aid

EXTENSION OF REMARKS
OF
HON. HARVE TIBBOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address on the subject of European Aid, delivered this morning over Station WOL of the Mutual network by Mr. George E. Reedy:

Opposition to the Marshall plan has become increasingly vocal during the past few days. It is based, primarily, on the thought that the high cost of living would drop were buying for foreign aid cut out of the economic picture.

That theme, which at first was brought out only occasionally, has become the focal point of attack upon the entire program. There are indications that it may be effective. If that is the case, the administration has only itself to blame.

For months the President and his advisers claimed that foreign aid had nothing to do with the current wave of high prices. They said that the amounts involved were too little to have a serious effect on inflation.

Little by little evidence mounted that tore this claim completely to pieces. Finally, when Mr. Truman appeared before Congress to ask for foreign aid, he let the cat out of the bag. He conceded that it involved extraordinary risks of inflation.

In fact, the President said it was so dangerous that he asked for equally extraordinary powers to try and keep prices down. All of a sudden the legislators were told that foreign aid meant a restoration of price controls and imposition of wage controls.

The reaction was immediate. Up to that point Congress, along with most of the country, had been considering foreign aid as merely an evidence of American generosity. They had not realized that it would involve genuine sacrifices on our part.

In this respect, the administration had fallen down in its job of leading the country. They should have been prepared for this revelation. They should have been told that it would mean doing without many things that Americans are used to having.

The whole issue could then have been placed on the level where it belongs. Americans would have been faced with the clear choice of making sacrifices to help the hungry abroad or pulling out of the picture and letting the Communists overrun Europe.

Once this had been made plain, the administration would have been in a far better position to sell its case. A democracy can always arrive at an intelligent decision once the facts are known. But too many people assume it is unsafe to tell all the facts.

Now it must do the ground work that should have been done months ago. Furthermore, it must do it among legislators who have the feeling they were sold. They had been given the impression that nothing was involved except voting funds to Europe.

This has long been the curse of American politics. Generations of politicians have been raised on the principle that it is unsafe to tell unpleasant facts. As a result, when the facts arise, the electorate is unprepared to meet them.

Too much of the debate on the Marshall plan has centered around the issue of whether it does or does not involve sacrifices. That should have been taken for granted. The real issue has been—and is now—whether those sacrifices are justified.

On that basis, proponents of the program would not now find themselves in a false position. They would be debating the case on its merits instead of arguing side issues. They will have to do that over and over again in the next few months.

The President's address to Congress on the opening day of this session was a masterpiece of political maneuvering. But its timing its unexpectedness, and its innermeanings may have done more to jeopardize foreign aid than anything else.

Eating Planned Economy

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of November 9, 1947:

EATING PLANNED ECONOMY

Once upon a time there was a Nation known as the United States. It was the richest Nation in the world, being blessed with abundance of fertile lands and natural resources of all sorts. The people had more food and clothes and other things than in any other country. In fact, it was generally recognized as the most prosperous Nation that had ever grown up in that place called the world.

It came to pass, in the course of tumultuous events, that other nations (in that same world), some of which were friends and allies, and others former enemies, were hard pressed. Hunger and poverty beset these other peoples, and they turned to their rich neighbor for succor.

The inhabitants of the United States were distinguished for generosity and humanitarian instincts. As no other nation had ever done before, the United States dispatched food to hungry peoples.

Throughout the great farmlands of the United States were flocks of chickens and turkeys such as the world had never seen. Then it came about, as winter was approaching and the hardships of the less fortunate peoples were becoming most acute, the President of the United States adopted a plan to assist the workings of nature.

The people of the United States were forbidden to eat poultry, which they possessed in abundance, on Thursdays. As we have said, this order was devised with the approach of winter.

Now winter is the time when poultry raisers reduce their flocks by selling them to people to eat. If they were not sold, the farmers would have no choice but to feed them grains, which were urgently needed by the hungry peoples.

The people of the United States, therefore, could no longer eat fowl according to their custom and turned to other foods. Supplies of poultry, as a result, increased on the farms and consumed grain. Supplies ready for the market piled up in refrigeration storage warehouses.

Thus it came to pass that more grain was being consumed on the farms, poultry farmers faced financial hardships and poultry prices began to fall. And what is more remarkable, the Government which by its own acts created the break in prices was committed by law to buy poultry to raise prices again. The people, therefore, were buying chickens while forbidden to eat them.

When great confusion and public discontent brought about a change in this policy and the people again were permitted to eat their flocks, the Government directed that

the farmers should in the future raise fewer chickens and turkeys so that there would be less for the people of the United States to eat and to give away. Thus the Government next turned to the creation of scarcity, although it was well known that scarcity would raise prices while diminishing the supplies of food for everybody.

This process acquired the name of planned economy, which some people—the world always was a strange place—preferred to food.

The event just related occurred in the year 1947.

The Tragedy of All World Tragedies

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial which appeared in the October issue of Today's World:

THE TRAGEDY OF ALL WORLD TRAGEDIES

(By Hamilton Fish)

In conformity with the fundamental principles of Today's World of daring to tell the truth—we denounce the ghastly use of the atomic bombs at Hiroshima and Nagasaki as having been the most colossal blunder verging on criminal folly ever perpetrated by high officials of the United States.

This is not rash or snap judgment on our part, but is the result of patient research, investigations, and careful reading of the reasons presented by the officials who were largely responsible for its use. These top officials are President Harry S. Truman, former Secretary of War Henry L. Stimson, and Chief of Staff George C. Marshall. May the Lord have mercy on their souls, for future historians of atomic warfare, if there are any left, will have none.

Its frightful, immoral, and lethal repercussions are of such a character and magnitude that it may be years before the awful plight into which we recklessly plunged the entire world, including America, will be fully realized. It has already been condemned by the Vatican and by most church leaders in England and by many in the United States. What a tragedy it is that America, hitherto the greatest moral and humanitarian force ever known, should have unleashed this diabolical and deadly weapon upon hundreds of thousands of women and children in two Japanese cities totally unable to protect themselves. Overnight we sacrificed our moral leadership of the world by using this infernal monster of death and destruction.

It would have been far better for the happiness and security of the world that the atomic bomb had never been invented. The military use of this devastating weapon and the consequent unleashing of a concentrated hell on earth is far more important and vital both in history, to our own destiny and that of the entire world, than the winning of World War II. Today's World insists that we should not have used this infernal machine. It was not warranted by military necessity. If it were a military necessity, then no fair-minded person would have blamed us if we had used the atomic bomb against Japanese warships or against a naval station of 100 men on some small island outside of Tokyo Bay as a token of the destructiveness of this new lethal invention. Certainly we should have used it in defense of our own shores in case of invasion. To have used A-bombs on teeming Japanese cities without warning at the conclusion of a victorious war raises both a moral and military issue. This magazine desires to commend former Under Secretary of the Navy Ralph A. Bard for opposing the use of the atomic bombs without prior warning.

On August 6, 1945, at Hiroshima we burned women and children alive without warning. It was a momentous day in the history of the world, perpetrating the war's greatest atrocity and marking the advent of the destructive atomic age which may eventually black out civilization.

President Truman recently alibied his responsibility for the military use of the atomic bombs by claiming it saved the lives of 200,000 American soldiers. That statement does not conform with historical facts. The knock-out punch to the Truman-Stimson claim of saving American lives by the military use of the atomic bomb was delivered by none other than Admiral Chester W. Nimitz, commander of our Pacific Fleet. He told a news conference at his welcome-home reception at the Nation's Capital:

"I think the end would have been the same without the atom bomb and Russia's entry into the war, but it would have taken longer."

Asked if he believed the surrender also would have come before an invasion, he gave an affirmative reply. He is also quoted as saying:

"The atomic bomb did not win the war against Japan. The Japanese had, in fact, already sued for peace before the atomic age was announced to the world at Hiroshima and before the Russian entry into the war. * * * The atomic bomb played no decisive part from the military standpoint in the defeat of Japan."

If Admiral Nimitz is right and he was the highest authority on the condition of Japan to continue the war, then the use of the atomic bomb was a ghastly tragedy.

Maj. Gen. Curtis E. Lemay who directed the B–29 superfortresses bombing Japan said, "the atomic bomb had nothing to do with the end of the war." The fact is our large bombers were unloading their missiles almost at will.

What price the atomic bomb? What price Russian participation? The highest Navy and Air Force generals claim Japan was already defeated and had virtually no navy or air force to fight with. Others state on reliable authority that Japan had already offered unconditional surrender terms.

General MacArthur submitted Japanese peace terms of virtually unconditional surrender months before the Russians had received equivalent terms from the Japs about which we knew. It was bad enough surrendering our moral leadership to experiment with, not one but two, atom bombs when a small token bomb would have sufficed. But far beyond the loss of moral leadership is the incalculable military harm it has done to us. Before the tragic use of these dreadful weapons, the United States was invincible against attack from any one nation or all nations combined. We had by far the greatest Navy and Air Force in the world and a huge and efficient Army. We were just winding up a victorious war against Japan, the last of the Axis powers. We rightly feared no nation or group of nations.

The moment we unleashed the atom bomb and let the rest of the world know its terrible destructiveness, we lost our position of impregnability and became naked and defenseless to attack by the first nation that solves the secrets of this infernal invention. America is now at the mercy of fanatics, saboteurs and enemies from within and without. The truth is, the atom bomb has boomeranged on us the richest, the most powerful and the most peaceful nation in the history of the world. There is no known defense against it. We already live in fear of our own devastating invention and will become more and more fearful of being atomized by sudden attack without declaration of war. It would be the retribution of justice as we recklessly started it. That is why the unnecessary, unwarranted and stupid use of the two A-bombs against Japan amounts almost to criminal folly and certainly constitutes one of the greatest atrocities of the war to the Japs, to ourselves, and to the rest of the world.

This editorial is not designed to be a detailed answer to the recent article by Henry L. Stimson in Harper's Magazine, in which the former Secretary of War stated, "The ultimate responsibility for the recommendation to the President (Truman) rested upon me, and I have no desire to veil it." The record shows clearly that surrender on identically the same terms could have been consummated without committing this abomination of desolation against humanity or letting hell loose on earth to terrorize and maybe exterminate not only Americans but mankind.

Today's world as a result of the Hiroshima crime against civilization belongs to the atomic age. It is part and parcel of our daily life. We cannot afford to ignore it. All other issues pale besides it and are of little consequence.

Mature and second judgment has already begun to condemn those responsible for unleashing this fiendish weapon that may destroy America and even life in the world. Our cities can now be turned into dust in the twinkling of an eye. Governments are instituted among men to preserve life and promote happiness. Bigger A-bombs may well mean mass destruction in which case there will be no need for Government itself. It is difficult to think in terms of war atrocities and war criminal trials if one-half of what is said about the A-bomb is true. It all seems so shocking and futile.

Brig. Gen. Bonner Fellers, in charge of psychological warfare against Japan, for a year military secretary to General MacArthur and later Secretary General to the Allied Council, refutes Secretary Stimson's claim that the atomic bomb ended the war. In an article entitled "Hirohito's Struggle to Surrender" in Foreign Service Magazine, General Fellers described in detail how "the U. S. S. R. repeatedly smothered Japanese overtures for peace with the Allies for 6 months before Japan's surrender."

He points out that "the Emperor's personal decision to surrender and his first attempt to obtain Russian mediation trace back to February 14, 1945, after General MacArthur's forces entered Manila."

The American Government knew about these overtures for peace and "were told by former President Hoover that Suzuki's (Pacifist-made Prime Minister) appointment meant the Japanese were ready to capitulate, and in all probability if a trial balloon were sent up which gave them as only concessions the preservation of the Emperor and an ultimate Liberal government of their own selection, they would submit to every other requirement. Mr. Hoover pointed out also that this gave us the opportunity to make a quick peace without Russian complications, as Russia was not at war with Japan. I do not know what steps the United States took to exploit this favorable opportunity from May to July. Obviously, however, the atomic bomb neither induced the Emperor's decision to surrender nor had any effect on the ultimate outcome of the war."

This quotation from General Fellers, together with that of Admiral Nimitz, tears to pieces the legalistic excuses of Mr. Stimson for the frightful blunder in inaugurating atomic warfare when there was no military necessity for it.

The Soviet Union continues to insist on the right of veto over inspection and control. It would be the height of folly and criminal stupidity to surrender the atomic-bomb

secrets on any lesser guaranties than provided in the Baruch plan.

Today's World agrees with the American Legion and the Veterans of Foreign Wars that we should henceforth retain the atomic secrets for our own defense and for the preservation of world peace and freedom.

Today's World hopes that we will not yield to the propaganda of the rabid "one worlders, America lasters, and Russia firsters" who want us to share the secrets of the A-bomb irrespective of inspection and control.

Whenever Soviet Russia turns from aggression and world revolution to the paths of peace and sincere international cooperation, then and then only should we agree to outlaw the A-bomb.

Madison and the Constitution

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Hon. J. VAUGHAN GARY, Member of Congress from Virginia, before the William Byrd Chapter of the Daughters of the American Revolution at the tomb of James Madison, Montpelier, Va., on Constitution Day, September 17, 1947:

Madam Regent, distinguished guests, I am deeply sensible of the honor of being invited to participate in these exercises, and particularly to appear in the role of speaker for the William Byrd Chapter of the Daughters of the American Revolution. It is very fitting that we should assemble at this time and at Montpelier because today marks the one hundred and sixtieth anniversary of the adoption of the Constitution of the United States, and no one contributed more to the framing of this historic document than James Madison who lived here.

Madison was born at Port Conway, in King George County, Va., on March 16, 1751. He studied under private tutors, and graduated from Princeton College in 1771 where he remained to study law for 1 year. Upon returning to Virginia, he continued the study of law, was admitted to the bar, and in 1774 was elected as a member of the committee of safety from Orange County. Having acquired a taste for public life at the early age of 23 years he was destined to embark upon a public career that brought him the highest honors that could be bestowed upon anyone.

In 1776 Madison was elected as a delegate to the Williamsburg Convention, became a member of the First General Assembly of Virginia the same year, and was unanimously elected as a member of the Executive Council in 1778. He was a member of the Continental Congress from 1780 to 1783 and again from 1786 to 1788, and at the age of 36 he served as a member of the Federal Constitutional Convention at Philadelphia.

Madison was elected as a Democrat to the First, Second, Third, and Fourth Congresses of the United States, serving from March 4, 1789 to March 3, 1797. He declined a mission to France, tendered by President Washington in 1794, and also the position of Secretary of State offered him the same year. In 1799 he again became a member of the Virginia General Assembly from Orange County; was a presidential elector on the Democratic ticket in 1800 and voted for Jefferson and Burr. He was appointed by President Jefferson as Secretary of State on March 5, 1801, entered upon the duties of that office on May 2, and served until March 4, 1809. Madison was elected as a Democratic President of the United States; was reelected and served from March 4, 1809, to March 3, 1817, whereupon he retired to his estate, "Montpelier". However, 12 years later he was recalled from private life to serve as a delegate in the Virginia Constitutional Convention. This most distinguished statesman served as rector of the University of Virginia and visitor to the College of William and Mary. He died at "Montpelier" on June 28, 1836, at the ripe age of 85 years, and his remains are interred here.

I have given briefly a sketch of the public offices held by Madison as evidence of his great intellect and ability, which peculiarly fitted him to take such a prominent part in the formation of the Constitution under which we live and which Gladstone properly termed as "the most wonderful work ever struck off at a given time by the brain and purpose of man."

The people of the Colonies from their earliest days claimed for themselves and their descendants exemption from taxation which was not imposed by their own representatives, and as it was not possible for them to be represented in the British Parliament, they denied the right of that body to tax them, and vigorously opposed all such efforts. In the French and Indian War of 1754–63, which was a part of the Seven Years' War in Europe, the American Colonies sided with Great Britain as their protector, and while Great Britain was left with many new colonial possessions all over the world, she was saddled with a great debt. Great Britain believed that the American Colonies should help defray the cost of removing the French menace and of continued British protection, and as a result the British Parliament declared that "the Colonies and plantations in America have been, are, and of right ought to be, subordinate unto, and dependent upon, the Imperial Crown and Parliament of Great Britain," and that the King, with the advice and consent of Parliament, "had, hath, and of right ought to have full power and authority to make laws and statutes of sufficient force and validity to bind the Colonies and people of America * * * in all cases whatsoever."

The assertion of power to tax the Colonies met with violent opposition both in England and America. The distinguished British statesman, Lord Chatham, significantly pointed out in 1765, in discussing the subject, that while British authority over the Colonies was supreme in matters of government and legislation, "taxation is no part of the governing or legislative power; taxes are the voluntary grant of the people alone."

In addition to resistance to "taxation without representation", many grievances were held by the American Colonies against Great Britain growing out of the economic and social life of the Colonies for which the British made no allowance. The Stamp Act Congress which was held in 1765, the boycotting of English goods, and the destruction of imported tea as well as acts to coerce Massachusetts into British obedience were the preliminaries of the war for independence, and led the Colonies to take the first steps which resulted in our present Union. This was the meeting of the First Continental Congress which was held in Carpenters' Hall at Philadelphia, on September 5, 1774, the year that Madison was elected as a member of the Committee of Safety from Orange County which marked his initial venture into public life.

Delegates from all of the colonies, with the exception of Georgia, attended the First Continental Congress, the representation of the people being indirect. A highly important matter was that this meeting, following the practice of the Stamp Act Congress, adopted the rule of one vote for each colony without respect to size, population, or wealth. It is interesting to note that under our Constitution each State has two Senators, elected without regard to size, population, or wealth. However, the equal representation rule often impeded congressional action and retarded the development of a competent general government, and efforts to continue it almost disrupted the Convention of 1787 that drafted the Constitution. After passing a number of measures the Congress adjourned on October 26, 1774, to meet again if the crisis continued.

The Second Continental Congress met again at Philadelphia on May 10, 1775, and continued until it was superseded in 1789 by the Government organized under the new Constitution. When this Congress met, hostilities had begun and the Minute Men of New England were besieging the British military in Boston. Independence, national standing, confederation, and State rights were joined together speedily. The resolution of the Virginia Convention at Williamsburg in 1776, to which Madison was a delegate, instructed the colony's delegates to propose independence. The Virginia Convention also gave assent to "whatever measures may be thought proper and necessary by the Congress. * * * *Provided*, That the power of forming government for, and the regulation of the internal concerns of each colony, be left to the respective colonial legislatures." The resolves introduced by Richard Henry Lee, approved and, in turn, adopted by the Continental Congress on July 2, 1776, provided that a plan of confederation be prepared and transmitted to the respective colonies for their consideration and approbation.

Events of transcendent importance were developing, and after considerable bickering the Articles of Confederation were finally agreed to in 1777 and submitted to the States for ratification, Maryland being the last State to ratify the Articles on March 1, 1781. On account of this delay practically the whole of the American Revolution was fought under a gentlemen's agreement which was by no means favorable to efficient operation from either a civil or military standpoint.

The Continental Congress undoubtedly was not the best instrument for the task that it had to perform. Its personnel deteriorated, and much time was wasted in unnecessary debate upon unimportant matters. Its efficiency was impaired because of the obduracy of the State governments, which alone had the power to make the laws enacted operable.

Conditions were not materially improved under the Articles of Confederation, which served principally as a foundation upon which to build. While the Articles contained many sound provisions which were later written into the Constitution, the compact gave Congress no commercial control and no power to raise money. It could only make requisition on the several States and hope and pray that they would respond adequately, which the States never did. The Congress was given control over foreign affairs but had no way of making the States obey even treaty requirements or provide for the payment of the foreign debt.

Thoughtful men, both in and out of public life, were fully aware of the distressful state of affairs, and efforts for a better understanding and cooperation were sought. Virginia led in sponsoring corrective measures which had direct results. On January 21, 1786, the Legislature of Virginia, ignoring entirely the requirements of the Articles of Confederation, suggested a general convention of commissioners from the several States to study the trade of the Union and "consider how far a uniform system in their commercial relations may be necessary to their common interests and their permanent harmony." This convention met at Annapolis in September of 1786. Owing to the limited attendance, very little was accomplished except to make a report, drafted by Alexander Hamilton, to the legislatures of the five States represented in

the convention and also to the Congress. This report drew attention to the fact that the delegates from New Jersey had been instructed to consider not only commercial regulations but "other important matters" necessary to the common interest and permanent harmony of the several States and suggested the calling of another convention with enlarged powers. The report was considered by the Congress, and on February 21, 1787, it resolved that such a convention appeared to be the most probable means of establishing "a firm national government," and that such a convention be held in May 1787 at Philadelphia "for the sole and express purpose of revising the Articles of Confederation and reporting to Congress and the several legislatures such alterations and provisions therein as shall when agreed to in Congress and confirmed by the States render the Federal Constitution adequate to the exigencies of Government and the preservation of the Union."

The legislatures of all the States except Rhode Island appointed delegates to this Convention of 1787. Rhode Island, where radicals were in control, ignored the entire proceeding. Washington was by far the most outstanding member of the Convention. Madison and Randolph, his fellow deputies from Virginia, played, however, very active roles while Wythe and Mason, older men, added the weight of their knowledge and experience as prominent participants in earlier affairs. To Madison more than to any other deputy public life was a profession. His great knowledge of political science and his grasp of the most important problems before the Convention and the means by which they could be solved, enabled him to become the principal architect of the Constitution, and rightfully earned for him the title of "Father of the Constitution."

On May 29, 1787, the Convention having been organized, Randolph opened the main business by introducing the Virginia plan, which had been drafted by Madison and later worked up in preliminary meetings of the Virginia delegation of seven members. It provided for apportioned representation, a legislature of two houses, the lower house elected by the people, the upper one elected by the lower. The legislature was to have all the legislative power of the Continental Congress, and also "to legislate in all cases to which the separate States are incompetent, or in which the harmony of the United States may be interrupted by the exercise of individual legislation; to negative all laws passed by the several States, contravening in the opinion of the National Legislature the articles of Union; and to call forth the force of the Union against any member of the Union failing to fulfill its duty under the articles thereof."

It provided for a national executive and a national judiciary, with a council of revision formed out of them which should have a conditional veto on national legislation and also on the National Legislature's negative of State acts. Provisions were made for the admission of new States and for amendment without the assent of the National Legislature.

This was the germ of the Constitution of the United States. For its form it went back to practices of colonial and State governments; for its powers to the lessons of wartime and later experiences. It gave the Central Government coercive power over the State governments, while it guaranteed their continued existence. Since no provision was made for operation through the State governments, it contained the idea of direct action on the people, and the great law of the land principle was foreshadowed. Charles Pinckney also introduced a plan as well as Paterson, of New Jersey.

Heated controversy arose between the large and small States. On July 2 the Convention was deadlocked over giving each State an equal vote in the upper House, five States voting in the affirmative, five in the negative, and one divided. This threatened to disrupt the Convention, but on July 16 a compromise was reached on the several plans and proposals. Debates, however, continued on the Virginia resolutions. The 15 original resolutions had been expanded into 23. Since these resolutions were largely declarations of principles, on July 24 a committee of five, Rutledge, of South Carolina, Randolph, of Virginia, Gorham, of Massachusetts, Ellsworth, of Connecticut, and Wilson, of Pennsylvania, was selected to draft a detailed Constitution embodying the fundamental principles which had thus far been approved. The Convention adjourned from July 26 to August 6 to await the report of its committee of detail. This committee, in preparing its draft of a Constitution, turned for assistance to the State constitutions, to the Articles of Confederation, to the various plans which had been submitted to the Convention, and other available material. On the whole, the report of the committee conformed to the resolutions adopted by the Convention, though on many clauses the members of the committee left the imprint of their individual and collective judgments. In a few instances the committee avowedly exercised considerable discretion.

From August 6 to September 10 the report of the committee of detail was discussed, section by section, and clause by clause, and further compromises were made. Toward the close of these discussions, on September 8, another committee of five, William Samuel Johnson, of Connecticut; Alexander Hamilton, of New York; Gouverneur Morris, of Pennsylvania; James Madison, of Virginia; and Rufus King, of Massachusetts, was appointed "to revise the style of and arrange the articles which had been agreed to by the House."

On Wednesday, September 12, the report of the committee of style was ordered printed for the convenience of the delegates. The Convention for 3 days compared the report with the proceedings of the Convention. The Constitution was ordered engrossed on Saturday, September 15.

The Convention met on Monday, September 17, for its final session. Several of the delegates were disappointed in the result. A few deemed the new Constitution a mere makeshift, a series of unfortunate compromises. The advocates of the Constitution, realizing the impending difficulty of obtaining the consent of the States to the new instrument of government, were anxious to obtain the unanimous support of the delegates from each State. It was feared that many of the delegates would refuse to give their individual assent to the Constitution. Therefore, in order that the action of the Convention would appear to be unanimous, Gouverneur Morris devised the formula "Done in Convention, by the unanimous consent of the States present the 17th of September. * * * In witness whereof we have hereunto subscribed our names." Thirty-nine of the forty-two delegates present thereupon subscribed to the document.

The Convention had been called to revise the Articles of Confederation, but instead it reported to the Continental Congress a new Constitution. While the Articles specified that no amendment should be effective until approved by the legislatures of all the States, the Philadelphia Convention suggested that the new Constitution should supplant the Articles of Confederation when ratified by conventions in nine States. For these reasons it was feared that the new Constitution might arouse opposition in Congress.

Three members of the Convention, Madison, Gorham, and King, were also Members of Congress, and they proceeded at once to New York, where Congress was in session, to placate the expected opposition. Being aware of their vanishing authority, Congress on September 28, after some debate, decided to submit the Constitution to the States for action, and made no recommendation for or against adoption.

Two parties soon developed, one in opposition and one in support of the Constitution, which was debated, criticized, and expounded clause by clause. Hamilton, Madison, and Jay wrote a series of commentaries, now known as the Federalist Papers, in support of the new instrument of government. The closeness and bitterness of the struggle over ratification and the conferring of additional powers on the central government can hardly be exaggerated.

On December 7, 1787, Delaware became the first State to ratify the new Constitution, the vote being unanimous. Pennsylvania ratified on December 12, 1787, by a vote of 46 to 23 which was scarcely indicative of the struggle which had taken place in that State. New Jersey ratified on December 19, 1787, and Georgia on January 2, 1788, the vote in both States being unanimous. Connecticut ratified on January 9, 1788, 128 to 40. On February 6, 1788, Massachusetts, by a narrow margin of 19 votes in a convention with a membership of 355, endorsed the new Constitution, but recommended that a bill of rights be added to protect the States from Federal encroachment on individual liberties. Maryland ratified on April 28, 1788, by a vote of 63 to 11. South Carolina ratified on May 23, 1788, yeas 149, nays 73. On June 21, 1788, by a vote of 57 to 46 New Hampshire became the ninth State to ratify, but like Massachusetts she suggested a bill of rights.

By the terms of the Constitution nine States were sufficient for its establishment among the States so ratifying. The advocates of the new Constitution realized, however, that the new government could not succeed without the addition of New York and Virginia, neither of which had ratified. Madison, Marshall, and Randolph led the struggle for ratification in Virginia. On June 25, 1788, by a narrow margin of 10 votes in a convention of 168 members, our State ratified over the objection of such delegates as George Mason and Patrick Henry. In New York an attempt to attach conditions to ratification almost succeeded but on July 26, 1788, New York ratified with a recommendation that a bill of rights be appended by the very close vote of 30 to 27.

Eleven States having thus ratified the Constitution, the Continental Congress, which still functioned at irregular intervals, passed a resolution on September 13, 1788, to put the new Constitution into operation. The first Wednesday of January 1789 was fixed as the day for choosing Presidential electors, the first Wednesday of February for the meeting of the electors, and the first Wednesday of March, namely, March 4, 1789, for the opening session of the new Congress. Owing to various delays, Congress was late in assembling, and it was not until April 30, 1789, that George Washington was inaugurated as the first President of the United States.

So well did your forefathers labor that only 21 amendments have been adopted to the Constitution, the first 10 of which comprise the Bill of Rights. Several of the States, including Virginia, consented to ratify the Constitution only after they were satisfied that the Bill of Rights guaranteeing individual liberties would be incorporated as a part of the fundamental law of the land.

Several unique features of the Constitution distinguish it from any previous inventions in the art of government.

The Constitution binds individuals as well as States. Under it all individuals have equal duties and equal rights.

The legislative, executive, and judicial powers are lodged in separate bodies of public servants whose powers and duties compel them to check and balance one another. No uncontrolled power is lodged in any one.

The written Constitution is made paramount to any legislative, executive, or judicial authority.

A court is created with power to hold all authorities within their allotted spheres, but the sphere within which the court may operate is also defined.

The Constitution contains within itself a method whereby it may be amended by the people.

These principles, never practiced before, are the warp and woof of a fabric suitable to a Nation whose government obeys those whom it rules, and whose people rule the Government which they obey.

There are those who would supplant those principles with different ideologies of government. Dictators from without and their puppets from within seek to nullify our Constitution and to destroy our American way of life. We, however, are steeped in the knowledge that "eternal vigilance is the price of freedom." May we be ever vigilant in defending those principles, which are our priceless heritage.

Expunging of Remarks From the Record

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mr. PASSMAN. Mr. Speaker, the curtain that will close a very unpleasant incident is about to be drawn. I refer to my statement of November 21 that I would offer a resolution to expunge from the RECORD remarks purported to be made and inserted in the RECORD by my colleague the gentleman from Louisiana [Mr. MORRISON]. Unfortunately, my statement received wide coverage in the papers of Louisiana, which brought a torrent of letters and telegrams stating that a Member of another body had inserted in the RECORD a statement equally as malicious. They seem to think it was a question of the kettle calling the pot "black." I have no comment on their deductions except to say that the people are of the opinion that Mr. MORRISON was using the RECORD to try to elect himself Governor of Louisiana and that the Member of another body was using the RECORD to try to elect Sam Jones Governor of Louisiana. The consensus of opinion among the many that I have heard from is that both articles should be expunged from the RECORD. Since I have no control over the statement inserted by the gentleman from another body, I shall not pursue the House matter further. I must say, however, that in my opinion Louisiana gubernatorial politics should not be aired through the general distribution of the CONGRESSIONAL RECORD. Neither should the taxpayers be burdened with standing the cost of such statements being franked at Government expense to the voters of Louisiana. I hope that I have not incurred the ill will of any persons of Louisiana or elsewhere because of my stand in trying to bring about fair play and adherence to the rules of the House.

The Food Problem at Home

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper account of the activities of the House Agriculture Committee:

[From the York (Pa.) Dispatch of November 13, 1947]

CONGRESSMAN GROSS RETURNS FROM TOUR—REPORTS ON FINDINGS OF HOUSE AGRICULTURE COMMITTEE—FOOD PROBLEM AHEAD

The House Agriculture Committee of which Congressman CHESTER H. GROSS, of the York-Adams-Franklin district, is a member, has just returned from an interrupted tour of the Nation. Terminating their tour at Temple, Tex., because of the call for a special session of Congress, the Congressman said they hope some time next year to complete their tour of the Rocky Mountain and Pacific Coastal States.

Congressman GROSS told a reporter the committee members feel that their trip has had a good effect in the agricultural sections, stating, "the welcome received everywhere and the interest taken convinced the members that the tour strengthened the people's confidence in Congress." The committee, beginning their hearings in New Hampshire on October 13, traveled south along the eastern seaboard States into South Carolina, then on to Georgia; north through the Middle West into Wisconsin; then south through the Corn Belt to Temple, Tex.

One annoying and time-consuming situation with which the committee had to deal at every hearing was the manner in which the Soil Conservation Service packed the committee hearings with their witnesses urging Government-aid programs. Complaint finally reached Washington when Secretary of Agriculture Anderson denied to Chairman HOPE in a letter that the Department was responsible but the witnesses continued to appear, GROSS said.

The committee's visit through the Twenty-first Congressional District impressed members tremendously with the high type of agriculture here and the apparent stability of the people. They were further impressed by the fact that there were more buildings underway in this area than in any other area on their 4,000-mile tour. The hearings were largely attended, ranging from 400 to 1,000 people, and as many as 70 witnesses heard in a single day. The committee was amazed, GROSS said, at the attitudes taken by many witnesses. For instance, in Rocky Mount, N. C., where the tobacco farmers, share croppers, and tenants were getting more than $500 per acre for their tobacco, they still asked for cash payments for lime and fertilizer. As a southern Negro farmer in Georgia told the committee, "It seems to me everybody is interested in soil conservation, but I am sorry to admit that most of those I know are more interested in the cash from the Government than in improving their land."

"This was evident in every section visited," GROSS declared. "After visiting tobacco auctions and cotton gin mills and there speaking with tenants and share croppers, both white and colored, I have come to the conclusion that there is a wide field for improvement, particularly in the South. One of the principal troubles with tenants and share croppers is their illiteracy and their inability to spend their money wisely. It is not unusual to find the share cropper getting $5,000 for his cotton and tobacco and then buying 12 bicycles for his 12 children or a $200 automobile for $1,000 or bidding $200 per acre for $30 land."

TERRACING "OVERSOLD"

"Land terracing has been greatly oversold. The committee saw many thousands of acres of land terraced and never cropped. They saw much land terraced that was not worth $1 an acre and never was. Some places the land has been terraced so hard that on miles of terraces two rows of corn are planted and the balance of the land not farmed. One of their main troubles in the South is the lack of dairy products in diet, as I pointed out to many communities. In the drought-stricken Midwest in the most prosperous farm sections appeals were made for cash payments to purchase lime and fertilizer. In one county in Indiana, where 40 farmers met the committee at a crossroads, a proud farmer boasted that his farm value had increased $150 per acre in the last 3 years and that for every dollar's worth of fertilizer applied to their land they were getting seven in return, yet they wanted the Government to supply fertilizer. This same group boasted, 'This is the only county in the United States that could as of today pay its share of the national debt.'

"The committee found hog production extremely low everywhere except in southern Minnesota and Missouri. One reason is that last spring Secretary of Agriculture Anderson requested that farmers produce less hogs and the other the present high price of corn. In Minnesota and Wisconsin we found a well-balanced agriculture and farmers really prosperous, but the soil-conservation witnesses came forward begging. The committee was amazed to have the wheat king of Kansas get on the witness stand and declare that he knew how it felt to have a crown on his head and then beg for a continuation of crop insurance which cost the Federal Government $80,000,000 last year and benefited no one except a hoard of employees. He also pleaded for free lime and fertilizer. In some counties of Kansas there were produced this year 10,000 bushels of wheat for every inhabitant. It sold for around $2.20 per bushel, which means that every inhabitant in a county like that had an income of more than $20,000.

"In Temple, Tex., where the hearings were terminated witnesses came from six States. Complaints were made about absentee landlords, scarcity of labor, the farmers' inability to buy the proper equipment, as well as the poor houses, which are so common in that area. Nevertheless, upon investigation the committee found that the banks in the Midwest are bulging with farmer money and that many a farmer who lived in a shack had sufficient money in the bank to buy his neighbor's acres at tremendously inflated prices. It is an amazing thing that in the better agriculture areas land values are not nearly as high comparatively as they are in the land of the tenant and the share cropper."

FOOD TROUBLE AHEAD

"I believe there is a serious food problem confronting this country in the not far distant future. For instance, the wheat of Kansas and Nebraska, Oklahoma and the panhandle is still lying in dry ground when it should be 6 inches high. Approximately 2,000,000 range cattle are wintered annually in that area on the wheatfields. These cattle are now finding their way to the stockyards at Sioux City, Kansas City, and Forth Worth, Tex. They will have a serious reflection on our wheat and meat supplies next year.

"During our entire tour we found no place where the people were more conservative, more prosperous, better satisfied, or where a better agriculture program was in effect, than right here in this congressional district. I spoke in numerous places and tried to impress farmers everywhere of the importance of having farmers solve their own problems

and warned that if they let the Government do it for them they are bound to have a master. This met with general agreement by farmers everywhere. Soil conservation may be a national problem but after all can only be solved by the individual who owns the land. Of the hundreds of witnesses we heard, few presented any kind of a program for long-range agriculture. Only one or two asked for a guaranteed price schedule slightly below the cost of production to cushion the farmer against rebounding war prices and still permit him to operate in a free, uncontrolled economy and at the same time protect the Government against surpluses such as we have in potatoes and wool at the present moment. However, numerous farmers asked for a price formula that would guarantee and continue the high prices secured for them by the administration at Washington, apparently forgetting or overlooking the fact that the present prices are war-inflated. We found everywhere unanimous opposition against controls of any kind and that means against acreage controls and market quotas. The committee stopped at many places on their 4,000-mile tour and talked with farmers on the farms and observed just what they were doing. The one conclusion the committee arrived at was that wherever we found a thrifty man he was a happy man. After all, thrift does pay."

BARBECUE ON TUESDAY

"The committee was warmly welcomed everywhere and at Muscle Shoals, in Alabama, the committee was served a barbecue dinner with about 200 guests present on October 21, a meatless Tuesday."

Federal "Gag" Inquiry

EXTENSION OF REMARKS
OF
HON. ROLLA C. McMILLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. McMILLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Decatur (Ill.) Herald:

FEDERAL "GAG" INQUIRY

The administration has not heard the last of its so far abortive attempt to impose on Government agencies and employees a peacetime censorship as stringent as that in effect during the war—congressional investigators are going to take a look at what's been going on.

The matter is deserving of such attention, because now it is learned the "gag" drafted from wartime Army regulations has been twice applied to the Veterans' Administration and twice withdrawn—both withdrawals having been ordered after alert Washington correspondents discovered the regulations were in effect.

Chairman CLARE HOFFMAN of the House Expenditures Committee, a Michigan Republican and a sleuth-minded attorney, has scheduled hearings on the subject after seeing copies of the proposed minimum "security" standards. These standards are such that a Government employee could be discharged on disloyalty grounds for revealing information which embarrassed his superiors or made their job more difficult. The information would not need to be of such a nature as would endanger the national security. Under the regulations, any employee who disclosed inefficiency or corruption could be discharged.

Never in peacetime has there been such an attempt to make it impossible for the press to give the Nation an honest, analytical picture of the Government in action.

The code in question was drawn up by a three-man security control subcommittee of the State-War-Navy-Air Coordinating Committee. Chairman of the subcommittee is Hamilton Robinson, director of the State Department's Office of Controls. Robinson recently was quoted as saying public officials should decide the amount and kind of information made public. Reconcile that, if you can, with our traditional concept of democratic government. The other two members of the subcommittee represent the Army and Navy, and, more important, represent Army-Navy thinking on censorship.

President Truman has tried to brush aside criticism of the gag move. Things have gone too far for that, however. Here indeed is a matter worthy of congressional investigation, because peacetime censorship is entirely incompatible with the American way.

This We Have Heard

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I offer for the RECORD a very moving bit of writing from the Belle Fourche (S. Dak.) Daily Post of November 20, 1947. It deals with a matter on the mind and heart of Congress at this time.

THIS WE HAVE HEARD

We have, in our time, heard women discuss among themselves recipes to be used for donation purposes—the cake to be sent to a ladies aid supper; the cookies for a community party for children. The discussion has been usually of the eggless, sugarless, shorteningless requirements of the recipe, resulting in—as many have said—"a sweet that's plenty good enough."

We have heard women discuss how donated clothing can be stripped of such extras as buckles and button trims. In fact, we once saw a woman going through the clothing she was packing for a missionary barrel and taking off all trims she could use in her own sewing, leaving only the fasteners that held the garment together.

We have, likewise, heard men discuss how little they can donate to community institutions and still get by public opinion.

But in the past few weeks, we have heard discussions like these:

Women reviewing recipes for cookies to be sent to the veterans at Fort Meade, the high grade of the materials used, their point of emphasis, since "these boys have so little they can enjoy, and some of them apparently have been forgotten by their families." The women discuss the preferences of the soldiers as explained by the Gray Ladies, who take the cookies to the hospital each week. The boys like soft cookies best, the Gray Ladies say, soft cookies with frosting. "I use that favorite chocolate recipe of mine," we heard one woman say, "then I make a batch and a half of the frosting, spread it good and thick. I pack them so that they are not broken when they get there." The only wail we have heard in the whole cookie-making project has been the scarcity of big boxes in which to pack the cookies so that they will reach the veterans—after a 30-mile trip by car—in as good condition as they left the kitchen.

In the past few weeks we have heard women and children discussing the sizes of garments and types of garments needed for adult and child in nations overseas; the warmth of stockings and the question of laundering—"Soap is scarce over there; so I put in a couple bars." The complaints have been solely of restrictions placed on the donations by the sponsoring agencies.

This week we heard men discussing donations to the local Scouting organizations. They were commenting that they have in past years given the Girl Scouts only half the amount they gave the Boy Scouts. But this year they gave the girls' organization the same, since the girls' organization had risen to new heights of service.

Nobody knows how many boxes of food, clothing, and pleasure gifts are pouring from Belle Fourche every day in the name of world brotherhood. The boxes go from individuals—child and adult; from organizations—child and adult.

People have responded like this under the pressure of war, time and again. But this is wartime behavior in a peacetime cause.

What does it mean?

It means building peace from the individual up. It means the positive answer to "Am I my brother's keeper?"

May our leaders assembled in Washington see the quality of this upsurge that rises from the people; may they see its unselfishness and depth. Then may they match it, in their behavior, with an equal unselfishness and depth.

Help America

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. WEICHEL. Mr. Speaker, the President has had absolute control over the exportation of building materials, food, farm machinery, grain, meats, metals, motor vehicles, and steel, so that he would curb and stop the exportation of building materials, food, farm machinery, grain, meats, metals, motor vehicles, and steel, so that the national defense shall not be impaired, so that the national security shall not be endangered, and so that the civilian use of building materials, food, farm machinery, grain, meats, metals, motor vehicles, and steel shall not be impaired.

The President has had absolute and complete authority in the matter of export. The Congress can give him no more. Yet, since May 1945, the President has thrown to the winds and did not use his power and authority to curb and stop the export of building materials, food, farm machinery, grain, meats, metals, motor vehicles, and steel, and protect the people of the United States, by sending and authorizing to be sent abroad untold millions of tons of building materials, food, farm machinery, grain, meats, metals, motor vehicles, and steel, and last year alone the food that was given and sent from continental United States would be longer than a railroad freight train nearly 3,500 miles long.

The sending and the permission of the President of the United States assisting in the vast amount of building materials, food, farm machinery, grain, meats, metals, motor vehicles, and steel, being sent from continental United States and standing idly by and watching this parade 3,500 miles long of food alone from continental United States without raising a finger or using his right to protect the people has brought about a great scarcity of building materials, food, farm machinery, grain, meats, metals, motor vehicles and steel in this country and has caused the greatest inflation ever known and the highest prices to the people of the United States. Such unnecessary burden caused by the President standing idly by casts a heavy hardship on nearly every person in America.

So that such hardship might not be continued on the American people by the President in not exercising the law and authority given to him, I have introduced a bill whereby no building materials, food, farm machinery, grain, meats, metals, motor vehicles, nor steel shall leave continental United States unless the Secretary of Commerce certificates to the President of the United States that the exportation of any such building materials, food, farm machinery, grain, meats, metals, motor vehicles, or steel will not impair the national defense, endanger the national security, nor impair the civilian use of building materials, food, farm machinery, grain, meats, metals, motor vehicles, or steel by the people of the United States.

Meatless Tuesdays

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. BATTLE. Mr. Speaker, a few days ago, William Kitay had a very timely article in the Birmingham News which I would like to call to the attention of the Members of the House of Representatives at this time. It illustrates the difficulties faced by the President and the administration in trying to save food and help solve an international problem through voluntary self-denial programs at home.

The article follows:

TUESDAY MEATLESS IN NAME ONLY HERE, RECENT SURVEY SHOWS

(By William Kitay)

Meatless Tuesday in Birmingham is meatless in name only, a survey revealed today.

And Charles Luckman, Chairman of the Citizens Food Committee, has wired the News and Age-Herald to remind local residents again that:

"No meat today, it's Tuesday. No eggs on Thursday."

The wire pointed out there no longer was a poultryless Thursday. The ban on poultry was removed under pressure of the Nation's poultrymen who argued the measure was not saving either grain or chickens.

The survey, made by a News reporter, showed that while local citizens openly appeared to cooperate with the President by abstaining from meat on Tuesday, the facts are:

1. The city's meat packers and wholesalers have experienced no decline in the weekly demand. They are supplying retailers with as much meat now as they did before meatless Tuesday.

2. Most retail meat markets are selling as much meat now in 5 days as they did before in 6.

3. Many persons who eat in restaurants are not eating less meat but have merely shifted their meatless day from whatever it was, to Tuesday.

The survey covered 12 meat-packing houses and wholesalers, 15 large retail markets in representative sections of the city, 20 restaurants and the 5 major downtown hotels.

Significant is that the all-out cooperation shown 3 weeks ago, definitely is on the wane. Persons who, during the first two Tuesdays of the drive, selected meatless dishes, today are asking for meat.

A large number of downtown restaurants have quietly put back meat on Tuesday's menus. While all downtown hotels still had meatless menus on their dining-room tables, three of the five said they had meat dishes waiting in the kitchen for anyone who asked. And a growing number of people are asking for meat, waitresses reported.

"At first," said one meat packer, "we thought the demand for meat had dropped off about 50 percent of 1 day's business. But during the last week the demand is back to normal."

Most packers pointed out there is a normal seasonal shortage of meat at this time. And that they are delivering every pound they can obtain.

"The amount of meat available normally is so short," said another packer, "that it is impossible even to determine if the demand has dropped off. One thing we do know, we are selling all the meat we can get. We could sell more, if we had it."

The seasonal short supply was said to be due to the light weight of animals this time of year. A slight drop in the demand for beef was blamed on a seasonal eating change and not on meatless Tuesday. As the cold weather approaches, people in the South switch their tastes from beef to pork.

All retail markets contacted made approximately the same comment as voiced by one butcher who said:

"My customers will not buy meat on Tuesday. They act insulted and indignant if I even suggest such a thing.

"The laugh is, of course, that many people make up for it the rest of the week. And most people buy twice their normal needs on Monday. So, at the end of the week I have sold as much meat as I ever did before meatless Tuesday."

The situation in restaurants depended upon the individual trade. Some eating places reported a drop in their Tuesday business, showing their customers went elsewhere where meat was being served. Others reported they were receiving a few complaints but on a whole were not having too much difficulty, as most customers had changed their normal meatless day to Tuesday.

However, most agreed their meat order each week was identical to what it was before the advent of meatless Tuesday.

"We replaced meat with chicken," said one restaurant owner. "But more and more people are demanding meat. Many of my customers are not eating with me on Tuesdays anymore."

Another restaurant man reported he put meat back on the menu today "because we are losing customers." He added that if everyone cooperated, he was all for meatless Tuesday. But that he couldn't let his business go to others who were not observing the day.

One restaurant owner said his steady trade was not complaining so much against the removal of meat from the menu. But that it was strenuously objecting to the removal of eggs from Thursday's menus.

A large cafeteria operator said he solved the problem by putting on the Tuesday menu a lot of meat "byproducts," such as liver, hash, beef heart, and frankfurters. This, he said, seemed to satisfy most people.

An increasing number of restaurants reported meat dishes waiting in the kitchen for all who ask. Their menus, however, showed meatless dishes.

One steak house serving meat today reported "more business than we can handle" and "most customers today are new ones."

United States Foreign-Relief Fund

EXTENSION OF REMARKS
OF
HON. MELVIN C. SNYDER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. SNYDER. Mr. Speaker, on November 12 Mr. R. M. Davis, one of West Virginia's outstanding citizens and businessmen, addressed a letter to the President of the United States, in which he suggested that the Congress pass a joint resolution calling upon the President to issue a proclamation providing for the creation of a United Nations foreign-relief fund to be administered by the United Nations.

In brief, Mr. Davis suggests a community chest. Each Member of Congress, employee of the United States Government, State employees, municipal employees, and the people generally would give 1 day's pay, and school children would contribute 5 cents each, to the proposed relief fund.

The significant fact is that it would be given by the people of the United States directly to the people of Europe for their relief. Such a gift would have a tremendous psychological effect and demonstrate the interest of the people of this Nation, and would in turn be recognized by the recipients as a demonstration of interest in their welfare.

Our assistance to Europe would be divided into two categories; one, relief in food, medical supplies, clothing, and so forth, by direct contribution of the people of the Nation; and two, assistance in the form of machinery, materials, and so forth, to reestablish the economy of the countries concerned. Funds for the latter purpose would be provided by Congress.

The program to furnish relief in category one by the people would almost eliminate the necessity of any legislative appropriation of funds for that purpose and would have the additional benefit of the gift being from the people of one nation to the people of other nations and not from a government to a government.

Mr. Davis' letter to the President follows:

MORGANTOWN, W. VA.,
November 12, 1947.

HON. HARRY S. TRUMAN,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: Along with an increasing number of our fellow citizens, I am

much concerned about world affairs that seem to be drifting slowly toward another war. The hopes of people all over the world that the years following the close of the last war would be filled with peace and happiness and prosperity have given way to fears that we are face to face with another world conflict which may mean the end of the civilization we know.

Now we are told that we must contribute billions of dollars toward the relief and reconstruction of the people living in western Europe. I am heartily in favor of feeding hungry people wherever they may be found to the extent that we do not destroy our own economy. To undermine our own economic system would only defeat our purpose of aiding peoples elsewhere.

In order to accomplish the greatest amount of good in a relief program for western Europe I would like to offer the following suggestion for your consideration.

I propose that the Congress of the United States pass a joint resolution calling upon the President to issue a proclamation providing for the creation of a United Nations foreign relief fund to be administered by the United Nations. The proclamation should also call for the designation of a United Nations Foreign Relief Fund Week for the raising of a substantial sum of money for foreign relief. The American people would be asked to contribute toward this fund with the thought that if the people are permitted to have a direct participation in the raising of the money they will have a far greater appreciation of the purposes for which it is being raised and a much greater understanding of the United Nations as the main hope of peace in the years ahead.

As a basis for contributions toward the United Nations foreign relief fund I would suggest that the President, the Members of Congress, and all employees of the United States Government contribute 1 day's salary, and that all State governors, and all State and municipal employees give their salary for 1 day. All employees of our educational institutions, the public and private schools, colleges, and universities should be asked to give 1 day of their salary to the fund. The officials of all industrial establishments throughout the country would be expected to give their salary for 2 days, while all employed persons are covered in one of the above categories would be asked to donate their earnings for 1 day.

Then I think we should bring all the school children into this program in order that they may early in their lives learn something about the practical problems in international relations. Let each school child give 5 cents toward the relief fund, and he will gain some understanding of the United Nations. Other contributions would be acceptable from anyone on the basis of his capacity to assist.

In my opinion there is no better way for the American people to prove to the world that they are peace-loving and want only to do their part in building a peaceful future than to participate on a mass scale in the creation of such an international relief fund as I am proposing. Charges of warmongering against the United States would evaporate into thin air as concrete evidence of our peaceful intentions began to roll into the countries of western Europe in the form of food, clothing, and medicine. It must be perfectly clear that the goods made available are the product of the free-will offering of the American people.

To cap the climax of the successful creation of a huge relief fund by the American people, Congress should then pass the bill now pending in both Houses for the creation of a Department of Peace in the President's Cabinet. The whole objective of such a department is to educate the American people to their responsibilities in international relations with the hope that this country would set an example which would be followed by other States. Let a Department of Peace on a permanent basis combat the idea that we are imperialistic in this country, that we are a warmongering people. No agency of the Government as it now exists is qualified to undertake and carry into effect the vitally important educational program which is needed to educate people everywhere that war can be avoided and must be avoided if the world is to escape the fate of another Dark Ages.

Very sincerely yours,

R. M. DAVIS.

Let's Blow Our Own Horn

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Daily Evening Item, Lynn, Mass., November 22, 1947:

LET'S BLOW OUR OWN HORN

Several Congressmen who opposed the State Department's Office of Information and Educational Exchange, and who voted to cut its budget by more than half last summer, have now changed their minds. These are men who recently toured Europe, and who returned with the demand for some sort of propaganda agency to offset the stream of anti-American lies and vituperation that the Russian propagandists are pouring into Europe.

This does not necessarily mean that the legislators were shortsighted or dead wrong in their earlier opposition. Conditions have changed in the meantime. Also, some of the strategy of former Assistant Secretary of State Benton and some of the tactics of his assistants were open to criticism.

There was nothing wrong with Mr. Benton's basic idea. It was his laudable intention to fight distortions with dispassionate truth, and to sell American democracy to the semi-slaves in Europe by such means as the Voice of America broadcasts, publications, libraries and traveling art exhibits.

But that was last spring. At that time Mr. Benton's principal target seemed to be Russia. But the Russian people, who most needed to hear the truth about American life and policies, were and are almost hopelessly insulated from the truth.

The Russian people who are 35 and under have been fed from the cradle on the anti-capitalistic dogma of Marx and Lenin. The older ones have had a steady diet of such propaganda for 30 years. Few Russians have radios on which to hear the American side of the story. And it is conceivable that even those who listen to it may simply put it down as false propaganda.

Furthermore, the picture has changed since Congress last considered this State Department information bureau. The Soviet Government has tightened its grip on the Balkans. There is now a Marshall plan to be explained and defended, not behind the iron curtain but in the countries awaiting American aid. Communist propaganda has now been stepped up to a high pitch. National pride is being appealed to. The threat of imperialism and loss of sovereignty is dinned into western European ears and minds day after day.

What is needed now, it seems to us, is a more forceful presentation of the American story. There must be the same scrupulous regard for truth as now, but there must be greater emphasis. We must play up what we are doing now and what we have done to relieve hunger and hardship in Europe.

We must make it even plainer that the refusal of Russia and her satellites to participate in the European recovery program was Moscow's idea, not ours. We must dispel the idea that we are seeking to dominate Europe, or to stuff the capitalistic system down unwilling throats, or to make war.

National modesty is no longer a virtue. The people of Europe must be shown the contrast between our generous but largely unpublicized aid and the niggardly Russian contributions which have been ballyhooed out of all proportion. It may go against the grain of Americans, individually and collectively, to blow our own horn. But that type of information service seems indicated under present circumstances.

Resolution of Compton Post, No. 2089, Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 25, 1947

Mr. BRADLEY. Mr. Speaker, Compton Post, No. 2089, Veterans of Foreign Wars, has carefully considered the desirability of allowing Eva Togura D'Aquina, also known as the Tokio Rose, to reenter the United States and has adopted the following resolution in regard to such reentry:

Compton Post, No. 2089, Veterans of Foreign Wars of the United States, Compton, Calif., at the last regular meeting, 10 November 1947, unanimously adopted the following resolution.

"Whereas after the late war in which so many of our American citizens were so diabolically treated by personnel of the Japanese people; and

"Whereas 105 Compton men gave their lives in this war; and

"Whereas the broadcasting system of the Japanese Government was used by American-born and educated Japanese girls to demoralize our servicemen with their slurs upon their loved ones at home; and

"Whereas, one American-born and educated Japanese girl, to wit, Eva Togura D'Aquina, also known as Tokio Rose, a one-time student of the Compton Junior College, of Compton, Calif., is now stating her desire to return to the United States, less than 1 year after Harry S. Truman, President of the United States of America, decreed that the hostilities between Japan and the United States were at an end: Therefore be it

"*Resolved*, As comrades of these men who suffered and those who paid the supreme sacrifice, we are definitely opposed to the granting of any visa, or other mode of entrance into the United States of the above-named person, believing that it would be a disgrace to the memories of our departed comrades; and be it further

"*Resolved*, That a copy of this resolution be inscribed on our minutes and that copies be sent to the Los Angeles County Council, California State department, and to national headquarters, also a copy be sent to the Compton Press."

Attest:

CLAUDE W. NICHOL,
Commander.
DALE H. LEWIS,
Adjutant.
JACK BIGGERSTAFF,
LESTER D. GANDY,
H. A. CASTEEL,
Resolutions Committee.

Antilynch Bill

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. TWYMAN. Mr. Speaker, I have today introduced a bill to protect citizens and other persons in the United States from mob violence and lynching. There have been several bills submitted during this first session of the Eightieth Congress for this general purpose. The bill I have submitted, however, provides for greater latitude in punishment for lynching. The bill provides a punishment by fine of $10,000, or imprisonment not exceeding 20 years, or both, upon conviction of participation in a lynching, and prescribes a fine of $5,000, or imprisonment not exceeding 5 years, or both, for any official found guilty of having willfully failed to protect a person in his custody from lynching, or to apprehend or prosecute the members of a lynch mob. The bill also provides for the compensation to the victim of a lynching, or, if it results in his death, to his next of kin, in an amount of not less than $2,000 or not more than $10,000 to be determined in a court of law.

No right-thinking person can justify the necessity for lynching. It is a cowardly practice, usually engaged in by mobs of persons who would not have the courage to carry on their activities alone or in the open. It is a practice which is not to be condoned.

Fortunately, the number of lynchings in the United States is on the decline. For the last several years, there has been a marked reduction in the number of lynchings in the United States. There is every chance, however, that a wave of hysteria may develop which would cause a return to a greater degree of this practice. We must have ready a deterrent by Federal legislation in the form of severe penalties to the individuals and officials who practice or condone lynching. In the wild hysteria that prevails at the time that a lynching is conducted irreparable mistakes occur, and too frequently an innocent victim suffers a horrible fate. All of these acts are contrary to the laws of our country and the principles on which our Nation was founded. No one subscribes to the idea that guilty persons should not be punished for their acts. Each and every State and community has legal processes which can and should be followed.

It is fitting that I present a bill designed to punish persons engaging in mob violence and lynching. The State of Illinois has laws against such acts. A number of States have such laws. Unfortunately, all States have not seen fit to take such action. Furthermore, descended as I am from people who have fought to maintain the liberties afforded by our Constitution, it is perfectly proper that I should interest myself as a Member of Congress in putting a stop to this practice. My grandfather separated from his southern family and came north to fight in General Grant's army, while his brothers remained to serve in the Confederate Army. My entire family has been devoted to the principles that this should be a Nation which protects the individual by law or punishes the individual by law. Those who see fit to evade the principles on which this Nation was founded, and see fit to take the law into their own hands and constitute themselves judges, jurors, and executioners, should be punished as well as the officials who tolerate such proceedings.

I have high hopes that this Eightieth Congress will enact an antilynch bill, and it is my intention to work for its passage and support it in every way that I can. It is my belief that such a law will go far toward ending a practice which the vast majority of the people of the United States abhor.

A Resolution

EXTENSION OF REMARKS
OF
HON. EDWARD O. McCOWEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 25, 1947

Mr. McCOWEN. Mr. Speaker, under leave to extend my remarks, I am hereby presenting the following resolution of Mathews-Carter Post, No. 325, the American Legion, Department of Ohio, Manchester, Ohio:

Whereas the cost of living has increased to the extent where veterans are unable to maintain a livelihood for themselves and their families on the pensions and disability allowances now received by the Veterans' Administration, and whereas World War I veterans served their country with valor and honor and are entitled to a living pension and the age requirements lowered from 65 years of age to 55 years of age for an automatic total disability for pensions on a Spanish-American War basis, where dependency exists: Now, therefore, be it

Resolved by Mathews-Carter Post, No. 325, the American Legion, Manchester, Ohio, That this organization support and urge the passage of House bill No. 677 now pending in Congress of the United States which provides for an increase in pensions and disability allowances for servicemen of World War I and the relaxation of the age requirements from 65 to 55 years of age.

Adopted this 14th day of November 1947.

WILLIAM R. POWNALL,
Post Commander.

Attest:

R. W. POOLE,
Adjutant.

May I urge prompt action on H. R. 677.

National Science Foundation

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address I delivered on the subject of the National Science Foundation, before the meeting of the Special Libraries Association, Lafayette Hotel, Washington, D. C., November 25, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NATIONAL SCIENCE FOUNDATION BILL

Mr. Chairman, ladies and gentlemen, I am honored to speak on the subject of legislation for the advancement of science through a medium to be created and to be known as the National Science Foundation.

That there still will be established a National Science Foundation is the prayer of everyone who wants this Nation to achieve and maintain preeminence in the field of scientific education and, as the most habitually peaceful and peaceable of peoples, perhaps, anywhere, set an example before the world in continued technological leadership.

We may not achieve these objectives without Government encouragement and assistance; on the other hand even with the most abundant and bounteous grants that might be conceived, other government competition might run away from us in an easy race, and we still might have to rely greatly on Yankee ingenuity, the natural bent of our young men and women for mechanical inquiry, and the incidental invention which comes from a highly industrialized national community.

So serious is our problem, so compelling is our competition, that we pray that there may be created a National Science Foundation worthy of the name.

My own personal roles in this type of legislation have been diverse. I have had the greatest personal satisfaction in the role of conciliator—I believe all my colleagues would concede my claim to this—and in the amelioration of a stubborn idea here and there to the point that both the Senate and the House approved a bill, thus in a way getting farther than ever before, namely right up to the very edge of Presidential approval.

As you know, S. 526, which Senator H. ALEXANDER SMITH, of New Jersey, and I reported out of the Committee on Labor and Public Welfare, was vetoed. One of the purposes of tonight's talk, then, is to discover where we go from here.

The bill was patently vetoed because of the degree of responsibility of the proposed foundation to the President. I do not want to become tedious, as I certainly should do if I were to rewind and unwind a long spool of events leading up to acceptance by the Senate and the House, of the nine-man executive type of foundation which failed.

As a matter of fact, in S. 525 I personally authored a bill which prescribed the type of organization that the President might have been expected to approve. Surely S. 526 was a compromise with S. 525 which I introduced on both this and other features.

I do not want to say too much about differences of opinion with respect to the administration of the foundation. This is a subject, not for purposeless airing, but for further attention in the crucible itself, and if more laboratory work of the type we have done will yield further increment, we may try with profit to adjust our organization difficulties and agree, White House and all.

The person who wrote the veto message of the President thought of but a single concept of government which overlooked American governmental habits that have become so well established in all of the States and in the Nation. Executive control is one thing, but our Government is what it is today because we worked out some techniques of government which made for a complete separation of many State and Federal activities from political control. To assume that the President should have control of all of the

persons conducting research would show that our State universities and colleges and the State public-school systems have been, administratively speaking, failures. This, of course, is not true.

As conciliator, I do not feel that I have been left high and dry by anyone, but am willing to make further efforts toward agreement.

In passing, however, I might identify, if I can, the bridge we have yet to span, and by inference reveal some of the bridgework we already have constructed, for I am not going to give a tedious chronology of differences of opinion as they have been overcome through conversion or compromise through the years.

The high hurdle is to fix the degree of responsibility of the Foundation's principal officer to the Federal Government, and principally, of course, to the Executive. That which is yet deemed to be an insufficient degree of responsibility is an organization of 24 individuals chosen by the President and confirmed by the Senate, to be members of the Foundation, the members to elect their own chairman and their own executive committee; and the Foundation to name a principal executive officer, known as the director. Another feature was the requirement of an annual report to the President, to be submitted by him, in turn, to the Congress.

In contrast, the bill I introduced in the Eightieth Congress provided for the director to be appointed by the President and confirmed by the Senate.

In this connection, I believe in the sincerity of those who thought my own theory of political responsibility to be preferable. I am also impressed with the feeling that those who felt that science could best steer the course of scientific research also gave up, or gave in. However serious the matter of organization may be, basically, sufficient safeguards were actually retained so that ultimate responsibility to those who would have to open the pursestrings every year was adequate in the product which was presented to the President for signature. This, I say, these individuals believed honestly.

The President believed otherwise, and I certainly would not, if I could, take issue. After all I was complimented because the bill which I introduced provided for the type of administration the President's veto message considered correct. Therefore, the only lesson that may be taken from the experience is that our work of bringing order out of chaos, and agreement out of order, is not yet complete.

I have almost committed a fault. I have spoken of my bill, and I was about to speak of Senator SMITH'S bill. S. 525 and S. 526 happened to be the bills we individuals presented. Senator SMITH'S number prevailed, after we had considered features of both. Senator SMITH and I signed the committee report placing his bill on the calendar. It was an honest act and we agreed.

But I do not want to take credit for the ideas which Senator KILGORE and numerous others had, or from the President's message on this subject, or any other source material of my bill. In considering Senator SMITH'S evident feelings concerning the proposals, always a dangerous thing for another Senator to try to do, I would no more ignore Senator MAGNUSON and others who have manfully considered what science itself might think, and what science itself might do, given money and encouragement, to assist scientific development. I dare not start giving credit, for I could not stop. Senator FULBRIGHT and his associates were no less painstaking.

Instead I want to give credit to every Senator and every Representative who has been sobered by the reduction in our midst of thousands of doctors of philosophy in science, by the more than occasional monopolistic frustration and retardation of scientific development (along with, of course, profitable industrial advancement through invention) and by the terrific competition of at least one rival government in encouraging the development of science. I know that there is no one in any branch of government who has given study to the subject, who does not realize, and who does not fear the reduction of this Nation to second-rate status through lack of knowledge and invention.

The old patent-alone system will not work any longer, unsupported. As one distinguished scientist observed, the old idea of a poor genius working out an amazing scheme in an attic has almost entirely vanished. Certainly we may not preserve our national standing on any such basis or gamble.

The problems of war brought the subject into early and sharp focus. In 1939 President Roosevelt authorized the mobilization of science for war by creating the Office of Scientific Research and Development, with Dr. Vannevar Bush at its head. His unit made a striking record, which led to the President's assigning Dr. Bush in December 1944 a study of the Nation's postwar research program. Dr. Bush reported to President Truman in July 1945. The National Science Foundation bills followed. Hearings meanwhile had long since been held exhaustively on scientific and technical mobilization. Hearings on science legislation followed. Our national scientific ledger was presented with its columns of assets and liabilities. It could be compared calmly, too, with that of other countries.

We learned, or at least we heard, that in 1940 Germany withdrew public support to research in favor of putting everything they had into the production of existing weapons. An expert from the American Navy, recently back from a study, Commodore H. A. Schade, declared that the ensuing 2 years in which all long-term research had been forbidden was a costly mistake, one the Germans tried vainly to rectify by setting up in 1942 the equivalent of a research foundation. A year later a sporadic effort was made to bolster up German naval research, under what Commodore Schade described as "the spur of the German decline in electronic activity and research."

"They never recovered," he concluded, "from the 2-year hiatus when they forbade research between 1940 and 1942."

This witness, appearing before a joint hearing of several committees of the Senate under the umbrella of the Committee on Military Affairs, of which I then was chairman, then went on to list the remarkable array of weapons and war devices which the Germans failed to get into production in time, attributable to this delay.

During the war I went to one of the captured buzz-bomb factories and I also saw the effects of the buzz bomb on England. We, to an extent, followed through the German philosophy of stopping research on the score that we should produce what we had. After the war was over we were not slow in taking advantage of the knowledge of the German scientists who were found in our captured part of Germany.

We suffer delays like this today and think nothing of it. Perhaps we too shall pay for our sins of omission. Discovery, invention, and refinement are marking time here. Are they waiting everywhere?

This is not the place to discuss the moot provisions of a bill which has been vetoed, unless I were to take a side, which I would prefer to do in the way that I undertook to get competing forces in the Senate together, and in the conference adjustments between the Senate and the House.

This organization thing is not crystal clear. For example, former Secretary of War Robert P. Patterson stated in part: "In developing this plan I consider that the utmost in scientific research and development will be gained if the War Department does not attempt to impose its ideas as to the best type of organization which should be adopted to accomplish this. I believe it should be left to the ablest leaders of scientific research and development to outline to Congress for its consideration the type of organization which, in the opinion of those scientific leaders, will call forth the best efforts of the men with scientific talent. They are familiar with the problems, and they know the people with whom they deal. They are expert witnesses as it were, in a field where unskilled persons have far less knowledge.

Dr. Bush stated in part with respect to organization: "A National Science Foundation will be on a far sounder basis if its policy is pursued by a board rather than by one man."

I quote these matters not to embarrass the Presidential veto as here applied, for I myself introduced a bill which provided for a Director with normal responsibilities to the President. I quote them to say that we must bridge this difference with compromise if possible. I quote them to show that there is the highest type of thinking back of both proposals.

And I quote them to suggest that the point is not, or may not be, so important after all and that perhaps under either plan an admirable degree of responsibility to the people of this Nation might well be provided. As a Navy witness, Commodore Lewis L. Strauss, Special Assistant to the Secretary of the Navy, said: "From the point of view of the Navy Department, the question of the overall organization of the Foundation, once it is set up, is of relatively little moment. It is not a matter of organization; it is a matter of men. The proper man for this program should be a man of a certain amount of technical competence, great vigor, and breadth of imagination, and I do not believe that either method necessarily insures that kind of man. I would assume that under one method where the individual is elected by the board, it would be hardly likely that an individual would be chosen who was not persona grata to the President. On the other hand, it seems to me that where the President would be appointing the Administrator, he would be unlikely to choose an individual who was not looked upon with favor by the scientists with whom he would have to cooperate and whose assistance he would require in everything he did."

It is discouraging to be so near and yet so far, but we shall keep striving.

As I said earlier, very little of the bill today remains actually moot, and it is with some promise of a new vista before us, provided we can pass a bill again, that we contemplate its strong points and benefits.

We have progressed through enough bills, committee prints, and now conference report, to know that the Foundation will be authorized to (1) formulate, develop, and establish a national policy for the promotion of basic research and education in the sciences; (2) initiate and support basic research in the mathematical, physical, medical, biological, engineering, and other sciences, by making contracts or other arrangements—including grants, loans, and other forms of assistance—for the conduct of such basic scientific research; (3) initiate and support scientific research in connection with matters relating to the national defense by making contracts or other arrangements—including grants, loans, and other forms of assistance—for the conduct of such scientific research; (4) grant scholarships and graduate fellowships in the mathematical, physical, medical, biological, engineering, and other sciences; (5) foster the interchange of scientific information among scientists in the United States and foreign countries; (6) correlate the Foundation's scientific research programs with those undertaken by individuals and by public and private research groups; and (7) establish (a) a special commission on cancer research, (b) a special commission on heart and intravascular diseases, (c) a special commission on poliomyelitis and other degenerative diseases, and

(d) such other special commissions as the Foundation may from time to time deem necessary for the purposes of this act.

In carrying out the foregoing, an objective of the Foundation is to "strengthen fundamental research and education in the sciences, including independent research by individuals, throughout the United States, including its Territories and possessions, and to avoid undue concentration of such research and education."

Presently five divisions of the Foundation are proposed. These may be augmented. I do not, here, want to outline the differences between the natural sciences and the social sciences, or to define them, or to discover whether and wherein they overlap, for myself or for you, or for the witness, for that matter, who became a little impatient if not indignant because the study of statistics belonged in one category and had been "seized" for another. The five divisions, roughly, are intended, at least by many to embrace mainly the natural sciences. The explanation given is that the bill provides for the creation of new divisions, and the inference is strong that these new divisions are to be social sciences.

We will hear the line of cleavage more sharply expressed than this, I am sure; but at the risk of sounding like the weather man in the Fibber McGee program I believe I will stand on the statement as made.

The proposed Division of National Defense is strongly emphasized in the proposal and was discussed searchingly in the testimony. One half of the members of its controlling committee will be made up of civilians, the remainder will represent the Armed Services.

The other divisions specifically provided for initially are (1) a Division of Medical Research; (2) a Division of Mathematical, Physical, and Engineering Sciences; (3) a Division of Biological Sciences; and (4) a Division of Scientific Personnel and Education, which, under the language of the bill, "shall be concerned with programs of the Foundation relating to the granting of scholarships and graduate fellowships in the mathematical, physical, medical, biological, engineering, and other science."

The executive committee is empowered to receive the advice of the Committee for the Division of National Defense, and therefrom establish regulations and procedures for the security of information or property in connection with scientific research having military significance.

The spark plug of the whole proposal is in the scholarships and fellowships to be provided. This, truthfully, is the feature over which I showed greatest concern. Here, as in no other section of the bill, might creep in the most innocently intended abuses, such as unduly stressing the reputation of an outstanding school, and such as overlooking talented individuals who are developing, like the unseen rose, their talents to be wasted on the desert air in many cases except for that little fact which makes the difference between opportunity and none, financial encouragement. The geographical distribution which I shall presently read was not the asking price; it was the selling price. Nevertheless I am satisfied that with such provisions in the bill any possible abuses may be expected, not to be reduced, but to be eliminated. Permit me to read this important section:

"SCHOLARSHIPS AND GRADUATE FELLOWSHIPS; REGISTER OF SCIENTIFIC PERSONNEL

"SEC. 10. (a) The Foundation is authorized to award, within the limits of funds made available pursuant to section 14, scholarships and graduate fellowships for scientific study or scientific work in the mathematical, physical, medical, biological, engineering, and other sciences at accredited nonprofit American or foreign institutions of higher education, selected by the recipient of such aid, for such periods as the Foundation may determine. Persons shall be selected for such scholarships and fellowships from among citizens of the United States, and such selections shall be made solely on the basis of ability; but in any case in which two or more applicants for scholarships or fellowships, as the case may be, are deemed by the Foundation to be possessed of equal ability and there are not sufficient scholarships or fellowships, as the case may be, available to grant one to each of such applicants, the Foundation shall award the available scholarship or scholarships or fellowship or fellowships to the applicants in such manner as will tend to result in a wide distribution of scholarships and fellowships among the States, Territories, possessions, and the District of Columbia.

"(b) The Foundation shall maintain a register of scientific and technical personnel and in other ways provide a central clearinghouse for information covering all scientific and technical personnel in the United States and its Territories and possessions. No individual shall be listed in such register without his consent."

There were those who were nervous about the consideration of patents lest we destroy the present system and strip the inventor of his incentive. The fact that the inventor's incentive has been badly mauled around in the past by monopolistic practices on the part of some companies and industries was lost sight of, but the testimony, taken in 1943 and 1944 on monopoly and cartel practices was shocking. One lawyer went so far as to advise his client that it would be risky to continue to file infringement suits and though they were effective enough in eliminating competition, too many of them would excite suspicion and cause unhappy public reaction. Moreover, the international tie-ups proved to be almost scandalous, particularly with respect to German controlled cartels. Finally in some important products, technological advance was brazenly held back in order, on one instance at least, for the concern to get out whole in a monetary way with money invested in obsolete equipment; and to give another example, in the case of a utility, in order to sell more of the service or the product.

To take an instance of the scientific reluctance of private capital overseas let me quote from Mr. W. S. Wasserman, a Philadelphia investment banker, who said—note this period—in April 1943: "Some years ago I was approached by some of my friends in England and asked whether my firm would be interested in backing a revolutionary type of airplane propulsion based on the jet principle. Some of my banking friends had run across a young man in the RAF who had come out with what he claimed was a completely revolutionary idea. This principle was mathematically analyzed by one of the greatest mathematical geniuses in England and was found to be correct. Extreme difficulty was encountered in raising funds. A small amount of money was made available, but in the long run the company had to be financed by the British Government to bring this inventor's plan to practical development." Mr. Wasserman's next sentence I shall underscore: "This invention may be of first-rate importance in winning this war." I just ask my listeners to look backward over the potentialities of that moment and answer for themselves whether financial encouragement to science might be of value to a Nation's security and help to shape its destiny.

The young inventor does have a difficult situation with his patents. A spokesman for rural electrification spoke slightingly of the farm boys' chances to do anything with the thousands and thousands of gadgets they have invented. Another witness cited the company control of patents inspired within the company. Still another said that far from placing reliance upon chance industrial invention it should be remembered that there are 150,000 industrial concerns without any research laboratories whatever, and that while some concerns are rather generous in their research all had their own affairs to shape rather than the responsibility for general public welfare; and finally, even though there were impressive industry laboratories, two-thirds of these were employed by concerns whose total personnel was only 10 percent of the industrial population.

There seemed to be considerable satisfaction with the agricultural experiment station idea and the farm research programs so far applied. The dean of engineering, Pennsylvania State College, told us: "For a period of 35 years the engineering schools have endeavored to establish somewhat the same sort of relationship with the Federal Government that the agricultural experiment stations have had. We have met with frustration—I think that is the right word—all along the line, partly due to the fact that in engineering there isn't any one group of colleges to represent the interests of research as the land-grant colleges represent the interest of agricultural research."

Let me read the provision on patent rights. It probably represents the bill as finally to be combed out into public law. In short, if a new bill is introduced, it probably will have this patent feature verbatim. Let us see, in view of the actual situation today, if we are not headed for improvement. The proposal follows:

"PATENT RIGHTS

"SEC. 12. (a) Each contract or other arrangement executed by the Foundation which relates to scientific research shall contain provisions governing the disposition of inventions produced thereunder in a manner calculated to protect the public interest and the equities of the individual or organization with which the contract or other arrangement is executed: *Provided, however,* That nothing in this act shall be construed to authorize the Foundation by any contractual or other arrangement to alter or modify any provision of law affecting the issuance or use of patents.

"(b) No officer or employee of the Foundation shall acquire, retain, or transfer any rights, under the patent laws of the United States or otherwise, in any invention which he may make or produce in connection with performing his assigned activities and which is directly related to the subject matter thereof: *Provided, however,* That this section 12 (b) shall not be construed to prevent any officer or employee of the Foundation from executing any application for patent on any such invention for the purpose of assigning the same to the Government or its nominee in accordance with such rules and regulations as the Foundation may establish."

Of interest to the Government is the proposed Interdepartmental Committee on Science. I will not take time to read its provisions, but much thought was given to a method whereby the Cabinet, departments, and the offices and bureaus of the Government might profit by an interchange of ideas and information. We have taken advice on this and prepared a very careful section. So with the section on International Cooperation, we may share the research of others, and vice versa without risk to our security.

Let me again stress the desire for unity of action on the part of the legislative and executive branches of the Government. I am a realist. I hold in my hand a bill, not the ashes of a bill. It is true that the bill has been vetoed. There is no partial veto; all of the bill has been vetoed. The intention was to have a revision of the organization plan, otherwise there would have been no Presidential message in advance of the introduction of this legislation. Therefore, we may, if we are prone to count our gains, believe that Congress would again enact the benefits I have just described, and that the President would approve the enactment; that the fault in short is purely administrative.

We overcame more difficult obstacles than lie ahead to get this far. We are nearly over the top and perhaps do not know it. I do not want to be an incurable optimist, but I believe we ought to hold fast to what we have, and determine to reach a point of agreement on what is left.

I thank you.

The Future of the American Standard of Living

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent and able address delivered by our distinguished colleague from Vermont [Mr. FLANDERS], before the New England Council annual meeting.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This country has a history of more than 300 years of constant improvement in the standard of living of its inhabitants. It is true that there have been ups and downs but, viewed in the long range of history, they are slight irregularities on a continuously ascending curve. Can we be sure that the future will be an extension of this progress? Can we be sure that if so, it will happen automatically without forethought and purposeful action on our part? That is the question I would ask you to consider with me this afternoon.

The first problem we are facing is that of maintaining full employment without inflation. Except for the so-called frictional employment which is largely temporary and voluntary for the individuals included, we have had full employment for many months. We are also having a dangerous inflation. Full employment and inflation are going together. Is the inflation merely a happenstance or is inflation the normal result of full employment? These are the questions we must face.

In wartime we had over-full employment without inflation. We accomplished this by means of rationing, price control, and wage control. We do not wish to reimpose these wartime controls in peacetime.

In peacetime there is a quite evident relationship between full employment and inflation. Without discussing at this time the question as to which comes first—wage advances or price advances—it is quite clear that with full employment and heavy purchasing power the ordinary limits on both wage advances and price advances disappear. If the worker can leave one job without doubt in his mind as to whether he can get another, he will be much more confident and persistent in making wage demands than he will be otherwise. If the manufacturer finds himself in a seller's market, the ordinary restraints on raising the price of his product disappear. This describes in simple terms the malady we are suffering from today.

Whether the initial impetus comes from high wages or high prices, they react on each other with deadly precision. High wages increase costs and purchasing power. The increased costs are reflected in increased prices, which find the high purchasing power available to move into consumption and enjoyment the goods and services produced. Finding that this results in no net increase in consumption, the desire for high wages again expresses itself with another profitless revolution of the machinery of inflation.

It should be sufficiently clear that no actual improvement in consumption is possible without an increase in production. Without that increase a rise in wages or profits simply makes the goods produced cost more. There is, of course, on the part of organized labor a feeling that profits can be dipped into and thus shared in equitably, but there are limits to this process. It is generally considered that a net profit of around $17,500,000,000 resulted from our present annual production rate of $200,000,000,000. This means less than 9 percent of the total. The wage increases being asked, if obtained by all those engaged in productive work, would go far beyond this maximum of 9 percent available for distribution.

What is happening, of course, is that a temporary advantage at the expense of the rest of the workers goes to those organized groups which get the first advances in a new round of increases. This they gain at the expense of other groups who are slower in making and gaining their demands. They have to hurry to catch up. Some groups never catch up. This considerable body of those left behind is growing and constitutes our most serious internal social problem at the present time.

It is clear that the existence of a body of unemployed would slow up this inflationary process. We are not satisfied to have that body of unemployed. We must find some other way to avoid inflation. How can we do it?

I regret that I can see no simple or easy way. In fact, the only way is a hard way. That hard way is a matter of self-discipline for organized labor and for business management. It involves first the understanding of the simple truth that we consume and enjoy only what we produce, and that there is no use trying to raise the standard of living by raising wages and profits if, in the process, we do not produce more.

The second thing which must be deeply graven on our consciousness is that under full employment decisions of important groups of labor and industry as to wages, prices, and profits are no longer private matters. They are public matters and must be determined with the public interest as a major element in the decision.

In reality this public interest serves the private interest as well. There is no private interest of those engaged in the physical production and distribution of goods and services which is served by an unrestrained inflation. The only group which makes money under those conditions are the scavengers and vultures of the social order who fatten on the distresses of the productive elements of society. The interests of those productive elements are the same, whether their place is at the work bench, the counter, or the executive desk. Their problems and decisions must alike be made in view of the social and long-range interests rather than of their immediate short-range advantage.

Of course, while it is difficult to control inflation, it is not difficult to end it. The less it is controlled, the faster it goes up; and the faster it goes up, the sooner and harder it may be expected to come down. It will be well for labor and management to keep repeating this hard truth over and over again, to themselves and to each other, until it becomes the determining factor in their mutual relations and decisions.

Full employment, then, naturally results in inflation and inflation naturally results in depression and puts a stop to high production and a high standard of living. This is the first of the new factors in our social problem which I wish to discuss with you. If we do not like this, we must actively apply the restraints of self-discipline. There is no automatic remedy for whose action we can patiently and inactively wait.

A little earlier, mention was made of the fact that it was useless to endeavor to raise the standard of living as measured in goods and services by attaining increased wages and profits, unless those goods and services were actually produced. We cannot consume and enjoy more than we produce, no matter how high wages and profits go. Unless we increase that production, increased wages and profits merely raise the prices of the goods and services.

Let us look for a moment at the limits on production. We have full employment based on the 40-hour week. We have a highly mechanized productive system which makes efficient use of the available labor. How shall we increase the output? This is our primary problem if we are looking for an increase in the living standards of the American citizen.

It will be useful to look at some of the calculations which have been made as to what constitutes a desirable standard of living for an American family. The so-called Heller committee at the University of California has set up three standards of living for three income groups. The really desirable one, the one which we would like to see apply to every family in the United States, was based on a four-person family of a wage earner, wife, boy of 13, and girl of 8. In the prewar years this desirable budget for this family in the San Francisco Bay region cost around $2,320. In September 1946 the same goods and services cost around $3,575, an increase of 54 percent.

Now the family income of the average wage earner of this country in September 1946 has been calculated as around $2,500. There is thus a great disparity between the desirable and the actual condition. Realizing that in September 1946, as at the present time, we had practically full employment, one begins to wonder how this 35-percent increase in consumption can be provided. The means would seem to be longer hours, more efficient management, and more labor-saving equipment in production and distribution. It is entirely safe to say that the standards of the Heller committee cannot be attained on a 40-hour week with present facilities.

The people of this country will soon have to decide how they want their high standard of living divided, as between goods and services on one hand and leisure on the other.

Skillful management can, however, make its contribution. Production without waste of time or materials, the most efficient distribution, the skilled organization of the labors of large working forces, all can make a contribution toward increased production that can be set alongside that given by increased hours of work. Here the question that faces the American consumer is his willingness to search out or have searched out the best available managerial ability in the country, to the end that that ability may be focused on the problem of seeing to it that the worker's labor hours produce for him and his family the maximum of the goods and services which he wishes to enjoy. To bring this about there likewise has to be a willingness that the highly skilled manager shall be generously paid. He can be paid generously with only a small fraction of the increased production and distribution which his skill can bring about.

There is still a third resource to lay alongside longer hours and more skilled management in the endeavor to raise the standard of living in this country. This third contribution can be made by research in new products which give better service at lower cost and by the invention and development of new capital equipment for labor-saving in the production of the new and old goods and services. This means that the American consumer must be interested in the retention of sufficient profits in industry to apply to the development of these new products and this labor-saving equipment. Particularly is it

true that the old prejudice against labor-saving equipment must be thrown overboard. We must see with crystal clarity that when we have full employment we are bound to use every resource within our power to increase the output of that employment if we expect to raise our standard of living further. It is natural, though shortsighted, to look with suspicion on labor-saving machinery and processes, when a large percentage of our people are unemployed. It is indefensible stupidity to continue that point of view when we are fully employed. The American consumer has a tremendous stake in the rapid development and installation of labor-saving machines and methods.

Full employment then brings us to an end of our expanding standard of living except as we raise the ceiling on that standard by longer hours, well-paid and more skillful management, and new labor-saving products, processes, and machinery.

The third limitation on a further increase in our standard of living is set by the limitations of our natural resources. This will come as a new idea to many. We have been accustomed to think of those resources as limitless so far as concerns our own generation and those immediately following.

It is true that we have suddenly discovered that the heavy iron and steel production of the war was making serious inroads on our high-grade iron reserves. Our low-grade reserves are large indeed, but concentrating them is a costly process as compared with the direct use of the type of ores we have been employing up until this time.

There have likewise been fears from time to time that our oil wells would only last for 5 or 10 or 15 years further. But new fields have continuously been discovered so that while the end of our oil resources has always seemed near, yet it gets no nearer. As a result we have not, perhaps, become sufficiently concerned about this resource.

Depletion of our forest lands has been longest a matter of public concern. It is more than a generation ago that we began to realize that we were cutting them down far faster than they were being replaced. That realization led to the establishment of Government forest reserves as public policy and it led the more far-seeing lumber and paper companies to treat trees as a crop rather than to work the forests as a mine.

While these things are not new to us it must come as something of a shock to realize that we are right now reaching the limitations of food production in this country so far as the important staples are concerned. It is the European emergency which has brought us to this realization. When we have a requirement for European relief of one-third of an unprecedented and probably unrepeatable wheat crop of 1,400,000,000 bushels, and when this requirement comes on top of full employment with an unprecedented domestic demand on food production of types allied to grain production, we suddenly find ourselves bumping the ceiling of this country's resources.

In large measure the domestic market resulting from full employment is the thing that needs looking at. It has demanded a meat production per capita for which we have to go back to the year 1909 to find any precedent. In that year the population of our country was only about 91,922,266. Today that population is about 142,000,000. The range acreage and the feed-grain acreage now no longer exist to produce a higher per capita consumption with our increased population.

For one thing the world demand for wheat has been so great that we have again plowed far into range lands which should have been left in grass. We are again preparing for a dust bowl. In so doing the best range lands are being reduced, and our capacity to produce meat animals is correspondingly diminished.

The desire for a given amount of nourishment from meat as compared with demand for the same nourishment from grain is a serious drain on grain supplies. It means that for the same amount of calories we have to use from 3 to 10 times as much grain for meat as for direct consumption.

Now, so far as food is concerned, the desire for a higher standard of living expresses itself principally in a desire for more and better meat. On this we have reached the limit. That limit was lowered, it is true, by failure of the corn harvest, but the unprecedented wheat harvest helped to maintain it. We have no right to expect as good grain harvests again next year or the year after, or more than exceptionally in the years to come. We have reached the limit on domestic production and consumption and must find some way of adjusting ourselves to that unpleasant fact.

The only method now in sight for safely increasing meat supply is to open up new areas by irrigation. Reclamation thus takes on an urgency which it has lacked up to now, for never before in all our history have we reached the limits of our food production.

This condition has a particular impact on the present inflationary spiral. The demands for higher wages are supported by increasing living costs. Increasing living costs are almost entirely produced by increasing food costs. Most of the food costs are under control as compared with the cost of meat. The law of supply and demand, rather than any profiteering, all the way from the stockyards to the consumer is what is setting the price of meat. In a way, therefore, the whole problem of inflation focuses down onto this one food. Unless we can reduce effective demand by voluntary rationing, I have come to the reluctant conclusion that we will have to institute statutory rationing in this one food product.

Price control will not be needed. The law of supply and demand will take care of price if we can control effective demand at the consumer level by rationing. Furthermore, rationing will more equitably distribute the available supply. That great body of consumers who are being left behind in the inflationary race for higher incomes will have access to a regulated supply of lower-priced meat under rationing. This is denied to them now.

The short-range problem of our current inflation is serious but is, I believe, manageable. The permanent necessity for adjusting ourselves to a diminished supply of meat rests on the limitations in our possible food production described above. To this we must adjust ourselves in some way on the long-range basis. Just how that may be done I am not prepared at this moment to state. I only feel sure that it must be done.

In this talk I have confined myself to a certain group of influences. Our present inflation requires study of other factors than those mentioned. Monetary and fiscal policy enters into inflation control. No mention is made of these policies because we have been concerned this afternoon with elements directly affecting the possibilities of a continued advance in our standard of living in this country.

Let us sum up this problem as we have been discussing it.

We have run up against three limitations to the further expansion of the standard of living in this country. These situations are not theoretical. They are practical, actual, and present.

The first situation is that full employment produces an inflation which bids fair to end in collapse and depression. We have to find means of maintaining full employment without inflation. While short-term palliatives may be applied there seems to be no long-term remedy that does not include self-restraint, long-range as distinguished from short-range self-interest, and real statesmanship on the part of organized labor and business management. These groups must concentrate on the development of this statesmanship both in the public interest and in their own long-range interest.

We have met a limitation in labor hours. We are finding that increase in income does not mean a higher standard of living if no more goods and services are being produced. The limitation of the working period to 40 hours per week is the most obvious limitation. While we can increase the output of the 40-hour week by encouraging the services of the most highly skilled management and by going in wholeheartedly for labor-saving products and productive equipment, we will still have to decide in the long run whether we prefer to take our improvement in living standards in the form of greater leisure or more goods and services.

Finally, and most surprisingly, we have in this country for the first time reached our limitations in food supply. That we have done this would have been incredible to almost any of us a few years ago. Without bringing new land into cultivation we cannot produce more meat per capita than we are now producing even under the most favorable circumstances. This means that a new kind of readjustment is necessary in our thinking as to what kind of a table we are going to set for ourselves and our families, even under the most prosperous conditions.

These conditions and the suggestions for meeting them must not be counted as counsels of despair. Despair is the last emotion to surrender to when the problems are posed by our abundance. The ceilings of output and consumption are far above anything the human race has ever enjoyed at any other place or any other time.

We are, therefore, dealing rather with counsels of challenge. If we clearly see the conditions which face us we can meet the challenge wisely and effectively. This discussion is a contribution toward the determination of such wise and effective policy.

The Relation of Colleges to Government

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. WILEY. Mr. President, on October 31 last, it was my pleasure to participate on a round-table panel in Ripon College. This college is an excellent small institution, which is currently celebrating its centennial. The college represents the very finest, I believe, in American educational traditions, and is symbolic of the many similar small institutions throughout our country, which are contributing so much to progress in the field of higher education.

I ask that the text of my talk at this round table be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

THE RELATION OF COLLEGES TO GOVERNMENT

(Statement by Hon. ALEXANDER WILEY, United States Senator from Wisconsin, on round table panel, Ripon College, Ripon, Wis., October 31, 1947)

I am grateful for the privilege of participating with my many friends in this discussion. The subject, Relation of Colleges to Govern-

ment, is a very thought-provoking one, and at the same time, a very vital and sober subject. This is so because colleges are supposed to be the foundations of learning, where men gain knowledge and acquire skill.

Knowledge and skill for what? How may that knowledge and skill serve government? What are the types of knowledge and skill?

TWO ANSWERS

I believe that there are basically two answers that can be given to these questions.

The first answer is that colleges can contribute to government in material research and learning, and the second is in the field of spiritual research and learning.

MATERIAL CONTRIBUTIONS

We are presented all around us by evidences of the great material contributions of American higher education to government in our times. We know how, for example, the great and humble universities and colleges of our land contributed to research on the atom bomb in the service of national defense of government and country. We know how government—State and Federal—is contributing funds in many instances to colleges and universities for research on other problems ranging from agricultural to mineral resources, to physical science—physicis and chemistry—problems.

And, too, colleges can so instruct students in the social sciences—in the art of public administration, for example, that government will be assured of adequate personnel in the coming years. Yes, all about us we can see how the men of government and the men of science of higher education, both professors and students, are contributing to material research.

I do not underestimate the value of this material function; I believe it has great expanding frontiers.

T. H. Huxley wrote in 1892: "The medieval university looked backwards; it professed to be a storehouse of old knowledge. * * * The modern university looks forward, and is a factory of new knowledge."

But I do not overestimate the value of this new research, this new knowledge, because, I regret, the colleges have not sufficiently utilized the spiritual wisdom of bygone ages as they should.

SPIRITUAL LEARNING

Yes, material instruction and research do not present us with the major relation of colleges to government, which I regard as a spiritual one. No matter what our scientific advances, no matter how much colleges can contribute to increasing the technological information and then disseminating that technological information to students, no matter how many advances we make in the material realms, the colleges will not have served their principal function if they do not produce students and citizens who are worthy of their spiritual responsibilities in this atomic age.

I am reminded of the words of Goldsmith in the Deserted Village:

"Ill fares the land
To hastening ills a prey
Where wealth accumulates and men decay."

So, too, I say that ill fares that system of higher education whose wealth of knowledge, whose brilliance of faculty, continues to increase without a corresponding increase in its ability to educate students to live adequately and gallantly in these days of tensions, of pressures, of fears and doubts, and anxieties. Yes, it is the role of higher education to equip students for noble living, conquering the negative in us and around us. There is no nobility of the soul except where individuals learn honesty, integrity, and service to their fellows.

CHALLENGE OF OUR TIMES

A few weeks ago I returned from Europe and en route home I spoke to the American Bar Association. I concluded my remarks before that body of distinguished lawyers and judges with this statement:

"In this age of our material splendor and achievement, we must not forget the spiritual wisdom which constitutes the real framework of our national life. We must fight moral decadence at every turn. The world needs spiritual splendor—spiritual ideas of honesty, purity, unselfishness, love—more than it needs our material goods. Without these ideas our material goods will be only a palliative.

"Material remedies for moral ills are ineffective. Many nations are at the ebb tide of spiritual vitality. Our age will determine which of the rival revolutionary philosophies shall sweep the generations of men. You and I cannot stand idly by. We are called to a great purpose to serve God, humanity, and our country by seeing to it that there is a spiritual rebirth in our Nation. It is a momentous hour in history and we ordinary folks can be truly great if we do the job before us."

COLLEGES' OBLIGATIONS

In that paragraph, I had stressed my concept of the obligation of the colleges to our Government and to this age.

1. They must raise up God-serving men and women, who are not so enmeshed in material concepts and the thought of material gain that they have lost sight of the true purpose of living.

2. They must raise up men dedicated to preserving the republic. To do that, these men must understand our system of Constitutional checks and balances, the wonder of it and the imperative need of preserving it for themselves and future generations.

OBLIGATION TO WORK

3. The colleges must raise up men and women who know in whatever field of human endeavor they find themselves, they are dedicated to "work and production." They must not be shirkers, or chiselers, or grafters, but builders; men who recognize that they do not live by bread alone and do not live for self alone.

4. The colleges must raise up men who can teach themselves and learn well in the school of life.

Here is how one man described this matter of self-education. Perhaps he exaggerated somewhat, but listen to what he said:

"Every man has two educations—that which is given to him, and the other that which he gives to himself. Of the two kinds, the latter is by far the most valuable. Indeed, all that is most worthy in a man he must work out and conquer for himself. It is that that constitutes our real and best nourishment. What we are merely taught seldom nourishes the mind like that which we teach ourselves."

SPHERE OF GOVERNMENT

Let us note this fact before we go any further. In a narrow sense the word "Government" relates to administration. In a larger sense, the term Government means 142 million of us humans.

ADVENTURE OF TODAY

In this fast-moving, dramatic, and climactic age, the big business of a college is to see to it that its students are on their toes—"awake and aware" of the privilege of living in this age of great adventure. No generation was ever engaged in a greater adventure than the present. The college must see to it that its graduates do not get a sense of discouragement or the tragic. Yes, you of Ripon are building builders for the future or termites of the present. If they are builders, they will be like Livingston, in darkest Africa, or like Edison, looking for the answer to problems. If they are builders, there will be bred into them the joy of endeavor.

Now, speaking from observations of almost 9 years in Washington, I would say that the colleges of today and tomorrow who simply turn out selfish individuals without any sense of obligation to the period in which they live, are missing the mark. The college that brings to its students the vital truth that man does not live by bread alone; that civilization is not made up of wood and coal and wheat and wool, but of elements more ideal; that life consists in developing a sense of the appreciation of the spiritual values; that the individual is best qualified to meet the impact of this age who develops a sense of loyalty to the proved values, including the Republic—that college has the proper relation to the Government.

For any college to perform adequately in this age, it must have adequate tools. The greatest tool of any college is not that found in its buildings and laboratories, but that found in its professors and teachers. I remember one teacher who sensed the privilege of molding the human clay that came into his classroom into "soul stuff." He taught that there were three great sins in life.

SINS OF LIFE

1. Failure to face your obligations.

2. To permit yourself to become guilty of arrested development.

3. To permit yourself to become a peddler of the negative and defeatist thought.

Under the first category, he spoke of those obligations that one had to his own family, his own city and State, and Nation.

Under the second, he told of men who come out of college thinking they were educated, little recognizing that life itself was a kindergarten course and that we must constantly grow.

And under the third, he said that those who peddled the negative and the defeatist were "sewage carriers," gossipers.

LIFE'S MEANING

And then he quoted Browning that "life has meaning and to find its meaning is my meat and drink." He said that life's meaning alone could be obtained in rendering selfless service to his fellows. And he taught that brilliance was good enough in its place but that the reason so many brilliant men failed was because they depended too much on their brilliance and not enough on work.

Let me recall for you the words of Theodore Roosevelt:

"What counts in a man or in a nation is not what the man or the nation can do, but what he or it actually does. From the standpoint of the nation and from the broader standpoint of mankind, scholarship is of worth chiefly when it is productive, when the scholar not merely receives or acquires, but gives."

Let me recall, too, the words of Benjamin Disraeli, speaking in the House of Commons in 1873:

"A university should be a place of light, of liberty, and of learning."

NEED FOR RENAISSANCE OF IDEALISM

An education that justifies a man only to prey on society imprisons that man. Gluttony, greed, and selfishness cramp the soul of man. Give us men intoxicated, so to speak, with the thought of giving joy and with the thought of helpfulness.

So, what we need in America and what the world needs today is a renaissance of idealism. There must be no deflation of the spirit. The highest function that a college can perform for its government—and people of this Nation—is to see to it that there is such a renaissance; that its graduates are filled with enthusiasm and inspiration; that they recognize with William James that there is an untapped source of power within us. When a college sends such material out in the interests of the Republic, it renders the greatest service to the Republic.

CONCLUSION

The material and the spiritual—each in its place, each to the degree that is merited—that is the twofold function of colleges today to government.

Neither function should be underestimated nor overestimated. We are living in times which require the fulfillment of both functions if we are to continue our progress. Colleges must grow, just as individuals and nations must grow. There is no standing still. There is only going either backward or forward.

I am certain that this splendid institution, like so many institutions throughout our land, will continue to go forward, blazing a trail of progress for other institutions to follow nobly in its way.

The Freedom Train

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Maurice H. Thatcher, formerly a Member of the House of Representatives from the Louisville, Ky., district, on the subject of the Freedom Train. Every year the Society of Mayflower Descendants in the District of Columbia celebrates the anniversary of the signing, on November 21, 1620—old style, November 11—of the famous Mayflower Compact, on the *Mayflower*, the ship that brought the Pilgrims from their exile home in Holland to the bleak shores of New England, where they founded, at Plymouth Rock, the Plymouth Colony. The anniversary of the Compact Day dinner of the society was held on the evening of November 21, 1947, at Hotel Twenty-four Hundred, in the city of Washington. For many years Mr. Thatcher served as governor—the chief officer—of the society. His address was broadcast over Station WINX, Washington. The Freedom Train is very much before the public just now, and it is believed that Mr. Thatcher's very interesting and informative discussion of the subject constitutes a worth-while contribution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very glad to speak on the subject of the Freedom Train, at this, the annual compact day dinner of the Society of Mayflower Descendants in the District of Columbia. I am honored by the invitation thus to appear and am grateful therefor. I must also extend to the staff of WINX Station in Washington on behalf of the society and myself, assurances of the most earnest appreciation for the courtesy accorded in providing for this broadcast.

In recent months the country had been told a great deal about the Freedom Train. The newspapers, the radio, the screen, and other agencies of publicity and communication have had much to say on the subject. It shall be my endeavor to summarize the pertinent facts involved.

The question which first presents itself is, What is the Freedom Train? It is a railway unit made up of three rebuilt steel coaches in thoroughly fireproof manner, with every possible protective device installed, and the whole operating under the most carefully planned schedules of safety. Pullman and other coaches, specially arranged, constitute parts of the train, these for the accommodation of those in charge. The three coaches first named are carrying 127 of the most precious documents and texts of history, beginning with the letter written by Columbus regarding his discovery of America (1492), and coming on down through the centuries to Magna Carta, the Mayflower Compact, the Declaration of Independence, our Federal Constitution and its Bill of Rights, and the Gettysburg Address, to the Charter of the United Nations, and including various other items bearing on the story of the evolution, establishment, and maintenance of free institutions in our Nation, and dealing with World Wars I and II. In most cases originals have been procured and utilized, while in some, authenticated texts and copies. All have been appropriately and protectively framed for the inspection of our citizens. Undoubtedly this is the most striking display of vital instruments dealing with the subject of free government the world has ever known. In addition, six historic flags are included on the train, making a total of 133 exhibits carried. The train and its contents are under the guard of United States marines, and the railroad schedules are all so planned as to assure the fullest measure of security of operation.

Next, it will be asked, "What was the genesis of this undertaking, and what are the motives involved?" The Freedom Train project was suggested by the Attorney General of the United States, Hon. Tom C. Clark, and it has been sponsored by him and the Department of Justice. No Federal funds being available for the purpose, and the opportunities for good appearing to be so great, private influences, of voluntary character, immediately became effective and concrete, and undertook to handle the situation. A private nonprofit corporation was created and organized under the laws of the District of Columbia, and designated as the American Heritage Foundation. Under it a board of trustees was named, with Mr. Winthrop W. Aldrich, prominent New York banker, as chairman.

The Foundation thereupon took over, and has since carried on, the Department of Justice, the Library of Congress, and the National Archives, meanwhile, rendering full and efficient aid and cooperation. The tremendous lot of details involved, including the preparation of the physical set-up of the train, the selection and arrangement of the exhibits, and the making up of the itinerary and schedules for the train's operation have been the work of the Foundation and assisting agencies. The three exhibit cars are furnished by the Pennsylvania Railroad Co., the three pullmans are loaned by the Pullman Co., and the baggage car by the Santa Fe Railroad Co. The Diesel engine is of the latest type, of 2,000 horsepower, and is provided by the American Locomotive Co. The exterior of the entire train is white, with a red and blue stripe, and a gold American eagle in the center; while on the end doors appear the great seal of the United States and that of the American Heritage Foundation. Experienced persons are in charge of the exhibits, and high-class railroad men operate the train.

The necessary funds for all this have been procured from private sources. It is expected that the total direct cost will be something like $1,000,000. In addition, large sums—running into many millions more—will be raised and expended for the purposes of local patriotic programs throughout the country, the same to be put on in the respective localities where the train stops, the exhibition of the contents of the train constituting a fitting climax to each such program. The local radio, screen, church, school, club, and other agencies will be accordingly enlisted in the effort to make the locality program a thoroughgoing success.

The avowed purposes of this great enterprise may be said—in their major imports—to be of twofold character. One is to bring home to the American people the vital story of the age-old fight for free institutions and the free exercise of the democratic process in government, or, in the words of the Foundation, "to re-create awareness of our heritage." The great landmarks in the forward march of freedom—beginning so many centuries ago, and moving onward to Plymouth Rock, New England, Virginia, and the other points of American settlement and colonization, and thence on to the Revolution and the birth and maintenance of our Republic—will thus be most effectively dramatized for the benefit of all. The other primary objective sought is the combating of the many subversive and dangerous activities and influences now current in our midst so antagonistic to our form of government, our freedoms, and our manner of life. In the further language of the Foundation, a purpose involved is "to arouse interest in safeguarding and improving the elements of American democracy." By the exhibition of these great trophies of liberty and constitutional government, it is hoped that there will be, in large measure, a rededication, a reconsecration, by the general body of our citizens, to the cause and principles underlying our democratic-republican form of government, and which is ours today by reason of the sacrifices of our Nation's founders and preservers and by virtue of the long and weary struggles through the centuries for freedom as achieved and represented by these sacred texts. In each visited city there is to be a period of such dedicatory services, culminating in the arrival of the Freedom Train and the exhibition of the exhibits carried. Through the local agencies of exposition in all these urban communities there will be given the fullest notice and information concerning these special services and the train. To quote the Foundation, the program deals only with "our heritage of political and democratic ideals, institutions, and forms. It has nothing to do with our economic system."

This may be sufficient to indicate what is projected and hoped for in this extraordinary and most praiseworthy enterprise. The implications as to all of this may be surmised.

Now, as to the itinerary of the Freedom Train. It began on the 17th day of September 1947 in Philadelphia, the birthplace of the Nation and American independence, and on the one hundred and sixtieth anniversary of the signing of our Federal Constitution in that city. Thence, the journey turned eastward through New Jersey, New York, and the New England States; whence it is turning southwestward, and will reach Washington at midnight, Wednesday, November 26, for a stay of 2 days. The train will be open to the public here from 10 a. m. to 10 p. m. each day—Thursday (Thanksgiving Day) and Friday, November 28. I would especially urge that every effort be made by members of our society and our guests on this occasion to visit the train and see the exhibits carried, and to do this as early as possible. The local press and radio will give full information concerning the stay in Washington. There is now being carried out an appropriate local program, to continue until the train's arrival here. The train will remain on track 4, main concourse, Union Station, while here.

The train is scheduled to make stops at more than 300 of the more important cities and centers of the country scattered throughout the 48 States; and the entire distance to be covered is estimated as being more than 33,000 miles. One year's operation is projected, but it is to be hoped that this period will be substantially extended, as the present stops of the train are wholly insufficient to accommodate the great number who strive to see the train and its exhibits.

This brings us to the very pertinent inquiry, "What exhibits are carried on the Freedom Train?" The included documents have been carefully selected by a committee headed by Mr. John Foster Dulles, and as cataloged by the Foundation. There is not present time to permit a complete enumeration, but certain references may be made. The first title is called The Beginnings. There are three items under this heading, No. 1 being the first printed letter written by Columbus, touching the discovery of America in 1492; No. 2 is the thirteenth century manuscript of Magna Carta; and No. 3 is the English Bill of Rights (1689).

The next two headings are entitled, respectively, "Stirrings of Freedom in Colonial America" and "The Struggle for Independence." There are 12 items under these headings, the first of which—No. 4 in the full series—is the Mayflower Compact, to commemorate which this dinner is held. Various important letters written by Franklin, Jefferson, and others in the Colonial and pre-Revolutionary period are included, together with the contemporary manuscript of the Articles of Confederation, attested and signed by Franklin and Silas Deane; also, a copy of Paine's Common Sense (1776); also are included Jefferson's rough draft of the Declaration of Independence, and a contemporary copy of the Declaration.

The next title is "Fight for Freedom," made up of five items, including The Crisis, by Paine (1776); Paul Revere's original commission as official messenger; the letter of George Washington to Gouveneur Morris, describing conditions of the winter headquarters in 1780; and the Treaty of Paris (1783).

Then follows the title "Religious Freedom," consisting of four items, including the Maryland Toleration Act of 1649; Roger Williams' statement on religious freedom; and Jefferson's bill for religious freedom (1784).

Next is the title "The Achievement of the Constitution," under which are grouped eight items, among them the famous collection of writings by Hamilton, Madison, and Jay in behalf of the adoption of the Federal Constitution, and published under the designation of The Federalist (1788); Washington's own copy of the Constitution (1787); and other historic documents bearing on the subject matter of the Constitution and its ratification.

Then follows the title "The Bill of Rights—A Charter of Liberties." There are eight items included in this group, beginning with the Bill of Rights to the Constitution (1789), and various memoranda and letters of Jefferson and Madison dealing with the Bill of Rights.

The succeeding title "Alexander Hamilton," with three items, is made up of the original manuscripts of Alexander Hamilton on the Constitution, the public credit, and Washington's Farewell Address.

Next, we have the title "The Flag," consisting of two items, including Francis Scott Key's manuscript of the Star-Spangled Banner.

Then follows the title "Washington's Leadership," with two items, to wit: Washington's Revolutionary War account book and his Farewell Address.

Next comes the title "Emancipation and Reconciliation," made up of seven items, including, among them, Lincoln's draft of the Emancipation Proclamation; the Emancipation Proclamation itself; Lincoln's Gettysburg Address, and his Baltimore Address (April 18, 1864); and Gen. Robert E. Lee's letter accepting the presidency of Washington College (August 24, 1865).

The next title is "Women's Rights," covering three items of historic interest, dealing with the subject of enfranchisement of American women, and including the nineteenth amendment, providing for suffrage for women.

Next in line is the title "Freedom Follows the Flag," with five items, including the Northwest Ordinance of 1787, whereby all of the Northwest Territory was ceded by Virginia to the United States Government; letter from President McKinley to William Howard Taft, president of the Philippine Commission (1900); and proclamation of the independence of the Philippines by President Truman (1946).

Then there is the title "Inspiration of American Freedom to Other People," five items, noteworthy documents.

Then follows the title "American Memorabilia." Under this title there are 16 items, among them being Benjamin Franklin's own epitaph in his own handwriting; Mirabeau's tribute to Franklin (1790); the thanks of the Congress of the United States to the French Nation (March 1791); Andrew Jackson's letter to the Secretary of War, describing the battle of New Orleans (1815); and log book of the United States frigate *Constitution* (1815).

Next is the title "Freedom of the Press," with a total of 10 items, including 3 issues of John Peter Zenger's New York Weekly Journal, 1734–35, together with an editorial of Benjamin Franklin concerning Zenger; and John Milton's famous Areopagitica (1644).

Then we have the title "Modern America," with three items, namely: original typescript with autograph annotations of Woodrow Wilson's first inaugural address; declaration by the United Nations, called the Atlantic Charter (1942); and the United Nations Charter (1945).

Then follows the title "Fight for Freedom—World War II," made up of 18 items, including President Franklin D. Roosevelt's proclamation of an unlimited national emergency (May 27, 1941); agreement for the invasion of western Europe; last message from Corregidor; naval reports on operations in the Pacific region; Admiral Nimitz' battle report on Midway; General Clark's message announcing victory of the Allies in Europe; instrument of surrender of the Jap forces in the Philippine Islands; instrument of Germany's unconditional surrender; and log of the U. S. S. *Missouri*, dealing with the Japanese surrender.

While the greater number of documents carried on the train are originals, it has not been possible, always, to procure originals. The Mayflower Compact is utilized in the form of the printed text in a book known as Mourt's Relation, published in 1622, and said to be the first printed story of the voyage of the *Mayflower* to the New World.

In addition to the items in the original list of documents, there have been added by the Foundation certain documents, five in number, including the original typescript draft of the Covenant of the League of Nations, 1918, and personal report of General Stillwell to General Marshall, January 28, 1944, concerning military actions against the Japanese in China.

Added to the 127 items thus included in the titles I have mentioned are 6 flags, designated as "flags of freedom," being General Eisenhower's personal flag, Commodore Matthew C. Perry's flag flown on his flagship at the time of the opening up of Japan in 1854, the flag raised on Mount Suribachi by the United States Marines upon the invasion of Iwo Jima, flag flown from the U. S. S. *Missouri* upon the occasion of the Japanese surrender in Tokyo Bay, and the SHAEF flag, symbolizing the liberation of the peoples of Europe from Nazi tyranny.

Pilgrim descendants are very much gratified that the Mayflower Compact is included as an exhibit on the Freedom Train. It has played a most vital part in the establishment and maintenance of free institutions in America, and in the grouping of early American documents carried on the train it is named as the first of the number. Our Federal Constitution (our Nation's gyroscope) is but a complete and effective elaboration of the principles of self-government stated, in simplest form, by the compact.

In connection with the operation of the Freedom Train a freedom pledge, of appropriate character, has been formulated, and it is being signed by visitors to the train and voiced by various groups engaged in the rededication ceremonies already mentioned.

The pledge is as follows:

"THE FREEDOM PLEDGE

"I am an American. A free American.

"Free to speak—without fear;

"Free to worship God in my own way;

"Free to stand for what I think is right;

"Free to oppose what I believe to be wrong;

"Free to choose those who govern my country.

"This heritage of freedom I pledge to uphold.

"For myself and all mankind."

No true American can view these epoch-making documents without experiencing a quickened and revitalized loyalty to, and appreciation of, the institutions of his country; or without renewed determination to do all within his power to merit, protect, and preserve the heritage of freedom, which, in the slow processes of time and struggle, has come to him and his fellow citizens.

A study of the documents and texts carried will reveal the grim and age-old fight for freedom and the rights of the individual man that began with Magna Carta in A. D. 1512, and culminated in the American Declaration of Independence and our Federal Constitution and its Bill of Rights nearly three centuries later. The efforts of the lovers of liberty was for a government of law rather than a government of men. Only in our Constitution and its amendments, providing for the rights of our people, and through the admirable system of checks and balances set up in the Constitution, has there ever been adequately established in the earth a government of law. The trouble with the world today; the trouble during the two world-embracing wars of the generation now closing; indeed, the trouble which has plagued mankind throughout the past—has been due, primarily, to the fact that there were governments by men rather than governments by law. Arbitrary or despotic power has always brought the disregard of the rights of others, both at home and abroad. Governments by men and totalitarian rule have always spelled dictatorships and tyrannies; and such governments, from times immemorial, have waged cruel and relentless war, and brought death, desolation, and sorrow to the human race. Hence, so long as there shall exist in the earth dictatorships and totalitarian forms of government, there will be wars; and not until there are removed, everywhere, these causes of war, may we expect wars to cease. While it is the duty of all free nations to do everything possible—with the best tools available—to bring about the conditions of permanent peace and security throughout the globe, such nations must not permit themselves to be lulled, by false hopes, into fatal neglect and insecurity. In their efforts for peace they should be governed by a wise realism, as well as by a strong desire, to deal with justice for all.

Twice within the memory of those who live today our America, which, under the free institutions and systems growing out of our manner of life and mode of government, had become strong and powerful beyond all precedent, has been the greatest single factor in saving the world from being conquered and enslaved by dictators and totalitarian might. It is but natural, therefore, that we of America, who believe in its laws, institutions, and way of life, are of the deep and abiding conviction that the safety of the future lies in the knowledge and effective application, in all other lands, of the

essential principles underlying these laws and institutions. In the very nature of the case we cannot undertake to impose on others the establishment of governments embodying these principles; but must trust, under our system of freedom, that the light which oppressed nations and peoples may receive from our uplifted torch, may enable them to find their way. The brightness and enduring quality of this beacon depend on the strength and patriotism of our citizens; and, beyond question, this strength and this patriotism are increased by everything that yields to us a wider knowledge and keener appreciation of our history, heritage, and institutions. In the effort to revitalize the story of the struggle for freedom, and of the birth and perpetuity of the American Nation, and to bring about a new consecration to the purposes, ideals, and destiny of the Republic, the Freedom Train is privileged to play an important part. The thanks of all our people are due those who, by their time, money, and labors, have made the Freedom Train possible.

The idea and purpose of this patriotic venture are of outstanding character: indeed, without precedent in all history. Certainly, in this era of world confusion and perplexity, with the questions of permanent peace and security unsolved, the truths and lessons embodied in the sacred memorials and texts carried on the Freedom Train should be brought home to the American people in the most effective manner; and to this end the privilege of visiting the train and viewing the exhibits should be accorded and availed of in the fullest way possible. In the spirit and word of these documents the American Nation was founded and has grown to unprecedented and enduring greatness. Yet, there are those who would destroy all this by the substitution of alien forms of despotic government, with the inevitable loss of all the precious freedoms which Americans know. All loyal Americans should, therefore, earnestly and effectively cooperate to make the mission of the Freedom Train a success.

The Future of Puerto Rico

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article written by me entitled "Puerto Rico's Future in the Eyes of a United States Senator," which was published in El Estado, a magazine of the island, in the September-October issue of 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUERTO RICO'S FUTURE IN THE EYES OF A UNITED STATES SENATOR

I have been asked by the publication El Estado to express my idea as to the future of Puerto Rico and its people. I believe that I understand the racial, religious, and political background of the island. When I say I understand, I mean understanding of ancestry, political philosophy, and general history. I happen to be of the same racial extraction as most of the people of the island, hence I believe that I understand the general characteristics of many, many years. The God of Nations some hundred years ago determined that the area of continental United States wherein my folks have been born and reared for hundreds of years would become a part of the United States of America. Since then everything that has had to do with matters political, with matters economic, with matters of loyalty and patriotism, deal only with the United States of America. Notwithstanding my ancestors, I was reared under that atmosphere, with all the trials and tribulations, hopes and dreams, that go to the average citizen within the United States. My luck has been good; I am the beneficiary of those things that Uncle Sam stands for, and knowing my background, I say that I can appreciate to the fullest extent the benefits that come to those who are born under the Stars and Stripes.

The people of Puerto Rico come from the same kind of racial, religious, and historical background as those of New Mexico who are of my kind and race. Hence, I believe that I can appreciate everything and every feeling that the Puerto Ricans might have on account of racial and religious characteristics. The idea is that through the same God of nations, Puerto Rico and its people did in 1898 become an integral part of the United States of America. Lots have happened since then, great economic and cultural progress has been made. An understanding of American institutions, ideals, and traditions has prevailed. In 1918 through the Jones law, the citizens of Puerto Rico became American citizens of the United States of America. Hence, to me the question that is now and then asked, "What is the political status of the people of Puerto Rico?" is simple: the greatest status, the ideal status of anyone in the face of the earth is that of being a citizen of the real democracy of the world, a citizen of the United States of America. To forever preserve and protect that citizenship and what it represents, Puerto Ricans have suffered, bled, and died throughout the battlefields of the entire world, so, the status of the people of Puerto Rico is that of being citizens of the United States of America, a great privilege. That being so, there is no need for the people of this island to worry or suffer as to their status, their concern should be: How can they as said citizens improve their individual standing and those of their neighbors? The question is asked: How can that be done? It can be done by following to the spirit of the ideals, the traditions, and those things that the originators of our country fought for and created.

No one knows better than I the racial characteristics of the people of the island. Of course, the child loves the mother and we can love Spain and all its grandeur of the past, but being American citizens we have to face stern reality and be practical. We have to live in this age and not in the age when Isabella and Ferdinand, and Carlos V, and Felipe II were in power and at their best. Let's reason for the moment a practical proposition. Like Spain in its period of influence and grandeur, so was England, Henry the Eighth, Great Queen Bess, Victoria, and the British Empire, but at the moment what practical man that has a family to feed has to be concerned about the time when the sun did not set on the Union Jack? It happens that in this period and in this age, the country that you belong to, the country that is great, the country that is powerful, the country that respects the opinion of any citizen no matter how humble or how meek, is the United States of America; again you are privileged to be citizens of that Nation wherein you can express your opinion as you see fit, where you can worship God as your conscience would dictate, where you can have hope that your children might not suffer what you suffered, and where you can dream of equality of opportunity that can and will be realized.

Every time I come to Puerto Rico I can see progress and general improvement. Since my last trip, the construction of a glass factory and a paper factory have been concluded. Your energetic and enterprising businessmen have been working hard to do their share in industrializing the island. Your cement plants, so necessary for construction and which mean so much to you in the future, are of the best. In a small way, great strides have been made with structural steel; better methods are being practiced in agricultural activities; yes, better wages are being paid to those who labor. More and more persons are going to school and colleges, both here and in the continent. I have seen improvements also in political activity—your public officials as a whole are sincere, patriotic, and industrious citizens who appreciate that they are only the agents of the people of the island and not their bosses. It appears to me that they react very nicely to public demands and aspirations. I, for one, am most happy that your public officials are working and planning for the future. Puerto Rico in a few years will become one of the most interesting tourist centers in the Caribbean. As soon as the island has better hotel facilities to accommodate the visitors you will see the continental American here by the thousand. That will bring outside money; a better understanding of the people of the continent and the island; create new business, and make for better conditions for all concerned. I am optimistic by nature, but I feel that there is plenty of justification notwithstanding to say that, in my opinion, a great future awaits Puerto Rico and its people.

Let's forget about idle dreams and phrase-catching words about independence. There is quite a difference between the so-called independence and liberty and freedom. You are independent. From the bottom of my heart what I wish the people of Puerto Rico to have is freedom, liberty, and equality of opportunities in life under the Stars and Stripes. No one should ask more.

DENNIS CHAVEZ,
United States Senator.

Foreign Aid and Domestic Anti-Inflation Program

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in

There being no objection, the article from the veterans' edition of the Army Times relating to the President's foreign aid and domestic anti-inflation program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON.—The majority of veterans of World War II stand foursquare behind President Truman's broad foreign aid and domestic anti-inflation program as outlined to Congress this week, the results of an opinion poll conducted by Army Times reveal.

Ninety-two percent of thousands of veterans responding to a lengthy opinion poll have gone on record unqualifiedly in support of a continuation of rent controls beyond the present February 29 deadline, the GI weekly reports.

An even 70 percent of the same veterans favor the Marshall plan for extending economic aid to the free countries of Europe, although only 53 percent of them are in favor

of expanding the plan to include other countries of the world.

A lesser majority, 66 percent, said "Yes" to the specific question: "Do you favor restoring price controls on food, clothing, etc.?"

The Army Times' opinion poll did not include a question concerning the rationing of cost-of-living commodities.

Typical comments from veterans responding to the Army Times' poll show a keen understanding among the vets of the need for this country to extend aid to Europe and a strong feeling that industry and big business have failed them in the matter of keeping prices in line.

Those favoring continuation of rent controls are convinced that real estate lobbyists and "rent hogs" will send rents sky high if controls are ended.

Many of them opposing restoration of price controls expressed the view that controls would only result in further scarcities, hoarding, return of the black market while others oppose restoration on the grounds that it is too late to repair the damage done by ending price control too soon.

In every section of the country veterans have painstakingly answered each of 15 questions included in the opinion poll with "Yes" or "No" answers and in most cases have taken the trouble to give their reasons for taking a specific position.

Although returns from the poll are not yet complete and tabulation of the stand of the veterans on other specific questions has not been made as yet it appears that the housing situation and the high cost of living are considered by the majority of veterans as the biggest problems they face.

Further results of the survey will be made public next week.

The Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial dealing with the proposal for foreign aid, which I ask to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Louisville (Ky.) Courier-Journal of November 15, 1947]

A MATTER THAT NEEDS TO BE CLEARED UP

As discussions of the Marshall plan progress, it is certain that increasing importance will attach to foreign assets in the United States. And unless existence of these assets is recognized in official policy, it will damage the general public support which United States citizens now accord efforts to assist Europe.

The House Foreign Affairs Committee has just heard from Representative HERTER that French assets in this country are worth $500,000,000, and that Frenchmen are hoarding at least $2,000,000,000 in gold at home. Recent estimates of assets which foreign citizens have in this country run as high as $17,000,000,000. This equals the total of European aid needed from this country, as estimated by the President's Committee on Foreign Aid.

While it is outside the realm of the Marshall plan, the subject is further emphasized by Yugoslavia's request for release of $56,000,000 of Yugoslav gold frozen in this country during the war.

No figures are available on how much of total foreign assets in the United States came from countries for which Marshall plan assistance is contemplated. The proportion must be considerable. Some of it is normal foreign investment, no doubt. But most of it surely is fugitive money—funds transferred abroad by property owners who feared for the economies of their native lands. It is simply a more elavorate version of what the French are doing by hoarding gold at home.

In effect, then, the United States is asked to demonstrate a faith in the economic survival of European nations which some of their own citizens are unwilling to demonstrate. While the number of these cautious capitalists may be small, it is enough to put a serious damper on our enthusiasm to help.

During the war Great Britain supplied an example of quite a different sort. To finance the war effort almost every British investment in a foreign country was liquidated. South American railroad interests, United States tobacco assets—corporate and private investments—all were sold to provide dollar credits which the British Government repaid owners with sterling credits.

This is the sort of transaction which seems needed now. In its report this month, President Truman's Foreign Aid Committee declared: "It should be made a condition of continued assistance under such a plan (as the Marshall proposal) that the participating countries take all practicable steps to achieve production and monetary goals which they have set for themselves in the Paris report." One such practicable step would be conversion of foreign assets into dollar credits, to eke out United States assistance, and to serve as an ordinary token of good faith on the part of participating nations.

Political Recognition of the Negro

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Republican for the month of October 1947, which makes reference to Mr. R. R. Church, chairman of the Republican American Committee of Chicago, an outstanding Republican who, at one time, was appointed by the late President Coolidge to be Governor of the Virgin Islands.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEGROES DEMAND GOP RECOGNITION

The Republican Party has not won a Presidential election since the Negro voter left the party. It is implicit that Republicans nurture and cultivate the noticeable trend of the Negro voters back to the GOP since the 1946 elections. It is therefore necessary that the entire attitude and strategy of the GOP, as it affects the Negro citizens, be changed.

That is the earnest opinion of the Republican American Committee, whose policy committee met this fall in Philadelphia, under the chairmanship of R. R. Church, and drew up a plan to win back the Negro voter.

To accomplish this objective, the committee believes that "it is necessary that the entire attitude and strategy of our party as it affects the colored citizens must be changed."

As spokesman for the largest single minority in the United States, the committee expressed sincere disappointment in the record of Congress.

"Deeply disturbed over the failure of the first Republican-controlled Congress in 16 years to take any ultimate action on problems of transcending importance affecting the civil rights and economic welfare of large segments of the population * * * we feel impelled to warn our party of the dangers which lie ahead if it continues its policy of inaction on these issues, and we urge it to rededicate itself to its founding principles of equality and justice to give reassurance to Republicans everywhere of its determination to correct these evils by effective legislation."

Placed in its importance of action according to the committee, the legislation which must be passed to turn the Negro voter to the GOP is: 1, the FEPC; 2, the antilynching bill; and 3, the antipoll-tax bill.

"The Republican Party can demonstrate its continued faith in the democratic processes and its belief in the dignity of man by marshalling its forces to pass these bills."

The committee emphasized that the Negro would not be deceived by legislative jockeying, buckpassing, or double talk. He will not be satisfied with noble gestures, but will demand from the party in power actual fulfillment of platform pledges and promises.

To regain this vast voting power of 20,000,000 citizens, the spokesman urged the Republican majority in Congress to place this legislation upon its must calendar in the early part of the next session and to make its passage a matter of party responsibility.

Negroes scattered throughout the 36 States were urged to bring pressure at local and State levels in order to hurry the passage of this Federal legislation. The members of the Republican American committee were asked to hold conferences, to send telegrams, to arrange for personal interviews with their Senators and Representatives in order to impress upon them the necessity for these laws which will improve the living conditions of one-tenth of the population.

Seeking to put an end to the economic and civil barriers which harass the minorities of our Nation, the policy committee members called for the national chairman of the Republican Party to indicate to the American people, that the GOP is not insensate to the hopes, desires, aspirations, and rights of its largest single minority, and that it will take whatever steps are necessary to guarantee the passage of the legislation enumerated previously.

That the Negro desires economic security above all is apparent by his gradations in the importance of the legislation. He placed the Fair Employment Practices Act above all appeals of antilynching and antipoll tax. He desires the opportunity to work amid decent conditions, most of all.

In conclusion, the policy committee of the Republican American committee put itself on record as follows:

"1. That it urge the Republican majority in both Houses of Congress to adopt the Ives-Morse, the antilynch, and the antipoll tax bills, as must legislation.

"2. That the Repubican National Committee appoint a special committee, with the power to act, to make a thorough canvass and a study of the entire situation of the Negro voter, his problems, and his relationship to the GOP.

"3. That the Republican Party set forth the party's principles in a concrete bill of rights, and dispatch this bill to every Republican State, county, and city committee for their information, guidance, and adoption.

"4. That copies of these resolutions be sent to the chairman and all members of the Republican National Committee, to the members of Congress, the Republican governors, to Republican State chairmen, and to the press."

Can America Do the Job?

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. TAYLOR. Mr. President, I should like to call the attention of the Senate to a forthright, clear statement of America's potential—in natural resources and manpower. It is an address entitled, "Can America Do the Job?" by the Honorable C. Girard Davidson, Assistant Secretary of the Interior, before the Young Democratic National Convention, at Cleveland, Ohio, on Saturday, November 15, 1947.

I was particularly interested in Secretary Davidson's view that not only can America meet any task with its resources, but that it can effectively aid in world reconstruction through proper use of its manpower. But Secretary Davidson makes the point that our manpower can function at full pace only if we preserve the cherished civil rights upon which our democracy is based, and he outlines the real threat which exists to the precious American heritage of freedom of opinion.

Mr. President, I ask unanimous consent that Secretary Davidson's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You and I, as more or less young Democrats, are gathered here today not primarily as workers in a political party but as men and women who are seeking to discharge great responsibility to our Nation. The people of this country are keenly aware that the world is at a great crisis; the consciousness is beginning to dawn, too, that our own Nation is at crisis point.

We no longer need to be told that this is one world. We know it. We should no longer need to be told that we are an inseparable part of that world, in sickness and in health, in joy and in sorrow.

The world's basket of bread—its machinery and coal and resources—is our basket, and our bread and resources are also the world's. We know this now. The people of the Nation know it, and their representatives will soon demonstrate this new awareness by their approval of the plan proposed by our Secretary of State, George C. Marshall.

We in the Interior Department have been charged with a special responsibility in connection with America's new role in the world, and particularly in connection with the Marshall plan. We have been asked the question which is bothering many Americans—even many of good heart and sound vision. Can this Nation afford the Marshall plan? Can we meet the demands that are heaped upon us by a prostrate world and by the insistent and meritorious clamor of our own people for a higher standard of living? Can we feed and fuel and equip our own people and industries, at an even better scale, and at the same time provide the people of western Europe and China with food and fuel and equipment so that they can live and work as free people?

Our answer to that in the Krug report is a thumping yes. We can provide for ourselves and for our friends abroad out of our resources and production. But we can do more than that. We can provide for our own people an ever-increasing prosperity, an even richer Nation, and an even better way of life. And at the same time we can provide not a minimum of aid, but we can, if we wish, provide a full measure of assistance for our friends which will help them and us to create a new world of abundance, freedom, and peace.

We can do this—not just the minimum but the maximum for ourselves and our children and for the world—if we will truly and boldly conserve and use the resources and assets with which we are endowed.

We can do this if we proceed in the great tradition of the Democratic Party—if we are brave and resolute and development-minded. We cannot do it if we are timid, reactionary, and miserly.

We must not be the servant who through fear hid his talent and was cast into outer darkness but rather we must be the one whose daring but wise use multiplied his resources and thus opened his way to even greater prosperity.

The conservation and development of our resources has two inseparable phases: one, the development of our physical assets; and two, the greatest use of our human assets—our people.

America's good earth is not feeble or exhausted. In large part it is relatively untouched. America's mighty streams, by and large, are still unharnessed; many of them are still instruments of destruction, instead of servants of our people.

If we are concerned about potential shortages of food, let us add more productive land by irrigation and drainage. As we are doing in the great Coulee basin in the State of Washington, let us reclaim vast tracts of now barren soil upon which great quantities of precious food can be grown.

We are now handicapped by a shortage of electric power. Let us build more of the great dams like Bonneville and Grand Coulee, which our Republican friends once called "white elephants." We can, by harnessing our streams, generate enough electric power to increase vastly our industrial production and to ease the drain upon our oil resources.

Are we worried about the depletion of our soil from erosion and sustained high yields of crops? Let us control our floods, expand our soil conservation programs, reseed the public range, produce and apply more fertilizer, irrigate and drain our land where needed. We Democrats have made great strides since 1933; we can achieve these goals, if we have the will and the vision—and I might add the Congress.

Some people, including those who think that America has quit developing, say that we are running out of iron ore and other important minerals. We at Interior know that this need not be so. We know that what is needed is not tears and lamentation, but work; we have not even fully explored our Nation for minerals. We need to do this; and we need to spend some money for research on the utilization of our abundant stocks of low-grade ores. We know we can develop and use synthetics; we can make coal into gas and gasoline.

These are merely illustrative. We know how to provide an abundance—even a superabundance—of natural resource products. The question is not can we supply ourselves and our friends with what is needed for peace and prosperity, but will we. And this depends upon whether we in the Democratic Party will again take the lead in ushering our people and our Nation—and this time the world—into a new era of development.

But this alone will not do the job. Resource development alone will not provide Americans and their friends in the world with either peace or plenty. Resource development alone is useless—indeed, it is impossible—unless our people are vigorous, alert, imaginative, and adventurous.

America's frontiers were not opened by timid, unimaginative, or frightened people. America was neither won nor developed by people who lived in fear. Our Nation is the product of free men, thinking and working freely; freely agreeing or freely differing. It is our glory and our good fortune that our people have had diverse ideas, differing backgrounds, contrasting principles. In this crucible of free ideas, freely expressed, there was formed the vigorous, indomitable spirit of America.

And so the critical issue we face when we consider whether America can meet the demands of the present and future, is not so much do we have the material resources; but rather can we bring to the job the full talents of free men, freely exercised. Do we, in short, still have the freedom of soul and thought, the greatness of heart and mind, that our crisis requires?

It is easy to say that of course we do, that we are a great democracy, that our very name is synonymous with freedom. That has been our proud history, that has been our promise.

But it is a history and a promise that are now in jeopardy. Our freedom—the freedom for the genius and the crackpot—the scientist and the alchemist—the scholar and the screw ball—which has enriched our society and given us vigor and inventiveness is now in mortal danger. Our boasted protection—even for the view we despise and the thought we reject—is being frantically withdrawn from all but those who march squarely down the middle road of conformity.

I hardly need to prove this point. The attempted suppression of political thought, the instances of oppression of minorities are too fresh in the minds of all of us. The recent report of President Truman's Committee on Civil Rights has brilliantly presented instances in which our practice has failed to live up to the American ideal.

The forthright statement given by President Truman yesterday to his Loyalty Review Board that the executive branch of government will engage in no witch hunts is hailed by all freedom-loving Americans. They commend his order to the departments that in the enforcement of the loyalty program the civil rights of all Government employees shall be properly and adequately protected; that employees will not be removed for disloyalty on the basis of rumor, gossip, or suspicion, but that charges must be presented, a hearing granted, and provision made for appeal.

Of course, the President can and has spoken on this issue for the executive branch. But the party of which he is a member and which holds this belief in the fundamental rights of the average man is not in control of the legislative arm of our Government.

There we have seen individuals stigmatized and branded as outcasts, without charges or a hearing, presumably because they have at some time or other been identified with causes which are now unpopular. Individual citizens have been convicted in the eyes of the public with consequent impairment of their reputation and earning ability on suspicion, innuendo, and the flimsiest of circumstantial evidence in violation of all of the rules of fair play. We have seen an

entire industry and a number of artists exposed to a kleig-light investigation which might better have been staged on a Hollywood set. Citizens are irreparably damaged who have no recourse in the face of congressional immunity. An apparent attempt is being made to eliminate from positions of influence persons who do not adopt a mid-Victorian social and economic philosophy or who do not believe that the development of our political and economic institutions reached perfection during the presidential term of Herbert Hoover.

No true American can quarrel with the stated objective of these inquiries. No true American will tolerate in positions of public trust people whose allegiance is to a foreign power, or who have knowingly allied themselves with an organization which serves another government. But I cannot and will not believe that the eradication of these pests requires a reign of terror. I cannot and will not believe that it makes necessary the suppression of freedom of thought and opinion. And I do not believe that it means that the Government and the Nation, in order to detect and disarm a handful of subversives, must deprive us of the services of loyal scientists, administrators, research workers, clerical employees, and others who, if they are allowed to work freely in an atmosphere of freedom and trust, have so much to contribute.

Those who, with whip and lash, press this terrible crusade in defiance of all of our traditions are of two sorts: they are either frightened people who, fearful of the menace of communism, lack faith in the power of freedom; or they are people who are deliberately and coldly using the opportunity which the real danger of communism affords, to eradicate any vestige of liberalism and progress in America.

These are dangerous people. These are dangerous attitudes. If we once lose faith in the power and vitality of freedom, America is indeed in danger. If we fear that the free development, expression and interchange of ideas is dangerous to our democracy, we have abandoned our heritage. We have then made a fatal overture to the very totalitarianism that we profess to reject.

Totalitarianism masquerades under many stated objectives—some good and some evil—but the essential difference between our democracy and all forms of totalitarianism is the maintenance of civil rights. That difference is worth fighting for, as we have demonstrated in two bloody wars within our lifetime. We must never surrender our basic civil rights on the spurious grounds that their surrender is necessary to fight our enemies. If we do, we shall find that we have lost what we are fighting to preserve, without ever engaging in battle.

There is more to Americanism than the ideas and principles of any one man or group of men. Americanism is a tolerance for all of our ideas. It is the principle and practice of freedom. The application of this kind of Americanism to our problems will assure our success in providing greater abundance for ourselves and the world.

And so, as we increase our efforts to prevent soil erosion, our efforts must be even more vigorous in preventing the erosion of our liberties. As we increase the fertility of our soil to produce more food, we must preserve the fertile soil in which freedom may flourish. As we push the building of dams to prevent devastating floods, we must be alert to see that our civil rights are not swept away in a tidal wave of hysteria. And as we guard our forests from destructive fires, we must be doubly sure that we have no burning of books.

Young Democrats have a special and deep responsibility to keep the party the great champion of human freedom—the heritage given it by Jefferson, Jackson, Wilson, and Roosevelt, which is being carried on so ably by President Truman. With that kind of dedication, the Democratic Party will provide the leadership for an America in which our human as well as our economic potentials will be fully realized. With that kind of leadership, America can do the job.

Removal of Army Officers

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter regarding removal of Army officers, which appeared in the Army and Navy Journal on October 18, 1947.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTERS TO THE EDITOR

REMOVAL OF ARMY OFFICERS

EDITOR, ARMY AND NAVY JOURNAL:

Since unification of the Army and Navy has become an accomplished fact, a rather anomalous and incongruous situation presents itself, namely, that under certain existing laws as, well as recently proposed legislation (H. R. 2744), an officer of the Regular Army may be removed from the active list, discharged, or placed upon the retired list by an order or "confidential letter" signed by the Secretary of War (Secretary of the Army), such action on the part of this official to be "final and conclusive." However, officers of the Regular Navy and Marine Corps may be removed from the active list under similar circumstances only with the approval of the President, the constitutional Commander in Chief, in war and peace.

Insofar as the Army, Navy, and Air Corps are now at least in theory unified under the Secretary of National Defense, it seems strangely inconsistent that all officers are not afforded equal protection under law. All officers of the United States are appointed by the President, by and with the advice and consent of the Senate. Yet the officer of the Regular Army is apparently the only officer of the United States who may be removed without the approval of the President.

In the opinion of this writer, this fantastic discrimination is not generally known and recognized or the significance fully appreciated by officers of the Regular Army, Members of Congress, the Attorney General, and perhaps not even by the newly appointed Secretary of National Defense.

In the near future hundreds of Army officers are going to be passed over and removed from the active list (virtually by selection boards) without the same protection afforded their compatriots of the Navy and Marine Corps—the approval of the President, their Commander in Chief.

The legality and constitutionality of such arbitrary procedure together with its conflict with century old law and custom (Article of War 118) may well be pondered and seriously considered by all concerned before the ax falls.

"OLD ARMY."

Zeal for Democracy

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Zeal for Democracy," by John W. Studebaker, United States Commissioner of Education, published in School Life, in its October 1947 issue.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ZEAL FOR DEMOCRACY

(By John W. Studebaker, United States Commissioner of Education)

A vigorous program designed to vitalize and improve education in schools and colleges throughout the United States with respect to the ideals and benefits of democracy and to reveal the character and tactics of totalitarianism has been launched by the United States Office of Education.

Strongly supported by Congress, this program will aim to make the principles and practice of democracy and the traditions of our republican form of government more vivid and meaningful. Resource material, teaching aids, programs of study, and good practices found in various school systems and colleges to be made available to educators in the future, especially during the next year, should stimulate increasing interest in education for democracy, for representative government; showing clearly the nature of their opposites, namely, communism and fascism.

AMERICAN EDUCATION IS CHALLENGED

We do not know what the future holds for the world in this uncertain atomic era. We do know, however, that American education is challenged to cause millions of young people to come from the schools with the deep-seated conviction that government in a free society is what the people want it to be, that it seeks and responds to the freely expressed desires, opinions, and judgments of the people, and that, conversely, totalitarian government maintains itself by force, suppression, and coercion of the people to make them conform to the will of the dictatorial group "at the top."

Our young people should learn the ways of democracy by practicing them in school and college. They should see the shadows behind glamorous and attractive promises and propagandas for the easy solution of all important social and economic problems. They should intelligently oppose the scapegoat type of indictment of certain classes, creeds, or races. They should examine carefully all undemocratically operated movements or organizations placing power in the hands of a few leaders. They should weigh wisely the continual criticism leveled at politicians or other classes or groups blaming them for our social and economic difficulties. Finally, they should have a sufficient store of knowledge to be able to detect and expose totalitarian methods and practices.

A PROGRAM OF HIGH PRIORITY

I regard this program as one of high priority for American education. As a partner in the program, the United States Office of Education is strengthening its historic function of promoting national security through education. Schools and colleges, completing

the partnership, can make a timely and genuine contribution in helping our youth articulately to defend the democratic way of life with intelligence and perseverance.

Congress Gets Our Free-Mail Plan

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Congress Gets Our Free-Mail Plan," from the Army Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS GETS OUR FREE-MAIL PLAN

WASHINGTON. — The free-transportation plan proposed by Army Times for shipment of individual food and clothing packages to Europe's needy was offered to Congress this week in a bill sponsored by Representative AUGUST H. ANDRESEN, Republican, Minnesota, on the opening day of the special session.

A day later, Representative ANDRESEN appeared before the House Foreign Affairs Committee to suggest that the legislation be incorporated in the Marshall plan itself.

Meantime, a companion bill to put the Army Times plan into effect was offered Thursday in the Senate by Senator BRIEN MCMAHON, Democrat, Connecticut, one of several Congressmen who have previously endorsed the idea. Senator MCMAHON has also suggested to President Truman that the battleship *Missouri* be used to transport such packages.

The Veterans of Foreign Wars, the Amvets, and the AVC have already given whole-hearted veterans' approval to the Army Times plan and the Amvets have endorsed it in national convention with a further pledge that they will raise 1,000,000 individual food packages if the free-postage idea is adopted.

Representative ANDRESEN, who returned only last month from an 11-country tour of Europe as a member of the Herter subcommittee studying foreign-aid needs, testified before the House Foreign Affairs Committee on the opening day of hearings on the Marshall plan that the free-postage idea has logic on its side.

He said food packages were one sure way of proving to the people of Europe that the American people, personally, are coming to their aid because there would be a personal link involved that could never be established through the impersonal distribution of grain and flour.

"But the postage on such packages," he said, "actually costs more than the food they contain."

He added that some idea of the volume of good will inherent in the scheme could be obtained from postal department figures showing that last year, with no special incentives, the American people individually shipped 600,000,000 pounds of food packages to people in Europe.

Representative ANDRESEN described for the committee the many ways that Russia and communism are trying to wreck the Marshall plan while claiming credit for whatever aid the starving and needy are getting now.

He said that if the Marshall plan could include the free-postage idea Europeans then would know that they are getting help from American individuals and we can better teach them the meaning and benefits of democracy while making it possible for Americans to participate personally in a humanitarian venture.

The Minnesota Congressman was complimented by the committee when he completed his testimony.

Federal Trade Commission Policies and Activities

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine address delivered by Hon. Garland S. Ferguson, Chairman of the Federal Trade Commission, before a meeting of the Small Business Advisory Committee in Washington, D. C., on October 13, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a difficult task for anyone in a short time to discuss the policies and activities of the Federal Trade Commission relating to small business. Here time permits the presentation of only an outline.

The Commission operates under several Federal statutes. First and foremost of these is the Federal Trade Commission Act. It is the organic act by which the Federal Trade Commission was created just 33 years ago this last month. It was enacted by the Congress in exercise of the authority contained in the commerce clause of the Constitution of the United States. By this legislation, there was, in 1914 for the first time, introduced into the laws of our country that short and far-reaching clause which reads, "Unfair methods of competition in commerce are hereby declared unlawful." This provision against unfair methods of competition was, and still is, the cornerstone of the regulation of competitive practices in interstate commerce. The Commission was set up under this act as the administrative and enforcing agency of the Government with powers to carry out its provisions, and with authority, in the interest of the public, to issue cease-and-desist orders against persons, partnerships, or corporations found using such unfair methods of competition in interstate commerce. Experience in the application of this law, since it was signed by President Woodrow Wilson in 1914, has brought to the Commission many cases of administrative and judicial determination. These reveal that the phrase "unfair methods of competition" is not only of comprehensive character, but also is a living organism capable of being applied to new, or as yet unknown practices, which may arise from time to time in the conduct of business and prove to be unfair.

In the same year 1914, the Clayton Act was passed, by which the Congress legislated, among other things, against the practice of lessening competition and restraining trade by certain specific trade practices; namely, (1) discriminations in price as was then covered by section 2 of the act; (2) the use of tying contracts in the distribution of goods, wares or merchandise as covered by section 3; (3) the practice of one competitor gaining control of another through stock acquisitions or mergers covered by section 7 of the act, and (4) the use of interlocking directorates between normally competing corporations. Primary authority to enforce the provisions of the Clayton Act proscribing these several inhibited trade practices was vested in the Commission, with certain concurrent authority conferred upon the Department of Justice.

In 1936, Congress took another step, to add to the category of unfair trade practices with which the Commission may deal, by enacting the Robinson-Patman Antidiscrimination Act. This statute amends section 2 of the Clayton Act of 1914 and prohibits the practice of selling in commerce at discriminatory prices where the effect may be substantially to lessen competition, tend to create a monopoly, or to injure, destroy, or prevent competition. It also catalogs, as unfair and illegal trade practices, the granting of certain types of brokerage, commissions, advertising or promotional allowances and discriminatory services or facilities.

In 1938 came the Wheeler-Lea Act by which Congress further expanded the Federal Trade Commission's authority to deal with unfair trade practices. A primary purpose for the Wheeler-Lea enactment was to facilitate remedial processes for dealing with unfair trade practices and to make substantive provisions of law of more direct service in protecting the public interest. The act amends and strengthens the original Federal Trade Commission Act of 1914. By it, the words "unfair or deceptive acts or practices in commerce" were added to the phrase "unfair methods of competition in commerce" as it stood in the original act. Thus, as this basic statute now stands, the Commission is authorized to act in prevention of all those business practices which the law classifies as "unfair methods of competition in commerce" or "unfair or deceptive acts or practices in commerce."

The Wheeler-Lea Act specifically lists false or misleading advertising of food, drugs, curative devices, and cosmetics, as being a type of trade practice falling within the inhibited class. It also adds special civil and criminal remedies in the case of misrepresentation of these products. The Wool Products Labeling Act of 1939 was designed to protect industry, trade, and the consumer against the evils resulting from the unrevealed presence of substitutes and mixtures in wool products.

The statutes which I have cited constitute the source of the Commission's authority and the chart of its duties with respect to the regulation of business practices in interstate commerce. They are all directed toward the maintenance of free and fair competition and to the control of methods which, in the eyes of the law, are harmful to industry, trade, and the public; which obstruct or interfere with the free flow of merchandise in the channels of distribution under sound and equitable conditions.

As the official body set up to deal with these matters, the Commission was created in 1914 as a nonpartisan independent agency of the Government and a quasi-judicial tribunal, having not only powers and facilities for administration and investigation, but also the determination of issues by judicial processes.

In the work of the Commission directed toward preventing the use of unfair trade practices in industry and trade, three well-defined courses of procedure are followed. One might somewhat descriptively refer to them as the compulsory method, the consent method, and the cooperative method. All three are designed to do just what our act says; that is, prevent unfair competition, and unfair and receptive acts and practices in interstate commerce.

Where compulsory action against an offender is required to bring about correction

and the protection of the public interest, the Commission, as I have already indicated, is authorized, upon due process, to issue cease and desist orders against the offender. In such cases, findings of fact are made upon pleadings and evidence and, of course, after full opportunity is afforded the respondent for the taking of testimony, the filing of briefs, and the submission of oral argument. Such cease-and-desist orders may be appealed to the United States Circuit Courts of Appeal for review, and may eventually be taken to the Supreme Court of the United States upon certiorari. If no appeal is taken, the order becomes final at the end of 60 days. For violation of a final order, the offender may be subjected to civil penalties of not more than $5,000 for each violation, collectible through the courts.

One charged only with a violation of our organic act, however, need not in all cases have compulsory action in the nature of formal trial taken against him, unless he chooses to persist in the alleged unfair practices and refuses to avail himself of the means of voluntarily consenting to refrain from them in a manner which will satisfy the public interest and avoid the necessity for litigation; or unless he desires to contest the issues and have them determined by the judicial processes I have referred to. If an offender desires to agree voluntarily to discontinue the unfair practice which is complained of, the Commission, in its discretion and subject to certain limitations, may afford him the opportunity to enter into an agreement, called a stipulation, to cease and desist. It is the policy of the Commission to extend the privilege of such informal stipulation only in cases where it is of the opinion, under all the circumstances, that disposition of the case by this method will effect prompt correction and will fully protect and satisfy the public interest. Such stipulation procedure is what I have referred to as the consent method of settling cases without the necessity of instituting formal litigation. It does not extend to cases of deliberate fraud or concerted action in restraint of trade.

A third procedure available for the elimination of unfair trade practices and the consequent promotion of fair standards of business ethics is provided by the Commission in the trade practice conference plan. This is what I have referred to as the cooperative method. Such trade practice conference procedure has for its purpose the wholesale elimination of unfair trade practices by industry-wide cooperation with the Commission and collaboration of all groups in interest in the formulation, establishment, and observance of fair-trade practice rules governing the conduct of the industry and trade in question. Under the plan, joint action among competitors with the supervision and aid of the Commission is possible, and experience proved the efficacy of this method in more than 100 industries as an adjunct to the compulsory procedure which I have outlined. The Commission is now, with the sanction of the Congress, enlarging this method of procedure.

Conference proceedings are conducted on a basis of voluntary participation; though the Commission may initiate the conference, it cannot compel attendance or participation. Parties in interest are at all times free to advise and consult with the Commission's representatives in the matter. Where necessary or desirable, informal meetings or preliminary discussion may be arranged to formulate tentative drafts of rules or to develop, through an exchange of ideas, a clearer understanding of the problems involved and the assistance which can be rendered by the Commission in their solution. The conference considers and proposes rules for submission to the Commission for its approval. Before rules are finally approved or promulgated by the Commission, they are subjected to public hearings at which all interested or affected parties are afforded opportunity to present their views. They may submit such in writing or be heard orally as desired. Through such conferences and hearings, all groups in interest have the opportunity to be heard and to consult with us in the matter, even though they may not happen to be classed as members of the particular industry or trade involved.

In passing upon the rules proposed for approval, the Commission applies the test of law. In other words, the rules must not sanction practices which are contrary to law or which, when put into effect, may bring about a result which is illegal or opposed to the public interest. The purpose of this is, of course, obvious. It is not within our province to sanction violations of the law, but on the contrary we are directed to promote law observance, to the end that honest business may be liberated from the waste and fetters of unfair practices, and the rights of the public may be protected.

In addition to the activities of the Commission in enforcing the laws committed to it, it has the function which may be described as advisory or consultative in character, as provided for under section 6 of the Federal Trade Commission Act. In carrying out that function, the Commission places at the service of Congress, the President, the courts, and the general public the expert knowledge and skill acquired by the Commission and its staff in ascertaining and analyzing the facts regarding various industries and recommending remedies for evils disclosed, including recommendations for legislation. This class of activities includes matters of broad public policy that are of special interest, not only to the statesman and lawmaker, but also to the economist, the small businessman, and all others who are concerned with economic and social trends with their long-range results.

While the subject matter of these reports varies considerably, most of them deal with the general subject of competition and monopoly. With the level of economic concentration reaching all-time heights, the need for such special reports will undoubtedly increase, and it is hoped that they will be continued and expanded.

The relevancy of these reports to the problem of small business is obvious. They describe the general trend of economic concentration, the means by which large corporations may have achieved the ascendancy of power, the mergers and acquisitions which may have taken place, and the monopolistic practices which may have existed. Frequently these reports have an immediate impact on legislation; for example, the Commission's report in 1919 which resulted in the Packers and Stockyards Act; the report of the Commission on public utilities which resulted in the Securities and Exchange Act and the Public Utility Holding Company Act; and recently its report on the copper industry that had its effect on tariff legislation.

In passing section 6 of the Federal Trade Commission Act, Congress intended that the Commission should make full use of the "spotlight of publicity" as a means of ameliorating the uneconomic and harmful practices of monopolies which could not be adequately dealt with through the antitrust laws. It is the purpose of the Commission to effectively utilize this power in order to protect small business and the competitive system. Recently the Commission gathered factual information and reported it to Congress showing that in the dynamic development of industry, based on modern technology, the facts of concentration in big business and the swallowing up of small business constantly tend to outrun the law. In laying these facts before Congress, the Commission pointed up today's choice as being one between legislative action recommended by the Commission to plug loopholes in the present laws against further concentration of economic power in big business, the disappearance of small business, and continued frustration of our declared public policy for free and competitive enterprise.

Simply stated, the Commission's proposal is that the Clayton Act be so amended that acquisition by a corporation engaged in interstate commerce of the assets of a competing corporation also engaged in interstate commerce be made unlawful where the result tends to monopoly. As the law now is, only stock (not asset) acquistions so tending are unlawful under that act.

Under the present law the Commission cannot halt this concentration of economic power when accomplished through acquisition of assets as distinguished from acquisition of stocks. It is in that respect that the Commission has recommended each year since 1927 that Congress amend and strengthen the law, so as to make the acquisition of assets unlawful.

The war contributed powerfully to the trend of concentration. Government purchases and Goverment financing of productive facilities were necessarily, in order to win the war, channeled predominantly into the hands of corporations which already occupied positions of dominance. Surplus profits created by such channeling have contributed powerfully to the trend by providing funds for additional wartime and postwar expansion through acquisition of former competitors.

In its enforcement of laws committed to it by Congress, the Commission has proceeded for the protection and preservation of small business enterprises against blacklisting and boycotting with all that they entail concerning cutting off supplies and outlets, use of tying and exclusive dealing arrangements, and unlawful acquisition of stock of competitors. Examples of the Commission's actions in those respects are briefly stated as follows:

In an industry consisting of approximately 100 wholesalers, the Commission found that they, through a trade association, combined and agreed not to buy from manufacturers dealing with small retailers on terms and conditions not approved by the wholesalers. It was clear that the purpose of the scheme of the wholesalers was to prevent manufacturers from dealing directly with small merchants who were selling at retail. The small merchants thus not approved were included in "white lists" prepared and distributed to manufacturers by the wholesalers. Those small businessmen were thereby blacklisted. Manufacturers who sold them were then boycotted by the organized wholesalers. The Commission ordered that this practice be stopped. Its order was appealed to the United States Circuit Court of Appeals, where it was affirmed.

A similar case which did not reach the courts was one in which an organization of large building material dealers established rules and definitions, which, in effect, decreed that a manufacturer of building materials should not sell to the small retail distributors unless such retailers had been approved by the director of the organization. Such approvals were evidenced by certificates issued by the director. The retailer not holding such certificate was not considered to have shown any economic necessity for his operation as a building supply dealer. The operations of many small businessmen were thus interfered with and some were put out of business. The Commission's order in the case directed that such practices of that organization cease. There was no appeal to the courts.

During 1945, the Supreme Court of the United States unanimously upheld orders

previously entered by the Commission against two large and prominent producers of glucose, one with a plant at Decatur, Ill., and the other with plants at Kansas City, Mo., and Chicago, Ill. Those two companies had engaged in price discriminations through the use of a basing-point system. Under the operations of that system, small businessmen engaged in the manufacture and sale of candy in southwestern United States, including Kansas City, as well as those located in the neighborhood of Decatur, Ill., were being discriminated against in favor of the large candy manufacturing concerns located in Chicago. The discriminations involved in some instances exceeded the margin of profit usually realizable on some of the more popular brands of candy bars.

In other cases the Commission has proceeded against the practice of two large optical goods manufacturers because of their practices of granting preferential treatment to large buyers. For example, those companies granted quantity discounts in terms of what they designated "big dealer" and "little dealer" discounts. They gave the big dealers who were able to purchase optical goods in the amount of $1,500 per month a discount of 25 percent from the prices that they compelled the small dealers to pay. The Commission's orders entered in the cases directed that such practice be discontinued.

In a case against a large salt manufacturer the Commission charged, and found that it was selling table salt to small buyers at prices considerably above those it was charging large buyers. The Commission found that the discriminations thus practiced operated to the detriment of the small businessmen and directed that the discriminations be discontinued. Many more examples could be cited.

For a number of years officials of associations representing more than 25,000 independent tire dealers, located throughout the United States, have been filing with the Commission and with Members of the House of Representatives and the Senate complaints that preferential treatment in the form of quantity discounts and other discriminatory favors were accorded to mass distributors of rubber tires by the manufacturers are creating monopolistic conditions in that industry. They have complained that mass distributors are gradually driving the independent tire dealers out of business. The Commission has had inadequate funds with which to undertake investigations for the purpose of ascertaining all of the facts with respect to the distribution and pricing policies of more than 40 manufacturers of tires and the effects of such policies on the independent tire dealers. However, following meetings of members of the Commission's staff with representatives of a Subcommittee of the House Select Committee on Small Business during June 1947, the Commission on July 7 adopted a resolution pursuant to the terms of which it has moved to investigate the pricing and distribution policies of more than 40 manufacturers of automobile tires. This action has been taken for the purpose of determining whether conditions in the industry warrant the Commission taking action as is provided for in section 2 of the Clayton Act, as amended, to fix and establish quantity limits with respect to the sale of automobile tires in commerce.

From what I have stated, it is, I trust, clear that the Commission is empowered to and is acting on a wide front in dealing with competitive practices which are truly unfair. In so doing, it is actively engaged in the work of keeping the channels of commerce free from unfair business practices and I can assure you that the Commission is willing and anxious to aid not only small business but all businessmen in every way possible to achieve and maintain these objectives in the public interest.

Pennsylvania's Heritage of Freedom—Historic Documents in State Museum

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. MARTIN. Mr. President, we have all been greatly interested in the Freedom Train as it has proceeded over America. I think the exhibition of the historic documents on the Freedom Train has done much to arouse the people of the United States to a better understanding of what our Government really is.

Pennsylvania has also on exhibition what may be called a Freedom Train of its own, a large room of the State Museum at Harrisburg, which contains original documents pertaining to the State. I call it to the attention of the Members of the Senate, and hope that all who may visit our State will be interested in viewing the original charter given by King Charles II to William Penn, dated March 4, 1681, and other papers of similar character. There is a description of those papers contained in an article published in the current issue of Right of Way, the official publication of the Pennsylvania Threshermen and Farmers Protective Association, and I ask that the statement may be printed in the Appendix.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the current issue of the Right of Way, the official publication of the Pennsylvania Threshermen and Farmers Protective Association]

PENNSYLVANIA'S HERITAGE OF FREEDOM EXHIBIT OPEN TO PUBLIC—ORIGINAL DOCUMENTS IN STATE MUSEUM DESCRIBED BY CHARLES M. STEESE, ADMINISTRATIVE ASSISTANT

Pennsylvania has a Freedom Train of its own—only it's firmly anchored in a large room of the State Museum at Harrisburg.

Incident to the recent visit of the widely heralded Freedom Train, now touring the Nation, and in order to give the citizens of Pennsylvania an opportunity of seeing for the first time in the history of the State all of the priceless documents pertaining to the founding of Pennsylvania and development of its government, there has been arranged in the State museum under special police guard an exhibition of these important papers.

The exhibition was formally opened by Gov. James H. Duff on Navy Day, October 27, and will remain in the museum over the winter, in order to give the public schools, the colleges, and all citizens an opportunity to see them.

It is of interest to note that the room in which the documents are being displayed was used by the Governor as an Executive Office prior to the building of the present capitol.

The documents have been carefully bound in light-repellent film, and are lighted by a carefully selected fluorescent tube in order that no damage will be done in the display of them.

Following is a complete description of each document in this exhibit:

THE CHARTER OF KING CHARLES II TO WILLIAM PENN

This charter, approved by the King on March 4, 1681, and proclaimed on April 2, 1681, officially created and named Pennsylvania, and made William Penn its first governor and proprietor.

INDENTURE BETWEEN THE DUKE OF YORK AND WILLIAM PENN, AUGUST 21, 1682

By this the duke released his claims to the area included in Pennsylvania, which claims were based upon his conquest of the Dutch colonies in 1664. It is interesting not only as a legal document in Pennsylvania history, but as evidence of the friendship between William Penn and the duke, who later became King James II.

THE FIRST FRAME OF GOVERNMENT FOR PENNSYLVANIA

This frame of government, or constitution, for the Province of Pennsylvania, was written by William Penn, and formally adopted in England on April 25, 1682, by the Proprietor and some of the first purchasers. This is Pennsylvania's first constitution.

THE SECOND FRAME OF GOVERNMENT FOR PENNSYLVANIA

A number of objections were made to the First Frame of Government, and William Penn issued this second Frame, which the Assembly approved on April 2, 1683. This is, therefore, the first constitution of Pennsylvania which was formally approved by elected representatives of the people. Only the first page is shown.

THE GREAT LAW OF 1682

This, the first code of laws of Pennsylvania was adopted by the first session of the assembly, held at Chester in December, 1682. The preamble and first chapter are especially noteworthy, since they established religious toleration and freedom of conscience as basic foundations of Pennsylvania law.

THE CHARTER OF PRIVILEGES, 1701

When William Penn returned to Pennsylvania late in 1699, he immediately began to plan a final settlement of constitutional difficulties. The result was this charter of privileges, adopted on October 28, 1701. This, the last constitution of provincial Pennsylvania remained in effect until the American Revolution, longer than any other constitution of Pennsylvania down to the present time. William Penn relinquished so much of his power to the assembly that, except in the appointment of the governor, Pennsylvania had a democratic system of government from that time. This is the version enrolled in the Provincial Record, the minutes of the governor's council.

MINUTES OF THE CONSTITUTIONAL CONVENTION OF 1776

In response to the wish of Congress, Pennsylvania revolutionary leaders early proceeded to organize an independent State government. On July 11, 1776, a constitutional convention assembled in Philadelphia, and was in session until September 28. Benjamin Franklin was the president of this convention, and had an important part in the drafting of the first State constitution. This manuscript booklet records the proceedings of the convention.

FIRST CONSTITUTION OF THE COMMONWEALTH OF PENNSYLVANIA

The first State constitution was approved by the constitutional convention on September 28, 1776, and went into effect immediately. It was an ultrademocratic constitution, providing for a general assembly of but one house, and for a plural executive, the supreme executive council, to exercise the functions usually entrusted to a governor.

Its most famous section was the declaration of rights, stating the rights of all citizens. This section of the constitution of 1776 is still in force, having been retained by all the later constitutions of Pennsylvania.

THE DECLARATION OF RIGHTS

The most famous and lasting part of the constitution of 1776 was the declaration of rights, which stated the fundamental and inalienable rights of all citizens. Like the Virginia bill of rights, which it followed by only a few months, it was a pattern for bill of rights in other States, for the Bill of Rights in the United States Constitution, and for the French Declaration of the Rights of Man. It is still in force, having been retained in all the later constitutions of Pennsylvania.

PENNSYLVANIA'S RATIFICATION OF THE UNITED STATES CONSTITUTION

On December 12, 1787, Pennsylvania became the second State to ratify the Constitution of the United States, which had been drafted by the Federal Constitutional Convention meeting in Philadelphia from May 25 to September 17, 1787. Pennsylvanian delegates had an important part in the writing of the Constitution, which is a significant milestone in the evolution of Pennsylvania as well as United States Government. This is the official copy, with the signatures of the delegates to the State's ratification convention.

THE CONSTITUTION OF 1790

The second State constitutional convention met in Philadelphia on November 24, 1789, and drew up this more conservative State constitution, providing for a governor, a general assembly of two houses, and a more independent judiciary. The convention adjourned on September 2, 1790, after declaring the new constitution in effect. Notice the signatures.

CONSTITUTION OF 1838

The third State constitutional convention met at Harrisburg on May 2, 1837, adjourned on November 23 to meet again in Philadelphia, where on February 22, 1838, the amended constitution was adopted and signed. It was submitted to a vote of the electorate on October 9, 1838, and went into effect on January 1, 1839. Under this constitution all male white citizens received the right to vote, the power of the general assembly was expanded, and the number of elective officers was increased.

THE PRESENT CONSTITUTION OF THE COMMONWEALTH OF PENNSYLVANIA

The fourth State constitutional convention met in Harrisburg on November 12, 1872, and adjourned on November 27 to meet again in Philadelphia where the present constitution of the Commonwealth was completed on November 3, 1873. It was submitted to the electorate on December 16, 1873, and went into effect on January 1, 1874. Under this constitution the offices of lieutenant governor and secretary of internal affairs were created, the general assembly's power to enact special or local legislation was limited, and the structure of government was elaborated in great detail. This is the official copy, from the office of the secretary of the Commonwealth, its legal custodian.

TWO IMPORTANT INDIAN TREATIES

The treaty with the Five Nations, signed October 11, 1736, released their claim to the lands watered by the Susquehanna River. For this they were paid 500 pounds. The walking purchase treaty of August 5, 1737, certified on September 23, 1757, relates to the famous Indian walk, in which expert walkers walked for a day and a half. From this transaction Pennsylvania gained 1,200 square miles for settlement in eastern Pennsylvania.

SHIP LISTS

Valuable lists of immigrants to Pennsylvania in colonial days are preserved in these ship lists, which show the names of the settlers as well as the ships on which they arrived. Notice especially the oath of allegiance to the King, and of fidelity to the proprietor, which all were obliged to subscribe before admission to the colony.

Issues Before the American People

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, November 28 (legislative day of Monday, November 24), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Lewis B. Schwellenbach, Secretary of Labor, before the national convention of the Congress of Industrial Organizations, at Boston, Mass., on October 14, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I was happy to receive and accept the invitation extended to me by the Congress of Industrial Organizations. It gives me an opportunity to discuss with you some of the issues which I consider important today, and also to renew acquaintance with a number of my friends within the organization. Before I finish the subject of gratitude, there are two other actions which this organization has taken for which I am deeply grateful. One is the consistent reelection of Philip Murray as your president. He has a complete understanding of the problems which confront our Nation and the relationship between the labor movement and those problems. He is not an appeaser on any fundamental issue which confronts the labor movement, but he does understand the necessity for proper timing of the presentation of questions in order that they may most effectively be presented and considered. I have for him not only the highest respect, but a feeling of deep affection as a result of our contacts during the last 2 years. The third thing for which I wish to thank you is the recommendation by this organization to the Department of Labor of John Gibson. No night was too long, nor was any trip by plane too dangerous to stop him when he and I considered either was necessary. He is the hardest worker I ever knew and the most loyal assistant I have ever had. I have been, and am now, extremely proud of the fact that he is one of the assistant secretaries in the Department of Labor.

The last 6 weeks, through a series of speeches and press conferences, I have attempted to bring to the attention of the American people the fact that despite what they have been told to the contrary, the increases in wages of the workers of this country were not the exclusive causes of increase in prices. For two long years representatives of business, in the press and the magazines, have dinned into the ears of the American people the claim that advances in prices were exclusively caused by advances in wages. I have attempted to be conservative in my attitude and fair to all involved. I had hoped that as a result of these speeches and interviews, I might work myself into an argument with those who have presented the claim to the contrary. The facts are on my side. Insofar as I know, the only newspaper or individual who has attempted to answer me has been the Baltimore Sun. Its answer was that I was a politician and a demagogue. I suppose that having held political office during 8 of the last 13 years, I am properly classified as a politician. However, I know that had I done what the Baltimore Sun and other papers I think I should have done, I would be a statesman. Had I broken the promise to the people of my State at the time of my election to the Senate and refused to follow the leadership of Franklin D. Roosevelt, I would have been a statesman. Had I taken advantage of the opportunity presented by my present office to condemn and to join into an effort to destroy the labor movement in the United States, I would have been a statesman. The good faith of keeping campaign promises and the following of a course consistent with my deepest convictions upon the question of organized labor have relegated me, in the eyes of editors and publishers, as a mere politician. For myself, if that is the standard, I prefer to be known as a politician. Insofar as demagoguery is concerned, if one becomes a demagogue by telling the truth to the American people, if one becomes a demagogue by revealing facts which heretofore have been concealed, if in refusing to permit my office to be used as a club for the destruction of organized labor as many people would have liked me to do, if these things constitute demagoguery, I may say that while I refuse to accept the opprobrium, I would still prefer to be called that than to become a statesmen by having to knuckle down to every special interest in the United States. As I say, I had hoped to stir up some legitimate argument on this question upon the basis of facts. I have failed in this because no person can get into a legitimate argument with one who ignores the facts and ignores the figures and simply answers by calling names and hurling epithets at those with whom they disagree.

All I have tried to do and all I am trying to do now is to prove that wages alone are not responsible for price increases, and to bring to the American people the realization that the element of profits is also an important factor which must not be overlooked in evaluating the problem of prices. You all know, and every individual in America who reads the papers knows that ever since VJ-day, the attempt has been made, and usually successful, to place responsibility for any price increase upon wage increases. You are all familiar with the typical release given out by any industry which decides to increase its prices. The head of that industry issues a pontifical statement to the effect that, against their wishes, it has become necessary to increase prices. The reasons given for it are increase in wages, which are expounded at great length, and then the statement that there were other factors which created the necessity for the price increase. Usually the figures are given out as a comparison between 1939 and 1947. Everyone knows that during the war years wage increases were not objected to by the manufacturer because he knew that the Government would pay the bill, either in adjustments of their contracts on which they were working, or contract settlements after the war was over. Everyone knows that in 1939 we had a loose labor market under which the purchasers of labor had a pool of 6,000,000 unemployed upon which they might call if they desired to keep the wages down. The subject which is of importance and the subject about which the American people want to know, is what has happened during the period since VJ-day and since June 1946 when price control was abolished. Those are the pertinent figures and those are the figures to which the American people

should pay attention. I am free to admit that wage increases have had a relationship to price increases. I will not admit and I deny with all my vigor that all price increases should be blamed on wage increases. While wages have increased 21 percent from August 1945 to August 1947, during the same period prices have increased 24 percent. Of that 24 percent, 20 percent occurred after the lapse of OPA in June of last year, while the hourly earnings of factory workers increased 15 percent.

For the third quarter of 1946, which was the first quarter after price control received its stab in the back, the annual reported profit of all corporations, after taxes, was $8,100,000,000. Using the second quarter of 1947 and similarly adjusting it to an annual basis after taxes, the profits are $16,600,000,000, showing an increase in profits since the abolition of OPA as slightly above 100 percent. You will notice that the corporate profit figures I have given to you are after taxes. I have made no such deduction in reference to wages, but this is because it is impossible for anyone accurately to figure the amount by percentage of the wage earners' pay which goes to taxes. Certainly the 21 percent increase in wages should be reduced by the amount of individual income taxes that the individual or the family may pay. I do not think that any sensible person can deny that the use of the repeated statement that wage increase is exclusively culpable so far as prices are concerned in the light of the fact that price increases have consistently moved ahead of wage increases at a time when the profits of industry were increasing over 100 percent. I recognize the right of a corporation to make profits, but I say that when profits increase at this rate, they certainly should bear a substantial portion of the burden for the price increases since June 1946. The contention is made that of the $16,600,000,000, $4,100,000,000 should be disregarded because it is contained in inventory, which may be substantially reduced because of decrease in prices. I do not know, and no honest-minded citizen should pretend to know what portion of these inventories will ultimately be disposed of at lower prices. I do know, however, that ever since prices started to rise, the holders of inventories in this country have been able to sustain their position before the courts that they were entitled to use for income-tax purposes the amount of the last highest price which they paid for a portion of their inventories which they sell. This is called "the last in and first out doctrine," whereby inventory holders are protected in their income taxes against price increase which they have paid for the products they have bought. It will be interesting to find out their attitude upon the same problem when and if there will be price reductions of the articles now inventoried.

The claim is made that these profits are not reflected in dividends. Of course they would not be because the stockholders might then become accustomed to a high rate of dividend and make inquiry when it had been reduced. The claim is also made that after completely wiping out the inventory figure, the present percentage of profit to the national income was exceeded in 1929 and 1930, 1937, 1940 and 1941. That may be true. But look what happened to the country's economy after 1929 and 1930, and what happened in the last months of 1937. 1940 and 1941 were prewar years in which we were preparing for war, hold no relationship to our general economy picture. The attempt is made to blame the Administration policy of shipments of products abroad for a portion of the price increase. The fact is that during the first half of 1947 we exported 8.8 percent of our gross national product as compared with 6.8 percent during the year 1929. Certainly this 2-percent increase of our shipments abroad can bear no substantial relationship to increase in prices here. Another effort to blame the administration involves the criticism of our tax policy. Statements are made that if the President had not vetoed the tax bills there would not have been such an increase in prices. The fact of the matter is, as everybody recognizes, that we do not today have a free market in which there is competition. We have a sellers' market because the earnings and savings of the people during the war and the profits of the corporations make it possible without control to run the prices up. The corporations already had received a substantial contribution so far as taxes are concerned when the excess profits tax was abolished as of January 1, 1946. The adoption of the tax bills which were passed and vetoed would simply have increased the demand without increasing the supply.

The President is asking the people to demonstrate that they want to win the last war. The conclusion of the shooting war did not mean the end of the war. On our part the war was fought for certain definite purposes and ideals. We wanted to preserve the institutions of democracy, freedom of speech and freedom of the press and freedom of religion. We saw Germany and Japan destroy these freedoms. It was but the first step along the road to ultimate aggressions which finally resulted in war. Our war will not be won until we have achieved those objectives.

It is not our purpose to impress upon the rest of the world our system of democracy. What we tried to do in the war, and what we still are trying to do, is to see to it that those nations which want to embrace all or a portion of our form of democracy may do so without the interference from the outside by any totalitarian power. We made a substantial first payment on this doctrine in the form of the lives of American boys in every part of the world. There have come back hundreds of thousands of those who added their personal contribution to the cause by returning home with bodies maimed and minds shattered. The amount which the President is asking with which to pay off the balance which is required if our war objectives are attained is picayunish beyond what these men have paid and infinitesimal as compared with what a third war would cost. All he asks the American people to do is stop wasting food. The sacrifices for which he asks are the minimum. The American people, if they will but think, must realize the necessity for, the desirability of, this last expenditure which they are called upon to make. I ask the labor movement of America to join, as I know it will join, with these efforts.

The road of the labor movement has been a difficult one. As a result of its efforts conditions in this country are far more desirable than they are in any other country in the world. The liberties which have been enjoyed are not the ends which are sought. They are the means to the ends. Every forward step which American labor has taken for the benefit of those who work has been the result of the fact that American labor had the liberty not only to think, but also to speak and write. The trouble with the old-time reactionaries was that they saw these freedoms and could not look beyond them. They would point out to the American people the valued rights which they had under our Constitution, never realizing that it was through these rights that the American people had the hope that they could improve their standards of living and enjoy some portion of the fruits of their industry beyond merely the preservation of these rights. These old reactionaries lived in totalitarianism. They would let the people speak. They would let them pray. They would let them write, but they controlled the elections by the use of money and threats of reprisals. They controlled the lives of their employees by making them live in company towns and seeing to it that their grocery bills took up about all of the wages that they received. They controlled the economy through their control of the resources of the Nation, which were so great that they, and they alone, could exploit them.

We all know what happened to organized labor under that theory. It was allowed to die on the vine. That is why I am so much opposed to reactionaryism in the labor movement itself. I classify as reactionaries those who would give to the Government complete and total control over the lives of our citizens; those who upon order from abroad seek to substitute totalitarianism for democracy in America. Under the Morgans and the Hills and the Cookes and the other great financial magnates who dominated this country up until the time that the people decided that they wanted to use their freedoms to better conditions, at least they let the Constitution alone and let the people imagine that they had power even though they prevented its ultimate exercise. We were permitted to speak and to pray and to write. The American workers have gone far ahead in the exercise of those rights. It would be a grave mistake to permit the reactionaries in the labor movement, who would deprive us not only of the exercise of the rights, but also of the rights themselves, to use trade unionism as a means to attain the objectives which they seek.

If the workers of America, organized and unorganized, are to succeed in their efforts to secure a reasonable chance to live in comfort, decency, and peace, those workers, all of them, must have a strong department in the Federal Government that will give them the services they need. It is part of our job to assist the States in the promotion of health and safety measures. In order properly to carry out this function, the President asked for $718,000. The House of Representatives eliminated the appropriation altogether. The House and the Senate, in conference, restored this to the extent of $200,000. That was done in the name of economy.

The President approved a budget of $6,764,000 for the United States Employment Service. It is part of our job to get jobs for people. This was reduced by 44 percent to $3,300,000, including the complete elimination of $893,000 for the Veterans Employment Service. Four hundred field assistants of this Service have been separated. How soon those who say they represent the American people forget the sacrifices and suffering of those that bared their breasts that American freedom might live!

Congress reduced the President's request for the Wage and Hour Division by more than $2,000,000. This reduction will mean that only 28,000 of the 550,000 covered establishments will be inspected during this fiscal year.

There is some talk about the next session of the Eightieth Congress increasing the minimum wage to 60 cents an hour. During the last Congress, and this one I have advocated an increase to 65 cents, with a scaling upward to 75 cents an hour. Changed living costs have now made 75 cents a necessity. Perhaps the Congress will pass a bill which will authorize a necessary increase in the floor under wages. I am not the least bit interested, however, if Congress passes such an authorization bill and then fails to provide sufficient funds with which to carry it out. There are two parts to this problem. One is the authorization and the other is the appropriation. One cannot go without the other and if the first is passed it will be a mere phantom bill or, to use a more understandable phrase, it will be simply "a phony." This form of deception will not be permitted without forcible attention being called to it so that the American people may see what is happening.

The Bureau of Labor Statistics furnishes all the basic figures for most of the planning that is done not only by labor but by indus-

try in the United States. Never so much as now is there necessity for accuracy of those figures. Never so much as now has it been necessary to cover the field which the Bureau wants to cover. Yet the appropriation for that purpose was reduced from $6,900,000 to $3,400,000. Repeatedly, prominent, important, and sincere Members of Congress have said that they would not commit themselves until they knew all the facts. The cutting of the throat of the principal fact-seeking agency of the Government lends some support to the thought that I may have used the word "sincere" inadvisedly.

During the last fiscal year we had approximately $56,000 appropriated to the Department for Workers' Education. It seemed to me to be a desirable program. This year I asked for $116,000. The entire sum was eliminated from the appropriation. Many of the other departments of Government asked for and received appropriations for similar functions within their departments for the benefit of the people with whom they directly come in contact. I could see nothing wrong, and I see nothing wrong now, in giving to the workers an opportunity to study the various problems of industrial relations and to study and understand the various clauses in labor-union contracts. I intend to continue insertion of that item in the budget, and ask for and hope to receive the wholehearted cooperation of the labor-union movement.

If we are to have a strong Department of Labor, we will need the support of those in the labor movement who are organized. The Department was created for you and for all of the unorganized workers of America. We need your support. I have come here to ask it. I want that support not merely when the bills are a couple of days away from passage. I want it throughout all of the weeks of the year.

Another matter which I wish to call to your attention, because I think not sufficient attention has been paid to it, is the enactment of laws in many States which have as their purpose the destruction of labor-union activity. A number of States have enacted anti-closed-shop laws, restriction of strike activities, antipicketing laws, and the regulation of labor relations in public utilities. In some cases there were omnibus laws, which cover a great variety of subjects. For example, a Delaware law deals with unfair labor practices, prohibition of the closed shop, and picketing. In other States separate laws were enacted on each of these subjects. Some 14 States passed laws prohibiting certain types of union-security agreements, thereby taking the right to the freedom of contract away from employers and unions.

In Maine, on the other hand, a law prohibits closed shop agreements, but permits the making or maintenance of union-shop agreements.

In Delaware, the Labor Relations Act declares that it is not an unfair labor practice for an employer to refuse to grant a closed shop or all-union agreement. It also provides that in contracts where the parties promised to join or not to join labor organizations they are contrary to public policy and shall not afford any basis for granting legal or equitable relief in any court in the State.

In 12 States, laws have been passed regulating and placing restrictions on picketing and other strike activities. Other legislation likewise incorporates this feature.

In laws passed by eight States, the check-off of dues by an employer from the employee's wages are prohibited, except where authorized by the individual employee.

We live in a paradoxical age. We have 60,000,000 employed persons in this country. Our bank deposits are larger now than ever before. Our car-loadings are limited only by the supply of cars. Yet there pervades our entire atmosphere the fear of what is ahead. Some are afraid of war. Some are afraid of collapse. We are desperately close to reaching the day when people will say that they want to stand still or go backward. They neglect to see, or they are ignorant of the historical lessons which they should remember or have learned. Any time any Nation stops expanding its economy, it faces deterioration and disintegration. That has happened several times in the world's history. No nation can afford to look back to find a comfortable hiding place from the problems of the day or of the future. No people can escape from them. No successful people can afford not to grapple with them. It takes more than courage during these days of an unsettled world to face and attempt to solve the problems which confront us. These times require daring. It is not enough for people to escape the fear, to advance only to the point of timidity.

Many mistakes have been made in the last quarter century. One of the most important from the point of view of economics, was the raising of the tariff rates after the end of World War I. Up to that time we had been a debtor Nation. We could afford to shut out foreign products because they took ours in payment for what we owed them. When, however, we became a creditor Nation sound economics required that we reverse our course. Another mistake was made shortly after September 1931 when England abandoned the gold policy in that we did not, at that time, assert leadership in the world of finance. Efforts were made by President Roosevelt and his administration to overcome these mistakes, but too much time had elapsed before they had the opportunity. Growing out of these two mistakes have come a multitude of economic problems which were interrelated with the other to that by the time he became President Mr. Truman had the most difficult position that was ever held by any man in the history of the world.

As I said, we need more than courage. We need daring to meet the problems ahead. I am confident that we can meet them. So sound is our basic structure that it cannot be destroyed so long as special and selfish interests are deprived of the power to misuse it. We have faced many crises before. We met them and defeated them because we had an understanding of their relationship to all of our people, and we gave to all of our people an opportunity to join in the selection of our leaders who would be required to handle them. The whole question will be decided on the basis of whether we advance or retreat or attempt to stand still.

No nation has ever been permitted to stand still. Retreat means only submission and surrender. The only course open to us is to advance. That we can do if we stay true to certain principles which we have inherited. The first requirement will be faith—faith in ourselves and our system of government and economy, and faith in the God upon whom we rely. Second, we must have intelligence so that we can understand the necessity for advancement. Third, we must have the courage to meet the problems. And, fourth, we must have the daring to find and to try the solution to the problems.

That is the reason why I am so much interested in and for such a long time have believed in trade unionism. You have been subjected to severe attacks during the last few years. Few organizations could have withstood those attacks. You have demonstrated your faith, your understanding, and your courage. There is no room in the leadership of America for the selfish, the near-sighted, and the timid. The trade-union movement has blazed the trail. It must furnish the education, not only to its members but to the other workers. Its leadership must not only have courage, but it must dare to do those things which will preserve American democracy. Those who have this unselfishness and understanding and daring must go out, as the Lord once said, "into the highways and hedges" and instill the faith and courage in the hearts and into the understanding and into the minds of those today who are so confused. Given a chance to know what a problem is about, the American people have never failed. We do not propose to fail now and we look with hope and confidence upon the ability of the Congress of Industrial Organizations to present this argument and this plea to call Americans everywhere within the boundaries of our Nation.

Prospects of Democratic Victory

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, November 26 (legislative day of Monday, November 24), 1947

Mr. MAGNUSON. Mr. President, a former distinguished Member of this body, Hon. Mon C. Wallgren, who is now Governor of my State, recently delivered an address before the midwestern Democratic meeting at Kansas City, Kans., on November 20, 1947. I ask unanimous consent that his remarks, dealing with the political situation in the United States, may be printed in the Appendix of the RECORD. I have received an estimate from the Public Printer that the manuscript will occupy three pages of the CONGRESSIONAL RECORD, and that the cost will be $213.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Tonight I wish to review some fundamentals in American political life which convince me that the Democratic Party will be victorious in 1948. Harry Truman will be reelected President of the United States.

Were he not to run of his own accord, then he would be drafted. He has proved himself in office. We need this man of brave heart and cool head to keep the Nation on a steady course to a peaceful and prosperous future.

He is needed as a good Democrat, close to the plain people of America, who therefore speaks to a hungry and frightened world with the authentic voice of American democracy.

In a time of transition and emergency Harry Truman was summoned to an office he never sought for himself. He entered upon his duties with a quiet dignity and courage which have won him the admiration and solid affection of the American people.

He was too modest to pretend he knew all the answers. He has grown in office and he continues to grow. But he will never lose that humble reverence for the highest honor in the land that any American can claim. He will never lose that simple and abiding faith in God and in the good sense and democratic spirit of the American people. In that faith lies his inspiration to carry on with the heavy and exacting responsibilities which fall upon the Chief Executive.

Harry Truman's sincerity, his willingness to proceed with care and caution through troubled waters, his ability to understand the other fellow's viewpoint, his boundless confidence in the American people, his calm but resolute judgment based on the facts—these sterling qualities I came to know in him as chairman of the Senate War Investigating Committee. I was privileged and proud to

serve under Senator Truman's leadership on that committee.

His record of competent leadership, carried over to the office of Chief Executive, is greater today than ever before. I repeat, Harry Truman will be reelected by an overwhelming majority.

The sorry performance of the Republican-controlled Congress reaffirms the hopeless incompetence of the Republican Party to deal with contemporary problems. That party has shown a callous indifference to the welfare of ordinary citizens. The forceful realization is brought home that the tasks we face today and tomorrow are far too grave and far too important to be made the responsibility of a Republican administration and a Republican Congress.

The American people are interested in performance. They want a job done and there is much to do. Needy nations to be helped to their feet. The peace to be secured. A domestic economy to be made strong and productive. Homes to be built. New enterprises and jobs to be fostered. New frontiers of science and technology to be explored for the happiness and well-being of all people.

Only a forward-looking administration can meet the urgent needs of a busy nation and a suffering world. Public support will go only to the party with the broad, liberal view, the party that makes the welfare of people its primary business. That party is the Democratic Party.

Now and then a few Republicans claim the mantle of liberalism. They declaim in public against the policies of their own party. They repudiate its blind reaction, and warn that unless the Republican Party takes a new and different course it will fail at the polls.

These few lonesome liberals in the Republican Party search through the pages of history to glean a speck of comfort. They note that the Republican Party sponsored Abraham Lincoln and Theodore Roosevelt. Hopefully, they recite a few good laws that have emerged from bleak and barren Republican administrations of the past.

We can respect the good intentions of these lonesome liberals in the Republican Party. We can admire their courage for trying against such great odds to rejuvenate their party. We can accept their conclusion that only a party genuinely devoted to the broad public interest is entitled to public support. But we cannot understand their fantastic political whim. For to liberalize the Republican Party is a task more hopeless than to change the ocean tides.

The course of political futility to which the sincere liberals of the Republican Party are committed, is plain enough. But also there are makeshift liberals in the Republican Party who pursue a course of political opportunism. They constantly promise to support liberal measures, yet they are found voting against appropriations that would make such measures effective.

The makeshift liberals who front for the Republican Party do not control its policies. Whoever accepts the political blessing of the policy makers in the Republican Party will inevitably bow to their will, no matter what is promised the electorate. The elections of 1946 have shown convincingly that the American people do not share in the dividends of Republican victory. Privileged groups which sponsor the Republican Party consider these dividends their own.

Abraham Lincoln, were he able to view the scene today, would be appalled at the vast gulf which separates his party from the plain people he loved so well. And Theodore Roosevelt today would scorn the malefactors of great wealth who give sustenance to the Republican Party.

In practical life we know that the lines of party are never neatly drawn. We do not decry the motives of people who sincerely differ with us in their political views. Neither do we say that our party is perfect, that one party is all good and the other all bad. But we speak now of the vital and enduring distinction between the Democratic and Republican Parties.

The Democratic Party is broadly liberal and progressive in principle. Whatever the obstacles, it strives constantly to live up to that principle. The Republican Party is narrow and reactionary in principle. Fundamentally it maintains that character, whatever deviations may occur.

History reveals that the precious and permanent values of the American heritage are transmitted through the Democratic Party. Our party is the standard bearer of American democracy. It fulfills the hopes and aspirations of Americans in the common callings of life. The Republican Party has always attracted men of selfish purpose and privilege and allowed them to dominate its policies.

Americans hold their Government to be good when it serves the many, and evil when it serves the few. Times of political complacency and confusion have seen Republicans in high office. Inevitably they have directed the machinery of government to benefit a small minority. Sooner or later the good common sense of the American people prevails, and a stop is put to this abuse of the democratic process. Whenever democracy is put to the test, whenever the Nation is sore, beset with problems crying for solution, the American people turn to the Democratic Party for guidance and constructive action.

Seen in the light of the Democratic Party's historic role, Republican gains in 1946 represented one of those political lapses that prove so costly and corrosive to the welfare of this Nation. The Republicans exploited the anxieties and irritations of a war-weary people. They cashed in on a common need and hunger for peacetime goods.

The barrage of propaganda and the crossfire of criticism against OPA served the Republican Party well. Public resentment was directed toward the party in office, while the people were left too bewildered to notice that their collective pocket was being picked.

Day by day we are feeling the consequences of Republican high-price policy. The plight of the average family is well-nigh desperate. Wages have lost out in the race with prices and profits. Modest savings have been eaten up. Families are encouraged to mortgage future wages by buying on credit. (Removal of credit restrictions, we may note, projects the high-price pattern into the future.) The necessities of life are climbing beyond reach of those who work for wage or salary, of older people dependent upon modest pensions, of veterans in school or training.

Economy-minded Republicans in powerful congressional places complain with brutal cynicism that there are too many drones in our society. They slash welfare budgets to shake-down the relief load. A few unfortunate poor are driven from relief to beggary, but there are fresh recruits waiting to take their place on the relief rolls. Those at the bottom of the economic ladder take the worst beating from Republican high-price policy. Relief needs are increasing, even in this period of relatively high employment. In one great city alone there are almost 9,000 GI's on relief.

The apologies, the excuses, the search for scapegoats by the Republican Party will not alter a grim fact. Republican price policy has set off a dangerous inflationary boom which paves the way for economic disaster, for privation and want in the midst of plenty.

The Republican Congress cannot escape the blame. Following the 1946 election Congress was completely reorganized. The entire legislative leadership was taken over by the Republican Party. Republicans became chairmen of all the committees in Congress. Their record is clear. The congressional record is a saga of their blunders. The Republican Party has written its own walking papers with indelible ink!

The Republican Eightieth Congress has ignored the needs and aspirations of the American people. Why then do the Republicans take pride in their handiwork and see only good in its results? The answer is simple. While they have served the American people poorly, they have served their masters well.

Taken together, the components of the Republican postwar program represent an organized effort to shift the burdens of reconversion onto the backs of working people, farmers, and consumers, and to channel the benefits of reconversion into the hands of a few.

Extinction of OPA was first on the agenda because those who bless the Republican Party were grasping for quick and easy profits before production could catch up with the backlog of consumer demand.

Next in line came the Taft-Hartley law. Not only were working people pushed to the wall in the matter of uncontrolled prices. The long arm of the law was thrust into their unions in order to weaken their bargaining power. This is the intent and purpose of the antilabor law.

It is easy to lose sight of the intent and purpose of the Taft-Hartley law by getting sidetracked into argument about the merits or defects of particular unions and about complex details of the law drafted by high-priced corporation lawyers. Our stand against this law does not mean that unions are blameless in each and every respect. But in common justice to the working people who built this country strong, who fought in the war and toiled on the production lines for victory, we must repudiate this wholesale legislative attempt to wrest from them their hard-won gains and to shatter their union strength.

This law reaches into the unions' internal affairs. It works to create dissension and distrust, setting each workingman against his brother, and all against their chosen leaders.

The Taft-Hartley law is punitive in character. It narrows the area of free collective bargaining and sets up a complicated policing system over unions. Therefore, it must be considered an insult to the dignity, intelligence and loyalty of the free working people of America.

To support the legislative assault on labor, a propaganda campaign by big business and its political henchmen exploited the well-known American dislike of monopoly. Monopoly in business was shunted off as a thing of the past. Giant business organizations presented themselves in the mellow light of competition and pushed labor unions into the harsh glare of monopoly power.

Anyone who is willing to face the hard facts of economic life today, knows that monopoly control by giant organizations is not merely a thing of the past. The concentration of economic power is greater today than ever before. The urgencies of war and reconversion have fostered monopolies.

These ominous developments have a long history behind them. In America there have always been some persons more privileged, more ruthless and self-seeking than the rest. They have preempted and taken for their own enrichment millions of acres of the public domain, the natural wealth of mine and forest, field and river. With haste and waste they have done their work, indifferent to the public need or the Nation's future.

Today their heirs and successors in the industrial and commercial life of the Nation wield power as a kind of invisible government. They fix the conditions of life and the standards of living for great numbers of the population. Whenever the American people lapse into complacency, there is a rise in the political influence of these groups.

Unchallenged monopoly power over the resources of the Nation invites restricted production, higher prices, mounting unemployment, and curtailed consumption. Unchallenged monopoly power is thus an invitation to economic ruin. Ultimately it would put an end to free enterprise, for idle and starving men, in desperation, would demand that their Government take over and run the whole economic machine.

The American people will fight monopoly without compromise, for unhindered monopoly control signs the death warrant to free enterprise. Free labor unions are a strong bulwark against a regimented economy. Whenever the monopoly charge is thrown at the labor unions, let us remember one vital distinction: whatever their faults may be, labor unions are people organized for mutual protection of their jobs and daily bread, whereas big-business monopolies are combines organized to restrict trade and production in the interest of greater profits for a few.

Workingmen organize in unions to insure a decent wage. Farmers organize in cooperatives to insure a decent price for farm crops, and, they too, are feeling the lash of the Eightieth Congress. Farmers' cooperative associations are being pilloried and subjected to congressional investigation in an attempt to weaken the bargaining power of farmers.

Just as labor unions were charged by big business with having a one-sided advantage in the law, so now the farmers' cooperatives are said to have an unfair tax advantage. Just as the labor unions were charged with being monopolistic, so now the monopoly label is put on farmers. Just as union wage scales were blamed indiscriminately for high prices, so now the large industrial corporations, embarrassed by publicity about their own fat profits, direct the accusing finger at the substantial rise in farm income.

Farm prices and farm incomes are good, and deservedly so, for farmers are called upon to do a production job unparalleled in the history of the world. The climb to farm prosperity has been long and hard from the deep pit of depression. The Government has a permanent responsibility to insure that never again will the farm economy sink into chaos.

It is essential to have an intelligent, long-range price-support program for agriculture. Furthermore, by Government aid, the benefits of advancing farm technology can be widely spread among the farmers.

The next few years will see a terrific strain on agricultural resources to meet the food needs of the Nation and the world. The lifelines of a healthy, thriving people are anchored in the soil. That soil must be kept in place and its elements of fertility maintained. Soil-building practices, including adequate programs of flood control, drainage, and irrigation, are vital to protect and enlarge the Nation's agricultural plant.

We cannot tolerate in this country a repetition of the paradox of glutted markets and hungry people. Governmental action must be directed to assure continued farm prosperity and the distribution and consumption of all that American farmers can produce.

In my section of the country organizations of farmers and labor unions have learned to work for common goals. Farmer and city worker both realize that good wages and good prices for farm crops go together. And both realize that a Republican-controlled Congress, which seeks to disrupt their organizations and weaken their bargaining power, cannot have their best interests at heart. Contrasting their steady gains under Democratic leadership with the false economies and petty sniping of the Republican Congress, the farmers will know what to do next November.

When we hear the Republican argument that farm cooperatives have unfair tax advantages, let us remember what the Republican propose to do in the matter of taxes generally. They propose to let the wealthy save millions and the poor save pennies in a tax-reduction program. They hope that low-income families will be attracted by this program, even though it would actually burden those least able to pay.

Nobody likes to pay taxes. At the proper time, taxes can and should be reduced. Tax reduction now would only feed inflation, and President Truman rightly vetoed the tax bill passed in the first session of the present Congress.

But the Republicans are committed to a program calculated to concentrate the benefits of reconversion into the hands of a few. They appointed a so-called citizens' committee to advise them on tax policy, first making sure that nine-tenths of the group were sympathetic to their views. At a time when corporation profits are bulging fat, and large concerns are eagerly pushing some of this fat into business expansion, we are told that corporation taxes should be reduced to provide business incentive.

With taxes, as with other important affairs, the Republicans proceed upon the maxim: To them that hath shall be given; from them that hath not, shall be taken away.

A few weeks ago some Republicans were confidently proclaiming, "as Kentucky goes, so goes the Nation." For once Republicans were right. I think all of us here tonight will agree that the clouds must have momentarily cleared from their crystal ball.

Because the wrath of the people has been registered, we can anticipate that some gestures to the voters may be made in the second session of the Eightieth Congress. I say gestures, because these moves, if any, will be motivated by considerations of political expediency, not by principle. They may have the form of needed legislation, but not the substance.

Perhaps I am too optimistic even in expecting that the gestures will be made. However, we ought not to underrate the resourcefulness of Republican politicians hungry for high office. They are practiced in the arts of subterfuge and political expediency. False-front legislation in housing, health, and education; a few added appropriations for essential services that were seriously cut down, these may be offered in the hope of garnering votes. After all, the Republican record to date is so bad, that even the slightest improvement will be conspicuous.

Here in the West we can see sharply the distinction between legislative principle and expediency. The Republicans have never accepted in principle the great multipurpose dam and power projects of the West. They refuse to vote appropriations sufficient to fully develop these projects.

Development of water resources is the lifeblood of the West. The narrow vision that sees in these wealth-creating projects of Government at best only "public works" that should be slowed down at one time, perhaps speeded up at another, is blind to the needs of a modern economy.

Republican Congressmen see only the first cost, and refuse to consider the productive wealth and economic benefits that flow from such developments. They cannot seem to comprehend that these great projects also pay for themselves—that these appropriations represent an investment in the economic development of the Nation, and that every cent appropriated actually will be repaid through sale of electric energy or irrigation water.

My own State of Washington is a good illustration. Last year in the city of Yakima, a celebration was held in recognition of final payment on the Tieton irrigation project financed by the Federal Government. The Government got back every penny with interest.

If the Republicans dared to do it, they would banish the TVA Act from the statute books. The Senate debates on the Lilienthal confirmation showed only too plainly their utter lack of comprehension regarding TVA accomplishments for the South and the Nation.

Franklin Roosevelt once said, "The waterpower resources of the Nation must be protected from private monopoly and used for the benefit of the people."

Let us contrast this statement with the remark of a Republican Congressman who has been energetic in resisting further development of Federal projects. He said recently: "Power does not belong to the people; it belongs to those who can get it."

Here we have in a nutshell the contrasting Democratic and Republican conceptions of the role of Government in resource development.

We believe that in a dynamic democracy, development of natural resources for the good of all the people does not signify an impairment of free enterprise. In the American system of free enterprise, geared to twentieth century needs, Government and private initiative are not opposed, but complementary. Indeed, Government has a positive duty and function to promote free enterprise. If it fails to act, control over economic life will then pass completely into the hands of powerful groups already privileged by wealth and circumstances to command an excessive share of the good things in life.

Government investments in power and reclamation projects stimulate private enterprise. Millions of kilowatts generated, millions of acres reclaimed, mean more factories and farms producing more goods and services for the Nation.

The positive results of government in a democracy, acting in behalf of free enterprise, are evident on every hand. Action by the Government in a Democratic administration was necessary to open up our great aluminum plants for competitive peacetime operation after 50 years of monopoly control. Now more and more avenues of opportunity are opening up for small manufacturers, fabricating this wonderful metal into countless products for home and business use. The aluminum industry is booming under the stimulus of competition. Private initiative is enlivened and invigorated when government acts in the public interest.

In the field of housing, too, government has an essential role to perform. Housing is properly the field of private enterprise, but when great slums blight our cities and millions are desperate for want of decent housing, government aids and incentives must be forthcoming to improve and expand the Nation's housing resources.

A comprehensive housing bill, fathered by Senator ROBERT F. WAGNER, a great humanitarian and Democrat, has been pruned down and pigeon-holed by Republican committees of the Congress. Can anyone point to a single positive action by the Republicans to speed consideration of this bill?

Republicans have always believed, and still do, that housing is for the people who can get it, not necessarily for the people who need it. The clamp-down on vital housing legislation is simply part of the Republican program for enabling extra profits to be raked from a high-priced market, without regard to the real and very acute needs of our people. Democratic victory in 1948 will assure to our veterans and others ill-housed, legislation that will get decent home built at a reasonable price.

A few days ago President Truman submitted to the special session of Congress his program for emergency aid to Europe. Let us hope that the Members of Congress will

quickly compose their differences and provide the necessary means for executing this urgent task.

That there are differences of opinion and judgment we know only too well. The danger is that in the turmoil and conflict of debate, the fundamental objectives of the foreign-aid program will be obscured, perhaps defeated, by those who are willing to make political capital from the suffering of people.

Already we have heard the proposals of some who would attach restrictions so complex and heavy as to doom the program to failure from the start. Others want to take the program out of the Government and make it a special form of business enterprise.

To many Republicans the Marshall plan has become a convenient kind of scapegcat to divert attention from Republican responsibility for high prices and a device to conjure up the threat of intolerable tax burdens.

In the background lurks the persistent shadow of isolationism, ready to embrace any project that will cause Americans to become discouraged and disillusioned, and thence to turn their backs on the world.

The generous heart of America responds now, as always, to the cry of the hungry in ravaged lands. The majority of Americans are solidly behind the Marshall plan and the government program as outlined by the President.

As a Nation, we have enough for ourselves, and to spare. Even if we must tighten our belts for a time, the productive might of this country is capable of supplying our needs at home in abundance, and needs abroad in moderation.

A wise man once said that if all sat at the same table, no one would go hungry. The American people will sit at the same table with democratic peoples in other lands, and so far as we can help it, no one will go hungry.

During the war, though ten to fifteen million of our able-bodied young men and women were withdrawn from the productive labor force, this country attained a production record, the like of which was never seen before in the world. With our enlarged plant capacity, our new skills and technology, our wealth of manpower, our natural resources still awaiting development, we can produce for peace.

There are some who say it is unwise to gear up our productive machinery to a large world demand. They foresee idle capacity and a depression after immediate export needs are met. This is an espect of the familiar scarcity economics which permeate the Republican Party and its monopoly adherents. We hear it from the private power companies. We hear it from the steel makers. Why expand capacity, they say, when a depression may be around the corner?

Scarcity thinking in industry is predicated upon depression and therefore serves to reinforce the very conditions which bring about depression. The prophets of scarcity have no faith in America's future. In pursuit of their own limited purposes, they are willing to limit opportunity for Americans at home and let the world wallow in misery.

There is an object lesson for Americans in the fact that those who want to limit production for foreign aid are of a kind with those who want to limit production for home needs. This is economic isolationism of a most vicious kind. The American people will have none of it. They want an economic system which is dynamic and expanding; they want an economic environment which permits the maximum of freedom for initiative and competitive enterprise. Our people are united in the desire to increase the range of opportunity and the standards of living for the average citizen.

On one extreme we have those who want America to turn its back on the world, and on the other we have those who charge us with seeking to dominate the world by a ruthless imperialism. Both extremes come together in their opposition to the President's foreign-aid program. Both work against the best interests of the United States. Both have a profound ignorance of the American character.

The demands of the American people, taken as a group, are always modest and peaceful, never grandiose and belligerent.

Americans have a permanent stake in the democratic way of life. They abhor the police-state methods. They respect individual integrity and they repudiate the concept of individual subservience to an all-powerful state.

But Americans know that individual freedom cannnot be cheaply purchased and easily secured. They were willing to pay in blood and toil to end the mad dreams of world conquest by the dictators of Germany and Japan. And they are willing now to demonstrate that democracy offers to the world the only satisfying alternative—a system of government which assures to all peoples the ample fruits of productive labor and the preservation of individual freedom.

Totalitarian governments can be answered by a working demonstration that men can live in freedom and live without want. We will demonstrate it abroad with food and machinery and funds and ideas. We will demonstrate it at home by doing in democratic ways all things necessary to achieve a good life for our people.

The responsibilities to our own people and to the world require determination, experience, and vision. They require our finest leadership. This leadership, after next November, will have the united support of a Democratic Congress.

With that support Harry Truman will lead us forward to our goal of a sound economy and a peaceful world.

Thanksgiving

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, November 28 (legislative day of Monday, November 24), 1947

Mr. WILEY. Mr. President, yesterday it was my privilege to address the people of Wisconsin, through radio transcription, on the subject of Thanksgiving. I ask unanimous consent that the text of my remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF THANKSGIVING

(Address by Hon. ALEXANDER WILEY, United States Senator from Wisconsin, over Wisconsin radio stations, Thanksgiving 1947)

Fellow citizens of Wisconsin, it is a pleasure to greet you from the Nation's Capital. Mrs. Wiley and I wish that we might have been in Wisconsin during this Thanksgiving season as America gives thanks for all that she is and all that she enjoys. However, as you so well know, the Congress is meeting in special session, and we are proud and privileged to participate with it in handling the tremendous problems of our Republic during these critical times.

I want to express my deep thanks to the management of this station for their courtesy in enabling me to visit with you for these few moments.

OUR TOUR THROUGH STATE

Let me say at the very start that Mrs. Wiley and I are particularly thankful that recently we had the opportunity to visit so many areas of our State during the latter part of the congressional recess. We journeyed literally thousands of miles up and down and across the State.

We visted with religious groups, fraternal organizations, business, labor, farm, education, and other groups. I'm very happy that I've had the particular opportunity of talking with high school students and college youths and feeling the pulse of Wisconsin—young and elderly. It is a strong, sturdy pulse, beating with the rhythm of production—production in our factories, on the farms, beating with the rhythm of work in our households and our offices and on our assembly lines—beating with faith in the future. Wisconsin is rounding out this last year of her first century of statehood, and she is making ever-increasing contributions to America's material and spiritual welfare. That is borne out by all the Government reports which come to my office each day.

SUGGESTIONS OF HOME FOLKS

I brought back with me to Washington the frank suggestions, comments, and criticisms of the folks back home. I am grateful for all the recommendations which I have receive from our people.

Mrs. Wiley and I do wish that we might have had more opportunity to visit even more areas of our State and personally see more folks. However, through your letters to us, we hope to continue to hear from you as often as the spirit moves you.

TRIP TO EUROPE

As you may know, during the early part of the recess, we spent a very brief period in several European countries. We saw at first hand some of the problems which America faces in her foreign relations. Yes, we saw many reasons for which America should be particularly thankful in this year of our Lord 1947.

SPIRIT OF GRATITUDE

In any year, it is good to give thanks unto the Lord. In the Book of Psalms, we read:

"It is a good thing to give thanks unto the Lord, and to sing praises unto Thy name, O most high; to show forth Thy loving kindness in the morning, and Thy faithfulness every night."

In Thessalonians, we read:

"In everything, give thanks, for this is the will of God."

Both religion and medical science tell us the joy and the healing powers of thankfulness. Sincere gratitude, deep thanksgiving—purify us and tend to give us "the peace which passeth all understanding." Thanksgiving relieves our tensions, it lights our eyes, it gives courage and good cheer.

This is no mere wishful thinking or idle sentiment. These have been my experiences as well, no doubt, as your experiences and the findings of countless others.

WHY BE GRATEFUL?

And yet I can almost hear someone say, "What do we have to be grateful for?" "Look at the tremendous problems we face." Look at the hardships, the difficulties up ahead. Prices have reached some of the highest levels in our history and are causing tremendous hardship, particularly among low-income groups. There is still a serious housing shortage, although the American construction industry is building new homes at record rates. Taxes are a tremendous burden to our business life and are decreasing the amount which the wage earner can bring home in his pay envelope.

FOREIGN PROBLEMS

These domestic problems stand against the background of our foreign problems. As many Government reports have recently told us, the peoples of Europe are in critical straits. War did not make for peace. It left a heritage of battered cities and broken hearts, undernourished bodies and diseased minds, a bitter legacy of crime and corruption and despair. In the chaos and

confusion of postwar Europe communism has found fertile breeding grounds.

Many peoples who dearly prized their freedom have found themselves in the meshes of fanatical communism—the people of Poland—the land which gave us Kosciusko, Curie, and Pulaski, millions of Germans in the land which gave so much of the world's culture and industrial genius, as well as fathering so many of our own fine American citizens, the people of Hungary—the land of Kossuth, of Austria, of Bulgaria, of Rumania, the people of Finland, of Greece—all these and other peoples, who cherish their national sovereignty and rights, feel themselves increasingly under the Red shadow.

What do we have to be grateful for when we face a picture such as this, when the American taxpayer, who has already been saddled with a two-hundred-and-sixty-billion-dollar national debt and with a terrific burden of taxes, faces the possibility of still more foreign aid to be given?

REASONS FOR GRATITUDE

Some folks may indeed ask this question, and yet, if we but look around us, we will see the answer to it. There are so many things for which we may be grateful. For one thing, America is at peace. To be sure, the guns are not silent throughout all the world, but we are striving with our might and main, through the United Nations, to still them. The horror of world war has come to an end. Yes, we still have with us the heart-rending heritage of war in our own land—hundreds of thousands of our veterans, many of whom are broken in mind and body. We want to assure for them the justice which they so richly deserve, adequate medical care, their full rights and privileges under law, decent housing, opportunities for education and business enterprise. But America is at peace, and for this we are duly thankful to God.

BLESSING OF FREEDOM

Yes, America, too, is still free. We still enjoy the basic freedoms for which our men have bled in all the wars which we have fought—freedoms of speech and press, freedom of religion and assembly, freedom to work wherever we please, to start a business wherever we please, to grow to the limits of our potential abilities.

In some of the lands which Mrs. Wiley and I visited abroad, such freedoms are rare and in many instances are unfortunately growing rarer. The government is taking an increasing hold over the lives of private citizens. Of course, in our own land there is a tendency toward Government regimentation, but here, if we use our traditional American ingenuity and courage, and maintain our system with its checks and balances, we can combat this menace.

OUR MATERIAL BLESSINGS

A third reason for our thankfulness is, of course, America's tremendous material blessings. Even before the war, with only 7 percent of the world's population and occupying only 6 percent of the land area, we possessed 80 percent of the world's automobiles, 50 percent of the world's telephones, 33 percent of the world's railroad mileage, 60 percent of the world's life insurance policies. We consumed 75 percent of the world's silk and 60 percent of the world's rubber. We had 1 radio for every 3 people as against 1 for every 90 people in Soviet Russia. Since the war, this gap has even widened.

SOVIET VERSUS UNITED STATES STANDARDS

Let's compare our workers with Soviet workers, for example. With his full week's pay, a Russian worker can buy only 16 quarts of milk. The average American wage earner (based on recent statistics) could buy 275 quarts of milk and still have change coming. The Russian worker can buy less than 10 pounds of meat with his full week's income, whereas the American worker can buy 82 pounds of beef. The Russian worker can buy, at the most, 4 pounds of butter, if he can find it, with his weekly pay, while the American worker can buy 60 pounds. In fact, it's been estimated that the standard of living of the American worker is 10 times that of the average Russian or 1,000 percent higher. The prices of foods in Russia have come up an average of 166 percent whereas wages of workers have come up only 25 percent.

This is not to imply that our workers have no problems. On the contrary, I have pointed out the difficult position which they face during these days of rising prices. Nevertheless, with a bit of perspective, we can see how grateful we should be for living in this land of liberty where we can handle our problems—as freemen.

ACCEPTING THE CHALLENGE

Another reason for which we should be grateful is, I believe, that we are resolutely accepting the challenge of Thanksgiving with traditional confidence, faith, and hope. The challenge to which I refer is the challenge to continue to improve our way of life so that we will have ever more for which to be grateful. To be sure, there are a lot of pessimists, a lot of doubting Thomases, a lot of grumblers, of fearmongers. But most of our folks know that America can lick this inflation and other problems and can continue to strive successfully for world peace and plenty, if we simply display the qualities of industry and love of liberty which Americans have displayed through over 170 years of war and peace.

Surely the problem of high prices is no greater than the problem which our men faced as they approached in landing crafts the beaches of Normandy or a dozen Jap-infested islands from which poured a rain of death upon them. Surely our problems are no tougher than our men faced at Valley Forge, or at the Alamo, or at San Juan Hill, or in the Argonne Forest.

TWO SYMBOLIC TRAINS

Across our land there are now moving two trains, which are symbolic of America's deepest feelings—the Freedom Train, and the Friendship Train, the one carrying the most blessed documents of American liberty, the other carrying the living proof of the Christian generosity of America's people.

Every train, however, that moves across America's landscape is a freedom train and a friendship train. Every train symbolizes the freedom of American enterprise and it represents the friendship among the 48 States, among all segments of our people. It represents the friendship which we hold for all men and women of good will.

CONCLUSION

Yes, it is a good thing to "give thanks unto the Lord," and it is a good thing that America has instituted Thanksgiving.

Mrs. Wiley and I wish for you and yours a Thanksgiving rich in blessings.

The Tax Burden and the Professions

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, November 28 (legislative day of Monday, November 24), 1947

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject, The Tax Burden and the Professions, delivered by me before the Lawyers' Association of Kansas City, at Kansas City, Mo., November 12, 1947. The information contained in this address I hope may be of interest to the members of all professions—doctors, teachers, engineers, registered nurses, lawyers, and the rest; in fact, to all persons who earn their income by personal effort.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TAX BURDEN AND THE PROFESSIONS

Professional people have for a long time taken pride and satisfaction in the substantial accomplishments of our professional organizations in the public interest and for the common good. Only a few years ago, for example, the Lawyers' Association of Kansas City decided that the corporation statutes of Missouri were antiquated and obsolete. It undertook a campaign to remedy this situation. A committee set about drawing a model statute. When completed, it was guided through the legislative process, and in substantially the form proposed by this association it is now the law of Missouri. Never a day passes when Congress or the State legislature is in session that lawyers, appearing on behalf of clients, do not give capable and effective guidance and assistance to legislators in the performance of their duties.

It is a truism that lawyers are usually too busy with their clients' affairs to look after their own. What is true of lawyers individually may also be true of lawyers collectively, and what is true of the bar is true of other professions. The attention of our organizations is directed mostly to the promotion of legislation for the benefit of the public at large, but little—perhaps too little—for the benefit of the members of the profession themselves. Other groups—trade unions, for example—are constantly bringing pressure to bear on Congress and the legislature in their own interest. The professions, I sometimes think, lean backward in this respect.

Another truism, and one with which any discussion of taxes should start, is that the best way to reduce taxes is to reduce the expenses of government. For several years past the Federal Government has been engaged in a spending spree unparalleled in history. The present Congress, at the last session, made a praiseworthy effort to reduce expenditures. I should be less than candid if I did not say that in my opinion its accomplishment in this respect was less than the people had a right to expect. As a Member of Congress, I have no desire to evade my part of the responsibility. I believe, however, it is fair to say that the responsibility should be shared with Congress by two other groups; first, the heads of the executive departments and bureaus of the Federal Government who failed to cooperate with congressional committees in their effort to find where savings could be made; and, second, those of the people back home who insist upon higher appropriations. It is to be hoped that Congress will carry through with courage and determination. If the people of this country desire lower taxes, they must demand lower appropriations.

I. THE INCIDENCE OF THE FEDERAL INCOME TAX ON THE PROFESSIONS

The Federal income tax, as its name indicates, is intended to be a tax on income, not a tax on capital. There are three forms of income: (a) investment return, (b) capital gain, and (c) earned income.

Adam Smith, in his Wealth of Nations, considered that all income should be taxed alike. He asked but one question in determining ability to pay: "How much is your income?" This test, however, is not followed in every

case in our income-tax laws. We have gone far afield in affording, for one reason or another, special treatment to various groups or classes. My thesis tonight is that earned income, particularly in the case of a professional man, is entitled to special consideration. This applies to the members of all professions—lawyers, doctors, teachers, engineers, registered nurses, and the rest; in fact, to all persons who earn their income by personal effort. Those who make a living largely by their own efforts expect to bear a full share of the cost of government. They would be something less than human if they did not before long become restive under the burden of more than a just proportion.

When a businessman spends a sum of money in order to obtain machinery, equipment, or buildings, necessary in his business, he acquires what is called for tax purposes a capital investment. He may allocate the cost, so much per year, over a number of years, and deduct for Federal income tax purposes a yearly percentage of the cost. In this manner, he is permitted to deduct from his income, free from income tax, the cost of the necessary equipment to engage in his business. By use of this method of calculating his tax, the businessman does not pay a Federal income tax on that portion of his capital which, theoretically at least, he uses up year by year. This is referred to as an allowance for depreciation.

The reason for this deduction is obvious. If it were not allowed, money would not readily be invested in enterprises, sometimes financially hazardous, which are essential to industrial development and progress. Production, so necessary for the Country's well-being, would be adversely affected.

Now let us examine this situation as it is applied to the professional man. Before he can engage in his chosen calling, he is schooled for several years at a considerable cost in order to obtain the specialized knowledge and skill required to engage in the practice of his profession. Usually a license is required, and not infrequently the requirements to qualify for the license include a specified number of years in an approved technical school. This specialized training corresponds to the machinery and equipment of the businessman. It is the professional man's capital investment. However, a deduction for depreciation or depletion is not allowed as a means of recovering funds that have been invested in acquiring the skill and knowledge of the profession.

The engineer who develops a patentable process or machine cannot charge off against his taxable income the cost of acquiring the knowledge which was basic to the invention. However, the businessman who purchases that machine or process can, over a period of time, charge off the cost to him of the purchase. The cost to a businessman of the use of a lawyer's specialized skill and knowledge, enabling the businessman to operate within the established rules of law, can be deducted as a business expense. But the cost of an essential element to the engineer and the lawyer, viz., the cost of obtaining the specialized knowledge and skill, cannot be treated as a capital investment or as a business expense. The physician, the accountant, the teacher, the registered nurse, and the other professional people find themselves in a similar predicament under the present tax laws.

If the professional man is to be given the same treatment with respect to income tax as is given to the businessman, he will be permitted to recover through the equivalent of a depreciation charge against taxable income the basic capital he has invested in purchasing an essential item of equipment in order to engage in his profession. In the case of the professional man the need to use this method is greater than in the case of the businessman, because skill and knowledge, unlike machinery, buildings, and other tangible capital, have no resale value and no salvage value.

Opportunities to earn income by employment are lost during the years of education. There is no interest on the money expended in receiving the training. The period of substantial earnings for a professional man is usually not reached until the late thirties and is over all too soon. The benefit to the professional man to be derived from a charge against his taxable income for this purpose would be especially helpful to him during the lean period after entering the profession and before reaching the period of substantial earnings.

II. THE REASONS FOR EARNED-INCOME RELIEF

Several cogent reasons may be assigned for special treatment for tax purposes of professional income. Let us summarize them.

1. The professional man is entitled to something in the nature of a depreciation or depletion allowance.

The professional man is constantly wearing out his physical and nervous equipment. Each year marks a milestone toward the end of his professional usefulness. He is using up his reserves of strength just as the reserves of a mine or oil well are depleted. In the case of mines, oil and gas wells, and other natural deposits and timber, the Internal Revenue Code provides for "a reasonable allowance for depletion * * * according to the peculiar conditions in each case * * * to be made under rules and regulations to be prescribed by the Commissioner." The courts have said that deduction of depletion for income-tax purposes is permitted as an act of grace in recognition of the fact that mineral deposits are wasting assets, and is intended as compensation to the owner for the part used up in production.

A lawyer's intellect, a doctor's skill, a nurse's special care, a teacher's instruction, or a business executive's energy are not fixed or indestructible capital, capable of producing an income forever. Yet the income they produce is taxed more severely than that from capital because capital is permitted to replenish its loss tax free by dipping into income through depreciation, obsolescence, and depletion.

2. The professional man is put to much incidental expense.

The individual with earned income has expenses not borne by the individual with investment income. The former must live near his place of employment and maintain a standard of living in keeping with his position. On the other hand, the investor may elect to reside wherever he pleases, thus avoiding the extra expenses required in a particular community, and his standard of living does not necessarily have an effect on the return derived from his investment. Inasmuch as the major portion of these extra expenses borne by the individual with earned income is not deductible for tax purposes, such as going back and forth between home and place of work, it results that earned income is taxed to some extent on a gross basis, while investment income is taxed on a net basis.

3. Earned income is uncertain.

Earned income is more uncertain than income derived from capital. If an investor is not too much lured by the possibility of an extravagant return, he may assure himself of a reasonably stable income. On the other hand, the individual with earned income is always confronted with the possibility of illness or accident, either of which may temporarily or permanently suspend his income, thus creating the necessity of savings to protect himself and his family from the possibility of that time when earned income ceases or is substantially reduced. The earned income stops short at the death of the earner.

4. Capital gains are accorded special treatment.

As has been said, the present law recognizes the need of special treatment for income derived from certain sources, particularly capital gains. The Revenue Code imposes a tax of not over 25 percent on the gain from the sale or conversion of capital assets held for a period of more than 6 months. There appears to be no reason why earned income arising from personal endeavor should not receive at least as much consideration as capital gains occurring in many cases without effort on the part of the taxpayer.

5. An incentive should be provided for work and effort.

Considerations of public policy are involved. Lightening the burden on income derived from personal earnings would encourage added effort to receive the gain. It should stimulate the personal initiative, the additional hour, and the extra ounce of energy so essential to a highly productive economy.

There is still another benefit to the public from fair treatment to the professions in this respect. Young men and women would be encouraged to enter training for them, at a time when we hear much of the shortage of doctors, dentists, nurses, and teachers. Also, postgraduate training would be encouraged and the level of competence would be raised.

III. THE ARGUMENT AGAINST EARNED-INCOME RELIEF

Few arguments have been advanced against tax relief for earned income. This may be due to the fact that there has been a surprisingly small amount of discussion of the subject. Three arguments that have been made deserve consideration:

1. The difficulty of administration.

It may be admitted that tax relief for earned income presents difficulties of administration. In the case of the small businessman, for example, it is hard to differentiate between income resulting from personal effort and that accruing from investment. Authorities of the Internal Revenue Department state that when the earned-income-tax credit was allowed it created a great deal of trouble in administration due to the fact that the tax credit was figured incorrectly in at least one-fifth of the tax returns. However, this may have been due to the fact that the directions to the taxpayer were unnecessarily complicated and involved, and this difficulty at any rate may be overcome by a settled policy and taxpayer education over a period of time.

2. Local taxes place a heavier burden on investment income.

It is contended that a sufficient discrimination in favor of earned income already exists because the local taxes on property place a heavy burden on investment income. The argument is put this way by Prof. H. L. Lutz, of Princeton:

"A final judgment as to the proper treatment of personal and property incomes cannot be reached by considering the Federal income tax only. The tax system of the American States will probably always contain the property tax in some form. The combination of property and income taxes results in a heavier total taxation of the funded or unearned incomes, without the necessity of emphasizing the distinction in the income tax." (H. L. Lutz, Public Finance, p. 308.)

The argument does not appear to be supported by the facts. Indeed, an opposite conclusion seems justified. Figures prepared in 1931 by the Joint Committee on Internal Revenue Taxation show that the individual with little wealth pays an average of 5 percent of his total income on property taxes, in spite of that fact that 75 percent of his income is earned income. On the other hand, the wealthy individual, with only 16 percent of his income earned, pays in local taxes only 2 percent of his total income. It is apparent

then that the earned-income class pays more than its proportionate share of the property tax, and it is eminently fair to give it a reduction in Federal income tax.

3. All income is on the same moral level.

Again, it is contended that no distinction between earned and investment income is justified, because such income does not, in either case, vary as to the deserts of the recipient. This conception is set forth by Lord Hugh Cecil in his exposition of political theory, Conservatism. After making some comparisons, such as the easy gains of popular writing as against the niggardly profits of good scientific work, he concludes:

"All property is seen to be on the same moral level, as something acquired without injustice, that is to say, without fraud or violence, but not meritoriously so that the owner's title may rest on his virtues."

Lord Hugh Cecil's discussion of the moral basis of the acquisition of property reminds one of Burke's famous Letter to a Noble Lord. When Burke retired from Parliament, it was proposed to raise him to the peerage as Lord Beaconsfield, but before this was done, Burke's son, in whom all his hopes and affections were centered, died. Burke then considered a hereditary honor an empty one, and he was given a grant of 2,500 pounds a year from the Crown. The next year the Duke of Bedford seized upon the granting of this pension as a weapon with which to attack the Pitt administration, which had been responsible for Burke's pension. Burke at once saw in the fact that the assault came from the Duke, the head of the House of Russell, which had received substantial grants from the Crown, an opportunity for the most telling repartee, and he availed himself of it with splendid effect. As literature, the piece is probably unsurpassed in the English language for lofty and scornful invective. In replying to the young Duke of Bedford, whom Burke called "my youthful censor," he said, among other things:

"The first peer of the name, the first purchaser of the grants, was a Mr. Russell, a person of an ancient gentleman's family, raised by being a minion of Henry VIII. As there generally is some resemblance of character to create these relations, the favorite was in all likelihood much such another as his master. The first of those immoderate grants was not taken from the ancient demesne of the Crown, but from the recent confiscation of the ancient nobility of the land. The lion having sucked the blood of his prey, threw the offal carcass to the jackal in waiting. Having tasted once the food of confiscation, the favorites became fierce and ravenous. This worthy favorite's first grant was from the lay nobility. The second, infinitely improving on the enormity of the first, was from the plunder of the church. In truth his grace is somewhat excusable for his dislike to a grant like mine, not only in its quantity, but in its kind so different from his own.

"Mine was from a mild and benevolent sovereign; his from Henry VIII.

"Mine had not its fund in the murder of any innocent person of illustrious rank, or in the pillage of any body of unoffending men. His grants were from the aggregate and consolidated funds of judgments iniquitously legal, and from possessions voluntarily surrendered by the lawful proprietors, with the gibbet at their door."

Suffice it to say that our taxing authorities have never attempted to construct a tax system on a moral basis, realizing its utter impracticability. We can differentiate as to the source of income, but it is hardly practical to deal in moral values affecting the manner of its acquisition.

IV. THE NEED FOR SPECIAL TREATMENT FOR EARNED INCOME HAS BEEN RECOGNIZED

In 1924 the Federal income tax laws for the first time recognized that earned income was entitled, for tax purposes, to special treatment. A credit was granted of 25 percent of the normal tax on earned net income, and for the years 1925–31 this credit was extended to apply to both the normal tax and the surtax. During the depression years of 1932 and 1933 the earned-income credit against the tax was eliminated in an effort to increase the Federal revenues. In 1934 earned income was again given preferential treatment. This time a credit was allowed against earned income instead of a credit against the tax, as previously done. This new credit was either 10 percent of the amount of earned net income not in excess of $14,000, or 10 percent of the entire income, whichever was lower, and applied only to the normal tax. In 1943 the credit allowed earned income was abolished, and the present law provides for no difference in treatment of the various forms of income.

The United States is not the only country that has realized that earned income should not be taxed to the same degree as unearned income. Great Britain now authorizes a credit of one-sixth of earned income, not exceeding a stated amount, approximately $1,000, as an allowance against income subject to the standard rates.

Canada differentiates between earned income and unearned income by imposing a special tax of 4 percent on unearned income. The first $1,800 of income from any source is exempted from this special tax.

In Australia all income below $648 is considered to be earned, and all income over $16,200 is considered to be unearned. Within these two figures, earned income is favored by imposing two different rates of tax, the lower one applicable to earned income.

V. WHAT FORM SHOULD RELIEF FOR EARNED INCOME TAKE?

We come now to a consideration of what form the proposed relief for earned income should take in the United States.

1. A direct depletion allowance is impractical.

There are serious difficulties in the way of capitalizing the cost of professional training and allowing a depletion allowance upon the cost so determined. For instance, should a person who has studied a profession at considerable cost be permitted a depletion charge if he decided later not to follow the profession? Should the deduction be permitted only to those engaged independently in the practice of the profession, or should it be extended to those who are employees of a corporation or other organization? And also, what costs should be included in the capital fund since the costs of an education vary widely in different institutions and among different individuals? For these and other reasons, a direct depletion credit is impractical.

2. Recommendation of the Joint Committee on Taxation.

In the year 1931 the Joint Committee on Internal Revenue Taxation of the Congress submitted a preliminary report on earned income. It concluded that the principle of allowing a deduction from net income, subject to tax of a certain percentage of the amount of the earned net income, representing a fair allowance for the exhaustion of the earning power of the individual, was fair and sound. It suggested three methods in which this might be accomplished, saying that the choice is largely a matter of judgment, depending upon the particular point of view.

If the strict theoretical view is taken, the committee said, it appears that a deduction from net income of 12½ percent of the earned net income for both normal and surtax purposes will probably most nearly meet the requirements.

If a practical viewpoint is taken, with the thought that the small taxpayer should receive the greater part of the relief, and that the loss of revenue should be limited, the committee said a deduction of 33⅓ percent of the earned net income in excess of personal exemptions from the net income, for normal tax purposes only, may be considered superior.

Finally, the committee recommended that if it is desired to take a middle course, where the relief can be readily fixed for each amount of earned endeavor, and thus allow both theoretical and practical considerations to have due weight, a table-of-constants method will offer the most advantages.

Any one of these methods offers a sound approach. The differential in favor of earned income should be sufficient (1) to afford an equitable adjustment to the classes involved, and (2) to serve as an incentive to work and effort. For these purposes, I regard the provision in effect prior to 1943 as wholly inadequate. The plan decided upon should be sufficient in amount to be worth while, and simple enough to be easily understood.

VI. DISCRIMINATION AGAINST THE SCHOOL TEACHER

At this point mention may be made of another discrimination in taxes that is peculiar to the members of an ancient and honorable profession, the school teachers. The practice is now frequent, and it is becoming more so, for school boards to require the teachers to attend summer school every few years to qualify for continued employment or to meet the qualifications for salary increases; and the cases in which the school authorities contribute to the cost of attending summer school are few and far between. The Bureau of Internal Revenue has stated in its rulings that it considers as ordinary and necessary business expenses, and therefore deductible from taxable income, "every necessary item of expense in conducting business, incurred primarily because of and solely in the furtherance of the business engaged in." Yet in spite of this general rule, in a ruling made back in 1921 and followed consistently ever since, the Bureau of Internal Revenue has held that: "The expenses incurred by school teachers in attending summer school are in the nature of personal expenses incurred in advancing their education and are not deductible in computing net income."

The position taken, in accord with this principle, is that any change will have to result from legislation. If a business organization sends one of its employees to school to learn how to operate a certain machine or to learn how to do a certain job better, it can deduct as a business expense the cost to it of paying for this education of the employee. A physician attending a medical convention or a chemistry professor attending a scientific meeting or convention may deduct the cost as a business expense (*Jack* v. *Commissioner*, 13 B. T. A. 726; *Silverman* v. *Commissioner*, 6 B. T. A. 1328). Although the chemistry professor can deduct from his taxable income the cost of attending a convention to gain new knowledge, and incidentally to further his education, if he had spent the same amount of time and money at a summer school of some outstanding university, in order to gain additional knowledge so that he could be a better professor of chemistry, he could not deduct this cost as a business expense, and neither could he depreciate it as a capital investment.

We have heard much recently about Federal aid for education, and that this aid is necessary to provide a method whereby teachers can obtain an adequate wage. It would help a lot, as far as our teachers are concerned, if we had less Federal tax discrimination against school teachers. I hope you lawyers will decide to do something for yourselves, and that when you do that you will lend a helping hand to the teachers.

VII. DISCRIMINATION AGAINST RESIDENTS OF NON-COMMUNITY-PROPERTY STATES

Under existing law there is another discrimination that falls heavily on earned income in some States. The present law discriminates between families on the basis of residence, by enabling couples in community-property States to divide their earned

and investment community income between separate tax returns, thereby bringing their tax payments into lower brackets. It discriminates also against earned income in non-community-property States, which is taxed to the earner, while the recipient of investment income is afforded numerous opportunities for splitting that income with members of his family. Since professional income is usually earned by one member of the family, the professional classes are among the principal victims of this injustice in States like Missouri.

The tax savings in community-property States by income-splitting varies at present rates with the size of the income. When all the income is received by one spouse, the savings vary from zero, in the case of married couples without dependents, with not more than $3,000 net income, to $342 at the $10,000 net income level and $12,854 at the $100,000 level. A change in the law to permit income-splitting between husband and wife in every case would, at present rates, result in a loss to the United States Government of about $750,000,000. Most of the tax savings would be received by those families with an income over $5,000.

It is obvious that the present arrangement is unfair. A husband, with no dependents other than his wife, who resides in Missouri and has an income of $10,000 from personal services only, pays a Federal income tax of $342 per year more than his counterpart living in any one of approximately 13 community-property States. In other words, part of the burden of paying taxes for equal benefits is shifted from one group to another group solely by reason of place of residence. Pressure has been brought on some of the State legislatures to provide community-property laws so that the inhabitants can receive some relief from the Federal income tax. As a result of new legislation in the States, this year the Bureau of Internal Revenue has ruled that husbands and wives in Oregon, Nebraska, Michigan, and Pennsylvania[1] may now, for the first time, each report only one-half of the community income in separate tax returns. In these States, it has been decided by the State legislatures that between the present Federal income tax and joint ownership of income by husband and wife, the lesser of the two evils is the latter. A similar proposal in Missouri failed of passage at the last session of the legislature, due, it may be supposed, to a reluctance to tamper with the basic property laws of the State.

This problem has received consideration over a period of 25 years. Four types of remedies have been proposed:

(1) To require joint returns for all married persons, which would cause married couples to pool their incomes in one return. Under this plan married couples with combined incomes above the first surtax bracket—now at $2,000—who now file separate returns would pay higher taxes, and their relative tax burdens would be increased in comparison with those of all other taxpayers;

(2) To tax earned income to the earner and community-property income to the spouse exercising management and control. This plan would eliminate the tax savings resulting from the automatic division of income under the community-property laws in some States, but would leave unaffected tax savings resulting from other forms of income-splitting, such as family partnerships, and having the investment income in the name of the spouse with no or little earned income. Its adoption would increase the taxes of spouses who now derive tax savings from reporting community income on separate returns;

[1] The Pennsylvania statute was declared unconstitutional by the Supreme Court of Pennsylvania, on November 26, 1947.

(3) A plan to equalize the differences has been mentioned, but it has failed to meet with much support. It would eliminate the tax advantage in community-property States by subjecting married persons filing separate returns to a new and higher surtax schedule. Under this plan it would usually be found more economical to file joint returns;

(4) What I believe to be the best plan of dealing with the community-property problem is that proposed by Representative ALBERT L. REEVES, JR., of Missouri. This plan would grant to spouses in all States the option to divide their combined incomes for tax purposes. This plan would reduce the taxes paid by married persons who have unequal incomes which in the aggregate exceed the amount taxable under the first bracket regardless of whether they now file joint or separate returns.

It is my opinion that there is no reason that a person earning a certain income in a non-community-property State should pay a larger Federal income tax than someone living in a community-property State earning exactly the same taxable income from the same profession. This matter should, and I believe, will, receive early attention from the Congress.

VIII. DELAY AGGRAVATES INJUSTICE

In conclusion, let me remind you that the late William E. Borah once said:

"The marvel of all history is the patience with which men and women submit to burdens unnecessarily laid upon them by their Government."

For my part, I marvel at the patience with which the professional people of this country have submitted to the burden of an unfair and unjust proportion of the Federal income tax. They have done so seemingly with very little complaint for many years.

Colbert is supposed to have said, with typical French cynicism:

"The art of taxation consists in so plucking the goose as to obtain the largest amount of feathers with the least possible amount of hissing."

I am bold enough to express the view that some hissing from my brethren at the bar is in order. I hope that it will start here tonight, and that it will be heard as far as Washington.

Faith, Not Fear, Must Move Us

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, November 28 (legislative day of Monday, November 24), 1947

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Faith, Not Fear, Must Move Us," written by Brooks Atkinson and published in the New York Times magazine of November 23, 1947. I think it has a bearing on the program which the Senate is now engaged in considering.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAITH, NOT FEAR, MUST MOVE US—WE SHOULD, SAYS AN OBSERVER, BASE OUR POLICY ON CONFIDENCE IN AMERICA, NOT DISTRUST OF RUSSIA

(By Brooks Atkinson)

(Brooks Atkinson, the Times' drama critic, was formerly its Moscow correspondent. He was awarded a Pulitzer prize for articles on Russia.)

Let us hope that the current mood of the country is a passing one. The mood is bitter and sullen, streaked with fear. Let us hope that it derives from nothing more permanent than exhaustion from the war. Wars infect the spiritual health of any country, no matter who wins them, and we are not immune.

It is better to win than lose a war, but not much better. Although the First World War was relatively small it left us in an abnormal frame of mind that produced a number of aberrations—bitterness toward our allies, repudiation of the principles of the war, vilification of war leaders, intolerance of foreign political ideas, general disintegration of personal morals.

But after the First World War we were not afraid. A kind of vague fear permeates the country now. It is eating away at liberal institutions and influencing our policies at home and abroad. It poisons our capacity to think clearly. We are afraid of Soviet Russia which, ironically enough, is afraid of us. If the gods pay any attention to these flutters of panic that skip across the world, they must enjoy this foolish spectacle of two powerful nations shaking in their boots at each other and competing with each other in a tempest of rancor.

Fear is a treacherous factor in situations that require decision and action. It wrecks normal judgment. If the Thomas committee wants to find a real adversary in its search for un-American activities it might investigate the growth of fear in this country. On the evidence of history, fear is un-American. America was settled by foreigners who were not afraid of work and danger. At crucial moments America has been inspired by men who were not afraid of freedom.

The greatness of America is founded on the abundance of our natural resources. But our wealth has been transmuted into a strong and vigorous Nation by the work and imagination of men who had courage. In everything that is vital and honorable in this Nation there is a history of courage somewhere by men who acted on their convictions.

But fear has begun to paralyze some of the normal functions of American institutions. For example, the Gestapo methods used in the loyalty test of Government employees violate the traditional American respect for an individual's security. Since Government employees have access to confidential information and are in a position to sabotage public affairs, the Government is entitled to be sure that its work is being done by people who are loyal. No one questions that. The people as well as the Government have an obvious stake in the loyalty of Government employees. But the secretive methods used in the operation of the loyalty check carry over into our democracy the techniques of police states. No secret police, including the FBI, can be trusted to weigh evidence judiciously or to protect the rights of individual people.

The loyalty check has veered so widely from democratic procedures that the President's Committee on Civil Rights discusses it with considerable anxiety in its thoughtful report, "To Secure These Rights," and declares: "Provision should be made for such traditional procedure safeguards as the right to a bill of particular accusations, the right to subpena witnesses and documents where genuine security consideration permit, the right to be represented by counsel, the right to stenographic report of proceedings, the right to a written decision and the right of appeal."

These would be elementary considerations in any public operation not influenced by fear. No doubt the President's recent appointment of an advisory board to review the loyalty check is the logical response to public opinion, which is the ultimate authority in a democratic state.

Action motivated by fear has recently appeared in another branch of the executive arm of the Government. Less than 2 years ago the State Department provided visas for three prominent Soviet journalists who were specifically invited to travel freely around the United States. With a hearty gesture, the State Department aided and abetted a wonderful journey.

But now things have changed. A few weeks ago Pierre Courtade, correspondent of the Communist l'Humanité, of Paris, applied for a visa to report the meeting of the Assembly of the United Nations. Since France is a member of the United Nations his application represented legitimate business. After a mysterious delay the State Department finally gave him a limited visa with the proviso that he must not peek at the rest of the United States.

We spend a good deal of time wrangling with the Soviet Government about freedom of the press and the moral right of newspapermen to travel anywhere in search of information. But in the Courtade case the State Department, assuming authoritarian powers of discretion, applied to a foreign journalist the same attitude we condemn in the Russians. Every nation guided by fear inevitably ends up in the same blind alley.

The un-American activities of the House Committee on Un-American Activities also come from group hysteria. Unfortunately, they are legal, though unenlightened by the philosophy of the bill of rights. And perhaps one may be pardoned for taking malicious pleasure in the fact that most of the victims called to the witness stand looked as disreputable as their inquisitors. For any American can defend himself against the Un-American Activities Committee by behaving with the candor and courage of an American. Once a question becomes public there are no penalties on honesty. Although the committee has no moral right to ask a man what his politics are, he has a full right to answer. But the Washington carnival, with Hollywood writers and celebrities as the showiest actors, proved something more disquieting.

People in high places in American life are scared, chiefly of Soviet Russia, and are willing to undermine American institutions by informing on their neighbors and recommending that an unpopular political party be declared illegal. They fear that 140,000,000 Americans cannot survive unless the 100,000 members of the Communist Party are turned over to police surveillance.

Since the Communist Party is operated like a conspiracy and is oriented more toward Soviet Russia than America it presents certain problems that cannot be lightly brushed away. But at a time when communism is more unpopular than ever in this country, many Americans are unwilling to trust the common sense of public opinion or the sound political traditions that have made America a strong Nation of free men. In fact, they are willing to try a little totalitarianism to preserve democracy. Like other things that are going on in America at the moment, this gives comfort and aid to the Soviet Russian party line.

Fear not only distorts normal judgment but it freezes the heart. On the Statue of Liberty we proudly display an inspired poem that begins:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free."

and we take considerable pride for humanitarianism. But we close our shores to at least 400,000 of the 1,600,000 displaced persons of Europe, some of whom have been waiting for a home for 5 years.

Most of them are the sort of people who helped fashion America in its present image, for they are the political and spiritual descendants of the millions who emigrated here from tyrannies and chaos during the last century. They believe in freedom more passionately than many Americans do at the moment. Fear of foreigners, which is one of the most primitive characteristics of a civilization and one of the basic characteristics of Russia, has locked the door of America against people who can help to give the world a new birth of freedom. We have forged a few links in our own iron curtain.

That is one reason why we are so generally disliked abroad. Although we have already given $12,000,000,000 to help ravaged countries abroad, we are held in low esteem by people looking for spiritual leadership. The Marshall plan, which is the most constructive proposal yet made anywhere, may change this situation if it is not strangled with political restrictions.

The main reason for our unsavory reputation may be the wide gap between our wartime statement of principles and our niggardly peacetime fulfillment. Caught off balance by Russia's initiative in the Balkans and in Poland, we have not made a single bold gesture in the spirit of the Atlantic Charter. We have not succeeded in helping "people to choose the form of government under which they will live," nor, apart from splendid moral statements, have we been able to give "assurance that all the men in all the lands may live out their lives in freedom from fear and want."

In the unhappy process of continually retiring from the Russians we have found ourselves automatically supporting reactionary governments in Greece, Turkey, and China and backing unpopular groups in Korea. At Yalta, fearing that Russia might not fight Japan, we blandly turned over all practical authority in Manchuria to Russia, without first asking the consent of the Chinese.

Out of fear of the Chinese Communists, and perhaps out of bad conscience, we have given American arms to help maintain in office a moribund Chinese Government which is unpopular with the Chinese people. American arms have been used to quell a popular uprising in Indonesia, where we have no responsibility or interests, although the Atlantic Charter expressed a desire to "see sovereign rights and self-government restored to those who have been forcibly deprived of them."

Perhaps the good impulses of Americans have been congealed by fear, not only of Russia but of change and of liberal ideas. In a world that has been oriented to the left, not by Russia alone but by the collapse of old and inadequate prewar regimes, we have been standing for the status quo, and to the rest of the world we now represent plutocracy. A liberal-minded nation with the courage to act on progressive convictions could be a great inspiration for the sort of free governments in which presumably we believe.

Apart from our food and goods, which are naturally wanted, the world longs for spiritual leadership which the principles of the Atlantic Charter expressed. The revolution that would be generally exalting would be democratic—not communistic. And the disheartening thing about the fear of Russia in Americans today is the lack of confidence it shows in our national creed. If the Russians are really smart, they ought to capitalize on that situation, and perhaps they have.

Unless we let America disintegrate, morally and materialistically, faster than seems likely, there is nothing in Russia to fear at the moment. Russia is a large country, populated by admirable people with infinite potentialities, but led by a handful of fanatical doctrinaires who are scared. They have all they can do to look after themselves, to say nothing of efficiently administering the countries they are dominating, and they cannot yet provide their own people with a decent standard of living. They have not yet fulfilled even one of the four basic freedoms—freedom of speech, freedom of worship, freedom from want, freedom from fear.

As a matter of fact, they have come closer to fulfilling freedom of worship than any of the others, which is curious, since that is the one freedom in which they do not sincerely believe. The cautious relaxation of pressure against religious observance represents their helplessness against the will of people rather than their own conviction.

Certainly there is danger of war. If the world remains rigid and inflamed there is danger of war with Russia in 5, 10, 15 years. No one can rationalize the danger away nor guess when the danger may be greatest. But every student of the subject agrees that Russia cannot fight an aggressive war now, nor can she risk provoking war, for she has hardly begun to recover from the appalling losses of the last. In the meantime she has been losing friends rapidly, particularly in England, where she once had many well-wishers.

Since the spring of 1946, when she was at the peak of her influence, she has made no further progress outside her own borders. Time is running out for Russia as an imperialistic power. Large as her army is, it is not powerful enough for unlimited conquest or continued subjection of people used to western ideas. Having nothing constructive to give the world, Russia now has nothing to look forward to except an internal collapse of the United States and the degeneration of American political traditions.

So why this wave of fear? Why do we let Russia inhibit our freedom of action and poison democratic principles at home? For this is the time to be, not less democratic, but more democratic than ever, to have faith in our own system and eagerness for progress. And if we base action on fear of Russia we shall be as guilty as Russia is of blocking the avenues to eventual understanding.

Whether Stalin believes what he says or not, it is true that the Russian and American systems can coexist and learn from each other—by normal commercial trade, to cite no other method. Although American ideas may be repugnant to Soviet Russia, American goods are quite acceptable, and are good tokens of faith in modern civilization. The Soviet leaders with their timid minds and ruthless methods have locked that door, but they are not so successful that they can afford to keep it locked forever, and the peace and well-being of the world is not so impossible to create as the frightened men of the Soviet state imagine.

The Marshall plan is a wholesome expression of American principle and a rational use of American resources for the good of the world as well as of ourselves. By excluding themselves from participation in its benefits the Russians have advertised the bankruptcy of their statesmanship, for they have nothing to substitute. The relentless logic of materialistic progress, which is something they profess to worship, may draw them into it, despite themselves. In fact, the Harriman report on the Marshall plan assumes that there will be trade with Russia and the Russian satellites before the plan has fulfilled its mission.

There is a calculated risk in the Marshall plan. But let's not forget that there has been a calculated risk in every stage of American development. The country was built by men who took risks—pioneers who were not afraid of the wilderness, businessmen who were not afraid of failure, scientists who were not afraid of the truth, thinkers who were not afraid of progress. And when there is no risk, but only fear instead, the American way of life may be regarded as finished. For progress in liberal institutions as well as in material things takes courage, drive, and conviction. Nobody's revolution is ever finished, including Washington's, Jefferson's, and ours. And Russia's.

Which? Private Enterprise and Full Production, and Plenty, or Government Controls and Scarcity?

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. ROBSION. Mr. Speaker, President Truman in his message on Monday, November 17, urged the Congress to provide for allocations, rationing, and price fixing on many commodities, including steel, fuels, petroleum and coal in order to carry out his program of providing $600,000,000 of stop-gap aid to France, Austria, and Italy and also the much larger program, perhaps involving $20,000,000,000 under some rehabilitation program, generally designated as the Marshall plan. I have received many letters from those engaged in the coal-mining industry expressing strong opposition to any such allocations, rationing, or price fixing. It is urged by the coal exporters and the industry generally that any such reimposition of Government controls beyond those now in effect will cut down production and contribute to inflationary trends and bring about a scarcity of coal by disrupting distribution. They point out that—

First. During 1946, coal shipped overseas under Government procedure whereby the Procurement Division of the Treasury Department obtained most, if not all of the coal, to be exported;

Second. Under calendar year 1946 total foreign exports of coal, excluding Canada, amounted to less than 20,000,000 gross tons;

Third. This Government system of purchase through Treasury procurement was entirely eliminated March 31, 1947, and it is estimated during the calendar year 1947 these coal exports will exceed 41,000,000 gross tons;

Fourth. In August 1947, under this free enterprise commercial system, overseas exports of solid fuels including anthracite, bituminous and coke exceeded 5,000,000 gross tons—an all-time record. This demonstrates efficient operation under the free-enterprise system which cannot be realized under a system of Government controls;

Fifth. The bituminous-coal industry of the United States is the only coal industry of the major coal producing countries that is now operating under the free-enterprise system and by virtue of such operation is supplying its own needs and a large portion of the coal needs of the world.

The National Coal Association on November 22, 1947, said in a written statement:

> There is no necessity for Government price fixing with respect to coal. To do so would impede production which is badly needed. There is no over-all shortage of coal. Let us keep some fundamental facts in mind. The United States is the only country in the world that has an adequate supply of coal available at this time. This is only because the industry is operated under the law of supply and demand. Prices are higher than they were a year ago and this is due to the increase in wages, increase in the cost of materials and supplies, and a shorter work-day. * * * The law of free enterprise is bringing out the coal necessary for this Nation's requirements and to supply coal for other countries. Any Government price fixing would reduce production of coal as it would become involved in all of the usual Government red tape.

It is pointed out, production for the week ending November 15 was 12,590 tons, even though Armistice Day was included in that week and there have been produced since January 1, 1947, 538,000,000 tons, indicating clearly that without interference production might exceed 600,000,000 tons during the present calendar year. The blighting hand of bureaucracy will cut down production and bring about shortages and inflationary prices. In all of the important coal-producing countries of the world except the United States, mines have been nationalized under socialistic forms of government. They have eliminated private enterprise and in those countries we find confusion, disorder, and strife on every hand, with reduced production and higher prices. These are the facts as presented by the National Coal Association, the Coal Exporters Association of the United States, the Big Sandy-Elkhorn Coal Operators Association, the Harlan County Coal Operators Association, the West-Kentucky Coal Co., and many others. Shall we abandon our system of private enterprise in the production of coal that is being carried on so efficiently and successfully and which has enabled us to provide coal for our own use and a surplus to aid other countries, and adopt the government-owned and socialized controlled system of other countries of the world which resulted in cutting down production and inflationary prices to consumers and made the people of those governments dependent upon us for their coal supplies?

Repayment and the European Recovery Program

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit a copy of an editorial from the Washington Evening Star of November 27, 1947, as follows:

REPAYMENT AND THE EUROPEAN RECOVERY PROGRAM

Under the chairmanship of Representative HERTER, the House Select Committee on Foreign Aid has put its finger on a significant fact in declaring that the United States can receive an important measure of repayment for the help it proposes to extend under the long-range European recovery program. The repayment—a kind of reverse lend-lease—can be in the form of the strategic raw materials we are stockpiling for national defense.

The same point has been made by experts associated with the President's Committee on Foreign Aid, headed by Secretary of Commerce Harriman. They have noted that our stockpiling program has fallen far short of its objectives up to now. According to congressional action taken last year, the program calls for an outlay of about $275,000,000 "for the expeditious acquisition of adequate stocks of certain strategic raw materials, the domestic production of which is insufficient to meet emergency requirements." But the Harriman group has found that the acquisition to date has been slow, unbalanced, and in many cases, negligible, In connection with legislation for the projected European recovery program, therefore, it has recommended that special arrangements be made with the recipient countries to increase the output of these materials to a degree that might permit their shipment to the United States at a rate of more than $250,000,000 a year.

Chairman HERTER and his committee have taken the view that such arrangements might even include agreements under which the United Kingdom or France, for example, might allow us to participate in the production of specific colonial resources, with certain fixed amounts allocated to us. In the committee's words, "Where it is inexpedient politically or otherwise to attempt this direct solution of acquisition of mineral rights a combination of American private capital for development under Government partial guaranty, plus stock-pile deliveries over a 25-year period, would go far toward repaying some of the Marshall program loans and possibly securing interest coverage on previous advances." The deliveries would be made up of more than a dozen major strategic materials, including asbestos, chromite, industrial diamonds, manganese, nickel, tin, and zinc.

The proposed European recovery program, of course, is designed primarily as an investment to help our friends abroad regain their economic and political vigor and thus preserve their independence against the threat of Red totalitarianism. If it succeeds in that, it will pay us rich dividends in terms of our own well-being and security—things that cannot be measured in dollars and cents. That does not mean, however, that the ERP must be put down as a project from which we should expect no other type of return. Both the Harriman and Herter committees have shown how it can be repaid in part in the concrete form of strategic materials. It offers other reimbursement possibilities as well. It is not meant to be a one-way operation entirely, with the United States getting no cash value whatever for what it gives.

The Eisenhower Foundation

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, November 28 (legislative day of Monday, November 24), 1947

Mr. CAPPER. Mr. President, on October 12, 1947, Charles M. Harger, publisher of the Abilene, Kans., Reflector-Chronicle, and president of the Kansas Eisenhower Foundation, addressed the Kansas State Historical Society on the Eisenhower Foundation. Since Mr. Harger's remarks give certain facts about the foundation which, I believe,

will be of interest to the Members of Congress, I ask unanimous consent to have his remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF CHARLES M. HARGER, PUBLISHER OF THE ABILENE, KANS., REFLECTOR-CHRONICLE, FORMER PRESIDENT OF THE SOCIETY AND PRESIDENT OF THE EISENHOWER FOUNDATION, BEFORE THE KANSAS STATE HISTORICAL SOCIETY AT ITS ANNUAL MEETING AT TOPEKA OCTOBER 21, 1947

Fifty years ago—a little more than that—the Eisenhower family moved to Abilene. They built and lived in a modest two-story building in what was then a remote part of the city and is not now inside the close business and residence section. It was on the wrong side of the tracks. But they had a little ground there and they raised five sons—fine, cheerful, wide awake, full of life, full of honors in the school—and one of them was Dwight Eisenhower.

Dwight I knew better than I did the others. He was a member of the same high-school graduating class as my daughter, he was over at the house dozens of times, he was just a nice boy. He was clean. He was decent. He worked hard. He helped earn all the money he could to aid the family, as all the others did. When he went to West Point it was without any pull or any political advantage—just the friendship of the businessmen of Abilene who liked him. The other four boys went to college and worked their way through. By the way, that was a remarkable family. Its five boys all worked their way through college; all occupied prominent places in business and professional life, and one of them, as you know, is president of the Kansas State College.

Dwight went to West Point, and we kept track of him. He came home frequently and we knew him for years and years and years. We kept watching his upward progress and one day we learned that he was a member of the War Staff in Washington. Then the President of the United States, the King and Premier of Great Britain made him head of the Allied forces in Europe, the greatest army that was ever gathered fighting against the most brutal, the most dastardly group of gangsters that ever lived on earth. And he won the war. His Army won the war. He got the honor for it. They acknowledged it. His diplomacy, his ability to gather together the groups from the different countries, molded them into a unified force and we all know what wonderful victories he won.

Then he came home. He stopped in London. One hundred thousand persons crowded the street in front of the Guild Hall. He stood on the balcony with King George on one side, Winston Churchill on the other—Princess Elizabeth in the background somewhere, I suppose—and made an address. It was a marvelous address—beautiful diction, beautiful language, beautiful sentiment. It was a speech that won the heart of every person who heard it or read it. One of the big London papers printed that speech eight columns wide. In comparatively large type, it covered the whole front page and in the center of the page was put a box. In that box was printed the Gettysburg Address. It said in the legend at the top of the page, the headlines, that the address of General Eisenhower was just as beautiful and just as glorious in its sentiment as anything that Abraham Lincoln ever wrote.

That shows how much they thought of him. He came to New York, and thousands and hundreds of thousands cheered him down Broadway. He came to Washington. He came to Kansas City and it was the same thing over again. He came to Abilene and 40,000 people poured into that little town of 6,000 population. I never saw acres of people before until they gathered around the speaking stand out in the park. It was a glorious reception, his home reception.

Then we decided that something ought to be done about it. Here was a man who was unquestionably the greatest general that America ever knew. He had commanded the greatest Army, had had the most remarkable support from every country and from all the generals. And he was a Kansas man, Kansas ought to do something about it. He was an Abilene man, Abilene ought to do something about it. We organized what is technically and officially known as the "National Foundation to Honor General Eisenhower and the United States Armed Forces." He wouldn't have it any other way. He wouldn't have it called the "Eisenhower Foundation," although in general parlance it has come to be called the Eisenhower Foundation.

We set out to raise a million dollars. The foundation has been organized for about 2 years. It has trustees and vice presidents—most of them, of course, from Abilene in order to hold meetings—from Abilene, Topeka, Kansas City, Chicago, and New York. We have tried to raise enough money so that we can build a shrine, a memorial. There ought to be a better name for it, but that's what it means—a structure that would house the trophies that he has promised us, for he has rooms full of them. He says there are so many of them he don't know what to do with them when he takes them up to Columbia University, and he has promised to deposit them with the foundation when we get the building ready to receive them. We have raised about $50,000. Dickinson County voluntarily, no solicitation, raised about $22,000 of that. The rest has come from donations from people of the Middle West. The Veterans of Foreign Wars and the Legion and their auxiliaries have assisted, and we are constantly raising more money. A week ago today they had a collection in many of the schools of Kansas, in which several hundred dollars were raised, and next month there is to be a tag day. All of that, of course, is only incidental. Some day we have to get in touch with wealthy people, or wealthy foundations in the East, and get larger sums—fifty or sixty thousand dollars of money at a time. They are generous as this is a most worthy cause. That's what we are trying to do. We have not struck the right persons yet, but I think we will, and if anyone here would like to give a thousand dollars we would be pleased to send it to the foundation.

General Eisenhower is coming to Abilene. He will bring with him in his plane a token portion of these trophies he has received. I don't know how many, it may only be a satchelful, and it may be a ton of them, I don't know how much a plane will carry, but he will bring them and turn them over to us as an indication of what he will do later when we are prepared to receive them. Some of these trophies are really valuable. Premier Stalin gave him the most valuable trophy or badge, banner, or something or other, making him a member of a Russian order. Jewelers have estimated, so it is reported, that the diamonds, sapphires, and rubies adorning it are worth $22,000. The Russians seem to have plenty of money for decorations and things of that sort. The Danish Government this week gave him a jeweled sword, set with jewels and diamonds. He has oceans of things filling two or three rooms, all to be deposited with the foundation.

In the meanwhile there was the property of the Eisenhower family, consisting of a house, their home in which they had lived, and adjoining it a block of ground of rather large size, with no buildings on it. Last June, Milton acted for the four sons, and they deeded that property to the foundation. We had a celebration at Abilene. Governor Carlson made a speech and Milton presented that deed to me as President of the foundation, and since then we have done a great deal to repair the house. The house needed a new roof and paint, without destroying in anyway the symbolism of the house as the home of the Eisenhowers. All the old things are there just as they were when Mrs. Eisenhower passed away—the dining room, the living room, the little parlor, the old piano, the books, the kitchen. The bedrooms have the same beds. The beds have the same bedding they had on them, and I noticed that on one of the bed posts was hanging the white cap that Mrs. Eisenhower used to wear. There are many souvenirs of the boys, that is of their boyhood life when they were in Abilene. All is there, just as naturally as we could make it, for the entertainment of the public. Then we threw open the house and had a couple of girls to act as guides. It was the latter part of June by the time it was finished. More than 12,000 persons have gone through in the last 120 days. That is nearly 100 a day. They come from every State in the Union, from eleven foreign countries—tourists that go through—and they all come there to see the home that was the boyhood home of General Eisenhower.

That shows how wide a following, how wide is the admiration for him. I believe if we ever get that foundation completed, if we ever get that structure built, it will bring thousands and thousands of people to Kansas just to come and see that memorial to General Eisenhower. He has been very modest about it. He does not want us to pressure anybody to give, and we are to do it as voluntarily as we possibly can. But we want to put it through. We want to complete it in the next 2 or 3 years, and along with it to do something for the rising youth. His ambition of life—his idea that he always talks about to me—is the youth of the Nation, how it needs to be taught the things on which our forefathers built this Nation; that we are not teaching them enough American citizenship. We hope, if we have enough money in the foundation after building a suitable structure, to use some of it to foster that education in some of the colleges and help to uplift this younger generation, which he feels is not living up entirely to its possibilities. That is his idea and it is the idea of the foundation—but first we have to have the building and the funds with which to work.

That's the story. We have appreciated the work of the Legion and the VFW and their auxiliaries in raising money and helping the cause all over Kansas. Many of the counties from out West, where they are loaded down with money—wheat money—have been very liberal in their contributions. Many of the cities have been liberal, and we are hoping that we can succeed in raising enough funds to complete that job.

Now, all of this, of course, has been very interesting to the press. Five books have been written—lives of General Eisenhower. All of those authors have come to Abilene and have spent 2 or 3 weeks digging out material—stories and incidents of his boyhood. A number of incidents never happened, but they make good reading matter. And there were magazine people—all sorts of magazine people—from the Saturday Evening Post, Collier's, and publications like that. All those magazine people came out and we entertained them. We were glad to meet them, for they are such interesting people. Then the newspapers, the Chicago newspapers, the St. Louis newspapers, New York, San Francisco, and of course, all the local papers like Wichita, Topeka, and Kansas City. They have come out and written feature stories for their Sunday issues. They all built up the reputation, notoriety and fame of General Eisenhower.

And so, reading all those articles and hearing those newspaper and magazine people talk, Abilene has evolved a dream. It may not come to realization, but it may, and that dream is that in addition to being the boyhood home of a great general, it may also be the boyhood home of a President of the United States.

It's a Great Day, at That

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of an editorial which appeared in the Washington Times-Herald of November 27, 1947, Thanksgiving Day, as follows:

IT'S A GREAT DAY, AT THAT

You don't have to look far or hard for things not to be thankful for on this Thanksgiving Day, 1947. The map of the world, including the United States, is plastered with such.

For one item, there is the inflation which is plaguing this country. Prices are up and going higher, and there's nothing to be thankful for in that.

For another, High Tax Harry Truman and his New Dealers are fighting to increase our inflation by railroading through Congress an insufficiently safeguarded European-aid plan to cost twenty billions or worse in the next 4 or 5 years. At the same time, they are trying to blame the Republicans for inflation, and are asking Congress for power to bring back black markets and superinflationary under-the-counter prices through a restored system of consumer rationing and Government price controls.

On the international scene, Communist Russia is still raising unmerry Hell.

Captive countries behind the iron curtain are suffering a variety of tyranny, robbery, and villainy reminiscent of the 30 Year's War of Genghis Khan; and the knowledge that such things are going on frays the nerves of civilized people everywhere.

The cold war against the United States is being stepped up by Russian stooges in France, Italy, Yugoslavia, Greece, China, Korea, Japan, and needless to say, the United States itself.

How the cold war can be kept indefinitely from becoming a hot war is hard to see; though we still think that would be a calamity of calamities, and that we should do everything in our power to prevent it. Another thing not to be thankful for is that our present rulers seem no more anxious to head off World War III than Roosevelt was to keep this country out of World War II.

For all that, things might be a lot worse than they are.

At least we have the hardest money in today's world, and a huge stock of gold to anchor it to. That most likely means that, while our inflation may get a good deal worse than it now is, we'll not suffer from such paper-money tornadoes as have wrecked the economies of Greece and Hungary since the war.

The United States also has plenty to eat. Our crops have been enormous for some 10 years last past. They will probably be off somewhat during the next year, but no famine or semistarvation is in prospect. We can be thankful for that.

We can also be thankful that Senator ROBERT A. TAFT (Republican, Ohio) and like-minded men are fighting in Congress for the proposition that we should ration the rest of the world on American food shipments before we think of rationing ourselves.

TAFT'S proposal was greeted with horrified shrieks by the do-gooders, but it is only common sense—how can we hope to help any other nation if we weaken our own? And it seems to be taking hold in Congress.

Then, too, we seem to have learned a few lessons from our latest war experience—not enough, perhaps, but a few.

THINGS TO BE THANKFUL FOR

At least we're still budgeting heavily for the armed forces, and throughout the services there is evident a determination that never again will we be caught napping.

Research on new-type airplanes, guided missiles and rockets is going forward energetically; and if Congress will only appropriate still more money for these purposes, we can be that much more thankful.

Maybe this is a gruesome thing to say, but it seems to us one of our chief reasons for offering up thanks today is the fact that we've been sensible to date about the atom bomb.

A year ago, it was touch and go whether Russia would succeed in kidding us into prematurely yielding up to some international agency all our knowledge of how to make atom bombs. The question is decided now, in the negative.

Meanwhile, we've been busily making and stock piling these individual weapons; and the current ones are said to be 50 times as powerful as the primitive little numbers that smashed Hiroshima and Nagasaki; and the reports that Russia has an atom bomb of its own appear to be just some more Soviet wahoo (old Indian word for bushwah, old Indian word for mahoola).

On balance, we think Thanksgiving Day, 1947, is a relatively glorious occasion for the United States, and we hope you enjoy it.

Our Honored Dead

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an unusual patriotic address delivered by the Honorable J. F. T. O'Connor, United States district judge for the southern district of California, in the Los Angeles Coliseum on Memorial Day, Sunday, May 30, 1943, which I had the privilege of attending.

It is estimated that 70,000 persons were present on this occasion. Distinguished guests were Gov. Earl Warren, Mayor Fletcher Bowron, Admiral R. S. Holmes, Maj. Gen. M. Murray, Judge Goodwin Knight, Archbishop John J. Cantwell, Rabbi Edgar F. Magnin, Dr. E. C. Farnham.

The address follows:

No one has expressed the spirit of this day in more significant words than William Gladstone when he said:

"Show me the manner in which a nation or community cares for its dead, and I will measure with mathematical exactness the tender sympathies of its people, their respect for the laws of the land, and their loyalty to high ideals."

We have assembled in this vast coliseum under sunny skies to honor the memory of our soldier dead. High and deserved tribute has been paid in the press, over the radio, and, this afternoon by Governor Warren, Mayor Bowron, distinguished officers of our armed forces, Archbishop Cantwell, Reverend Doctor Farnham, and Rabbi Magnin, and you, my fellow Americans, many tens of thousands, by your presence speak a far more eloquent tribute than any words of mine. While similar exercises are held today in most of our States and in Alaska, far away Puerto Rico, and the Hawaiian Islands, no gathering outnumbers this one.

Three quarters of a century ago the first Memorial Day services were held. They were dedicated, at the direction of the national commander or the Grand Army of the Republic, Gen. John A. Logan, to the fallen Union heroes of the Civil War, but as time healed the wounds and softened the bitterness of the strife, and men read into Appomattox not defeat for the South but a triumph for both armies, the soldiers in grey were honored with their brothers in blue. The men in '61 who shot out of the skies at Fort Sumter the Stars and Stripes, and lowered it from the southern capitols, 4 years later with their own hands raised again the emblem of freedom and justice, testifying to the indestructibility of the Union.

Two years after the close of the Civil War the women of Columbus, Miss., impartial in their offerings made to the memory of the soldier dead, strewed flowers on the graves of confederate and national alike. This act, simple and spontaneous in its origin, quietly done by women whose men followed the light of a fading star, touched the heart of the North as no resolution, no law, no speech, could do.

Was it the soldier son of a mother in Maine upon whose grave fell the tribute from the Mississippi mother's hand? Perhaps in the common sorrow shared by each was drowned the erstwhile enmity. The poet, Francis Miles Finch, wrote the story in imperishable words:

"They banish our anger forever
When they laurel the graves of our dead
Under the sod and the dew
Waiting the Judgment Day
Love and tears for the Blue
Tears and love for the Gray."

Of the 3,000,000 men who marched under the leadership of General Grant and General Lee, about 900 live today. In their honor a Nation bows its head in prayer and reverence. Thirty-three years of peace followed the Civil War. From Andrew Johnson to William McKinley our Nation pursued the peaceful pathways of a people determined to build a new continent dedicated to liberty, justice, and free enterprise— a new South arose. The battle trenches were filled, the battle-scarred fields grew new life with cotton, corn, and tobacco finding new and better markets across the Mason and Dixon's line. Houses and barns were rebuilt, while factories flourished in the North and the pioneer was breaking sod in the everwidening West, won by the heroes of the Indian wars. Once again from the lips of a united people came the song, born in the throes of an earlier war: "Oh say can you see by the dawn's early light * * *." Again the bugle note, again the call to arms, and the sons of the men who wore the blue and the gray now marched shoulder to shoulder under one flag, one command, one country.

Today we honor alike the heroes of the Spanish American War. They avenged the sinking of the battleship *Maine*. They carried our flag in triumph to the outposts of the Pacific and to the rich islands of the Philippines—Guam, Wake, and Midway were among the possessions which fell under our protection, while the last vestige of a foreign power relinquished its jurisdiction in the Western Hemisphere.

Today comes the real appreciation of our debt to the soldiers and sailors of '98. What would have happened had not the Stars and Stripes floated over the islands in the far Pacific during the past 45 years? We builded better than we knew. No—not we, but a higher power nearly half a century ago, sent our battleships to fight in distant tropical waters to liberate millions of men and women and to make more secure the safety of our own land. If speculation is pardonable on this solemn occasion, it is my humble opinion that the flag of the rising sun would float from every port and fort and public building, from the largest to the smallest island. Under Nippon the vast resources of the Philippines would have been used to build forts, guns, battleships, and battle planes to rule the Orient and threaten the peace of the Occident. The Philippine Commonwealth comprises 114,000 square miles with 16,000,000 people under the heel of Japan, but not for long. Soon Japan will feel the full power of American might and courage in the air, on the sea, and under the sea, and on the land, and her flag will symbolize not the rising sun, but the setting sun.

Nearly 20 years of peace followed the Spanish-American War, when again the bugle notes sounded the call to arms, and over 4,000,000 Americans responded. It was Europe's war—not ours—until a ruler drunk with power and crazed with ambition denied the right of American ships flying the flag of the United States to sail the high seas. One after another our unarmed ships were sunk—men, women, and children murdered by German torpedoes—from Washington to Berlin went countless notes of protest but the Kaiser, convinced we would not fight, and if we did, could not arrive in time to prevent a German victory, and that if our soldiers did arrive they were no match for German military power—gave the order for unrestricted submarine warfare. Our soldiers did arrive, they did fight, and they conquered. Fifty thousand four hundred and ten American soldiers died in battle or from battle wounds, while 182,674 carry the scars of battle. That was the most valuable part of our contribution and our sacrifice in the last war.

To these heroes of World War I a nation pays its tribute today. The statesmen, or shall I say the politicians, lost what they bled and died for under European skies.

Nearly a quarter of a century passed in peace, but slowly the war clouds were gathering over Europe and in the far Pacific—again it was Europe's war, not ours, until December 7, 1941. Japan without a declaration of war, without justification, without warning, in fact at the very moment her emissaries were assuring our Nation at Secretary of State Hull's desk that Japan was our friend, their grinning faces masking the treachery and perfidy of their minds, the sons of Nippon were murdering our soldiers and sailors at Pearl Harbor. They murdered 2,343; they wounded 1,272, and 960 are missing. They destroyed 177 airplanes. In the harbor 86 ships were damaged or destroyed. The despicable blow planned for a score of years or more in great detail by military strategists was intended to bring speedy victory to Japan. Guam, Bataan, Guadalcanal, Wake, the Solomons, and Attu is part of our answer. The completed story will be written in the ashes of Tokyo.

There are new graves in North Africa, Iceland, Alaska, the Aleutians, the islands of the far Pacific, and under the seas—new reasons for this memorial occasion. Our men sleep side by side with the other heroes of the United Nations. Each country honors its own dead—each honors the dead of the other nations fighting in a common cause. Love of liberty and justice binds in links stronger than steel, these United Nations. Determination to crush the enemies of democratic institutions is the watchword—liberty for all men the goal! Here in this Coliseum blend the colors of the United Nations—one for all and all for one. Each flag speaks the heart of its own people. Here they form a huge cross silently invoking divine assistance without which no cause can triumph. No historian can pen the story of another generation to read. No language has words to express the inhuman and brutal acts of savagery perpetrated by the Axis Powers.

Inspired by these solemn services, we shall go forth with renewed faith in the justice of our cause, sanctified by the blood of our soldier dead and with a deeper appreciation of the meaning of the present conflict. Let no rumble of discord stay the efforts of the leaders charged with the responsibility of bringing victory to the United Nations, peace to the world, and happiness and freedom to all mankind, foe and friend alike. Roosevelt, Churchill, Stalin, De Gaulle, Giraud, and Chiang Kai-shek—this great multitude voices the approval of the war's progress and lifts its heart in prayer to Almighty God to speed the end of destruction of life and property and, with the hope that another Memorial Day will witness "Peace on earth to men of good will!"

Putting It Up to Congress

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. ANGELL. Mr. Speaker, the Congress was called into session by the President to consider foreign relief and high prices now prevailing throughout the United States. The Portland Oregonian, published in my congressional district, has written a series of editorials discussing these problems which are worthy of consideration by Members of the Congress and I include them as a part of these remarks.

The editorials are as follows:

[From the Portland Oregonian of November 11, 1947]

PUTTING IT UP TO CONGRESS

Secretary of State Marshall's factual, unemotional statement of Europe's needs should set the tone for congressional consideration not only of emergency aid, in the special session, but of the long-range assistance program. This is not to say that the Congress should accept without question all recommendations of the administration. Careful examination of the requests for gifts and loans from the 16 friendly nations, and assurances that those countries will work together to help themselves, are essential. But any attempts to make partisan, political capital of the European aid program would be an affront to the intelligence of the American people.

So many writers and commentators lately have been saying that the cold war between communism and freedom in western Europe already has been won, or is about to be won by the forces of democracy, that Congress must guard against an inclination to sit back in its seat and take it easy. If the spread of communism has been stopped, temporarily, the reason is not ideological. It has resulted from a renewal of confidence in depressed countries that they can depend upon the United States for help.

Decisive congressional action to implement the promises of the Truman administration—though such promises were made without consultation with Congress—must be taken. Russian communism would gain ascendancy in France, Italy, and Austria if Congress defeated the aid program, or by haggling and political quarreling delayed its effectiveness beyond the grim winter months. And when communism takes over a country, there is an end to world cooperation as well as to individual liberties.

Secretary Marshall's statement to the joint congressional committees of foreign affairs that the long-range program of European assistance must be one of construction, production, and recovery is reassuring. Congress would be negligent, however, if it accepted such assurances without making sure that beneficiary nations will take steps to stabilize their currencies, remove trade barriers, and draw strength one from another, as well as from the United States.

Emergency appropriations to pull France, Italy, and Austria through the winter and to strengthen the occupation must be given priority. Whatever steps may be feasible to reduce prices in this country, thus making the European burden easier to bear, should come next. Then, the long-range program of world assistance, geared to the goal of ending the dependency of friendly nations as quickly as possible.

[From the Portland Oregonian of November 14, 1947]

MARSHALL'S SECRETIVENESS

Secretary of State George C. Marshall's projection of military "top drawer" secrecy tactics into the conduct of foreign affairs is drawing increasing criticism from Members of Congress and the press. This page thinks he is making a mistake—in fact endangering his own plan for aid to cooperating nations—by refusing to let the public in on the facts of the world situation.

Nevertheless, one need not go far to find some explanations for his secretive attitude—aside from his training and habits as an Army career man and Chief of Staff in the great war.

When General Marshall succeeded James F. Byrnes as Secretary, the Communist tide in Europe was advancing at an alarming pace, menacing France, Italy, Turkey, Greece, and other nations as well as clamping the leg-irons on those countries which already had fallen as satellites. No effective American policy had been developed to oppose it.

While President Truman took the credit for the Greek- and Turkish-aid program, it is generally understood that Secretary Marshall helped develop it. It was Marshall who gave western Europe its first concrete hope of averting economic chaos and Communist absorption. In his address at Harvard University he offered American loans and grants to European nations which would get together and present a reasonable program for reconstruction.

Development of the Marshall plan followed. As a result of the Paris Conference called by Bidault and Bevin, 16 nations lined up in what may roughly be called the American bloc, and 7 by choice or compulsion threw in their lots with Russia. This became the first clear development of American foreign policy—a realistic and tough policy—in the postwar era. And the spread of communism was stopped.

It is not surprising that Secretary Marshall, who dealt with the European situation in a decisive military manner, has been encouraged to believe that he can continue to make grave decisions without consultation with Congress or the people.

It is no discredit to the Secretary to say that he cannot, and that he will soon come to realize it. Congress is not disposed to write a blank check for the administration to spend, nor should it be. The people are entitled to know what steps are being taken and what dangers exist. This is not a quarrel between reporters and Congressmen on

the one hand and the Secretary of State on the other.

What actually is involved is the fundamental right of a free people, to know what their leaders are doing.

[From the Portland Oregonian of November 17, 1947]

WE MUST EARN THEIR BREAD

The momentous special session of Congress opening today would not have been necessary had European countries made better progress on the long road to recovery from World War II. Congress has been called back to deal with domestic inflation, as well as to provide additional emergency funds for France, Italy, Austria, and occupied Germany, but the prices which are a burden to everyone would not have risen so high were it not for the bidding for food and goods to meet Europe's needs.

Nor is it likely that Congress can devise any guaranteed program which will greatly reduce domestic inflation, so long as the drain of resources to Europe continues unabated. Congress will do well if it can check the rise. It must be apparent that the sooner our friends in Europe struggle to their feet, the better it will be for all of us.

The role of bread-earner and physician to the world is not one which the United States eagerly assumes, having had unhappy experience as "Uncle Shylock" after World War I. Yet it is a responsibility this Nation cannot shirk if there is to be world recovery and peace instead of further degeneration into chaos and eventually into war. Perhaps our efforts will not be enough. We must make them, regardless.

It is well to remember, if Congress appears to be giving undue attention to the details of the aid program, that these are our elected representatives who feel a keen sense of duty to determine the best and least costly method of helping other countries. There still is not sufficient understanding of the Marshall plan—which is not so much the plan of this Government as it is the presentation by 16 nations of their requests for help.

If Congress can improve upon this program, it would be remiss if it did not do so. There is no obligation for it to accept it as written, though should some Members of Congress succumb to a temptation to make partisan politics of human misery they certainly would risk their political futures, as well as the Nation's welfare.

It will be pointed out that had the Soviet Union joined in world reconstruction with at least a show of amity, had it even fulfilled its Potsdam pledge for the unification and rebuilding of Germany, western Europe would not be so hungry and cold this winter. Yet that is a situation this Nation has found no means to alter. The United States has no alternative to the Samaritan role, and we think the people are ready to make the sacrifices which that requires so that the feeble light of peace may be kept aflame.

[From the Portland Oregonian of November 18, 1947]

RETURN TO FEDERAL CONTROLS

President Truman's bold and forceful program to halt inflation before it ruins the Nation is a challenge to Congress, to business and to labor to accept it or to devise a better one. It took political courage for the President to urge the resumption in peacetime of odious consumer rationing, price ceilings, wage ceilings, and rent control for it is not at all certain that such measures would do the trick should Congress approve them.

The President and his advisers evidently sensed the deepening tide of public resentment against living costs, which have outpaced earnings, and evaluated it correctly as a threat to the world-assistance program which is essential to peace and recovery. The people probably will support any reasonable program which will bring lower prices. But there may be fatal flaws in Mr. Truman's plan.

One wonders if he would have gone further and advocated total controls over prices, allocations of supplies and wages had it not been for the virtual impossibility of obtaining the consent of Congress and support of the public. The truth seems to be that the people want lower prices without a return to the widespread Government controls of wartime—and therein lies the danger of Mr. Truman's plan.

He asks authority of Congress, for example, to impose price ceilings on vital commodities in short supply that basically affect the cost of living—these falling in the classifications of food, clothing, fuel, and rent. But there would be no ceilings for delicacies and luxuries.

How would the Government prevent growers and manufacturers from turning their production into higher-priced luxury items, thus curtailing production of essential food and goods on which profits were limited by ceilings? Remember how the market was flooded with $10 luxury shirts, not long ago, when the overwhelming demand was for $2 everyday shirts?

This selective treatment in price ceilings also would apply to industrial items. Would the over-all result be a lower cost of living, or higher?

Mr. Truman expressed the opinion—which could be more accurately classified as the hope—that rationing of consumer goods would not be necesary, but he asked for authority to impose it if need arose. Of course, it would be necessary, if there were further depletion of basic food and clothing items by diversion of production to luxury items. Rationing is a specter which most Americans abhor.

The President's selective plan of controls also would apply to wage increases. He wants authority "to prevent wage increases which will make it impossible to maintain the price ceilings." Suppose, for example, ceilings were imposed on the prices of steel but not on the prices of automobiles. Steelworkers then could be denied wage increases, while automobile workers were getting them. One needs no crystal ball to foresee what would happen then—strikes, slack-off, or cessation of steel production, worse shortages, and higher prices.

The Little Steel formula used by the Government in wartime was at least generally applicable to all industrial wages and had the attribute of approximate equality.

It is plain from President Truman's message that he hopes to use these powers of selective controls as a threat to obtain farm-labor-management cooperation in checking the price spiral. But the threat will not be enough, and when controls are applied in one industry or to one commodity the forces of dissent will be loosed.

It is discouraging to see the Nation headed back into Federal controls, when the trend since wartime has been toward greater freedom from authoritarian government. The failure of the people to make good their escape after the last war increases the odds against breaking the chains again.

[From the Portland Oregonian of November 19, 1947]

PRICES AND POLITICS

Senator ROBERT A. TAFT's flat rejection of President Truman's demand for return to Government controls comparable to those in wartime—rationing, wage and price ceilings, and allocation of materials and goods, for consumers and for business—keynotes the 1948 Presidential campaign.

This was a situation which President Truman unquestionably expected to result from his message. Whether or not he believes such Federal controls essential if the United States is to provide foreign relief, he must have known that a Republican Congress would not accept them.

The plan he proposes puts Congress on the spot. If it rejects Mr. Truman's demand for executive authority unprecedented in peacetime, and fails to adopt measures of its own sufficient to halt inflation, Mr. Truman's campaign in 1948 will be simple. No one then could say whether or not his plan would have worked. But if Congress devises its own program, probably along the lines suggested by Senator TAFT, and inflation is checked, the GOP nominee will benefit by a restoration of public confidence in the economic soundness of the party.

One danger in this political issue which was made by Mr. Truman is that the foreign aid program may be lost or crippled in the controversy. That cannot be permitted to happen, for if Europe collapses in chaos and communism, the peril to this country will be so great that parties and politicians will prevail no longer.

Senator TAFT expresses belief that domestic inflation can be checked by reducing the $37,000,000,000 burden of Government expenditures; by reducing Federal taxes to relieve the pressure for additional wage increases and to make up the family deficit between earning power and buying power; by limiting exports of inflationary items; by reducing substantially the Marshall plan appropriations for long-range European assistance; and by controlling expansion of private credit.

Of those proposals, only the limitations on credit and exports fall within the President's 10-point plan. The prediction can now be made that the congressional program will follow Mr. TAFT's plan more closely than it will follow Mr. Truman's.

There can be no questioning the public demand for a curb on price increases, nor for the economic necessity of stopping inflation to avert collapse and depression. This page is convinced that the people do not want to return to Federal regimentation in peacetime, and will fight it with the under-counter, black-market weapons which were a national scandal in wartime. Our own experience, and the example of European countries with regimented economies, have made a free enterprise system more precious to us.

The Los Angeles Times expressed it rather well: "The supreme irony of Mr. Truman's petition to Congress is this: He says that to aid the sick we must share their sickness. Europe has too much government to produce, but if the United States had the same amount of government it would produce more."

Despite the injection of the anti-inflation issue into the Presidential campaign, there is nothing partisan nor political either in that issue or in the imperative necessity of helping Europe to its feet. Both the White House and the Congress should keep that in mind.

Let Us Weigh the Cost of War

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. GWYNNE of Iowa. Mr. Speaker, I desire to call attention to a very significant editorial in the November 29, 1947, issue of Labor entitled "Let's Weigh

the Cost of War Before We Plunge Into Another World Conflict."

In all our deliberations, Congress and the American people should remember two things: One, another war would take the lives of millions of innocent people, and, secondly, another war would probably settle nothing, and might even destroy civilization.

In accordance with permission heretofore granted, I enclose the following copy of the editorial referred to:

Men in high places—politicians, journalists, diplomats, financiers, militarists—are talking lightly of the inevitability of another world war. Before they plunge hundreds of millions of helpless human beings into such a catastrophic conflict, is it too much to suggest that they pause for a few minutes to read the stark facts of history?

Stephen Bonsal, famous war correspondent, is still living in a suburb of Washington. More than a year after the close of the First World War, he was in uniform, a lieutenant colonel in the Army Intelligence Service. The Paris Peace Conference had adjourned and a democratic government was struggling for existence in Germany. Bonsal was dispatched to Berlin to see how things were going.

On his return trip to Paris, he stopped at Valmy, scene of a famous battle. There in 1792 French revolutionists, many of them lacking in military training, routed the crack troops of the King of Prussia and his associates. But that was a little war. Why, in World War I the defense of Verdun alone cost the lives of 400,000 Frenchmen! Bonsal noted that fact and continued:

"My hours in Valmy, and those that immediately followed, will mark a period in my own war memories.

"The train I ultimately caught was crowded, jammed, with the wreckage of war; it had been chartered, apparently, to carry the crippled and the crushed survivors of battle to Verdun, where they were to celebrate the anniversary of some great feat of arms which was, I think, the recapture by the French of Douaumont, and now the train was carrying them back to darkened homes.

"This train, crowded with those who survived, was a more horrible sight than any of the many ghastly battlefields I have witnessed in so many lands.

"It was clear to me that those who had died in a moment of exaltation and of inspiration were the lucky ones; to many of these death had been merciful, often it had come instantaneously, but the overcrowded train in which I now stood up for hours was filled with men and women who were dying slowly, the long-drawn-out death of conscious agony.

"All about me were groups of men who had fought heroically, many with grotesquely distorted faces which even their loved ones could not look upon save with a feeling of repulsion that must have been difficult to conceal.

"Very much alone were the groups of war widows left to struggle for existence in a pitiless world, with perhaps a child, wearing as its only heritage the Medaille Militaire as substitute for the guiding hand of a father.

"As I traveled with this cavalcade of misery and of suffering, I realized more fully than ever before the terrible price our generation has paid for its victory. Is it not possible that we have learned our lesson? Can we not see to it that such a crime shall never happen again? Is not the panorama of calamity and distress by which we are surrounded a sufficiently crushing indictment of the military epoch out of which no one has emerged victorious?

"How I wish all who will be called upon to shape world policies in the next decade could have been exposed to this heart-rending spectacle.

"Out of such an experience might come something more substantial than our halting covenant for peace and nonagression, with reservations, signed by men well beyond the fighting age; perhaps might be reached even a universal decision not merely to disarm but to beat our swords into plowshares and to join in the forgotten prayer, 'Peace! Peace unto Jerusalem. They shall prosper who love Thee.'"

We fought World War I to "Make the world safe for democracy." In World War II we sacrificed thousands of our sons and billions of our treasure to give the world the Atlantic Charter, and now, 2 years after Hiroshima, we are stumbling toward World War III.

May God in His mercy soften the hearts and enlighten the minds of the statesmen of the world.

United States Air Forces

REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. LARCADE. Mr. Speaker, I wish to call to the attention of the Congress that on November 24 I introduced H. R. 4565, to appropriate $430,000,000 to the United States Army Air Forces and $250,000,000 to the United States Naval Air Forces, and my bill has been referred to the Appropriations Committee.

Mr. Speaker, on yesterday there appeared articles in the newspapers stating that Secretary Symington, testifying before the President's Air Policy Commission, said that—

The present Air Force goal of 55 combat groups by next January 1 is "not adequate to the security of the United States as framed by the Joint Chiefs of Staff" and that "for adequate security, we need an Air Force comprised of 70 combat groups, including 21 very heavy bomber groups, 5 very long-range reconnaissance groups, 5 light bomber groups, 22 fighter groups, 10 troop carrier groups, and 4 tactical reconnaissance groups" and that this would necessitate 6,869 planes and would include air transport command and air training command aircraft." Additionally, Secretary Symington estimated "the Air Force should have 27 National Guard air groups composed of 3,212 planes and 34 air reserve groups made up of 2,360 planes, making a grand total of 12,441 planes for a strong United States Air Force."

Symington said that—

The Air Force could reach its 70-group goal within 1 year, provided Congress O. K.'d enough funds, and that legislation should be passed to permit the Air Force to buy on a 5-year basis, instead of the present limitation of 2 years.

Mr. Speaker, at House and Senate hearings executives of the aircraft industry also testified that unless the Government ordered aircraft at once, the aircraft industry would dry up and that the industry would go out of business. We cannot permit this. This question is the responsibility of the Congress, and I hope that immediate favorable consideration will be given to my bill to save our Air Force and our aircraft industry. Mr. Speaker, for the information of the Congress, I ask that a copy of my bill, H. R. 4565, be printed following these remarks.

H. R. 4565

A bill making appropriations to provide supplemental funds for the Department of the Navy and the Department of the Air Force

Be it enacted, etc., That (a) there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the Department of the Navy, for new construction, procurement, and equipment of aircraft, spare parts and accessories, including expansion of and facilities in public or private plants, to be immediately available and to remain available until expended, in addition to amounts appropriated for such purpose under the Navy Department Appropriation Act, 1948, the sum of $250,000,000.

(b) There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the Department of the Air Force, for purchase, manufacture, and construction of aircraft, and instruments and appliances, including radio, radar, and electronic equipment, necessary for the operation, construction, or equipment of aircraft, and spare parts and equipment connected therewith, to be immediately available and to remain available until expended, in addition to amounts appropriated for such purpose under the Military Appropriation Act, 1948, the sum of $430,000,000.

School Teachers' Salaries

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. CLASON. Mr. Speaker, most Members of Congress are personally interested in the problem of furnishing adequate pay to the school teachers of the United States. As one who has been a teacher in the past and who has always been particularly interested in adequate education for our young people, I am glad to bring to the attention of the Members of Congress the remarks of a distinguished New England commentator, Mr. Hubert W. Kregeloh of Springfield, Mass. His suggestions are thought-provoking and worthy of full consideration by both national and State legislators. All of us know that most public school teachers and college professors and instructors deserve higher salaries than they are now receiving. After reading Mr. Kregeloh's instructive address, I am sure we will have a better background on which to build the future of teachers in the United States. His remarks are as follows:

DON'T FORGET THE TEACHERS

(By Hubert W. Kregeloh)

At this time, in several regions of the country, the public-school teachers are seeking pay adjustments. Before the public crystallizes its reaction to these demands it may be helpful to examine the issues involved soberly and searchingly.

It is the normal first reaction of every American to meet demands for more money with hostility and suspicion—whether the demand is for higher wages, prices, or taxes.

It is a healthy reaction, springing from an understanding of human nature. For if the demands were easily granted, without careful questioning, the temptation to try unreasonable assaults on one another's pocketbooks would quickly become irresistible.

We are fortunate to be in a position to resist, question, and scrutinize. In totalitarian countries, such as the Soviet Union, wages, prices, and taxes are decreed by an almighty government, as everything else is decreed. The citizens are merely informed of the amounts they will be expected to pay, and of the penalties they face in the event of noncompliance. But because we are so largely masters of our own fortunes, it is necessary for us to make up our minds with maximum responsibility. When a large group of wage earners requests a raise we must ask ourselves two determining questions: Is the demand justified by the circumstances? Can the funds be procured? In the case of the teachers it is hard to see how any fair-minded American could deny that the demand is eminently justified. And it would be shameful to argue that the funds could not possibly be raised by the nation which provided its citizens with the world's finest conveniences, financed the most prodigious war effort in the history of man, and has already shipped to foreign countries almost $20,000,000,000 worth of postwar assistance in one form or another.

We pride ourselves in our ability to give leadership to the world. Yet in the field of education we are not a shining example. Other countries which we consider "backward," among them the Soviet Union, do much more relatively to promote education. We have some outstanding educational institutions, but the national average is not as high as many believe it is and not nearly as high as it could easily be. The main reason for this condition is a catastrophic shortage of first-rate teachers. While teachers have been deserting the profession by the hundreds of thousands since 1939, the situation is still getting worse. As Mr. A. N. Spanel, president of the International Latex Corp., recently warned in a public-service advertisement: "Nobody wants to be a teacher. Young people turn to other occupations. In colleges, where teachers are trained, the seats are empty. There is often no one to take the place of the teacher who leaves the profession. The war greatly increased the birth rate. Soon these war-born children will appear at the schoolhouse door. There will be more pupils * * * and fewer teachers, * * * inferior schooling for millions of our youngsters."

Pointing to the shameful fact that American wages for all others have been raised substantially in recent years, that the national income has increased 300 percent since the war began, while teachers' incomes have been raised only 12 percent, Mr. Spanel stated in his advertisement that "teachers are quitting the profession simply because they are underpaid. They are victims of our short-sightedness. The high cost of living has wiped out their savings. Jobs outside the schools offer better pay. The teachers are naturally taking them. They will continue to do so until the American people decide to pay teachers a living wage."

It is ominously significant that the people, by and large, have not decided to come to the rescue of the hard-pressed teacher, but have evaded the issue and have made excuses, while unrealistically continuing to expect devotion and perfection from the teachers. At that, it is amazing how much devotion and perfection still is encountered among this neglected profession. For an educated, intelligent and ambitious person to be a teacher under prevailing conditions, one must truly be an idealist, and it is indeed inspiring to note how the shrinking core of competent and devoted teachers continues the Herculean struggle of giving their best to a community whose gratitude and appreciation are all too often shamefully inadequate. Have we forgotten, or are we indifferent, for example, to the facts that teachers willingly went without annual increments during the depression—and in many communities contributed part of their salaries to help take care of the increased welfare load; that teachers, for patriotic reasons did not ask for any increase in salary schedules during the war; that teachers performed the gigantic task of registration for the draft and registration and issuing of ration books for food, gasoline and fuel oil; that teachers have proved, time and again, that in periods of national or local emergency they stand ready to give generously of their time, energy, and even their meager funds? Do the exemplary moderation and self-discipline of the teachers in the face of dire difficulties make no greater impression on us than to conclude: Here is one group whose legitimate needs we may conveniently ignore?

Taking note of the strategy of labor unions, we complain that the tactics of their leaders are frequently belligerent, unreasonable, insolent, detrimental to the interest of the public and generally offensive. But does not the plight of the self-restrained teachers tend to confirm the contention of the unions that without pressure, threats, belligerence, and noise improved working and living conditions just cannot be obtained? We have now arrived at fateful crossroads where we must choose between three alternatives.

First, we can acknowledge the economic difficulties of the teachers, who now frequently earn less than unskilled manual workers with little education, and honestly resolve to provide quick remedial action.

Second, we can continue to ignore the situation, in which case our educational standards will continue to slip and the final consequences will surely be catastrophic for all of us.

Or, third, possibly as the result of continued indifference, we may drive our teachers to desperate measures—measures which would shock the community and demoralize our youngsters, measures which the teachers themselves have always been anxious to avoid. We expect the teachers to be examples for the young generation and for the community, men and women who conduct themselves with the dignity, refinement, and responsibility traditionally associated with the profession. Do we want to have these people walk out in mass strikes, picketing schools and city halls, making inflammatory speeches and perhaps becoming involved in physical violence? Do we want them to produce men like John L. Lewis or Caesar Petrillo to take up their grievances? Do we want to drive them into the arms of the eagerly awaiting Communist and look upon the blessings of Americanism with cynical bitterness?

Do these possibilities frighten us? Then it is time for us to relieve the teachers from financial worries, raise their income to levels that render the profession attractive and pleasant, free them of the need of taking part-time employment unrelated to their normal work, and give them an opportunity to study, buy books, attend concerts and lectures, travel and engage in other activities helpful to their ability to transform our children into responsible and educated citizens.

To contend glibly that in this rich country the funds to raise the teachers' salaries to decent levels are not available is either malicious or stupid. We spend more per capita than any other nation for lipstick, powder and perfume; for baubles to stick in our ears, put on our fingers or pin on our dresses; for ice cream and soft drinks; for whisky and bubble-gum; and for jive records. If we cannot divert a fraction of the sums spent on these pleasant but quite nonessential luxuries to the financing of an education commensurate with our role in the world we admit to monumental national immaturity. And always it must be borne in mind that educators—in elementary and high schools, in colleges and universities—never advance unreasonable demands. They do not expect to grow rich in their profession, they know they will never make as much money as the successful businessman, even though they may have studied much more, may have a much higher education and may work much harder. Their ambitions do not go beyond a reasonably comfortable and secure existence—an existence which a great and wealthy Nation can surely provide for one of the most vitally important segments of its citizenry; and in return they stand ready to repay us with high dividends by enhancing the ability of the American people to deal wisely and intelligently with the complex problems of our days.

I am not qualified to suggest how the funds needed are to be raised, but I know they can be raised. If a sudden emergency arose—fire, flood, explosion, earthquake, or epidemic—the money would be there no matter what the need. Well, the crisis in American education is an emergency, comparable in seriousness which any one can imagine. I don't think a sales tax, as proposed in some quarters, would be a good idea, because it creates hostility where sympathy is needed, but perhaps we could settle for a special addition to the direct State income tax. If a deadly disease threatened us and required constant defensive measures, would anyone in his right mind object to paying a higher tax to defray the cost? The creeping deterioration in American education is as deadly a disease as any. If unchecked, it would lead to increased crime, to lowered cultural levels, to political and ideological trends dangerous to the American way of life, to incompetence in the field of statesmanship, and to growing military insecurity. It would also raise the specter of depression and poverty.

Americans are supposed to recognize a good investment when they see one. As the feverish activity of foreign nations now demonstrates, there is no better investment than investment in education.

PMA Payments Help Protect the Nation's Soil

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. POAGE. Mr. Speaker, an editorial published in the St. Louis Post-Dispatch on November 16 suggests that the people are not getting their money's worth out of payments which are made to farmers for carrying out agricultural conservation practices. This criticism is so far from the truth, and its implications are so serious, that I want to submit some facts to keep the record straight.

The conservation practices for which farmers may receive some financial assistance under the agricultural conservation program are selected from a list of more than 50 practices which are approved for the Nation as a whole. This national list is determined very carefully, in line with the best technical knowledge as to the relative benefits of various sug-

gested practices. From the national list, each State selects those adapted practices which are most needed—and will return the greatest benefits—for that State. The elected farmer committees—ACP—in each county then select from the State list the practices most needed in that county. This selectivity makes it possible to concentrate on those practices, and only on those, which will mean the most constructive improvement.

The basic specifications which must be followed to qualify for financial assistance under the program are drawn up by a State technical committee, with membership drawn from the staff of the State agricultural college, the experiment station, and other soil-conservation authorities. I have before me the Oklahoma Agricultural Conservation Program Handbook for 1947, the same handbook which was placed in the hands of the farmers of that State. It lists these practices and specifications in detail. There is nothing hit or miss about this program. Every step is worked out carefully and scientifically, in line with democratically determined local adaptations.

The editorial quotes a large ranch operator in Texas County, Okla., as having said that only a relatively small part of the annual conservation payments in his county "represented permanent improvements to the soil." The record for Texas County refutes this charge clearly. The report for 1946, the last year for which complete information is available, shows that practices for which payments were made fall entirely in the class of conservation practices which build definitely and constructively for the future. The following table gives the practices carried out under the program in 1946, both for Oklahoma as a whole and for Texas County:

Selected conservation practices carried out under the agricultural conservation program—Oklahoma, and Texas County, Okla., 1946

Practices	Unit	State of Oklahoma	Texas County, Okla.
Ground limestone or equivalent.	Tons	431,387	0
20 percent superphosphate or equivalent.	do	16,839	0
Green manure and cover crops.	Acres	410,724	0
Construction of terraces.	1,000 feet	47,243	402
Contour farming:			
Intertilled crops	Acres	525,798	838
Close-sown crops	do	616,567	17,041
Protecting summer fallow.	do	222,674	79,806
Strip cropping	do	20,662	0
Sod waterways	1,000 square feet.	18,130	0
Dams and reservoirs	Number	15,764	83
Wells	do	690	44
Seeding or reseeding pasture or range land.	Acres	315,753	3,132
Deferred grazing	do	245,277	8,446
Planting trees	do	43	0

Just which one of the above practices would the Post-Dispatch or the Texas County farmer condemn? Mr. Atkins is quoted as stating that "The Production Marketing Administration seems to function on the principle of making it easy for everyone to earn the payments so we can justify the program because of wide participation."

Just which of these practices does he feel are of no value? By far the largest practice approved in Texas County, Okla., is that of protecting summer fallow. Surely no one who has seen the dust storms of Texas County would say that this protection was not needed, nor can any intelligent person claim that the protection is merely for the benefit of the farm on which it is practiced. Those who live almost 500 miles from Texas County, Okla., have seen the air filled with dust, a portion of which undoubtedly originated in that area. Protection of summer fallow is essential to protection of the soil of a whole great area.

It has been recognized not only by the Production Marketing Administration in Washington but the State committee in Oklahoma, and by Mr. Atkins' own neighbors in Texas County, because it must always be remembered that these practices are paid for by the local county committee, which is composed of local farmers. If payments are made for unnecessary practices in Texas County, Okla., the local farmers themselves must, through their committeemen, accept the responsibility.

The Agriculture Handbook indicates rather clearly that farmers of Oklahoma were not only careful about the practices for which they approved payment of the funds allocated to their State, but it contains seven specific provisions for forfeiture of payments where the farmer engages in practices defeating or nullifying the program if payment is authorized. One of these provisions relates specifically to Texas County, and to six other western counties, and imposes a deduction of $3 for each acre of native sod or other permanent vegetative cover broken out without the approval of the county committee. The purpose of these penalty provisions is clearly to assure the community of the benefits of the entire program, and seem definitely to refute the statement that the Production Marketing Administration was simply trying to make it easy for everyone to earn payments.

Referring specifically to Texas County, it is in the area where some of the Nation's most spectacular soil losses have occurred due to wind and dry weather. Reports from the general area, which includes portions of Kansas, Colorado, and Texas as well, are to the effect that there again may be trouble if the current drouth persists. It may also be added that reports indicate that the favorable weather of recent years, plus the demand for wheat and its relatively high price, has brought much new land into production. The reports further indicate that established farmers generally are taking every advantage of the ACP program to continue and extend such practices as contour farming and protected summer fallow. The figures bear this out.

During and since World War II the Nation has faced demands for maximum farm production. The phenomenal way in which farmers have responded to that demand is on record. This tremendous production was made possible primarily because weather and rainfall conditions have been especially favorable. But back of that is the fact that the Nation has been engaged in this program of building and maintaining its soil.

Undoubtedly every farmer in his own self-interest should be concerned with the maintenance of his land. However, the history of agriculture in this country and in many other parts of the world is striking evidence that this self-interest alone is not enough. Many farm owners, despite current cash returns for their products, are still unable to finance needed practices. Tenants often do not have the same self-interest to maintain the soil as owner-operators. Many absentee owners are concerned only with immediate returns. Through death or retirement almost every farm changes hands at least once in every generation. These are facts which bear indirectly on the Nation's policy on soil conservation and support the need for a program which will insure that the conservation job will not be neglected.

Certainly today, with the whole world calling for United States farm production, we must continue and expand those measures which develop and maintain our basic soil resources. This must be done in the interest of our whole national economy, and not just for the benefit of our agricultural producers. Assuring our future productive capacity is too vital an issue to be kicked around like a political football. The Nation would be shortsighted indeed if it did not provide the financial assistance necessary to see that active, coordinated conservation work went forward on the individual farms of 3,000 agricultural counties, in 48 States.

No one can find fault with the suggestions in the editorial as to the desirability of extending the Soil Conservation Service. The Soil Conservation Service is the action agency which does the physical work on the ground. Its contribution to the stability of American agriculture cannot be measured. PMA payments are in no wise comparative with soil conservation. They are simply supplementary, and have certainly resulted in a much more widespread use of the Soil Conservation Service. Nor need there be any lack of agreement with the Agriculture Extension Service, which is the educational arm of the Department. The Extension Service has done and is still doing a fine job of taking information to the farmer, but in many cases information and an available action agency are not sufficient unless the farmer has the income with which to pay the bill. Terraces will not be built and fallow land will not be protected no matter how often the county agent tells him of the need, or how ready the Soil Conservation Service is to provide the engineering. Someone has to pay for gasoline, bulldozers, and the man hours. All too often the income from the individual farm is inadequate to provide the funds needed to protect the Nation's land. The PMA has provided a portion of those funds.

It would be a tragedy if Congress were now to stop the clock and allow the return of a dust bowl in western Oklahoma.

Communism in European Trade-Unions

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. McDOWELL. Mr. Speaker, I present here a statement made this morning by the noted radio commentator, George C. Reedy. It presents a new thought on the situation. I do not necessarily endorse it, but it is well worth thinking of:

Representative CHARLES KERSTEN, of Wisconsin, has come up with a suggestion that deserves some very serious consideration. He proposes that this country intervene directly in the struggle between Communists and anti-Communists in European trade-unions.

KERSTEN, a young but influential Member of the House Labor Committee, believes there is no more important arena for fighting Communists. He came to this conclusion during an intensive study of trade-unions in Europe this summer.

At the moment, he says, the Communists are in a distinct minority in the trade-unions of France, Italy, and Germany. But they are well organized and are receiving aid directly from the Soviet Union. As a result, they have influence far beyond their true strength.

If we do not plunge in and help out our friends among the trade-union leaders, KERSTEN believes we may wake up some day without any friends at all. In the battle to save Europe from the Communists this would be a major tragedy.

The proposed aid would take the form of direct grants of money and rations to anti-Communist leaders among industrial workers. It would be handled by labor experts attached to American missions sent abroad to administer the Marshall plan.

The Communists have already demonstrated the damage they can cause in Europe through control of key unions. They have brought the industrial machine of France close to a complete halt, and they have kept Italy in a state of unrest for several months.

Yet, well-informed observers of European events believe, they are probably in a minority, in the unions of both nations. Their control rests partly on organization and partly on money and directives sent to them from the Soviet Union.

KERSTEN concedes that any active help offered to anti-Communist leaders would subject the United States to criticism. But he thinks we should face it head-on, in the realization that we are only countering an attack ultimately directed at us.

The prospects for driving Communists from the trade-unions are brightest in Germany, he says. There the population is overwhelmingly anti-Soviet, with the possible exception of the Ruhr coal miners. In this region the Red leaders may have some strength.

However, the United States may be losing the struggle to influence Germans just by neglect. The Russians, he says, are concentrating every effort on propagandizing children and young people. We are doing very little in that regard.

The Russians have printed 27,000,000 textbooks for the children in their sector of Germany. These textbooks, of course, are heavily slanted toward Communist doctrines. In our zone we have printed only 4,000,000 textbooks—a mere drop in the propaganda bucket.

If we are not careful we may someday have a strong section of Germany completely indoctrinated in communism. The people would be as blind as the Hitler youth—incapable of understanding anything except what their masters had taught them from the cradle.

The problems that KERSTEN is posing cannot be lightly dismissed. At the moment we are getting ready to embark on a great crusade, to save Europe from communism. This is a battle we could well win on the economic front, but lose on the political front.

His suggestion for helping our friends among the trade-union leaders is one that would have to be studied very carefully before being put into practice. However, to be certain of success, we will definitely have to take some steps with that end in view.

The Freedom Train

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. MILLER of Nebraska. Mr. Speaker, I ask permission to insert in the Appendix of the RECORD my remarks on the Freedom Train and to include an address given by the Honorable JOSEPH W. MARTIN, Jr., on November 27, 1947, when the train came to Washington, D. C.

Mr. Speaker, the 7-car Freedom Train, carrying the historic documents of our country, will visit more than 300 communities in the 48 States. The objectives of this train is to develop a greater awareness of the advantages we enjoy as Americans, emphasizing the relationship of our hard-won personal freedoms to our development as the strongest nation of free people in history.

It will persuade all Americans that only by active personal participation in the affairs of the Nation can we safeguard and preserve our liberties and continue to demonstrate to ourselves and to the world that the way of freemen is best.

It is to be hoped that millions of Americans will visit this Freedom Train and renew in their hearts the freedom pledge, which reads as follows:

I am an American. A free American.
Free to speak without fear.
Free to worship God in my own way.
Free to stand for what I think right.
Free to oppose what I think wrong.
Free to choose those who govern my country.
This heritage of freedom I pledge to uphold, for myself and all mankind.

The speech follows:

Fellow Americans, it is fitting that this Fredom Train, with its exhibit of priceless documents which comprise the records of how the foundation of Americanism and free government was laid should be in the Capital of this Nation on this, our day of national Thanksgiving.

No people anywhere on this planet have documents so priceless. They are the charter of human liberty on this continent, and a beacon of hope for the world.

No people have so much for which to be profoundly and reverently thankful to Almighty God as do we, the American people.

No people in the world have ever made such progress in free government and individual liberty as has been made in America in one and three-quarters centuries since the founding fathers wrote these epochal documents.

It is not with pride or arrogance we view these documents and ponder the eternal principles they declare. Freedom Train, as a symbol of our liberty and our richness of life is not a boast of power. It is a symbol of our own humble faith in God, our faith in ourselves, and our heart-deep desire to help all the rest of the world to see, to learn, to share, and to love the marvelous fruits of freedom as have we in the United States.

Freedom Train means, in its real symbolism, that freedom moves forward, and that freemen, working, loving, worshipping under the eternal principles set forth in the documents you will see here, move forward to higher spiritual and cultural achievements. It means there can be no progress under any system of government, or in any day-by-day living, which does not put foremost and keep foremost the vital, vibrant fact that life on this earth without individual liberty is worth nothing. The whole round of human existence becomes a weary, meaningless period of confusion, suffering, and chaos within the human spirit if freedom is denied, if liberty is gone.

Freedom is wholly of the spirit. It is not to be found in money, in power, in greed, in the hoarding of material wealth.

That wise and good Man who walked the shores of Galilee voiced that profound fact when He said:

"What profiteth a man if he gain the whole world and lose his own soul?" Let us ask ourselves: What profiteth a man if he gain great material wealth and lose his liberty?

We of this later day have come to take our liberties too much for granted. We have in a great measure lost the force of the warning the fathers handed down to us, that "Eternal vigilance is the price of liberty." With what horror have we seen the ghastly developments which have proved that warning to be true. With what horror have we seen the carnage wrought in this world, the bloodshed, the human agony imposed—all because power-lustful men were willing to go to any lengths to satisfy their selfish longing for personal aggrandizement at the expense of the freedom of their fellow men.

With what sacrifices are we striving to pour out scores and scores of millions—yes billions—of dollars to try to help the other peoples in the world to learn the blessings of freedom, to achieve freedom, and to live freedom.

We must stand as a united people to stop the march of despotism across the world. Any aggressive doctrine which would enslave the world must be destroyed, or else free men must fight against it until they die. Death is to be preferred to human enslavement. Any aggressive power which today seeks to march to power across the wreckage and misery of the world can do so only by trampling under foot all the sacred concepts of life; by trampling under foot human hearts, human happiness, and human freedom. Any such ruthless power must be stopped before it makes a carnal house of the whole world.

The documents enshrined on this Freedom Train for loyal Americans to view with humble thanksgiving set up the greatest experiment in human freedom and self-government ever attempted in the world. Every foreign statesman and student of government of that early day predicted the American experiment would fail. They believed people were incapable of self-government. They believed a chosen few must sit at the top and rule.

Yet, in spite of faults here and there; in spite of the vast changes taking place throughout the world, our American system

of government, economy, and society has enabled us through the last hundred and seventy-one years to achieve more than any other nation has been able to achieve in a thousand or 5,000 years.

Look at our country; look at our freedoms under the Bill of Rights; look at our comforts of life; look at our living levels and our working conditions; look at our people everywhere and then turn your eyes to the Orient, or to continental Europe, and marvel at the accomplishments and the progress we have enjoyed under the principles laid down in the documents you will view in this Freedom Train.

In 5,000 years the Orient has failed to reach the richness, to acquire the tremendous productive capacity we have. In Europe the same is true. Our people came from lands all over the globe. But under the government, the economy, and the society set up under these documents which this Freedom Train carries about the Nation, our people, through liberty were able to create and leave to us this great, rich heritage we call the United States.

This inheritance is not ours to squander, to exhaust, or to lose by indolence, indifference, or carelessness. We hold this most sacred trust—this great Nation, its principles and the fruits of its principles, in trust for those who are to come after us.

We hold this great heritage in trust for all the world to see, to admire, and to emulate. If we bring our Nation through these storms which now sweep the earth, if we can help the other peoples of the world without fatally depleting ourselves and wrecking ourselves, if we can keep America sane, sound, and solvent—what a beacon of hope, what a torch to light the footsteps of those in other parts of the world who seek happiness through liberty. Unless we hold this torch high, unless we shield it against the gusty winds of selfish alien doctrines of totalitarianism, the light of the world will go out. To do that, to protect our shining beacon calls for the concerted, devoted help of a united America. It calls for the devotion of every class, every race, every creed, every section of all who reap the blessings of our wonderful way of life.

On the monument bases in front of the Archives Building down on Pennsylvania Avenue are two inscriptions. They read:

"What is past is prologue." "Study the past."

Seeking what we may hope and expect to do in the future by looking at what we have been able to do in the past we can have high hope that we will survive these political storms and conflicts at arms which have swept the world and roll on to greater achievement as a nation just as this Freedom Train will roll on to let more tens of thousands of Americans see the precious documents which are the heritage of all Americans.

The signs of the times warn us we must be united and devoted to our liberties. We must be careful our freedom is not undermined by sinister and stealthy subversionists. We must be ready to uphold our traditions, our rights, and our privileges on the basis of the national good and not sacrifice our unity by each one seeking his own temporary advantage at the expense of his fellows. We must continue to do all we can to keep this spirit of cooperation and vigilance active among our own people. For that reason the Freedom Train is making an invaluable contribution to the Nation's good.

We all pray Almighty God in His wisdom and power and everlasting love to guide us, to show us the way that we may keep this great heritage untarnished, unimpaired, that all the world may see and marvel and emulate; and that our own posterity may share in the rich blessings of our grand Nation. May we be united for freedom in our faith in America through our faith in our God and our thankfulness to Him.

National Administration Determined To Reduce Americans to World Economic Level

EXTENSION OF REMARKS
OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I think the most challenging criticism of President Truman's bid for bureaucratic and un-American controls in peacetimes, in his recent address to the Congress, is set forth in the following statement issued by Mr. Tom Linder, chairman of Farm Commissioners' Council, and commissioner of agriculture of the State of Georgia.

Mr. Linder's statement needs no embellishments or explanations. Coming from one who believes implicity in representative democracy and American ideals, and from an organization composed of the commissioners of agriculture and those at the head of our agriculture departments of the several States, it should be read by everyone. If you want to know what the farmers of this country, without regard to political affiliation, think of President Truman's request for tyrannical power in controlling prices of farm products and commodities, you should read the following statement issued by Mr. Linder last Monday, November 24, 1947:

The present national administration is determined to reduce the American people to the economic level of the world.

The only way the American people can be reduced to such level is to have an administration that parallels in power over the people the totalitarian regimes of Russia and some other countries.

The President's request for such totalitarian power from the present Congress is the admission of the truth of this statement.

Very recently the President specifically referred to the powers he now requests as being the methods of police states.

According to Secretary of Agriculture Anderson, as stated to the Commissioners of Agriculture at Biloxi, Miss., 2 weeks ago, price controls under OPA cost the people 10 cents out of every dollar.

The restoration of price control at the present time on this basis would cost the American people $12,000,000,000 per year.

The President considered these requested powers as the totalitarian powers of a police state until he spent an hour in conference with Leon Henderson and Chester Bowles.

It would be interesting to know what sweet honeydew logic fell from the siren tongues of Henderson and Chester Bowles that laid great Caesar low.

The great champion of democracy who opposed restoration of a police state in America 1 month ago becomes the willing slave of the proponents of controlled economy.

The President of the United States, the Secretary of Agriculture, the Secretary of Commerce, and the Attorney General remained in serene composure and undisturbed by transactions on futures commodities exchanges when farm prices were so low that the farmers could not buy a new shirt or a pair of shoes.

It is only when prices on these exchanges go up to about 60 percent of true parity that these great champions rise up in wrath and demand control of commodity exchanges.

Since prices have gone up to present levels, since there is full employment in the country, since there is tremendous taxpaying power among the people, and since the American economic level is far above that of the balance of the world, these champions suddenly develop a desire to control these exchanges and force prices downward, together with the American standard of living, which it must carry with it.

The American way is to let the people speak. It is only a year until Presidential election. This country can rock along another year without adopting the principles of dictatorship. Let these champions submit their cause of price controls and economic controls to the people of the United States in next year's election. Let the people speak, and let Congress and the officials listen and then we will all know where we stand. Lincoln said, "Tell the people the truth and the Nation will be safe."

Congress, by taking hysterical, hurried, or ill-considered action, could easily throw our entire economy into a tailspin and the Chief Executive, acting under a delegated authority, can easily do the same thing through bureaucratic control.

Nothing at this time would tend to restore confidence among the people so much as for them to know that Congress is going to wait for a mandate from the people before taking any unusual action.

O democracy, democracy, what sins are committed in thy fair name. The President and others may speak with the coat of democracy but the voice is the voice of totalitarianism. Senator TAFT spoke with a voice of a true American in reply to the President's request for totalitarian power.

Of Mr. Truman it might be said:

"He wiggled in and he wiggled out,
He left the country all in doubt,
Whether the snake that made the track
Was going out or coming back."

The administration says we must make unprecedented exports to foreign countries.

The administration's whole trade program, including the 23-nation treaty, has for its purpose unprecedented imports into this country.

Unprecedented exports require unprecedented production, yet the administration is doing everything in its power to discourage production by trying to force the prices of farm produce below cost of production.

Unprecedented imports will necessitate reduction in production in this country.

While other nations have starvation diets, the fact still remains that they have more food than they have of anything else; therefore, our imports from foreign countries must consist of food out of their already meager supply.

Our exports to needy countries must of necessity be paid for by the taxpayers; this can only be done if we have high prices, high wages, and high salaries.

With low prices the taxpayers will be under a heavy burden simply to finance the national debt and meet current Federal expenditures.

Before this Nation can make any progress in any direction, the national administration must first decide in what direction it intends to proceed.

With $260,000,000,000 national debt and with high consumption of commodities on the present economic level, a moderate decline in farm prices would be catastrophic. A decline of 20 or 25 percent from present prices would be as detrimental to our economy as were the extreme low prices of 1930, 1931, and 1932.

If the weight of the Government is thrown against present agriculture price levels, it will result in a depression such as we have never seen and will make the days of 1931 and 1932 seem like the good old days. It will create in this country the most favorable and fertile ground for the growth of communism, which we are supposed to be fighting.

Exorbitant Taxes—The Enemy of Progress

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks, I include herein an editorial from the West Union Record for November 27, 1947, published at West Union, W. Va.

This is a Democratic paper, and the editor, Walter Stuart, being a Jeffersonian Democrat, sometimes talks like a Republican. The editorial follows:

EXORBITANT TAXES—THE ENEMY OF PROGRESS

This country will never have the kind of prosperity it should have until taxes are reduced to a point where they can be borne without hardship by every class of citizenry or where they will not discourage the expansion of industry or the establishment of new business or enterprise. High taxes are the Nation's greatest barrier to progress and the expansion of industry.

In view of the fact that the maximum tax rate is more than 90 percent, is it not a great wonder that this country enjoys as much prosperity today as it does? Under such a tax rate, there could be no prosperity if it were not for the vast amount of money put in circulation as the result of the war. But that war money is being fast siphoned away from the people by exorbitant taxes and by exorbitant prices for everything the people have to buy, and as a result the war money is not going to last long.

What inducement could there be to anyone to invest capital in a new enterprise when taxes take anywhere from a third to nine-tenths of the income? It would be absolutely impossible today for anybody to build up a great industry with the profits from his business. Under the present tax system, this country could not produce another Henry Ford.

If taxes had been reduced at least 50 percent at the close of the war and expenses of government had been reduced by a like amount this Nation would have experienced a business activity unparalleled in all the world's history. There would have been such an expansion of industry that in a very short time the production of goods would have kept pace with the demand. In a brief time everybody who wanted a car and was able to buy it could have had one and everybody who wanted a house and was able to pay for it could have had one.

There is nothing that the United States Government could do that would stimulate business more than to make a big reduction in taxes. High taxes can destroy business and a reduction of taxes can put new life in business. Thousands of little businesses in this country have been destroyed during the past few years by high taxes. The power to tax, as it has been truly said, is the power to destroy, and never has the truth of that old aphorism been more strikingly exemplified than it has been during the past 6 years.

Taxes should be reduced regardless of the enormous debt that this country owes, and there should not be a little reduction, such as was provided for in the recent tax bills which were passed by Congress and vetoed by the President, but there should be a big reduction. A big reduction in taxes would do more to keep this country out of another depression than anything else that could be done.

The politicians who oppose reduction of taxes contend that any surplus in the Treasury should be used to apply on the national debt, that tax reduction should wait until certain conditions are more favorable or until the national economy is more stable or until our foreign commitments are more definitely established.

It will take at least a hundred years to liquidate the present national debt and it may never be liquidated, but the people will have to live and business will have to go on in the meantime. There is no sense in impoverishing the people of today in trying to pay the national debt. The payment of the debt will have to be spread over several generations. No one generation can pay it or any very great part of it. Most of the debt was incurred in the interest of future generations as well as in the interest of the present generation and future generations should bear their share of the huge debt created by the war. The war was fought for future generations as well as for the present generation.

The very first legislation considered at the next session of the Congress should be a bill to reduce taxes. The people should bring to bear upon the Congress every influence possible in order to get a substantial tax reduction. Any Member of the Congress who opposes tax reduction should be defeated for reelection. If he cannot be defeated for renomination, he should be defeated at the general election next November, it matters not what his politics may be. A Republican should be as much interested in tax reduction as a Democrat. High taxes bear as heavily on the one as on the other.

The war has been over more than 2 years and yet the people are still paying war taxes, the same outrageously high taxes they paid during the years of the war. It is certainly time that the people were getting some relief.

Editorial by James C. Tibbetts, Editor, Platte County (Mo.) Gazette

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a splendid editorial written by Mr. James C. Tibbetts, editor of the Platte County Gazette, of Parkville, Mo., which in my opinion contains sound advice. It follows:

Congress is again in session. We fervently hope for legislation to stop pouring money—cash money—into other countries as well as a ban on guns and ammunition. We approve of the sending of some grain to tide countries through the winter, with medicines and clothing. Since the cessation of World War II, these countries have had two crop years in which to raise supplies. It is true some machinery has been needed but foreign farming methods are different from ours. When we send cash, the money is wasted on the purchase of arms as well as a lot of other things which keeps the people so stirred up in fighting their neighbors that no crops are even attempted. Republicans and Democrats should unite in pushing through a sensible program for the relief of all peoples.

Honest toil by our forefathers in days gone by pulled this Nation through many close times, and more work and sweat by all of us will steady the ship of state now. More production with limited exports is what this country needs most of all. We are opposed to giving foreign countries huge sums of the taxpayers' money—it seems to us that they just buy ammunition to continue their feuding. This editor does not believe in a lot of cumbersome Government controls.

Repatriation of Prisoners of War

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. KEATING. Mr. Speaker, the beneficiary countries under any recovery plan should employ self-help, not serf help.

Recently we have heard the phrase "slave labor" bandied about considerably and with a high degree of inaccuracy and misrepresentation. The true use of the term is exemplified in the shocking disclosure that two and one-half million prisoners of war are still held by our allies. This is the subject of a pointed and vigorous editorial in the Washington Post, which, under leave to extend my remarks, is quoted below.

Several constituents of my congressional district have appealed to me for aid in assisting their relatives, who are still held as prisoners, to be released from custody in order that they may return to their families in their native lands and assist in the rebuilding of their shattered countries. Although it is true that this Nation is not chargeable with the guilt of detaining foreign nationals for forced labor, I agree with the author of this editorial, who points out that our State Department should bring the strongest kind of pressure to bear upon the countries pursuing this practice to revise their policy.

It can be argued with considerable force in connection with any recovery plan that the extension of aid to any beneficiary country should be conditioned upon a covenant by that nation guaranteeing such repatriation of prisoners of war, according to a definite fixed schedule. Particularly is that true if such an integrated assistance program contemplates aid also to the country whose nationals are being held.

The outstanding example is Germany. It is universally accepted that there can be no satisfactory revival of western Europe without a substantial restoration of German industry, of course carefully conceived and supervised to prevent any effort toward rebuilding a war potential. The utter folly of the notorious Morgenthau plan, pursued all too long by the administration, is now generally recognized. Any German recovery requires the full utilization of its manpower. A German workman, toiling in his native land, is going to put forth better effort and contribute more to the over-all picture than that same workman dressed in the dungarees of a prisoner of war in France. Apart, therefore, from the persuasive humanitarian principles in-

volved, it is important to the efficient operation of any recovery program that the beneficiary countries employ self-help recruited from their own nationals.

Unfortunately the great bulk of these prisoners are held by a power with which negotiation and persuasion have been found singularly difficult. That does not, however, affect the principle involved or minimize the importance of taking such steps as are possible to prevail upon our other allies to follow our lead in the release of war prisoners. After all, some 800,000 are still held by nations other than the Soviet Union. Furthermore, their release would focus the spotlight of universal censure upon the one country continuing an internationally condemned practice. It is not too much to hope that pressure of such a character might avail much toward bringing about parallel action on the part of Russia. In fact, in this global "cold war" who knows but what Russia, in her fight to oppose any recovery plan for western Europe and to curry favor in Germany, might take the offensive in freeing these slaves, if for no other reason in order that thereby she might jump the ideological gun on the western democracies.

To the chairman and members of the Committee on Foreign Affairs, wrestling with the complicated problem of framing a program of foreign aid, I submit this suggestion for their careful consideration.

The editorial from the Washington Post follows:

SLAVE LABOR

The United Press survey disclosing that more than 26 months after VJ-day 2,500,000 prisoners of war still have not been returned to their homes is a disheartening comment on the debasement of international morality. It is a euphemism to refer to these men as prisoners of war. They are, in actual fact, a slave labor force pressed into the service of captor countries. To show that 73 percent of the prisoners are held by the Soviet Union is only to establish degrees of guilt. For these men to be separated arbitrarily from their families after the needs of war have ceased is something very close to barbarism.

A total of 1,656,532 German and Japanese prisoners reportedly still are in Russian hands. This figure is not especially surprising in a country that has made use of slave labor as an internal policy. The disturbing point is that France and Britain, where the principles of the Geneva Convention on treatment of war prisoners have long been recognized, should continue to negate those principles. Whatever the real needs of these nations for an augmented labor force, the plain fact is that the practice they are following is not essentially different from Hitler's. Nor is the argument that prisoners cannot be repatriated at a faster rate because of conditions in Germany a convincing one. The plan for European recovery demonstrates conclusively the close interrelation between German economic recovery and the welfare of the remainder of Europe. German industry cannot be expected to produce the goods France and Britain themselves need until its manpower is returned.

In his book, Speaking Frankly, former Secretary of State Byrnes tells of some of his tribulations in attempting to speed up the return of war prisoners, including an unabashed admission by the French that repatriation could not be increased because of their own labor shortage. As the matter now stands, Britain has agreed to return all its prisoners by October 1948. As of March 1 of this year, the French held approximately 450,000 German prisoners, including a number captured by American forces, which they have been returning at a rate of 20,000 a month. An agreement of the Council of Foreign Ministers, to which Russia is a party, provides that all German prisoners shall be repatriated by December 31, 1948.

For its part the United States has clean hands. Aside from war criminals awaiting trial, the last German and Japanese prisoners in this country were returned in 1946. But while the United States has discharged its own obligation, it cannot remain oblivious to the continuing blot on the conscience of humanity. We believe that the State Department should exert every effort to hasten the return of remaining war prisoners to their homes.

The International Crisis

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. KEATING. Mr. Speaker, wearer of the Purple Heart earned through serious injuries suffered in the Pacific while serving his country, diligent and profound student of international affairs, pious churchman and patriot of the first order, our colleague, Hon. EDWARD J. DEVITT, of the Fourth Minnesota District, is entitled to speak with authority in matters affecting the international scene. On October 17 he delivered the principal address at the national convention of Jewish War Veterans held in his home city of St. Paul, Minn. A copy of this address has been sent to me.

The simple, direct, sound, and well-reasoned content of this speech commends it to the careful attention of the Members of the House. Although many, like myself, may still be studying this great problem in an effort to arrive at a conclusion consonant with the ultimate welfare of our Nation, certainly the persuasive considerations advanced by our able colleague are a distinct contribution to our thinking.

Under leave to extend my remarks, I include this address:

I would like to talk with you today about our critical international situation. Never before in history have we had so many troubled spots in the world. Each of them is a smouldering punk which might ignite eventually into World War III. Look anywhere on the globe and you will see evidence of friction between peoples and between nations; you will see hunger and starvation, economic dislocations, and physical destruction.

Actual civil war exists in China. Korea is at an economic standstill, and in Indonesia the flames of nationalism are blowing against the old Dutch colonial policies. India is split asunder and the two new nations there are experiencing inordinate birth pains. Every day the newspaper and the radio records the gravity of the Palestine situation. The Balkans, as so often in our history, are again viewed as the potential trouble spot of southern Europe. A divided Germany is in great want, its wheels of industry grinding slowly.

Our focus these days is directed particularly to the plight of Italy and France where human suffering is great and where the vicissitudes of a European winter, combined with a small grain crop and economic maladjustment indicate an even more serious condition in the immediate months ahead.

One of the major decisions to be made in the field of foreign policy by the people of the country and ultimately by the Congress of the United States is whether we shall turn our backs upon Europe, and especially upon France and Italy, or whether we shall continue to aid them in the hope of rebuilding a self-sufficient and prosperous Europe.

I hope I do not oversimplify the problem by saying that it is essentially a contest between isolationism and internationalism. It would certainly be the easier course for us, today, to say that we have done enough for Europe and the world and to wipe our hands of it all. We have contributed most generously of our wealth and of our manpower in the waging of two great world wars which originated in that great smouldering caldron of diverse peoples in the old countries. Since Pearl Harbor we have contributed no less than $67,000,000,000 in aid to foreign countries—$67,000,000,000 mind you, not million. Although some $51,000,000,000 of this was in lend-lease, it would be wishful thinking to expect that even one one-hundredth of it would be returned to this country. And the people are saying, not within some justification, "When are we going to take care of ourselves? For how long must the international WPA go on and on? What of the high cost of living in the United States? Isn't it true that the giving of more aid to Europe will bring even a higher cost of living to the people of this country?"

And so we find ourselves today at the crossroads. We must decide whether we will continue to interest ourselves in the affairs of other nations or whether we shall draw again into the isolationists' shell, traditional of our pre-twentieth-century history.

For my part, much as the course of isolationism may be attractive to our own immediate and selfish well-being, we must continue today, and tomorrow, and for all time to concern ourselves with the problems of other nations, because in this modern age of rapid communication and transportation and of great scientific advances in the arts of war, we are really only one country in a small world of many countries. And what affects the peoples of other countries, directly or indirectly affects us. Our deep concern, therefore, must be to help solve the problems of the world because those problems are in reality our own.

We just can't let our fellow human beings starve. It isn't in us. It isn't humane.

I am just as well satisfied that we can't let communism spread further in the world. It has spread far enough. The Russian Government today controls, through actual aggression and occupation, or through infiltration and connivance, the peoples and the governments of 100,000,000 people over whom it had no jurisdiction prior to the war. Read off the names of the once free countries which now tremble under the boots of the Soviets—Finland, Latvia, Esthonia, Lithuania, Poland, Czechoslovakia, Hungary, Bulgaria, Rumania, eastern Germany, Yugoslavia, Albania. Greece and Turkey have been on the list but a temporary boost from our Government through the Greco-Turkish loan bill has prevented, or at least forestalled, their demise. I say that communism has spread far enough! From Stettin on the Baltic to Trieste on the Adriatic, and west to the continent of Asia the once free peoples can no longer call their souls their own.

There are only two great democracies left in Europe—France and Italy, and they are

in a precarious condition today. Palmiro Togliatti, the No. 1 Italian Communist, claims there are 5,000,000 Reds in Italy. It is estimated that 40 percent of the French people are either Communists or inclined toward communism. It took but a few hours for the Russian Politboro to engineer the fall of the Hungarian Government and to replace it with a Communist-dominated cabinet a few weeks ago. It would probably take no longer to engineer the fall of the present democratic Italian and French Governments. In time of general hunger and want, the greasy words of the Communistic propaganda machine sound so very consoling to a bewildered people.

We of this country must stop communism in its tracks by furnishing temporary aid to the peoples of France and Italy, and by furnishing them long-range aid for reconstruction and rehabilitation through inauguration of the Marshall plan. Temporary aid would cost some $500,000,000 and could probably be financed through some or all of the existing international finance agencies, such as the Export-Import Bank, the Monetary Fund, and the World Bank.

The Marshall plan calling for an expenditure of some $19,000,000,000 over a 4-year period really asks no more than we have been providing in past years. It differs from a strict handout in that it contemplates that instead of just helping the people of Europe, we will help them to help themselves. Instead of giving them a potato to eat, we will furnish them the seed and the fertilizer to grow their own food. Instead of giving them clothes to wear and houses in which to live, we will furnish them the machinery and the tools and the where-with-all to make their own clothing and build their own houses and reconstruct their own industries so that in time they may live by their own efforts alone.

International trade accounts for about 10 percent of our employment and industry in this country. By rebulding and revitalizing international trade through the self-help furnished by the Marshall plan, we will be insuring for our own economy and our own peoples the continuance of this 10 percent of our lifeblood, which may well be the difference between a prosperous and a depression kind of living in the United States.

I do not advocate that we deprive ourselves of the necessary food and essentials of living, but I urge that we contribute as much as we can of our own subsistence to help our European democracies without at the same time crippling our own existence. I feel certain that the Congress will circumscribe any grant of further aid to Europe with safeguards to insure the businesslike management and distribution of such aid; that there will be no more wanton hurly-burly passing out of American products by harebrained Socialist- and Communist-thinking international social workers without the giving of proper credit to the people of the United States. Such relief will be administered with businesslike methods and with proper credit attributed to the American people.

The present administration has been deficient in apprising the people of the country of the details and the necessity for the inauguration of the Marshall plan. For any such proposal to succeed, it must have the united and intelligent support of the American people. Our country is controlled at bottom by an intelligent and informed public opinion. Abraham Lincoln once stated in the course of a debate with Stephen Douglas, the little giant: "Public opinion is everything in the United States. With it, nothing can fail. Without it, nothing can succeed." How true that is. We must have an informed and enlightened public opinion as a condition precedent to the inauguration of the Marshall plan. It is the responsibility of our present administration to inform the American people about the plan, its details, and the necessity for its enactment. Although I am not a part of this administration—indeed, I am a member of the opposite political party—I believe that our acceptance of the Marshall plan and its businesslike administration is a necessity in this great world crisis. For that reason, I urge public understanding and acceptance of it.

The decisions which we make in these days in the field of foreign affairs are the decisions which will determine whether or not we shall have World War III. World War I wasn't started by the shooting of some minor royalty at Sarajevo, Serbia, in 1914, although that was the immediate provocation. World War II was not started by the bombing of Pearl Harbor in 1941, although that was the immediate provocation. Those two world wars resulted from the short-sighted, selfish mishandling of international affairs for the 20 or 30 years which preceded the actual commencement of the conflicts. We must make sure that today when laying the course of our foreign policy we are not igniting the embers for a third great world conflict. It is only the historian in retrospect who sees the picture as a whole. Because of our concentration on the affairs of the moment and the business of the day, we are not always appreciative of the long-range significance of our immediate conduct.

Upon you Jewish veterans of the wars I advocate an awareness of the importance of our foreign-policy decisions today. I urge a deep concern for international affairs and for the adoption of policies like the Marshall plan, which will serve the humane purpose of feeding the hungry, clothing the needy, and sheltering the homeless, on the one hand, and of stopping the aggressive spread of communism, on the other. In such manner I believe we can steer our course in this world in such a fashion as to avoid the perilous and dangerous course which leads to World War III.

I thank you.

Resolution of New Orleans Homestead Savings and Loan League

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas that part of Jefferson Parish comprising the heavily populated Metairie, Bridgedale, and other sections are exposed to the floodwaters of Lake Pontchartrain, that the hurricane of September 1947, during which that entire area was under floodwaters for a period of over 5 weeks, with material damage to over 2,500 homes, further emphasizes the necessity for adequate flood protection for that area; and

Whereas the construction of the Bonnet Carre spillway by the United States Government causing the flow of Mississippi River waters into Lake Pontchartrain, thereby causing the lake waters to rise above flood stage represents a constant threat to the flooding of the above area and also the entire area from the Bonnet Carre spillway to the line of the parish of Orleans; and

Whereas the hazardous condition is preventing the natural growth and expansion of the city of New Orleans and is the main deterrent to the construction of many thousands of low-cost homes mainly for veterans of World War II, as the area described is the logical area to contain some 30,000 home sites with provision for parks, playgrounds, and recreation facilities: Therefore be it

Resolved, That the New Orleans Homestead Savings and Loan League, representing an industry with over 95,000 members and having millions of dollars invested in home loans in the area, deplores the fact that the area is unprotected from Lake Pontchartrain waters and is fully cognizant of the constant hazard as impeding the growth of New Orleans and the construction of needed low-cost homes, therefore respectfully urges upon the Congress of the United States that the area be protected by a sea wall and that the area be earth-filled above potential lake-water levels, and that Congress meets its responsibility to the people in that area by providing the necessary funds for the cost of such project; be it further

Resolved, That a copy of these resolutions be sent to the President of the United States, to Louisiana Members of the Congress of the United States, to the United States Army Corps of Engineers, to the United States Mississippi River Commission, to the mayor of the city of New Orleans, to the Governor of the State of Louisiana, Pontchartrain Levee Board, police jury of Jefferson Parish, and others interested.

Congratulations, Mr. President

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. LUDLOW. Mr. Speaker, under both of the great political parties, as far back as my memory of Cabinet appointments extends, there has been too much of a mixture of politics and postal affairs.

The Postmaster General has been known as the political member of the Cabinet and usually he has been the national chairman of the party in power.

President Truman is entitled to the congratulations of the Nation for breaking this precedent. I do not know whether Jesse M. Donaldson, the new Postmaster General, is a Democrat or a Republican, and I do not know whether President Truman knows, but we all do know that he is a very efficient official who will bring to the office the experience of a long postal career and a determination to administer the office in a way that will mean the utmost in service to the public.

Under unanimous consent to extend my remarks in the RECORD, I include a letter I have written to Mr. Donaldson, as follows:

NOVEMBER 26, 1947.

HON. JESSE M. DONALDSON,
Post Office Department,
Washington, D. C.

DEAR MR. DONALDSON: My warm congratulations on your appointment as Postmaster General. President Truman has acted wisely and in the public interest by selecting the Department's most outstanding career man for that position. It is indeed refreshing to see a man chosen for a postal appointment of that magnitude on the basis of his demonstrated qualifications for the work to be done and on no other basis. My long association with the Post Office Department in connec-

tion with the postal appropriations has given me a very high opinion of your intelligent and comprehensive knowledge of the Department's needs.

I am wishing you much happiness and success as a member of the Cabinet.

Yours very sincerely,

LOUIS LUDLOW.

Why Can't We Have the Facts Earlier?

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. ROBERTSON. Mr. Speaker, the Congress has been called into special session by the President, and if we are to judge by the President's message delivered to the joint session, we have been called here to appropriate and vote relief for certain countries in Europe. By indirection we are advised that this is preliminary to the proposed Marshall plan, which will probably be the first order of business with the beginning of the next session of Congress.

I have no disposition to question the sincerity of the President whatsoever, but I do think that the country has become confused by virtue of the fact that we have so recently been able to rid ourselves of Government controls, and uncomfortable aspects that go with war, that the country will not take kindly again to more controls, especially if those controls are for the purposes of relief.

It is my considered judgment, Mr. Speaker, that the President has presented this case from the wrong angle. It has been presented as a stopgap relief aid for certain countries of Europe, where as a matter of fact the stopgap aid, so-called, and the funds that will be asked for under the Marshall plan are nothing short of funds for national defense, and the country would be better off if they were so advised today.

We have recently listened to major addresses on the floor of the House, one given by the distinguished gentleman from Illinois, the Honorable EVERETT DIRKSEN, who has recently returned from Europe, where he made extensive studies. There can be no doubt about the authenticity of his remarks and the candor with which he spoke.

The same can be said of the Honorable KARL MUNDT, who followed Congressman DIRKSEN a day or two later with a forthright address telling us the exact conditions that prevail in Europe today. His remarks have been made for the same good reason that he too has recently returned from a trip to Europe where he has made extensive investigations. Therefore we must accept his statement as one worthy and dependable.

A few days later the Secretary of State spoke from Chicago rather forthrightly about the dangers of communism and the practices of Stalin, Molotov, and Vishinsky, and others.

Not so long ago the country was awakened by a new book appearing, the author of which is the Honorable James Byrnes, its title "Speaking Frankly." This book makes amazing revelations. It is regrettable indeed that these revelations were not made many months ago. Surely if the conditions outlined in this book prevail today they prevailed when Mr. Byrnes was Secretary of State.

It seems to me, Mr. Speaker, that we are approaching this serious question from entirely the wrong angle. If we stand in the vestibule of trouble with Russia, and most surely Russia is doing everything possible to make trouble, then the people of the Nation should know the existing conditions as they are, not 1 year or 2 years later, but they should know them today and they should have known them in the past.

The President's request for relief for Europe may be construed if you please as national defense. It should be so labeled because it is nothing less than that, if we accept the words of the Honorable EVERETT DIRKSEN, the Honorable KARL MUNDT, the Secretary of State, and the message conveyed to us in the book by the former Secretary of State, Mr. Byrnes.

Alaska: Land of Challenge

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. BARTLETT. Mr. Speaker, Alaska was honored last summer by a visit from Hon. William E. Warne, Assistant Secretary of the Interior. Secretary Warne traveled from Ketchikan to Point Barrow, from the remote Pribilof Islands to the eastern boundary of the Territory. He talked with many people, and he learned much about this last great remaining frontier land of the United States. This is shown by the factual presentation made by Secretary Warne when he delivered a speech before students of Haverford College at Haverford, Pa., November 18. I consider it a privilege for me to offer his address for inclusion in the RECORD:

ALASKA: A PROBLEM, AN OPPORTUNITY, AND A CHALLENGE

Alaska is a problem, an opportunity, and a challenge for the United States.

The Territory is 586,400 square miles in extent; one-fifth as large as the 48 States. Its coastline is 10 times as long as that of the States.

Ever since Alaska was purchased from Russia for $7,200,000 in 1867, we have indulged in generalized thinking about it. It was "Seward's folly." It was "the land of perpetual ice and snow," and for a few years at the turn of the century it was "gold."

The time has come when the United States must take a closer look at its great remaining frontier of Alaska. We must now occupy and develop Alaska.

There is a great variety in Alaska. We must realize that in so vast an area climates, terrains, soils, resources, and peoples vary. Southeastern Alaska is timbered fiord country, spectacularly beautiful as the mountains rise steeply from quiet waters. Central Alaska, the very heart of the Territory, has warm summers and cold winters, and a great variety of promising resources. Here, perhaps, the greatest growth and the greatest development impend. The Aleutian chain, as though flung carelessly into the cold northern waters, stretches clear to Asia. These islands, grass-covered, rugged, often weather-bound, are bleak prisoners of isolation. The great deltas of the Yukon and Kuskokwim Rivers and the shores of the Bering Sea are, for the most part, unfriendly lands, largely undeveloped, except for the fishery in Bristol Bay. The Arctic plains north of the Brooks Range and the northern coasts are within the zone of months-long nights and little interest connected with them until recently. Now they are the site of an intense exploration for petroleum, and the caterpillar tractor and the Navy "weasel" are weaving long tracks in the tundra.

Alaska might be called a land of contrasts. High-towering, snow-clad mountains overlook expanses of low, swampy muskeg. In the south, where rainfall greatly exceeds 100 inches in annual average, glaciers grind their way to the sea, thus making islands of forests and villages separated by impassable, frozen channels. In the far north where the rainfall is so low as to place the Arctic slope in the arid class, the thin ice and snow cover melts off each year, though the ground may be frozen permanently 3 inches below the roots of the reindeer moss.

Alaska is a vast nearly empty land. Fewer than 100,000 people live in the Territory, and of these residents 40,000 are Eskimos, Aleuts, and Indians, native peoples.

Alaska is a hard land, as exciting and challenging to an imaginative visitor as the uncut interior of the United States must have been to the pioneers who pushed across the Alleghenies.

Alaska is a rich land with more coal than Pennsylvania, with more gold than California, with strategic and other minerals in quantities, with billions of board feet of virgin forests, and with millions of acres of land that may eventually be farmed. Alaska's fishery is the most valuable in the Nation, and her game and fur resources exceed anything that has existed in the 48 States in 50 years. Alaskan scenery is superb and the recreational opportunities, though almost wholly undeveloped, are splendid.

From this discussion of the physical characteristics of Alaska, I now turn to consideration of the future of the Territory. The very remoteness of Alaska and its far northern position that formerly made it simply our storehouse of barely-sampled resources now give the Territory a position of prominence undreamed of before the recent war.

Alaska suddenly has become the crossroads of aerial world trade routes. Here the flight lines to Japan, China, and India will cross those soon to be established north over the Pole to Europe. Not only has the airplane given Alaska its new significance, but it has introduced new era pioneering. In Alaska the airplane substitutes for the covered wagon, the pony express, and the early railroads that opened the West in the last century. In Eskimo villages where no automobile has ever been seen, little float planes and even large transport ships are stationed or visit regularly. We did not startle the Eskimos of the village of Shungnak, above the Arctic Circle, when we set our amphibicus plane down in the Kobuk River immediately before the village store, although land transportation, aside from dog sleds in the winter, is unknown there. The village does not even have a street. In the summer, you go to Shungnak afoot, by canoe, or by plane.

Because of the new situation created by the airplane, the development of Alaska now is essential and, I believe, inevitable.

Just as nature abhors a vacuum, so today with world population pressures and demands

what they are, I believe it would take active resistance to prevent the settlement and development of Alaska. There is every reason for the United States to encourage, guide, and foster the development of Alaska as an extension of our American civilization, because this movement will enlarge our National opportunities and enrich our commerce at a time when our national obligations are very great, both here and throughout the world. The employment of the resources of Alaska and the opportunity that this activity provides to use the energies and skills of our young people seem to me to be so obviously sensible as really to require no further justification.

I would simply add, however, that the population of Alaska is considered essential to the defense of the Territory and of the United States. This must not be overlooked.

Now, to sketch briefly the problems faced in the settlement and development of Alaska.

TRANSPORTATION

Transportation is a major problem. The only important railroad extends from Seward and Whittier on the south to Fairbanks. There is no rail connection with the 48 States, although in a relatively few years I think there must be one. The lack of great volume makes water shipment expensive. Development of the resources of Alaska would provide backhauls which would break this garrote on the lifeline of the commerce to and from the Territory. Virtually all passenger travel to and from and within Alaska now goes by air. On the landing field at Kotzebue I saw a DC–3 transport taking off for Nome on an Alaska circular charter tour with more than two dozen tourists aboard. Such casual visitors were absolutely unknown in Kotzebue before the new air age. While the Government has sponsored and developed a much more nearly complete system of aviation facilities in Alaska than most would expect to find there, the job is not nearly done. Without question, the airplane will be a permanent substitute in parts of Alaska for some other means of travel and transportation. Roads simply will not be built in some areas, and railroads cannot be. Even so, however, the absence of roads presently is the greatest deterrent to settlement in Alaska. We have a problem somewhat like the old one about "Which comes first, the hen or the egg?" This problem is: Shall we build the roads into areas that should be settled or wait until the people have homesteaded these areas before constructing roads to them. In effect, we have been following the latter course heretofore, with the result that there has been so little settlement as to be almost negligible. The Department of the Interior now proposes a program of road construction to the areas that are favorable for settlement as a means of aiding in their occupation.

SETTLEMENT

I have already said that Alaska is a hard land. Homesteading procedures adapted for the mid-Western plains can hardly be expected to do the job in Alaska. Yet they are the principal tools today. In the Matanuska Valley, it takes a man a year to clear 5 acres because of the heavy growth of birch and spruce and the matted roots in the soil. At this rate, 8 years are required to clear 40 acres. Yet 40 acres in Alaska are considered the minimum-sized farm to supply a man with a decent living. In addition, the homesteader must have a house the first winter. In that rugged climate, he cannot keep his family in a tent, lean-to, or dug-out, as the pioneers were able to do at least the first year in Kansas, Nebraska, and the Dakotas. The Matanuska colony, which gained such prominence 10 years ago, however, has demonstrated that permanent settlement and a permanent agriculture can be established through group occupation and well-planned and financed attack. A footnote on the Matanuska experiment: 48 of the original 200 families are on their farms after more than 12 years. Another 7 families are residing in the immediate vicinity in retirement, but still own their original land. All of the farms are occupied. In addition to the 200 farms of the colony, 250 additional farms have been cleared and occupied in the Matanuska Valley since the colony was established. This is significant because, prior to the establishment of the colony, only 50 farms had been established in the Matanuska Valley in almost 70 years of American occupation. The town of Palmer, which serves the Matanuska Valley, is one of the most substantial and promising in Alaska. The people of the Matanuska Valley have developed such aids to good living as Boy and Girl Scout camps on one of the most beautiful little lakes that I have ever seen; community clubhouses; boating and bathing facilities on this same lake; as well as other community facilities and aids to rural living. There are opportunities in Alaska for other group settlements, scores of them. Such settlements would, as the Matanuska colony did, attract more homesteaders to substantial, growing communities.

Alaska is not likely ever to be a prominent agricultural area, but with fortitude and perseverance men and their families will make decent livings on Alaska farms. The area should be able to feed itself in very large measure as collateral industries and activities grow and expand, even though the population increases. This, the Territory is not doing today, even though there are less than 100,000 people in the vast expanse of Alaska. Most of them are fed by foods transported from the United States at great expense, and the cost of living is very high because of it.

RESOURCE DEVELOPMENT

Mining, except for gold, is in its infancy in Alaska but the Territory has treasure upon treasure locked in its mountains and hills, many of which have not been adequately explored. Mining can long be an important industry in Alaska, if the metals and minerals are exposed and used. One of the growing-pains that Alaska is experiencing at this moment is a dearth of building materials. In the land where stands our greatest virgin forests, there is virtually no lumber to be had, and only a rare sawmill. Though the raw materials are present, there are no cement mills. This summer at Anchorage, men who were trying to build themselves homes were almost fighting in the streets over single bags of cement that managed to trickle through from the outside, as the Alaskans refer to the rest of the United States. So far as I could learn, there is but one brick kiln in all of Alaska. Pumice deposits are plentiful and pumice can be used to make good building blocks.

What Alaska needs sorely are investment capital and additional business enterprise. I was informed that there were 1,500 vacant jobs in Anchorage and at nearby Fort Richardson. What keeps the labor force from coming? Generally, the answer is: housing shortages, transportation difficulties, and inadequate living and feeding facilities. Alaska is in need of year-round employment opportunities and a permanent labor force. There are bright prospects that pulp mills will be established in southeastern Alaska, using the forests that abound there to provide a continuing supply of paper in quantities estimated up to 6,000,000 tons a year. Such enterprises as these will go far toward filling the needs of Alaska. They will provide steady employment, freight for backhaul, and markets for agricultural and other products. The undeveloped water powers offer important opportunities for manufacturing and large-scale industries utilizing local resources.

The fisheries of Alaska, particularly the salmon fishery, outweigh in importance every other industry. The fisheries, with intelligent management, may be depended upon to provide a continuous source of income, food, and gainful employment. Management of the fisheries is a responsibility retained by the Federal Government and amounts expended in regulation and enforcement and in research have historically been woefully inadequate. As a consequence, the fisheries have had their ups and downs, and unless the situation is corrected it is doubtful whether, in some areas, they can be considered permanently productive.

I have indicated some of the proposals that will be made in connection with a program for the settlement and development of Alaska. I think I should discuss the reasons for and the scope of the program itself.

A knotty problem is found in claims growing out of a lack of final determination of the rights of the natives to lands used and occupied by them. The fact that use and occupancy draw their significance from different activities among the races gives rise to the problem. Does hunting over or picking berries in an area constitute use, and does a recognition of rough tribal boundaries constitute occupancy by bands of the lands in question? These questions become pressing as development and closer settlement gain speed. Delay in settling this issue will surely reduce the chances of rendering complete justice to the natives and, as well, will impede desirable improvements and developments. Spokesmen for both natives and whites in Alaska this summer told me that the question should be disposed of as quickly as possible, saying a bad decision from either point of view was preferred by both to longer delay. The Department of the Interior will place this question before the Senate Public Lands Committee in a few weeks, indicating the avenues that may be taken in search of the solution.

Alaskans are handicapped in the management of their resources, not only by absentee Government control but largely also by absentee industrial control. In this instance, a specific reference is made to three industries which most acutely affect Alaska's whole life: transportation, fishing, and mining, which are, to a large degree, absentee controlled and operated and which return too little to the Territory itself.

A carefully coordinated effort must be made by all agencies that are involved, if the obstacles to Alaskan development are to be removed and if the challenge of this development to American ingenuity is to be met. No such effort heretofore has been made or even proposed. There has been virtually no organized effort on the part of any agency, private or Government, to develop or to stimulate development of Alaskan industry, community life, and agriculture.

The Department of the Interior this year is endeavoring to organize a program for the development and settlement of Alaska which will attack all of these problems.

Such a development program for Alaska must be based upon the assumption that the Territory will become one of the United States just as soon as its people, its resources, and its pace of development permit it to assume the obligations of Statehood. In this way, absentee Government control can be removed. Our Alaskan program looks to that end.

For the purpose of preparing the proposed program, agencies of the Department of the Interior, of which nearly a dozen have Alaskan responsibilities, have brought together their Alaskan programs for integration into a single coordinate activity.

In attacking the transportation problem, the Alaska Railroad proposes to make much-needed additions, improvement, and changes in track, roadbed, structures, and equipment. It is a complete rehabilitation program designed to insure the road's ability to handle increases in volume of traffic which have already developed. On another front of the transportation problem, the proposed program of the Alaska Road Commission provides for the construction and maintenance of highways to supplement the trunk-road system, as well as to provide connecting and feeder roads to the Alaska Railroad, to water transportation, and to farm areas.

To meet such problems of health and welfare as a tuberculosis death rate in Alaska, which is nine times that in the United States, medical forces would be strengthened by the proposed program and new modern centralized hospital facilities created.

The protection and enhancement of Alaska's presently most valuable industry, the fisheries, would be accomplished through a proposed program for more effective fish conservation. This would require more adequate law enforcement personnel, more effective control measures such as salmon-counting weirs, and investigations into the availability and utilization of the fish resource. For example, of the 360,000,000 pounds of salmon caught in Alaska, 120,000,000 pounds are dumped at sea in the form of cannery trimmings and related materials. Measures are proposed to reduce such losses.

I shall not take time to enumerate the proposed contributions of the other agencies of the Department of the Interior. As a whole, they constitute an integrated approach to the development of the resources of Alaska and to overcoming such major obstacles to settlement as the lack of suitable transportation.

Other departments of the Federal Government having responsibilities in Alaska, and of these there are also nearly a dozen, have been called upon for and have responded with cooperation to the end of integrating all the proposed programs of the Federal Government in Alaska into a single development program. Through this method, it will be possible to determine where and what activities must be expanded to meet essential needs and to eliminate duplications and distortions that occur from lack of knowledge of collateral work. It is by this means that the operations of the Department of Agriculture in marketing the timber from Tongass National Forest, of the Department of Commerce in encouraging the manufacturing of pulp, and of the Department of the Interior in protecting the important fish resource from the pollutional wastes of lumbering and pulp manufacture are to be interrelated so as to maximize the resulting benefits and minimize the damages.

There still will be required, in my judgment, the consideration by the Congress of special needs and requirements in Alaska that argue for legislative additions to and modifications of present programs. For example, at present there is no legal basis for an adequate group settlement program in Alaska. This particular step in the effort to bring up to date the thinking about Alaska will likely receive consideration in the spring.

Why do I talk about Alaska to a collection of students of Haverford College in Pennsylvania? I do so because the challenge of Alaska is to the energies, the imagination, and the fortitude of young men and women—those who are in college today and who will graduate tomorrow. As did the western frontier of yesteryear, the northern frontier today calls for men of intelligence and vision who are willing to work for what they will get and who have a desire to help in building a better world.

Price of Sugar

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, in the midst of universal discussions on the high cost of living and inflation, which reached a climax in the message of the President, I would like to bring to the attention of the House and to the attention of the public generally, the reassuring fact that the price of sugar remains at a low level by comparison with the price of other foods. Also, that the supplies of sugar have finally become equal to the demand, with the prospect that in 1948, there will be a surplus.

Those of us who represent sugar-producing States have perfectly good reason for being pleased with this result. It must be remembered that sugar was the first food to be made the subject of a price ceiling, even before Pearl Harbor. Sugar was likewise the last food to have rationing and price ceilings removed, which was accomplished on October 31.

An article in the Sugar Bulletin which has just come to my desk has served to refresh my memory as to the remarkable cooperation which has existed between our domestic sugar industry and our Government. The article is as follows:

IN WASHINGTON WITH C. J. EOURG

The date proposed by Louisiana as proper and safe for the decontrol of sugar price ceilings and rationing—October 31—has arrived and passed without disturbing incident. A reasonable time having elapsed to permit observation as to the immediate effect on the market, the American Sugar Cane League has no reason to regret its proposal of the date. At the time the legislation was before Congress last spring, Louisiana stood alone in its insistence that the sugar supply and demand situation would be sufficiently definite in October to assure an accurate decision to be made during that month with regard to decontrol. We were willing to leave the matter discretionary with the Secretary of Agriculture, provided any further extension would have to be justified by a report showing that conditions in the sugar market were different in October than we had claimed they would be. Members of Congress being in the mood for ending controls early, Congress accepted the Louisiana date and adopted it as law.

We are pleased to acknowledge that Secretary of Agriculture Anderson and Sugar Branch Director Marshall have handled the progressive elimination of Government controls in an efficient manner. The purchase of the Cuban crop at a price which reflects the cost of living in the United States has facilitated the solution of problems connected with the domestic producing areas, which has included a basic price ceiling considered fair to all producers. The production of large crops in the United States beet area and in Cuba have served to make possible the gradual decontrol as to rationing and as to inventory limitations prior to the final elimination of price ceilings. The net result has been that the transition from Government war regulations to the relatively free enterprise under the Sugar Act, has been brought about with the smoothness of fluid gear shifting in automobiles. In fact, the recent decision of the Secretary of Agriculture to make commitments to the Army for as much as 484,000 tons of sugar from the 1947 crop, to be shipped overseas for distribution in occupied areas, constitutes a practical demonstration that in the early fall, after the offshore crops have been harvested, is unquestionably the most appropriate time to evaluate all angles of the sugar supply and demand picture in the United States.

Substantial confirmation of this reasoning is contained in the statement of the Secretary-General of the International Emergency Food Council made on October 27:

"Because of this year's all-time record Cuban sugar crop, the world sugar situation is temporarily in rough balance at current price levels for sugar. In fact, because of the current dollar exchange difficulties, it has been possible to assign considerable quantities of sugar to the occupied areas. In the months immediately ahead, the sugar situation probably will appear relatively easy. Whether this situation will continue throughout 1948 is largely dependent upon the size of the Cuban crop and the availability of dollar exchange. No firm forecast on these matters can be made at this time.

"It is of the utmost importance, however, to make sure that any apparent lack of demand at present does not discourage production of every possible pound of sugar in 1948. At present prices, calories in sugar are very little, if any, more expensive than those in grain and during the months before new crop cereals are available, sugar represents the most important alternative source of carbohydrates of which more supplies, rather than less, are likely to be available."

Mr. Speaker, through this praiseworthy cooperation, it has been possible to maintain very reasonable prices for sugar and finally to bring about the transition from war regulations to a restoration of free enterprise within the industry, without any of the violent fluctuations which have prevailed on other commodities. This accomplishment is all the more remarkable because of the experience following the First World War when the price of sugar at retail was 30 cents or more a pound for a time, followed by a ruinous drop in price which brought terrific losses and hardships to all persons engaged in the sugar industry, as well as many of the industrial users and other large buyers of sugar.

There were many in and out of Congress who insisted upon continuing into 1948 the regulations on sugar price controls and rationing. Last spring, when this matter came up before the Banking and Currency Committee, of which I am a member, there were dire warnings that any decontrol of sugar prior to March 1948 would result in a price of 40 cents or more per pound and terrible dislocation in the sugar market to the detriment of the consumer. We likewise heard pessimistic prophecies on the floor of the House and Senate as to what would happen if controls were eliminated as early as October. Mr. Speaker, I had been assured by responsible representatives of the Louisiana sugar industry that October is the recognized ending of the sugar statistical year. It was pointed out to me that the Sugar Act itself recognized the 12-month period of November to October as the statistical year for determining the estimate of consumption. It was

also explained that the tropical island crops are produced during the spring and summer, so that the sugar supplies from those offshore areas are definitely known previous to October. On the other hand, the beet and cane crops within the States of the United States mainland are already in process of being harvested, and the estimates of total production can be made with practical certainty at that time. Accordingly, I supported in committee and before the House, the decontrol date of October 31, 1947, which was passed by the House and Senate and finally became law. The good judgment upon which the action of Congress was based is now corroborated by the recognized leading sugar trade journals. For instance the Willett & Gray Weekly Statistical Sugar Trade Journal of November 6 had this to say:

All price controls on sugar were eliminated on October 31 and the article seems to have made the most orderly transition from a controlled to a free market of any commodity released from wartime control.

Our United States primary distributors made no change in their quotations which are still listed at 8.40 cents for cane refined (with the exception of Sucrest who continues to quote 8.35 cents), while the beet processors continue to quote 8.30-cent basis.

Importers of offshore refined did advance, but only slightly and now ask 8.50 cents for graulated in cotton bags on the remaining supply presently available, against 8.40 cents quoted for this packing last week. The 8.50-cent price in cotton was their previously allowed maximum under control which they had been shading.

At retail the large chain stores announced that there would be no change in their prices to home buyers and the smaller stores naturally have to maintain prices reasonably close to these competitors.

The same journal on November 20 reported:

In most sections of the country the recent heavy demand for refined sugar for the housewife's use has entirely disappeared and a number of cases of cancellations of old unconfirmed orders are reported. Here in the East refiners are still experiencing a good demand from the metropolitan area and from upper New York State but there is more insistence on small packages and refiners' various specialties. It has been rather difficult to get bulk granulated here in instances due to export commitments made some time ago when it was expected that the domestic demand would show the usual falling off in November and December. With some principal refiners temporarily withdrawn on export sales it is likely that this condition will be remedied shortly, however.

The Lamborn Sugar Market Report, published in New York, had this to say in its issue of November 4:

The closing days of October witnessed ever-mounting hysteria on the part of housewives and small industrial users in many sections of the country, particularly east of Chicago and in the far West, as they strove to obtain as much sugar as possible before price controls should be eliminated on October 31. In the Middle West area buying was irregular. Some sections reporting heavy demand, while others had apparently reached the point of saturation. The Department of Agriculture performed yeoman service in attempting to quiet the fears of housewives and small industrial users as to sugar prices and the sugar supply.

Eastern and southern cane refiners are bowed down under the weight of orders which have resulted from the tremendous buying spree. Shipping delays range up to 8 or 9 weeks, depending upon the refiner, with the greater delays applicable to grocery size packages. The car supply has been reasonably good over the country, but the weight of orders has been so heavy as to obscure that fact.

A week later, in its issue of November 10, it reported encouraging news as follows:

Reports from most sections of the country state that the consumer demand for refined sugar is definitely on the wane. Assurances of the Department of Agriculture to the effect that supplies of sugar are such as not to warrant price increases undoubtedly have influenced the housewife, although the fact that several days have elapsed since sugar controls were ended without any rise in price has presented her with more concrete evidence of the uselessness of hoarding sugar. Furthermore, there has been no talk recently concerning rationing, in or out of official circles, which the housewife could by any stretch of the imagination interpret as likely to apply to sugar.

The Sugar Market Review for the week of November 6–12, issued by George E. Kesler & Co., of New York, covers the market developments with these paragraphs:

Now with the hysterical hoarding demand, thoroughly unexpected, and created principally by scare reporting on the part of radio news commentators, newspaper columnists, and others, refiners find themselves faced with an unprecedented demand for sugar from their regular customers which they are unable to supply because of their export contracts. It goes without saying that this is not a situation they would have chosen for themselves, for there is no refiner anywhere who does not want to take care of his regular trade first. However, there they are, faced with a fait accompli in the form of their duly executed export contracts, calling for delivery at certain specific dates and to definitely named steamers for whose cargo space exporters have signed contracts with the steamship lines.

Some relief is indicated by the fact that two prominent refining interests have withdrawn temporarily as export sellers. This means that one of these days, unless Government requisitions necessitate otherwise, these refiners should be able to assign their bulk granulated output to their regular users. Meantime, however, little bulk is expected to be available.

The effect of this state of affairs, as has been said, is felt principally in the East, where bulk granulated is scarce. In the Middle West and West this condition does not prevail, except in cases where cane sugars are in demand, because from Ohio westward the domestic beet processors are delivering their sugars in a prompt and orderly fashion and are materially helping to relieve a situation which, without their assistance, would be almost entirely out of hand.

It will be noted that there is recognition from New York of the value of the domestic sugar industry by the reference to this demonstration of the helpfulness and protection which the American consumer derives from the existence of the domestic sugar industry.

The Secretary of Agriculture has helped to bring about the gradual and progressive return of the sugar business to its owners by first removing the rationing of sugar in June, and a few weeks later by eliminating inventory limitations. Each such change caused a slight flurry in the sugar market, but following this the market settled down. Finally, when October arrived, there was evidence of increased demand and some fear that hoarding might result, but as the public became reassured through the announcements of the Department of Agriculture regarding the availability of ample sugar supplies, the market became stabilized so that we can now be satisfied that the changes from Government control have been brought about in an orderly manner and with full protection for the American consumer.

Moses Waddel

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. BRYSON. Mr. Speaker, on August 17 last I had the privilege of speaking at the unveiling of a monument to Moses Waddel at Willington, McCormick County, S. C.

Under leave to extend my remarks in the RECORD, I present the following copy of my speech:

When permitted to speak on occasions like this, beneath the blue canopy of heaven and these ancient trees now clothed in the rich green of summer but soon to take on the myriad colors of the rainbow following the touch of frost, I am persuaded to paraphrase the words of the poet and say, "Speeches are made by fools like me, but only God can make a tree."

It was beneath these same trees now more than a century ago that a great Carolinian, a great American, established a place of worship and a school to which institutions came the youth of the day. The fame of this place has gone out to all the Nation and the influence of its great founder still permeates the political and religious life of our Southland.

As we unveil this marker memorializing the establishment of Willington's Presbyterian Church, we visualize the church's founder, Rev. Moses Waddel.

The highest profession to which anyone can aspire is that of the ministry. Second only to this highest of all callings, stands the teacher. Reverend Waddel served masterfully in a dual capacity as preacher and teacher.

Although known as an able and conscientious minister of the Gospel, Moses Waddel's fame as a great teacher spread throughout the Nation. The list of clergymen and leaders in public life who studied under this great schoolmaster here at Willington reads like a roll-call of America's most notable men.

Emulating the example of the Nazarene carpenter, Moses Waddel preached and taught as he went about doing good. To Moses Waddel it was not sufficient that a young man be taught the arts and sciences of the day; to him, no education was complete without a sense of righteousness based on the teachings of Christ. If our Nation is great today, and if it is to remain great tomorrow, it is because throughout our history we have had men like this bard of Willington who believed and taught that underneath knowledge, man must be endowed with a spirit and consciousness of God.

Historians have not recorded many of the details in the life of Moses Waddel, but what has been left unsaid about the greatness and

power of this humble Presbyterian minister is eternally recorded in the deeds and lives of the great Americans he taught and inspired in his log-cabin school here at Willington.

Moses Waddel was born in July 1770 in Rowan County, N. C., of parents who had emigrated from the county of Down, in Ireland, in 1767. At first the child was frail and sick and not expected to live. When he began to gain strength, his parents gave him the name Moses, after the Old Ttestament patriarch who had been providentially preserved in his infancy.

Early in his life, young Moses Waddel showed proficiency in academic pursuits and, despite a long interruption in his studies by the invasion of the British troops, he had, at the age of 14, completed the study of the Latin and Greek languages, Euclid's elements, moral philosophy, geography, criticism, and arithmetic.

At 14 he began teaching English and Latin to pupils in his neighborhood in North Carolina. This was the beginning of a career which was to reap renown. In 1786 he moved to Greene County, Ga., and opened a school, which he was forced to close the following year because of Indian invasions. The next year his parents moved to Greene County and Moses Waddel established another school.

Following his decision to enter the ministry, Waddel enrolled at Hampden-Sidney College in January 1791 and graduated the following September, spending only 8 months and 26 days in college. He was licensed to preach the following May.

Soon after his entry into the ministry the Reverend Waddell became convinced that he could extend his usefulness by teaching and preaching at the same time, so he established a school near Appling, Ga., later moving into the village. While living at Appling an event occurred which was of great importance to Waddel's future career. He came to the Calhoun settlement in Abbeville district, South Carolina, and here met Catherine Calhoun whom he married in 1795. Miss Calhoun's younger brother, John C. Calhoun, was destined to become Waddel's most distinguished pupil. Young Calhoun entered the Waddel school at Appling, but following the death of his sister, Catherine, little more than 1 year after her marriage to Waddel, the school was suspended and young John returned home.

In 1800 Moses Waddel married Elizabeth Woodson Pleasants, of Halifax County, Va., and the next year he moved to Vienna, S. C., where he opened another school. John C. Calhoun returned to this school and within 2 years was ready to enter the junior class at Yale College.

It was in 1804 that Waddel moved here to Willington and established the academy which was to gain the reputation of being an American Eton. The first schoolhouse was a two-room log cabin, but when it was decided to establish a church at Willington, a combination schoolhouse and church was built and Dr. Waddel served as preacher and teacher. In the period between 1804 and 1819 he taught approximately 4,000 students at his famous Willington Academy.

Dr. Waddel's success as a teacher has been attributed to various factors. He possessed a remarkable capacity for inspiring boys to learn, and students loved and respected him even though his discipline was strict. He was devoted to their interests and welfare, often giving private advice to them concerning their conduct and associates. Discipline and control in the academy were maintained by a monitorial system of student government with the schoolmaster as head. From the statements of some of Dr. Waddel's former students it would seem that his reputation for severity and cruelty must have been exaggerated.

James L. Petigru, one of his most notable students who became South Carolina's greatest lawyer, referred to Dr. Waddel as "kind, without weakness; devoted to learning, but still more devoted to virtue."

Augustus B. Longstreet described his teacher as "benevolent, affectionate, charitable, hospitable, and kind."

The curriculum of the academy was chiefly classical and a tone of distinct seriousness of purpose prevailed at Willington. Students were particularly noted for their thorough preparation for college. The president of Princeton University said repeatedly that he received "no scholars from any section of the United States who stood a better examination than the pupils of Dr. Waddel."

There were also extra-curricular activities at Willington, such as a debating society, and recreations which included wrestling, running, jumping, playing town-ball, and bull-pen.

The following picturesque account of life at the Waddel school is quoted from Pinckney's Life of John C. Calhoun:

"The boys boarded at farmhouses in the neighborhood or lived in log huts in the woods near the academy, furnishing their own supplies. At sunrise Dr. Waddel was wont to wind his horn, which was immediately answered by horns from various boarding houses in all directions. At an early hour the pupils made their appearance at the log cabin schoolhouse.

"After prayers, the pupils, each with a chair bearing his name sculped in the back of it, retired to the woods for study, the classes being divided into squads according to individual preference. In the spring and summer months those squads scattered through the oak and hickory woods in quest of shade, but in cold weather the first thing done by them was to kindle log-heap fires. Whosoever imagines that the boys did not study as well as they would have done under the immediate eye of the teacher is mistaken. I have been to many schools, conducted according to various systems of education, but nowhere have I seen such assiduity in study, nowhere have I ever witnessed such emulation to excel." Those are the words of W. Pinkney Starke, another of Dr. Waddel's noted students.

In May 1819 Dr. Waddel assumed his duties as president of the University of Georgia at Athens. Two motives have been ascribed to his accepting the presidency of the university. These were: "First, to raise the university from the low state to which it had sunk in public estimation, and to give it so much respectability and usefulness as to secure the confidence of the people of the State * * *; (and second) he felt that before him would be opened a grand opportunity of communicating to the system of public education the spirit of Christianity as the animating principle of the whole."

According to Longstreet, the effect of Dr. Waddel's association with the Ur iversity was "almost magical." The school soon attained a measure of prosperity unequalled in the past. Upon his arrival the new president found only seven students in attendance. Ten years later when he resigned, he left an efficient faculty, a number of new buildings on the campus, an improved financial status and had witnessed the annual arrival of multitudes of the youth of Georgia and of the neighboring States.

Dr. Waddel returned here to Willington in 1829 and lived the life of a planter on his estate of several hundred acres and continued his work in the ministry. He also had a school reopened which was run under his general supervision, although he did not participate in the instruction of students.

In 1836 Dr. Waddel suffered a paralytic stroke and from then until his death in 1840 he was physically and mentally incompetent. In January 1839 he was moved to the home of his son, Prof. James P. Waddel, in Athens, Ga., where he died on July 21, 1840.

For the description of the character and service of Moses Waddel let us turn to those who knew him best:

Augustus Baldwin Longstreet wrote: "The reputation of Dr. Waddel never suffered from change of times, place, or society, but, bright at its rising, it grew brighter and broader at every move in his orbit. * * *

"The fruits of his vineyard are scattered far and wide through most of the Southern States, and long have they been seen in rich luxuriance in the Capitol of the Union. * * *

"Where lay the secret of his success over others of equal abilities? I should say, in his sleepless vigilance over the conduct and morals of his scholars; the equity and impartiality of his discipline, and his firmness in enforcing it; his ready insight into the character of youth, and his skill in improving it, either by prompt correction or speedy commendation, as seemed to him best; and in his well-regulated familiarity with them, which made him at all times accessible to them, without lessening their respect for him. To all which it may be added that, when left to choose, he almost invariably established his school in some retired spot, which, while it brought his pupils, night and day, under his immediate supervision, removed them almost entirely from the temptations of vice. Certain it is that he had the faculty, in a wonderful degree, of developing the native powers of the youthful mind. * * *

"As a Christian, Dr. Waddel's * * * piety burned with a steady flame. * * * He was active and constant in the discharge of his ministerial duties. * * *

"As a citizen, he was ever blessing and ever blessed."

John C. Calhoun, writing of the character of his former tutor said:

"It was as a teacher that he was the most distinguished. In that character, he stands almost unrivalled. Indeed, he may be justly considered as the father of classical education in the upper country of South Carolina and Georgia."

James Louis Petigru in a tribute paid to Dr. Waddel at the University of Georgia in 1846, said:

"The civilization of his age and country may be said, in some degree, to be indebted to him, for he carried the lamp of learning to a distance from the crowded seats of men, and exerted an influence in favor of education that was widely felt. A devout minister of religion, he extended its benefits to the poor; a priest without averice or ambition, he fed his Master's sheep with no mercenary hand; kind without weakness; devoted to learning, but still more devoted to virtue—he trained his pupils to place the pride of intellect far below the value of moral sensibility."

The roster of Dr. Waddel's students bears evidence that no schoolmaster in the South and few in the Nation had a more distinguished list of graduates over an equal period of time. Scores of clergymen and leaders in public life were numbered among those trained by him here at Willington. Included among these were John C. Calhoun, William H. Crawford, Hugh S. Legare, George McDuffie, Augustus B. Longstreet, and James L. Petigru. True, indeed, were "the fruits of his vineyard * * * scattered far and wide throughout most of the Southern States, and * * * seen in rich luxuriance in the Capitol of the Nation."

The old church and schoolhouse he built more than a century ago has long since crumbled in decay, but his life and deeds will live forever in the hearts and minds of the people.

"A builder builded a temple,
He wrought it with grace and skill;
Pillars and groins and arches,
All fashioned to work his will.
Men said as they saw its beauty,
'It shall never know decay.
'Great is thy skill, O Builder.
'Thy fame shall endure for aye.

"A teacher builded a temple
With loving and infinite care,
Planning each arch with patience,
Laying each stone with prayer.
None praised his unceasing efforts,
None knew of his wondrous plan,
For the temple the teacher builded
Was unseen by the eyes of man.

"Gone is the builder's temple,
Crumbled into dust;
Low lies each stately pillar,
Food for consuming lust.
But the temple the teacher builded
Will last while the ages roll,
For that beautiful unseen temple
Was a child's immortal soul."

What's Ahead for the Livestock Industry?

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include an informative address made by Mr. Charles A. Burmeister, economist, Livestock Branch, United States Department of Agriculture, at the Oklahoma Livestock Conservation Clinic, Oklahoma City, Okla., on November 13, 1947:

As the year 1947 draws to an end and livestock producers review its unusual events, they are well justified in contemplating as to what may be expected to occur next year and in the years beyond.

What adjustments or changes in plans should they make so as to best prepare for forthcoming developments? The livestock conservation clinic you are holding at this time affords an excellent opportunity for an exchange of ideas and views, and I greatly appreciate the privilege of being with you and being permitted to share in your discussions.

My contribution to your program will be to bring to your attention some of the information we have in the Department of Agriculture regarding trends in livestock production and probable future supplies of livestock, and to point out some of the more significant developments that may have a bearing on the future.

Looking back over this year, we can see that it has been an outstanding one for the livestock industry. Demand for meat was never greater and livestock prices reached levels never seen before, despite the fact that marketings of cattle and calves exceeded all previous records, and meat supplies were far above average. Feed was fairly plentiful, particularly early in the year but demands for it were so great that feed prices rose relatively more than prices of livestock. This increased production costs and caused hog producers to change their original plans to raise more pigs.

Unfavorable weather at planting time and during the growing season blasted hopes for another record corn crop like that of last year, and the harvest this fall is the smallest since 1940 and the second smallest in 11 years. This means much smaller supplies of feed grain than last year and less than the average of the last decade. Production of the four principal feed grains is about one-fourth smaller than the record total of last year, but the carry-over of these grains is somewhat larger and offsets some of the reduction in this year's harvest.

With a record wheat crop produced this year it is probable that more wheat will be used for feed than in the previous year when about 200,000,000 bushels were used for this purpose. The increase in wheat feeding will be limited, however, by the national grain-conservation program now in operation. Normally, the wheat that is fed goes mostly to poultry and dairy stock, largely in the form of mixed feeds. Relatively little of it is used for feeding beef cattle and lambs, and its use for feeding hogs is largely in those areas where other feed materials are not readily available.

Pasture and range conditions over much of the country have been generally good this year. In your State and western Texas, New Mexico, and Arizona, however, conditions have not been so favorable, as you well know, and there is much concern as to whether you might be experiencing the beginning of another of those droughts that occur occasionally in this region.

The relatively good season for pastures was also favorable for hay production and supplies are generally abundant. In relation to the number of animals on hand, these supplies are the largest of record and will greatly help in meeting the shortage in feed grains.

Supplies of byproduct feeds, including the oil cakes and meals, may prove to be nearly as large as the record supplies of the past year and will also help to alleviate the feed-grain shortage.

With smaller feed supplies on hand, we can expect hogs to be marketed at weights considerably lighter than in the last few years when they were far above average. Reports from the leading markets in recent weeks show that weights already are about as light as in the prewar years of the mid-thirties when droughts cut down feed production.

The decreased feed supplies will also tend to restrict cattle feeding, both as to the numbers fed and the length of time they will be kept on feed. A reduction of at least 10 percent in the number of cattle fed from the level of the previous year is not at all improbable and it may be even greater. The number fed this past year was probably the largest of record, although the number of long-fed cattle produced was below average. Another reason for expecting considerably fewer cattle to go into feed lots this coming year is the fact that fewer cattle are now available for purchase as compared with a year earlier. As I will bring out more fully further on in this discussion, there are rather definite indications that the very large slaughter of cattle and calves this year has resulted in a considerable reduction in cattle numbers, and much of the decrease has been in steers, heifers, and calves, the kind of cattle usually wanted for the feed lots.

Total meat output this year is indicated to be about 23,000,000,000 pounds, or slightly more than last year, when price controls were in effect much of the time, and somewhat less than in 1944 and 1945, when requirements for the war effort were very great. Meat production this year included more beef than in the other years, but less pork, lamb, and mutton; and also less veal than in 1944 and 1945. The heavy weights of the hogs marketed kept pork output from being smaller than it otherwise would have been, and the light weights of the cattle slaughtered tended to hold down beef output.

Slaughter supplies of livestock now in sight for next year indicate that meat production in 1948 probably will be around 21.5 billion pounds, which would be a decrease of about 7 percent from this year's level. Such a reduction would mean a decrease of about 10 pounds per person for our consumers, making the yearly per capita total about 146 pounds as contrasted with the average of 156 pounds now indicated for this year. But it would be about 12 pounds more than the per capita average in the five prewar years of 1937–41.

The rise in hog prices in late 1946, following the removal of price controls, resulted in a hog-corn price ratio last winter much above average and hog producers increased the spring pig crop slightly over the previous year. Had the ratio continued above average into the summer a very large increase in the number of sows farrowed this fall could have been expected, but the ratio dropped sharply after February when corn prices began to rise and by mid-June it was below average. Farmers in early June indicated that they planned to increase the fall pig crop about 9 percent, but because of the continued unfavorable ratio during the summer it is doubtful if the increase will be that large. The total supply of hogs for slaughter in the next 10 to 12 months, therefore, is probably only about 2 percent larger than that of the past year, but since market weights will be considerably lighter we can expect less pork and lard.

Sheep numbers have been decreasing since the early part of 1942 but the rate of decrease dropped off sharply this year because of fewer aged sheep going to slaughter. The number of stock sheep in the country at the beginning of 1948 will be the smallest in more than 80 years. This means small lamb crops in prospect for several years, and also very small supplies of lamb and mutton for consumption.

Sheep numbers probably will begin to increase gradually, either next year or in 1949, but the total increase during the next few years is likely to be moderate, since in most areas sheep growers may find it difficult to compete with cattle raisers until wool prices become more favorable in relation to cattle prices. In those areas where sheep herders are required the increased wages that had to be paid during and since the war caused production costs to increase relatively more than lamb and wool prices. This caused sheepmen to reduce their flocks even though in many instances they were operating on lands better adapted to sheep than to cattle. The long period of unusually favorable range conditions during the last decade also made it easier for cattlemen to compete with sheep growers in some of the areas where sheep normally predominate.

Because fewer feeder lambs are available this fall and also because there will be little winter wheat pasturage here in the Southwest, the number of lambs fed for market this winter will be considerably smaller than in recent years. A decrease of 1,000,000 head from last year and of nearly 2,000,000 compared with 2 years ago appears to be a reasonable guess.

One of the phenomenal developments in 1947 has been the high level of consumer demand for meats which was reflected in rising meat prices even though meat supplies for consumers were more abundant than at any time in the last three decades. This demand resulted from the high level of consumer income, which this year averaged nearly $1,200 per person after payment of taxes, and was more than double the prewar figure of 1937-41. The retail value of the meat consumed this year averaged about $75 per person as compared with the prewar average of about $30. Except during the years when price controls on meats were in effect, the retail value of meat consumed has usually been equivalent to 5 or 6 percent of the total disposable income. But this year expenditures for meat in relation to income were somewhat greater than average. There are two possible explanations for this. One is that the lower income groups now probably receive a larger share of the total income than they did in prewar years, and thus are in position to spend more for the luxury food products like meat. The other explanation is that because of their relative scarcity consumers have not

been able to buy other goods which they desire, particularly the more durable goods, and in consequence they have been willing to expend a larger proportion of their income for meat. When these other goods become more plentiful the demand for meat may weaken and be reflected in lower meat prices.

The specialists who are engaged in analyzing business trends and the factors determining the level of national income tell us that they do not see any developments in prospect which would cause the income level to decline in the first half of next year. A moderate decline might possibly occur in the latter half, but for the year as a whole the total income should be about as high as this year. Prices of livestock in 1948, therefore, may be expected to average as high as this year, and in view of the small marketings in prospect they may be higher.

In addition to the unusually strong demand for meat, another outstanding development this year was the very large movement of cattle and calves to slaughter. The total slaughter of these animals is now indicated to be about 36,000,000 head, unless there is a marked reduction in the rate of slaughter during the remaining 6 weeks. This, of course, is possible since many producers may decide to postpone sales until the new year in order to avoid being in the higher income-tax brackets.

A total of 36,000,000 cattle and calves slaugthered this year would be in excess of the calf crop, which is expected to total less than 35,000,000 head. Allowing for the usual disappearance in the way of death losses, totaling on the average about three and one-half million head, and taking into account the half million cattle normally imported from Mexico and which are not available this year because of the foot-and-mouth disease outbreak in that country, it becomes apparent that we are likely to have four to five million fewer cattle and calves at the end of this year than were on hand at the beginning. We are now forecasting that the total number will be between seventy-six and seventy-seven million head, or about 9,000,000 less than was estimated 3 years earlier, when numbers were at their all-time peak of eighty-five and one-half million. This means that during the last 3 years our slaughter and death losses of cattle and calves have exceeded our calf crops and imports of cattle. It means also that we cannot continue in this way much longer without reducing our herds to a level which would be too low for the national good, and also to make the most effective use of our grazing and forage resources.

In order to prevent a further reduction in cattle numbers it would be necessary to reduce the slaughter of cattle and calves in 1948 to about 31,000,000 head, or about 5,000,000 less than the slaughter indicated for this year. In view of the current price level for cattle and the uncertainty in the minds of cattlemen as to how long these prices will continue, I do not believe that slaughter will drop to 31,000,000 head next year; hence I expect a further reduction in cattle numbers in 1948.

One cannot predict with certainly when the present decline in cattle numbers will end nor at what level it will halt. It will end only when cattlemen sell fewer cattle for slaughter than the number of calves raised. Our records show that when the yearly slaughter of cattle and calves exceeds about 88 to 90 percent of the yearly calf crop, cattle numbers decrease, and when it is less than this percentage they increase. A change of approximately 2.25 points in this percentage ratio will result in 1 percent change in cattle numbers. If we have a slaughter of 36,000,000 cattle and calves this year it will be equivalent to about 103 percent of the calf crop expected this year. This indicates a reduction of 6 percent in cattle numbers by the end of the year, or about 4,000,000 head, which is in agreement with other indications that this reduction will occur.

Since about 1880 cattle numbers have increased and decreased in fairly regular cycles, with about 16-year intervals between the low points. Most of the cyclical changes have been in numbers of beef cattle rather than dairy stock. The latter have increased gradually about in line with the growth in population. The reductions from the high points to the low points in total numbers in the four previous cycles have averaged about 17 percent, and in beef cattle about 25 percent. If the percentage decline from the peak level reached at the end of 1944 should be about average, it would establish the next low point at about 71,000,000 head for total cattle, or about fourteen and one-half million below the recent peak. The reduction in numbers in the downswing of the cycle from 1934 to 1938, which was shortened by the Government drought emergency cattle buying program in 1934–35, was less than average. The decrease in the present downswing may also be less than average, especially if no serious adverse economic developments occur in the next few years, which would be an incentive for more pronounced liquidation. I am inclined to believe that numbers at the low point will total about 74,000,000 head.

The status of our breeding stock is the most important factor to consider in appraising the cattle situation at this time and for the years ahead because that is what will determine the future trend of beef production. During 1945 and 1946, when cattle numbers were reduced nearly 5,500,000 head, there was very little change in the numbers of beef cows and heifers; most of the reduction being in steers, calves, and milk stock. This year the slaughter of cows and heifers, especially the latter, has been unusually large, and this indicates a considerable reduction in the cattle breeding herd. The slaughter of steers and calves also has been much larger than average, which means that our reserves of cattle for future marketing and herd replacement will show a marked decrease. If cattle slaughter is to continue at a high rate next year it will be necessary to draw heavily on the breeding herd which would further reduce breeding stock and retard expanding cattle production when producers are ready to begin increasing numbers.

In view of the increase of nearly 2,000,000 people yearly in our population this present downward trend in cattle numbers will result in a marked shortage of beef for consumption sometime during the early fifties and is a factor that cattlemen should consider in making their plans. With the usual imports of a half million stocker cattle from Mexico and 200,000 from Canada no longer available, the problem of maintaining beef production at the desired level becomes more difficult. The only alternative for expanding meat production lies in increasing hog production and this is dependent on feed grain production. Decreased feed supplies this year will cause a reduction in the number of pigs raised next year—probably 5 to 10 percent—and this will result in smaller supplies of pork in 1949. It usually requires 2 to 4 years of good corn crops to get a large increase in hog production. Weather conditions during the next 2 or 3 years, therefore, will be the determining factor in our meat supplies in the early fifties.

In appraising the long-time trends in cattle production we need to consider the production capacity of our resources. In each of the previous cattle cycles, with one exception which resulted because of the severe drought of 1934, the peak in numbers was slightly higher than the previous peak. The proportion of cows in the beef cattle herd has increased considerably since the first World War and there has been a general tendency to market cattle at younger ages. This has resulted in increasing the yearly live-weight production per cow kept by around 15 percent.

Another reason that it has been possible to increase cattle production since the first World War is that cattle have largely replaced horses and mules in the utilization of our grazing and forage resources as these animals were replaced by tractors and other mechanical power.

Since 1918 the numbers of work stock have decreased nearly 16,000,000 head. This number is equivalent to about 19,000,000 cattle of all ages in terms of the grazing requirements to maintain them. The grass and hay formerly required to maintain large numbers of horses and mules is now used largely in the production of beef.

In determining our production capacity for the future one of our guides or measuring rods is the number of grazing animals we have maintained in the past over the varied conditions that confronted producers. Converting our grazing animals—cattle, sheep, and work stock to a common denominator equivalent to one milk cow or one horse or mule and designated as a grazing unit, we find that since 1900 our total grazing units have ranged from a low of 74,000,000 to a maximum of 91,000,000. The latter figure was reached in 1918 and the low point occurred in 1928. In 1944 the total was nearly 89,000,000. At the beginning of this year it was 81,000,000 and at the beginning of next year it probably will be about seventy-six or seventy-seven million. If we assume that the maximum units ever recorded for each State to be our maximum production capacity the total is slightly more than 93,000,000 units. If we assume also that some of the States like those in the South could maintain more livestock without difficulty we probably could increase the maximum to 95,000,000 units. In view of the possibility of drought recurrence at intervals this maximum probably could not be maintained with safety unless the carrying capacity of our ranges and pastures is increased by better methods of management and the use of higher yielding grasses and forage crops.

With a further reduction in numbers of horses and mules in prospect, cattle could be increased to replace them and a total cattle herd of at least 85,000,000 could be maintained with safety over the long period under average weather conditions. In view of the present downward trend in numbers it will be several years before this maximum level will be reached.

Thank God for Congress

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. ENGEL of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from a radio broadcast over Mutual Broadcasting System by Commentator Albert L. Warner on November 27, 1947:

This being Thanksgiving Day, columnists and editorial writers and just plain citizens are full of things for which to give thanks: Freedom and peace (such as it is) and prosperity and the opportunity to help less fortunate people.

But I doubt if anybody has mentioned Congress. Congress is too often an object of lambasting or of barbed humor. But our

National Legislature is a focal point of our freedom and our democracy. The overwhelming proportion of our legislators are industrious, honest men, proud to represent their people, and intent on listening to their own good consciences and to what they conceive to be the wishes of their constituents.

Some critics may not like the political or economic complexion of Congress. But the people made it—and they can change it.

Often on any given legislative problem it is difficult to get the facts. Facts come piecemeal or lie hidden, and sometimes, like opinions, they clash. But most Congressmen keep digging.

As facts are brought to light and opinions form into policy, these legislators carry out the processes of democracy, not too swiftly perhaps, but not with steps too doddering.

It may not be amiss to put in a word of thanks for our democratic institution—Congress.

Politics in Statesmen's Clothing

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Sunday Tribune for November 23, 1947:

POLITICS IN STATESMEN'S CLOTHING

It was expected that President Truman would ask Congress to take some action on an anti-inflation program for the United States along with his request for more relief for Europe.

The President's council of economic advisers had recommended some such measures. Most Republicans were ready to go along with them.

These measures were:

Restoration of controls over consumer credit—the time-payment plans that offer merchandise at a dollar down and a dollar a week.

Authority to increase the reserve requirements of Federal Reserve System banks.

Power to allocate some scarce materials among manufacturers in this country.

Extension of the export controls.

Authority for the Government to set margins—the down payments—in commodity markets.

The President, however, decided to throw the book at the Republican Congress. He requested not only these powers and actions, on which he could have expected approval, but he dragged out many of the old, discredited ideas on how to control inflation and asked reenactment of them.

Why?

The President must have known Congress would not approve such measures. He must have known it unless he has far less understanding of the reactions of the people and the Congress than it would be natural to assume any President must have.

It was only a short while after he himself had said that any sort of controls produced the police state that he was before Congress asking for such controls.

The only logical explanation of the President's requests, therefore, is that he was trying to set the stage for himself in the Presidential campaign of 1948. He was using a serious situation, both as regards our foreign policy and our domestic economy, to his personal political advantage.

He and his advisers apparently thought they would embarrass the Republican Party by this tactic. If Congress adopted the sweeping powers and proposals, Truman and his party would take the credit. If Congress declined to go along, Truman and the Democrats would say high prices were the fault of that failure to cooperate with the President. He was trying to play a heads-I-win, tails-you-lose game.

If such was the President's intention, he did not reckon with the statesmanship that is evident in Congress. The pressures upon our domestic economy, about which the President expressed such concern in his message, can be reduced in other ways than through regimentation and controls.

Already the report of the Senate Committee on Foreign Affairs has recommended that some of the funds to be made available to Europe be left free of restrictions that they must be spent in the United States. That will lessen the pressure here somewhat.

Congress also can arrange for more orderly movement of commodities to Europe to prevent bidding up of prices by the present competitive methods. Finally, Congress could whittle down Federal spending even more here at home and thus reduce even more the inflationary pressures.

The responsibility for keeping inflation in check and a sufficient flow of relief to Europe rests almost entirely with Congress. It is less likely to be influenced by political consideration there than elsewhere in Washington.

Antilynch Bill

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks, I submit herewith, an editorial from the Rochester (N. Y.) Democrat and Chronicle of Monday, November 24, which comments upon the bill introduced by Representative KENNETH B. KEATING for the purpose of protecting persons from mob violence and lynching. You will note the favorable reference to the provisions made in Mr. KEATING's bill, providing for the manner of furnishing funds for the payment to victims and next of kin.

SHOULD BE SUPPORTED

Every effort to make the crime of lynching punishable by law is sure to win substantial backing in a majority of the States. The fact that many such efforts have failed, owing to unyielding opposition in the South, does not discourage new attempts to get this much-needed type of legislation through Congress.

Representative KENNETH B. KEATING, of Rochester, is the author of the latest bill to force this matter on the conscience of the country. He proposes a maximum fine of $10,000 or a maximum prison sentence of 20 years, or both, for any person convicted of participating in a lynching; a fine of $5,000 or 5 years imprisonment for officials who willfully fail to protect persons in their custody from mob violence.

He proposes furthermore that victims of mobs or their next of kin be entitled to recover $2,000 to $10,000 in court, to be paid out of the Federal Treasury and charged back against grant-in-aid to the State in which the offense occurred.

These are reasonable provisions which, if enforced, should put a heavy hand on lynchers and those who wink at this crime. The bill has been referred to the Judiciary Committee, which has other antilynching proposals before it. We hope it is reported out and that Congress has opportunity to debate it. We cannot have too much confidence, of course, that it would be able to get through the Southern bloc in the Senate, which has killed more than one antilynching measure in past years.

Yet sentiment, even in the South, is hardening toward lynching as the fiendish crime it is. Although there are laws enough to punish perpetrators if vigorously applied, a blanket Federal law putting enforcement squarely up to the States would be a great advance step. It would be a demonstration to the world that as a nation we mean business in outlawing this survival of barbarism.

Monsignor Sheen Says Food Alone Will Not Halt Reds

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. LARCADE. Mr. Speaker, on yesterday it was my privilege to attend the annual Pan-American Thanksgiving services at St. Patrick's Church in Washington, and under authority granted to extend my remarks in the RECORD, I wish to submit a newspaper article quoting from the sermon delivered by Rt. Rev. Msgr. Fulton J. Sheen, noted Catholic lecturer, and which services were attended by notables from our Latin-American neighbors and high-ranking public officials. The newspaper article submitted is as follows:

MONSIGNOR SHEEN SAYS FOOD ALONE WON'T HALT REDS

All the food in the world will not stop Europe from going Red, the Rt. Rev. Msgr. Fulton J. Sheen, noted Catholic lecturer, said yesterday at St. Patrick's Church in a Thanksgiving sermon predicting Latin-American countries will demand revamping of the United Nations to assure world peace.

"Food may relieve conditions of communism, but it will not remove the cause," said Monsignor Sheen. "All the food in the world will not prevent Europe from going communistic." He spoke at the traditional Pan-American Thanksgiving Mass.

WE BEAR WORLD CROSS

"The United States—in these times—has been conscripted to serve, feed, and clothe a weak and weary world. Without knowing it, the American people are carrying the very cross of Christ.

"They are in the same situation as Simon of Cyrene who, in spite of his protests, was forced by Roman soldiers to bear the cross of bleeding Christ to Calvary.

"Before he knew it, the beam was on Simon's back as he became the sullen carrier of another's cross—the innocent sharer in another's crime. How far Simon walked without a change of heart we do not know—but Simon became a Christian.

"Until the San Francisco Conference, North American peoples had a similar outlook. But at that conference the chairman, representing the United States, decided not to open sessions with a prayer lest such a

supplication be offensive to some delegates. As a result, this country is being forced into a position where it is trying to support religion by not offending antireligious forces.

"But we are beginning to see that defense of Europe is synonymous with defense of Christian values."

Here Monsignor Sheen explained that many who had commonly regarded the Christianity of Latin-American countries as a kind of accidental appendage to their civilization now find themselves drawn into even closer bonds with their neighbors to the south.

PREDICTS CHANGES IN UN

"As Simon, I repeat," he said, "we do not know yet whose cross are we carrying, but we are carrying a cross and that, alone, makes a people noble.

"The smaller nations of the world—including our neighbors—must by the nature of their case rely upon law (for peace) and not upon great armies and air forces.

"Among them are the Pan-American nations which (like the United States) are unconsciously drawn into a defense of Christian values and they will seek reorganization of the United Nations in order to give supremacy to law over power."

He suggested that the General Assembly be put at the top as the major legislative and judicial body of the UN and that the Security Council be made subordinate to it as an executive branch whose responsibility it would be to enforce decisions of the Assembly.

He also outlined the following five-point program for world peace:

1. Development of the brotherhood of man.
2. Recognition of man as a theological creature.
3. Work for conversion of non-Christian countries to Christianity.
4. Give law supremacy over power by turning the UN upside down.
5. Discard materialism and adopt the practice of penance.

DIPLOMATS IN AUDIENCE

It was a great throng of worshipers who heard Monsignor Sheen speak, embracing many of the highest representatives in America of several foreign nations as well as outstanding American laymen and officials.

Archbishop Amleto Giovanni Cicognani, apostolic delegate to the United States, pontificated the Mass. The Most Reverend John M. McNamara, administrator of the archdioceses of Washington and Baltimore, presided.

The Reverend Gilbert Hahn was deacon of the mass, the Reverend Lawrence J. McGlone subdeacon, and the Very Reverend Bernard E. Ransing assistant priest. Deacons of honor included the Very Reverend Francis J. Connell and the Reverend Joseph T. Kennedy. Masters of ceremonies were the Reverend Walter J. Schmitz and the Reverend E. Robert Arthur.

The Ballot Box

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. McDONOUGH. Mr. Speaker, we as elected officials and servants of the people should never forget the conclusive, decisive, and powerful effect of the ballot box which is the instrument by which all great issues and questions, and the election of men to public office is determined.

I submit herewith a short poem from the November issue of the Family Circle which should serve as a reminder of its powerful effect, especially in the United States where freedom of choice by the ballot must always be guarded against encroachment.

A weapon that comes down as still
As snowflakes fall upon the sod;
But executes a freeman's will,
As lightning works the will of God;
And from its force nor door nor locks
Can shield you—'t is the ballot box.
—*John Pierpont.*

What New Orleans Has Done for the Negro

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. HÉBERT. Mr. Speaker, my request for permission to extend my remarks may appear rather unusual because of the nature of the contents of the article which I have asked permission to bring to the attention of the Congress.

It is an article by John Lester, who conducts the column Lagniappe in the New Orleans Item. Mr. Lester, I believe, is one of the most promising young newspaper columnists in this country and a distinct credit to the newspaper to which he contributes.

Mr. Lester recently wrote a column relating to the Negroes in the city of New Orleans. I read it with more than passing interest because it carried a message which should—but of course will not—strike a resounding note in those who prate so much about their concern for the advancement of the Negro.

Mr. Lester's presentation of what New Orleans has done for the Negro and his advancement is further testimony of the responsibility which the South has accepted to the members of this race. It is significant that these contributions have been made by southern people in a Southern State and a southern city without such phony measures as so-called fair employment practice acts, hate-generating antilynch laws, hypocritical anti-poll-tax legislation, and other innumerable suggestions which come from those who, while shouting from the housetops their desire to assist the Negro, are contributing endless harm to his real advancement.

The South knows its Negro and knows its Negro problem and is well capable of handling the problem without outside interference or misdirected proposals from those who would use the Negro as a political tool instead of aiding him as a human being with a rightful place in the world in which we live.

Those of us who are truly sympathetic to the Negro as a human being and desire to see him advance, are much concerned about the false propaganda and deliberate slander upon the South in connection with the race problem. The Negro cannot be helped by continually fanning the flames of hate and prejudice; the Negro cannot be helped by undesirable arbitrary laws which demand certain conduct on the parts of individuals.

I cite Mr. Lester's column as an example of what the Negro can do under the kind, understanding guidance of a paternal South which is able to cope with a problem if given the opportunity without outside interference.

The cry goes up daily about Negro minorities. The real danger is the attempt of the radical, self-seeking Negro minority beyond the Mason and Dixon's line trying to rule the top-heavy Negro majority of the South which is being helped and assisted every day in an orderly, understanding, and logical manner to become a more enlightened race.

Some of the statements in Mr. Lester's column will undoubtedly come as a surprise to many of you. To those of you who know and understand the South it will be the bringing to light of an old story.

Mr. Lester's column:

NEGROES BIGGEST NEW ORLEANS RACE GROUP

There are about 15,000,000 Negroes in the United States, about 850,000 in Louisiana, and about 180,000 in New Orleans. This last figure represents the combined total of some 43,000 families. It also means that Negroes form the largest single racial group in New Orleans and make it the first city in the South and the sixth city in the Nation as far as Negro population is concerned. About 18 percent of New Orleans Negroes own their own homes. About 15,000 own automobiles. They spend on the average of 27 percent of their income for food, but have a total buying power estimated at well over $1,000,000 a week. New Orleans has over 800 Negro owned and/or operated businesses (women play a tremendous part in business here) and is the second city in America in that regard. Largest business of all is life insurance, and the New Orleans Negro owns 16 companies here, doing an aggregate business of about $6,000,000 a year. Local 1419, a longshoremen's union, is not only the largest all-Negro local in the world, but the richest as well, with over $750,000 in the bank. There are 6 Negro theaters in New Orleans, and one of them, The Palace, is the largest in the United States. There are 5 Negro beauty schools in New Orleans, more than in any other city in America. There are also 15 hotels and 13 drugstores, 2 more "firsts in the Nation" for New Orleans Negroes. There are 25 taxicab companies, with a total of over 400 cabs in operation; 2 libraries; 2 bishops; 2 artists; 1 architect; a fight promoter; 6 authors; 47 doctors; 12 dentists; 2 lawyers; 8 printers; 1 privately endowed hospital; 2 of the finest Negro night clubs (in addition to others, of course) in the country; 50 grocery stores; 45 schools with a total of 552 teachers. Two business schools and two colleges, and of these latter, Xavier is the only Catholic Negro college in the Nation. The largest Negro Catholic church in America is Corpus Christi, here in New Orleans. In all, however, New Orleans Negroes have a total of more than 475 churches, the majority of them Baptist.

Like his brothers and sisters everywhere, the New Orleans Negro has a strong strain of nature worship in his blood, which accounts for his rich emotionalism, and, probably, for the fact that there are more than twice as many Negro clergymen in New Orleans as there are whites, in proportion to

the population. (It probably also accounts for the fact that Negro folklore is one of the largest and most varied bodies of lore in New Orleans today.) New Orleans supplies more Negro clerical workers to the Nation than any other American city. New Orleans is the only major city in the deep south in which the percentage of Negroes in the total population has increased in the last 45 years. Illiteracy among New Orleans Negroes is down from 95 percent during the war between the States to less than 15 percent today. By nature, New Orleans Negroes are agriculturists but, today, most wage earners among them are connected either directly or indirectly with business or industry. By nature, too, the Negro is a vegetarian. Average age of Negro businessmen in New Orleans is 42 years. The greater majority of their customers buy for cash with, possibly, the single exception of one item: furniture.

In the field of music, New Orleans Negroes are among the greatest creators and interpreters of jazz of all time, Louie Armstrong is the undisputed "daddy of 'em all" but there's also Zutty Singleton, "Buddy" Bolden, "King" Oliver, Sidney Bechet, Alphonse Picou, A. J. Piron, and Clarence "Basin Street" Williams, and the list could go on. In another generation, New Orleans Negroes were famous all over the world for their excellence and artistry in working with wood and iron. Currently famous all over the world is the character of King Zulu and the Negro's other contributions to Mardi Gras are likewise notable. (The ancestors of New Orleans Negroes originally came from Africa, from an area as large as the whole continent of Europe, and the first of them hit American shores in 1619.) Present-day Negroes here have a club, one of the most famous in the city, called The Hundred Dollars A Week Club, for anyone making that figure or more each week. The average wage of New Orleans Negroes, by the way, is one of the highest in the United States. Probably the oddest fact concerning the New Orleans Negro, however, is that the Emancipation Proclamation didn't include this city at all, due to a technicality, even though it freed about 4,000,000 slaves elsewhere in the Nation.

Shareholders in the World's Greatest Business—Peace

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. BRYSON. Mr. Speaker, on November 4 last it was my privilege to speak before the Business and Professional Woman's Club at the Cleveland Hotel, Spartanburg, S. C., and over radio station WORD.

Under leave to extend my remarks in the RECORD I enclose a copy of my speech:

It is indeed a great honor to be thus invited to speak to the business and professional women of Spartanburg on the tremendously important subject of shareholders in the world's greatest business—peace.

The term "shareholder" is a familiar one to you ladies who, no doubt, daily have business contacts with shareholders. I should, however, clarify my reference to the term "the world's greatest business—peace."

All of you are citizens of the United States. The United States is constantly referred to as a democracy or as a republic. Now just what do we mean by these words? Mr. Webster defines democracy as government by the people—a form of government in which the supreme power is retained by the people and exercised either directly as in an absolute or pure democracy, or indirectly, as in a representative democracy, through a system of representation and delegated authority periodically renewed. His definition of a republic is a state in which the sovereign power resides in a certain body of the people, the electorate, and is exercised by representatives elected by, and in theory at least responsible to, them. Thus we see that we, as citizens of a representative democracy or republic, hold the supreme power of the country in our hands. Such powers as our National, State, or local governments have are those which we have seen fit to delegate to them. The tenth amendment to the Constitution, a part of the Bill of Rights, states specifically that: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people.

That the National Government operates in the category of big business is evident from the fact that the annual budgets run into billions of dollars. The budget expenditures for the year which ended last July reached more than $42,000,000,000 and this represented a considerable decrease from the war years. The National public debt in 1946 amounted to nearly $2,000 for every man, woman, and child in the United States. In the same year national receipts amounted to $305 for each person while expenditures by the Federal Government averaged $461 for each individual in the population. These figures are based on Treasury reports and the Bureau of the Census estimates of population.

In view of these facts it is apparent that we all are shareholders in our Government, and that the United States Government falls in the category of a big business. Our Government's concern with peace has been publicly expressed, on many occasions, by our President and other statesmen. A few weeks ago President Truman, speaking at the Inter-American Defense Conference in Brazil, declared: "The fundamental basis of the policy of the United States is for permanent world peace." All our efforts in the United Nations and in other international organizations have been directed toward the goal of an enduring peace. It is inconceivable to me—as I am sure it is to you—that we should for a single moment consider the desirability of anything other than peace.

But if we are to preserve even the rather shaky peace which we now enjoy, we must all exert ourselves. It is regrettable that in the past the United States has gained the reputation of winning the war but losing the peace. Whether or not this is true, we cannot afford to let it happen now. The cost has been too great in lives lost or shattered, in populations uprooted and driven from their homes, in the destruction and devastation of wide areas of the globe. Let's examine the figures for the number of persons who were killed or who died as a result of the two great World Wars of this century. According to the War Department, more than eight and one-half million people died as a direct result of the First World War. More than twenty-one million were wounded; nearly four million were listed as prisoners or missing. Of the United States troops, 126,000 were killed or died; more than 234,000 were wounded; and 4,500 were taken prisoner or were missing. The casualties of World War II are even more staggering. Total casualties, including killed, missing, and wounded members of both the civilian and military populations, amounted to more than 45,000,000. The United States, which had no civilian casualties resulting directly from enemy action as of June 30, 1946, had suffered a total of 1,135,054 dead, wounded, and missing. Three thousand four hundred and twenty-three South Carolinians were killed in action, died of wounds, or of other non-battle-induced causes in the Army alone. Certainly this was a terrific price to pay.

In addition to the cost in lives, the cost in dollars of the wars in which the United States has participated has been little short of stupendous. Only within the past year or two has the last pensioner of the War of 1812 been removed from the Government pay roll. Not only do we have to pay for the guns and the ammunition and all the supplies for our troops while they are engaged in the war, but we also have to pay what are called the continuing costs. These costs include pensions, care of veterans, interest on war debts, and so on. The continuing costs are much greater than the expenses incurred for strictly military purposes. For instance, the Spanish-American War cost us $582,000,000 in military expenditures but almost $2,500,000,000 in continuing costs up to June 30, 1946. During 1945 the continuing costs of the Spanish-American War amounted to $143,000,000 and were still rising. World War I so far has cost us $74,000,000,000, and in 1945 alone cost us $312,000,000. The continuing costs of World War II have only begun, but already the total cost of that war has risen to nearly $400,000,000,000. Now this money doesn't appear miraculously in the coffers of the Treasury Department. Much of it gets to the Treasury through the collector of internal revenue. And where does the collector of internal revenue get it? That's right: from you and me, from the taxpayers of the country. A great part of each tax dollar collected goes to pay for the wars in which we have been involved. I don't mean to say that we should have stayed on the sidelines. On the contrary, it was absolutely essential that we enter the conflicts and so save our democratic form of government. I do want to point out how much it has cost us and to emphasize the fact that we cannot, we must not, permit another war. For should such a war ever start, it is more than likely that we would suffer greater casualties than ever before. In the atomic age we cannot hope to escape great destruction in our cities and production areas. What the dollar costs would be cannot even be imagined.

Our industrial production has surpassed that of of any other country in the world. During the war the tools of death and destruction rolled from our factories in a great flood. Energetic measures were taken to boost production. Naturally a period of reconversion of the factories to peacetime production was necessary. At the present time, production is reaching new heights and our national income is soaring. It is up to us to see that this increased national income is put to the proper use. If we spend as much time, with the same enthusiasm, working for peace as we did working for war, we shall soon have a better world in which to live and rear our children. Just think of what we could do with the $74,000,000,000 which World War I has already cost us. Think of the campaign for peace we could put on with such a sum—or even with only a tiny part of such a sum. Think of what we could do to banish ignorance, alleviate pain, and bring comfort and happiness to the world. And remember that it is up to you, the shareholders in the business of government, to say what shall be done.

Scarcely has the advance guard of our honored dead reached their native shores for permanent burial before heavy threatening clouds of another war engulf the troubled world.

There are many problems to which we must soon find a solution if we are to maintain the peace in this uneasy world. Perhaps the most pressing problem is that of the relations between Russia and the United States. Every day the newspapers carry some new story of conflict between the two greatest nations in the world today. Per-

haps it is not surprising that there should be friction between our two countries. The form of government maintained by the Soviets, and advocated by them for all other countries, is very different from that which we believe to be good and desirable. They believe in a strong central government; we believe in limiting the power of our Central or National Government.

The Soviets believe in control of all forms of business by the Government; we Americans believe in what we call free enterprise, with as little Government control as possible. Our entire history and cultural backgrounds are different. It is not to be wondered at that our way of thinking on various world problems is seldom the same. But it is the methods of settling those differences that are cause for alarm. We have tried the policy of sitting down at the conference table and attempting to arrive at mutually satisfactory decisions. So far this method has been unsatisfactory, due to the consistent Russian refusal to make concessions. It is hard to escape the conclusion that the Communists are convinced that a third world war is inevitable. Stalin himself wrote, "It is inconceivable that the Soviet Republic should continue to exist interminably side by side with imperialist states. Ultimately one or another must conquer." Recently he has expressed himself in a more pacific vein, but many competent persons believe that his earlier statement represents his true belief. Certainly there is evidence to support the theory that Russia is preparing for a third world war by attempting to gain domination of Europe and Asia, and by infiltrating and weakening all countries, such as our own, which cannot be brought under Communist control.

Thus it may be that, abhorrent though the idea is, we shall have to face again acute conflict in this era. Most assuredly, we shall avoid it if we can, but not at the cost of abandoning our American way of life. As terrible as the thought of an atomic war may be, more terrible is the thought of a Russian Communist dominated world. In spite of our desire for peace, we must remain realistic. It is dangerous to become too vocally strong while remaining physically weak. It is essential that our military forces be maintained at a strength sufficient to safeguard our national security. Although the United States is the richest and most powerful Nation in the world today, we have come to be too weak militarily since the end of the war. We must not allow that situation to go unremedied.

These are but two aspects of this great problem which now faces all of us—namely, how to keep the peace. But there are many other questions to be answered, all of which deal directly or indirectly with the peace. Shall we aid Europe this winter? If so, how much, and under what conditions? And there are a host of problems before the United Nations. What shall be done about Palestine? Or Korea? What policies are to be carried out in regard to the Balkans? I shall not dwell on these at this time. I merely offer them as illustrations of some of the world problems now facing us.

And what, you ask, can you as individuals or in groups such as this club do about it? Let us return to the analogy of the citizen as a shareholder in the business of government. At certain regular intervals, usually once a year, the shareholders of a business meet and choose a board of directors for that business. Similarly, the citizen-shareholder goes to the polls at regular intervals, every 2 years, and chooses his representative in the Congress. Now the shareholder in a business would not vote for a director who advocated a policy which would lead the company to bankruptcy or would lose the company customers. Nor should the citizen vote for a candidate for Congress who advocates the wrong policy for the National Government. But in order to know whether the policy is right or wrong, you have to know what the issue is and what the result of the policy would be. The most important thing that you can do, then, is to educate yourself on the problems of peace. When you have studied the matter, talk it over with your friends. Let your Congressman know what you are thinking. Let him know whether you approve or disapprove of the way he is handling your business.

It is good to know that you ladies are concerned, as you are, about public affairs. Nature has been kind to women. The mind of a woman is, in many respects, keener than the mind of a man. The mortality table reveals the fact that the average length of life for woman is some 3 years longer than that of man. The ravages of war have further depleted the ranks of men. Women now greatly outnumber the men all over the world. With the enfranchisement of women, particularly in our own great country, you are now more powerful than men. Great responsibilities are yours. May you continue to strive for permanent and lasting peace.

There is much hard work ahead for all of us if we are to succeed in our avowed goal of a permanent world peace. All of us must help. There will be many disappointments along the way and at times we will be discouraged. But if we persevere we may see the day for which the poet Tennyson longed—

"* * * when shall all men's good
Be each man's rule, and universal peace
Lie like a shaft of light across the land."

Our Waning Air Strength

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I appeared on the floor of the House this noon to call to the attention of the Congress the fact that on November 24, 1947, I had introduced H. R. 4565 to provide an appropriation of $430,000,000 for the United States Army Air Forces and $250,000,000 for the United States Naval Air Forces, stating that I had promised my constituents when I was first elected to Congress that if I could prevent such a catastrophe our country would never be caught unprepared as we have been in the last two World Wars, and that since our Air Force has disintegrated to a point where it is inadequate for the defense of our country, it was my opinion, that we should immediately provide sufficient funds for this important branch of the services to furnish additional aircraft and technical equipment to build it to a point where it would at least be potent enough to protect and defend our Nation for we all know that in this atomic age, air protection is the only possible defense that any nation could have against this type of attack. The responsibility is the responsibility of the Congress, and I have introduced the legislation to rebuild, if only in part, our air power and air defense. I have performed my duty and my promise to my country and my people. I hope that the Congress will give favorable consideration at once to this important legislation.

Mr. Speaker, in support of my position I include an editorial from the Washington Post, of even date, entitled, "Our Waning Air Strength," and I respectfully request that the same be included together with my remarks.

The editorial is as follows:

OUR WANING AIR STRENGTH

As Secretary of the Department of the Air Force, W. Stuart Symington has just revealed figures disturbing enough to demand the promptest possible action. In the world as it is, until there is a peace worthy of the name, the United States will be taking a reckless gamble unless all elements in its security establishment are maintained in a state of readiness adequate for any emergency. But the most important of these elements—our strength in the sky—is waning progressively for want of sufficient congressional appropriations. Mr. Symington has made that much very clear.

The central fact in the situation is this: That in keeping with the State Department's estimate of international trends the United States Air Force, under General Spaatz, has determined what should be the minimum strength of our military aviation at this time. The minimum calls for 55 groups of planes of every type by January 1. It calls, further, for an expansion in the following 12 months to a total of 70 groups made up of 6,869 planes in the Regular USAF, plus 27 groups with 3,212 planes in the Air National Guard. Above all, as of the present moment, it calls for the placement of at least 630 of our heaviest bombers (B-29's and the bigger ones in production) at strategic bases throughout the world, with 504 of these in constant readiness for immediate action.

If we had this kind of strength in being or in near-future prospect, there would be reason to feel confident, not merely in our own security, but also in the ability of such a force to serve the peace of the world as a check against any major aggression anywhere. Unfortunately, however, as Mr. Symington has emphasized to the President's Air Policy Commission, General Spaatz's figures are largely things of paper—a picture of what ought to be in existence, but actually is not. Thus, although the USAF is able now to supply 55 groups by drawing on planes from reserve stocks, the prospect is that by the end of next year it will have only about 40 groups, or little more than half of the 70 regarded as essential to meet our minimum security requirements.

The fundamental reason cited for this prospective decline is that the current level of appropriations is simply too low for the maintenance of the rock-bottom amount of strength the USAF must have if its preparedness is to be kept in line with the State Department's assessment of the international situation. General Spaatz and Mr. Symington have made this point most persuasively. If they are as right as they seem, Congress should lose no time in adopting corrective measures. Certainly, when it comes to national security, we can pinch pennies only at the risk of imperiling ourselves and free lands everywhere.

Radio Report to the People by Hon. W. Lee O'Daniel, of Texas

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Monday, December 1 (legislative day of Monday, November 24), 1947

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report to the

people made by me while in Texas during the time Congress was not in session earlier in the year.

My report was made in five radio speeches, and I ask that the first speech be printed in the RECORD of today, and that the other four be printed in order, one on each of the 4 days when the Senate may be in session following today.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REPORT TO THE PEOPLE—PART 1

(Radio address by United States Senator W. LEE O'DANIEL, radio station WBAP-TQN, Fort Worth, Tex., August 4, 1947)

How do you do, ladies and gentlemen, and hello there, boys and girls. This is your United States Senator W. LEE O'DANIEL, Democrat, of Texas, speaking to you on the Texas Quality Network from the studios of WBAP 820 in my old home town of Fort Worth, Tex.

At the very outset I want to make it distinctly understood that the report I am making to the good citizens of this State during these 4 weeks is in no way, shape, manner, or form to be considered a political campaign, or a prepolitical campaign. It will be strictly a report to the good people of Texas in my capacity as your United States Senator. It is not intended to be a report to the little group of male political hula-hula dancers in Texas and in Washington, D. C., who have been taking turn about dancing in the headlines of the newspapers for the past several months, with a forced grin on their faces, and doubt and fear in their hearts, trying to get the voters of Texas to watch them shimmy, and encourage them to become a candidate for the office of United States Senator next year. Now, if I thought the great rank and file of the people of Texas were especially anxious to know right now whether or not I am going to run for reelection, if I thought they were sitting up nights losing sleep while they rolled that question over and over in their minds, then under that condition I would feel that I had an obligation to make my intentions known at this time. But, folks, that is not the case; the people are not thinking about who is going to be a candidate for the United States Senate in 1948, it is just the professional politicians and the political machines who are interested in that. So, for that reason, I am not going to satisfy their curiosity at this time. Oh, yes; I know whether or not I am going to run. I know right now. I have already made up my mind what I am going to do, but I am not going to give these politicians the satisfaction of appeasing their curiosity, because I know their motives are entirely selfish.

Now, in reference to who will be elected, I could be mistaken, but there is one thing about which I am absolutely positive, more positive than I ever was in my life concerning a political campaign, and that is there is not enough power in the hands of this political clique that runs politics down here in Texas, reenforced by the power of the New Deal patronage machine in Washington, aided by the communistic left-wingers and the labor racketeers, to defeat me for a second term in the United States Senate if I run. So if I do run and any of these boys feel lucky, all I have to say is the water is fine, come on in, and I will guarantee you will get your money's worth when the weather gets hot about July 1948. So all you politicians call up your corporation connections now, arrange for your vacations, go up to Colorado and cool off, because you are not going to find out this summer what I am going to do next summer. By the time I get through reporting to the people about the deplorable condition of our Government I surmise the professional politicians will find out that there is something more important for the people to think about than the selection of a United States Senator next year.

My friends, I am coming to you with this report at a time which I consider to be the most crucial period in our entire history. I am naturally an optimist and have a very cheerful disposition, as you all know from listening to me for many years on the radio. But this is no time for optimism or hilarity. It is a time to be very serious. I am your public servant. You are paying my salary, and you sent me to Washington to find out what is going on there. I have found out, and I intend to tell you the truth about what is going on, regardless of where the chips fall. This Republic of ours in 170 years has grown from a relatively unimportant wilderness to become the greatest and most powerful nation on the face of the earth. We have reached the heights, have passed the crossroads, and are now skidding down the hill to destruction, with careless and reckless professional politicians at the helm. Unless the good Christian people of this Nation wake up and take some definite action to change our course, this Nation will go the way of all other great nations of the past and become a has-been nation. I do not want to be a calamity howler, but I do intend to perform my duty as your public servant and shout the alarm from the housetops. It is very unpopular for anybody to shout warnings too far in advance of the disaster. But unless somebody assumes that role, it may become too late to do anything about it. As a reminder let me call your attention to the warnings I started shouting 9 or 10 years ago about the encroachment of communism into our Government and about extravagant spending of the taxpayers' money, and the piling up of Government debt. Do you remember how I called your attention to those destructive forces? Do you folks remember how I went about this State telling you that your pussyfooting professional politicians at Austin were on a spending spree, and that they were placing mortgages on your homes and farms and businesses by writing hot checks on the State treasurer to the tune of several millions of dollars? Do you remember my telling you that by their extravagance, deceit, and deception they were actually hocking hot checks with certain banks in this State as collateral on which they borrow money to pay old-age pensions?

Yes, friends, it was very unpopular to sound that alarm, and it made the professional politicians in Texas so dad-blamed mad that they all ganged up on me and fought me bitterly in every underhanded manner they could during the entire time I served as Governor of this great State of Texas. But as you know, the fight I waged against them brought about some reform. You no longer have outstanding hot checks on your State treasury. The debt has been entirely liquidated, and now you actually have cash in your State treasury, and all of this was accomplished by the tax bill which was passed during my administration, because no other tax bills have been passed since my administration, and all these debts were paid with tax money. Furthermore, I recommended and got submitted to the people of Texas for adoption a constitutional amendment which you adopted, even though the professional politicians opposed its adoption, and now it is impossible for your State officials to ever create a public debt, except in case of some great emergency and then only by four-fifths vote of both branches of your State legislature. The good people of Texas give me credit for sounding that alarm, and fighting for and securing those reforms, but some of the newspapers of the State have been so busy criticizing me about every little picayunish thing they could conjure up, that they have not had time to print the truth about these substantial governmental improvements which have been accomplished on account of my fight for them, and furthermore they have tried to give all this credit to succeeding State administrations instead of mine where it rightfully belongs.

Then you will also remember how I have for many years bitterly fought the communistic labor leader racketeers who have been working hand in hand with the professional politicians, both in Texas and in Washington, in an effort to destroy our American system of democratic government and our American system of free private enterprise. Well, most everybody now admits that I was right then. Even our Federal Government at Washington has finally awakened to the fact that the Communists have wormed their way into high places in our Government, and even into our military high command, and have been selling America down the river all this time that I have been shouting the warning. The only difference is that the shouting coming from high places out of Washington now is pure deceit and deception. They are not sincere, and they are only trying to whitewash their own communistic activities. Oh, yes, they may fire a few little clerks and stencgraphers if they catch them reading the New Republic, or popping their bubble gum too loud, but those little clerks and stenographers are not the ones that have wrought the real destruction of our Government in Washington.

Let me tell you exactly how America has been sold down the river. It is largely by the enactment of communistic and socialistic legislation. Let me call your attention to the fact that it does not take Socialists and Communists to enact socialistic and communistic legislation. Socialistic and communistic legislation can be written, introduced, and enacted by Democrats and Republicans. And, furthermore, let me tell you that a lot of this socialistic and communistic legislation has been enacted by Congress during the past 14 years, and while I am at it let me tell you that you can't blame all of it onto the Democrats, because there are Republicans in Congress who also vote for socialistic and communistic legislation.

Now, perhaps it might be well for me to describe some of this socialistic and communistic legislation. I would classify the Wagner Act as purely communistic. It sets up the labor leader organizations which act on orders from Moscow. I would classify the OPA and rent control in peacetime as purely communistic. I would classify the Tennessee Valley Authority as purely communistic, just exactly like they have it in Russia. I consider every dollar loaned or given to any foreign nation to be in direct violation of the Constitution of the United States, and for the purpose of helping to wreck our own finances and open the door for socialism and communism. There are many other communistic and socialistic laws on our statute books which have been placed there during the past 14 years, and so far none of them have been repealed, even though the Republicans have been in the majority in the Congress for the past 7 months.

Now, friends, if the time permits, I intend to discuss these various pieces of communistic legislation more thoroughly on this series of four weekly radio broadcasts. I am just outlining the conditions now, on this first brodcast. While, of course, the enactment of socialistic and communistic legislation will sooner or later completely wreck our Government, there are many other devices being employed which are helping to destroy our Nation. One is public spending and another is public debt. Every experienced man and woman within the sound of my voice knows that one of the surest ways to destroy a person, a family, a business, or any other kind of organization economically is to continually spend more than is taken in.

Another sure way to destroy any person, firm, or organization economically is to retard or stop their production. Now, I want to call your attention to what you already know, and that is that your Federal Government in Washington for the past 14 years has been working overtime on both of these destructive tactics. They have retarded production or stopped production by the enactment of the Wagner Act, which took management of industry away from the owners and turned it over to a gang of communistic labor leader racketeers who have called thousands of strikes in industries all over the Nation for the main purpose of stopping production and have also stopped production completely in large plants by purposely shutting down other factories or mines which supplied their raw material.

I realize that the clever statisticians will produce manufactured statistics to try to disprove some of these facts, but every employer and owner, and everybody who has hired any work done lately knows what I am saying is true. The Government itself has spent millions of dollars in subsidies and other payments to make it more profitable for farmers and others to not produce than to produce. This kind of crop-control legislation on sugarcane and sugar beets was reenacted during the Eightieth Congress under Republican control. Potatoes are still being destroyed by Government edict, while many people are hungry for potatoes. Then on top of the Government doing these things to retard or decrease or destroy production, it has engaged in the most reckless spending spree ever undertaken by any other nation on the face of the earth, and for the main purpose of destroying the accumulated savings of the people of this Nation for the past 165 years. They started out in a modest way on WPA, and have never taken a backward step since then as far as spending or squandering the taxpayers' money is concerned. Now they have expanded the domestic WPA to a world-wide WPA, and are shoveling out our money by the billions, instead of the millions, to any and every nation on the face of the earth that will take it. In some cases like Greece and Turkey, it looks like they had to threaten a little force against them if they refused to take our money. In their fiendish desire to scatter our money all over the world, it seems that we could not print it fast enough to satisfy some of the foreign nations, so we just shipped our money-printing plates to Russia, so they could print all of our money they wanted to spend, without waiting for us to print it for them. Now some people have come to me in a fit of anger when they heard about our Government giving our money-printing plates to Russia so they could print as much of our money as they wanted, but I want to ask this radio audience which of the two tactics is worse. Is it worse for our Government to give Russia our money-printing plates so they can print all of our money they want, or to print the money ourselves, wrap it up in nice packages and ship it by prepaid express to England as a gift? At least we save the paper and the labor in printing when we let Russia print it instead of us going to the expense of printing it ourselves. Either process is dead wrong, and to my way of thinking it is one of the most unsound, vicious, and corrupt governmental acts ever practiced, and how the people of this Nation can stand idly by and watch their public officials engage in such tommy-rot without demanding their impeachment is beyond my comprehension. Of course, Stalin is laughing at our continued stupidity as he prints our money and uses it to buy material to be used in building up his huge war machine which he intends to use against us when he gets everything ready. And as far as England is concerned, everybody knows its government has gone completely socialistic, and here are our public officials pouring out our money to that socialistic government. Our actions are so silly that even the people in England who have good sense are laughing at us.

I have in my hand the Sunday Express, printed in London, England, August 3, this year. Let me read an article from page 4. Here it is:

"A very large section of the population decided that with the election of a socialistic government we had automatically entered the millennium in which work did not matter any more. If you needed money, you had merely to hand out your stocking and Santa Claus would fill it. The Government at the same time decided that if only the United States would lend us sufficient dollars we could sit back and build the heaven of their dreams without bothering too much about the facts of life. Unfortunately, the United States loaned us the money. Unfortunately, the money is now nearly exhausted, and unfortunately it hasn't done us a bit of good. On the contrary, by our pledges to make sterling debts convertible into dollars on request and by hog-tying ourselves by the notorious article 9 so that we cannot even move food we need from the larders of the Empire to the homeland's kitchens, we have brought disaster upon us."

So here, my friends, you have a perfect example of our Government being so eager to bankrupt our own Nation by shoveling out billions of dollars to a socialistic nation, and their newspapers now accuse us of bringing disaster upon their nation by forcing those billions upon them. Of course, nobody expects the loan to be repaid, and anybody who gave the matter any study knew before the loan was made that it would never be paid. And all the money our Government is pouring down every rathole in every foreign nation on earth is not only hastening our day of financial disaster, but it is laying the foundation to make every foreign nation hate us when the day finally comes that we are forced by circumstances to stop shoveling out our money to them. And to further make the sound-thinking people of all foreign nations hate us, Congress adjourned, so that all the long-haired strutting peacocks in the Senate and House could start flying pleasure junkets all over the world, at taxpayers' expense, to show off and brag about how rich we are, and try to tell every nation on earth, except Russia, how to run their own business. Now friends, I may be odd in staying here at home and visiting with American citizens and surveying our domestic problems, while my colleagues, or many of them at least, are having such a hilarious good time at taxpayers' expense, surveying the spheres, hemispheres, and stratospheres. But I am seriously alarmed about the conditions that confront our Nation. With the shoveling out of our money, at an ever-increasing rate, I think it is well to look at our financial condition. Two years after every foe has surrendered unconditionally, just like we demanded, we are still continuing wartime spending and wartime taxation. We have a public debt of around $260,000,000,000. To bring the shocking meaning of this gigantic debt closer to you, let me tell you that the cold figures show that based on national income, Texas' share of this national debt is $10,000,000,000. To illustrate what $10,000,000,000 in debt means to the people of Texas, I refer you to the total value of all real and personal property rendered for taxes in each 1 of the 254 counties in this State for this year, and tell you that when it was all added up by the comptroller down at Austin, it amounted to only $5,000,000,000, or just half as much as Texas' share of our national debt. Even if all real and personal property in Texas were rendered at only 50 percent of its real value, you can see that the national debt is a mortgage on Texas citizens for 100 percent or more of the value of every bit of real and personal property within the boundaries of this State. Is that not enough to cause you to be alarmed? When the bubble bursts, my dear friends, as it inevitably will, the banks will close, the insurance companies will go broke, and all of your lifetime savings will be hard to find. It does not require a prophet to foresee this approaching catastrophe.

Now I realize that it may sound strange to hear a lone voice in the wilderness shouting calamity during this period of false prosperity when people's pockets and all the banks are bulging with two-bit dollars. But let's see where this abundance of floating currency is coming from. It is being printed by your Government for the explicit purpose of covering up their mistakes and fooling the public, thus putting off the day of reckoning as long as possible. The high prices our farmers are getting for their wheat and corn and cattle is the result of deliberate planning and maneuvering by your Federal Government. Commodity prices have been bid up by foreigners who are buying with money that our Government is giving them, and that money is simply being added to our public debt. In other words, your Government is deceiving you by using your own credit to borrow money to give to foreign countries to send back to you in payment for your wheat, corn, cattle, cotton, and other commodities. It is also my honest opinion that this maneuvering is part of a plot concocted by your Government to run up commodity prices so that they will have argument at the next session of Congress to reimpose price controls upon you.

Now, friends, I am sticking my neck out in giving you my personal opinions of the skullduggery that is going on in Washington, but let me tell you that I am not alone in these thoughts. There are some good men in the United States Senate. Not too many, but there are some. You can count the good ones on your fingers. But some of these good sound Senators have told me in plain words that they believe our Government has gone so far to the left that it is already too late to save it. They will not say this publicly, but they actually believe it to be true. I am not going to say that it is impossible to save our American form of government, but I will say that it is the most important problem facing the American people today. We are in much more danger of losing our American form of government today than we were while Hitler was running loose in Europe and while the Japanese were seeking to rule the world. Our politicians did not save us then. We were saved by one group and one group alone, our men in military uniform and especially that group of brave young men out on the firing line who stopped the aggressor's bullets with their bodies. Our brave boys on the battle line saved this Nation, not with the help of the politicians, but they saved it in spite of the politicians. Since our brave boys won the war, our professional politicians have lost the peace. We are now in a battle for existence where the fighting men cannot take part; the politicians are running the whole show and they are doing a miserable job.

You ask me, What can the people do about it? There is just one answer, and I fear that you will not do that one thing which is necessary to save our Nation. Under our form of government, the people are supposed to rule themselves. It is the only such government ever set up in this world. It is founded squarely on the Holy Bible and the teachings of Christ. Our wise forefathers were honest, sincere Christian people, to the core. They

did not merely put on the robes of righteousness on Sunday. They wore them every day. They wrote for us the Constitution of the United States, a document which I consider to be the greatest document, outside of the Holy Bible, ever penned by the hand of civilized and Christianized men. Today we are off of the Bible, and today we are off of the Constitution. We are floundering in a mess of self-made confusion. Too many people have strayed too far from God, and too many politicians have gotten too far away from the people, the Constitution, and commonsense principles.

There are only two ways to get back to God: one is through prayers, and the other is through poverty. The best thing that could happen to this Nation is for it to be swept by a real, sincere, old-fashioned religious revival. It is not time to compromise with God's law and Jesus' teachings. It is time for people to return to the set of sound principles in business, social, educational, family, economic, and religious life that were embraced by the founders of our Republic. Now friends, I have studied the pages of history, and I have never found any trace of any man who could force any other human being to believe what he was saying. I do not expect you to believe what I am saying, unless you desire to do so. I know I am telling you the truth, but whether or not you believe it, is a matter for you to decide. One of the surest guaranties against our American form of government being saved, is the fact that conditions existing at the head of our Federal Government in Washington are so rotten that it is practically impossible for anybody to believe them, even when they are told to them by their most trusted friend.

On one of my future programs I expect to tell you exactly how our American form of government can be recovered and preserved, providing, of course, that it is not already too late to save it.

I will make another radio report to the people one week from tonight on these same radio stations starting at 7:30 p. m., central standard time. In the meantime, I have opened an office at 314 Federal Building, Fort Worth, and I invite everybody to visit me there or write me there, 314 Federal Building, Fort Worth. I also expect to visit other towns in Texas as time and conditions permit.

I have no prepared speeches to make except these four weekly broadcasts, but will be glad to interview anybody who has business to transact with your Senator, and will endeavor to answer any questions dealing with the affairs of our Federal Government. When I do visit other towns this summer, I shall make no attempt to draw any crowds, either large or small, at any place because it will be purely business trips pertaining to Government service, and will in nowise be considered as a political campaign. This is your United States Senator, W. LEE O'DANIEL, speaking from Fort Worth, Tex., and I will be speaking again on these same stations next Thursday evening at 7:30. Until then, I wish you one and all a most pleasant good evening.

The Crisis in America's Aviation Industry

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, December 1 (legislative day of Monday, November 24), 1947

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an article relating to the crisis in America's aviation industry, by Ansel E. Talbert, from the New York Herald Tribune of November 30 last.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEAPONS OF TODAY AND FUTURE GIVE PLANE MAKERS A DUAL TASK—AIRCRAFT INDUSTRY MUST TURN OUT LATEST PILOTED TYPES AND BE READY FOR MASS PRODUCTION WHILE DEVELOPING 4,000-MILE ROBOT-GUIDED MISSILES

(By Ansel E. Talbert)

American aviation is undeniably undergoing a crisis. The aircraft-manufacturing industry, which accomplished prodigious feats of production in the recent war, is facing operating losses of $50,000,000 a year—or worse.

Some large sections of the industry are in relatively good shape; others notably are not. Tax carry-backs allowed by the Government will absorb a large part of this year's losses, but this is the last year they will act to do so.

The industry's aeronautical scientists and production planners are being charged with the correct solution simultaneously of two of the most important problems of national defense ever to confront the Nation—one long-range, one immediate.

WEAPONS OF THE FUTURE

The long-range problem calls for the design and development of all manner of weapons of the future. In the ultimate, this means robot-guided missiles able to carry the atomic bomb accurately to targets more than 4,000 miles distant. These weapons could destroy an enemy nation's industrial areas and other war resources in hours instead of years.

The other problem is concerned with immediate security. It demands the industry keep turning out piloted aircraft of all types which are faster and better in other respects than those of any other nation.

Not only must the industry turn out such types—both military and commercial—but it must keep in readiness for manufacturing thousands of them on even shorter notice than it had in the recent war.

Some strategists feel that the long-range bomber, which was the decisive weapon of victory in the recent war, has had its day because of improvements in the art of interception. But few question that the piloted airplane's potentialities will be great, both offensively and defensively, for another decade. The general impression is that if war should come to the United States within the next three years it would of necessity be fought on the air side largely with the bombers and other aircraft types of the recent war.

For this reason the maintenance of an adequate Air Force and Navy air arm of constantly improving types is considered vital until the long-range guided missile is a reality.

But the importance of pushing guided-missile development with all possible speed is being stressed significantly by the two World War II commanders who had at their disposal the largest assemblages of heavy bombers in history. They are James H. Doolittle, former lieutenant general, commanding the Eighth Air Force in England, and Sir Arthur Harris, Great Britain's wartime air chief marshal.

Both Mr. Doolittle and Sir Arthur, now civilians with no service axes to grind, stress that the key to national security for the democratic powers is encouragement of science and the scientists. In his war memoirs, recently published under the title of "Bomber Offensive," Sir Arthur goes much further than his American opposite number in attacking reactionary thinking in the services. He prophesies:

"I have not the slightest doubt that the air force will go the way of the other services and tend to cling to the antiquated weapons with which it will conceive its interests to be bound up. * * * It is true that the atomic explosive has to be carried by something, and perhaps a few very fast, very long-range aircraft would provide a convenient means of carrying it.

"But it is much more efficient if put into a missile which has no crew and is directed by radar and mechanical means."

SCIENTISTS MAKE PROGRESS

America's aeronautical scientists have developed no guided missiles which a push button could send winging with accuracy across the vast stretches of the Atlantic and the Pacific and over the frozen wastes of the North Polar Basin. But, pronouncements from the service politicians in Washington to the contrary, the scientists already have perfected considerably more than the push button for push-button warfare of the future.

Maj. Gen. Curtis E. LeMay, who had a major role in the bomber offensive against Germany and later commanded the bombers' assault on Japan, is authority for the statement that the Air Force is at work on intercontinental missiles. One of the chief designers taking part in this program told this correspondent a few days ago:

"We will have in approximately 3 years, I believe, a guided missile capable of intercontinental warfare, with its guidance mechanism perfected and tested."

Industry designers say that almost any competent aircraft manufacturer could begin today constructing pilotless planes having the general lines of the German V–1 flying bomb, with a speed of 600 miles an hour for 4,000 miles. Interception of a large percentage of such missiles, however, might not be too difficult for an enemy nation which kept its top-ranking scientists at work on the problem.

Therefore, designers believe development work should proceed apace on supersonic pilotless aircraft having speeds of 1,200 to 1,500 miles an hour for 4,000-mile ranges and on long-range rockets of even higher speeds. It is estimated that between $200,000,000 and $300,000,000 will have to be expended on research and development before such missiles are ready for combat.

How long the development takes depends to a large degree on when and how much money is appropriated. Right now there is no adequate provision by Congress for such a development program, and under the most favorable conditions it is believed the work will require approximately 10 years.

NAVY DEVELOPS MISSILES

The Nation's guided-missile program is not being held up entirely by lack of sufficient funds for the complete long-range-missile program. The Navy has been doing an outstanding job with the limited funds it has in turning out target-seeking antiaircraft missiles, both rocket and ram-jet propelled. It also has been developing controlled missiles to be used against ground targets at ranges of up to several hundred miles.

Concerning missiles of this type, this correspondent obtained in writing from the headquarters of the Eleventh Naval District, in which the Navy's important over-water testing range at Point Mugu, Calif., is located, the following statement:

"In immediate prospect from Navy projects with the United States aircraft industry are supersonic, jet-propelled pilotless aircraft carrying pay loads from a small charge capable of knocking down an airplane, to the atomic bomb. These will be capable of sniffing out prescribed targets with no help from human hands or air-borne brains."

The Navy is studying ways and means of bringing missiles available before long to

within striking distance of the shore-based targets of any potential enemy.

Two former battleships are being made into missile-launching ships, and the Navy recently publicized the initial launching of a German V–2 rocket from the deck of the aircraft carrier *Midway*. Rear Adm. G. C. Crawford has disclosed it is feasible to launch guided missiles from submarines.

Some of the Navy's chief guided missiles are the following:

1. Neptune: A giant supersonic rocket 45 feet long and having a range of 235 miles. More slender than the German V–2 and one-third its weight, it has an alcohol-and-oxygen-burning motor developing 200,000 pounds of thrust.

2. Kingfisher: A new jet-propelled version of the Navy Bat, first and only pilotless aircraft used in combat by the Navy in the recent war. It transmits radar signals to the target and homes on the echoes it receives.

3. Little Joe: A shipboard-launched and rocket-propelled missile guided by radio against enemy aircraft formations. A proximity fuse causes automatic explosion of the warhead when it reaches the vicinity of an enemy plane.

4. Gorgon: A 500-mile-an-hour missile launched from a mother plane and steered by a pilot who watches the bomb's progress through a television eye in its nose.

5. Gargoyle: A 700-mile-an-hour jet-propelled bomb capable of being maneuvered violently against an evasive target after being dropped from a dive bomber.

6. Bumblebee: A 1,500-mile-an-hour flying test vehicle powered by a ram-jet engine.

7. Loon: The Navy's improved version of the German's V–1 flying bomb.

In general, development of guided missiles can be made to dovetail with aircraft development. The same kinds of machine tools, jigs, fixtures, and processes turn out both, with a few minor variations. After preliminary research and development work has been completed, there appears to be less precision machining in production of propulsive equipment for missiles than in manufacture of reciprocating engines and propellers for aircraft.

The one thing in the aviation and guided-missile field which no amount of money can buy, however, is time. There are several score projects pending which could be carried to a successful conclusion for, say, $2,000,000 or $3,000,000.

They could not be accomplished in half that period later, however, even if an appropriation of $100,000,000 suddenly was made available.

Industry leaders know that their present double-barreled assignment is a tough one even for an industry in the best possible financial condition. It is likely to prove to be an impossible one for an industry which this year received orders for military and naval aircraft amounting to fewer than 1,500 planes, unless Congress takes action in the next few months to formulate an air policy with more behind it than wishful thinking.

XC–99—XP–86—D–558–2

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the RECORD and to include a newspaper article, I wish to submit an editorial from the Washington Times-Herald of date November 30, 1947, which is presented to the Congress in support of my H. R. 4565, making appropriations for the Army Air Forces and the Naval Air Forces. The editorial referred to is as follows:

XC–99—XP–86—D–558–2

The above caption is not a code message to any of our operatives anywhere, or a tipoff to the correct answer to the current Tello Test question, or anything else dramatic or mysterious. It is merely a list of the names of three sensational new planes unveiled by the air force and the Navy in the last couple of weeks.

XC–99, built by Consolidated-Vultee for the air force, is the world's biggest land-based plane, and a sister ship of the B–36 bomber. This newest giant is designed to carry 400 fully equipped ground soldiers, or 50 tons of freight. Its maximum range, with reduced load, is 8,000 miles, top speed 300 miles per hour, and ceiling 30,000 feet.

The XP–86 is a new fighter plane of radical design, built for the air force by North American Aviation. This little honey with wings swept back at a 35-degree angle is powered by a GE-Allison J–35 axial flow jet engine which delivers a 4,000-pound thrust. It is expected to do almost 700 miles per hour, has a range of 1,000 miles, and can perform at better than 40,000 feet altitude.

An interesting feature of the XP–86 is its ejector pilot seat, which will bounce pilot and parachute clear of the plane in an emergency when XP–86 is traveling so fast that the man couldn't hit the silk on his own muscle power.

D–558–2 is a Navy job—or, to be more explicit, a joint Navy, national advisory committee for aeronautics, and Douglas Aircraft job. It has a nose like a swordfish; takes off by Westinghouse turbo-jet propulsion, and then is booted to top speed by a rocket engine. This top speed is expected to be close to the sea-level speed of sound—760 miles per hour.

The flying swordfish is for research use only, its object being to help in gathering data on what happens to flying machines moving at or near the speed of sound.

All this aviation news is exciting and encouraging. It ought to be especially attractive, we should imagine, to adventurous young men thinking of making careers in the Air Force. And it shows that our flying men are on their toes, keeping abreast of all developments in aviation, and working out many a new wrinkle of their own.

Let us not, however, take this news for more than it is worth. Actually, our present air strength is a long way short of being phenomenal.

Up to now, we haven't settled on a permanent aviation policy for the United States—a policy which, by current estimates, would call for at least 3,000 new planes of all types each year for the Air Force, plus about 400,000 highly trained officers and men for that same branch of service, plus two hundred and fifty to three hundred millions a year for research.

According to Air Force Secretary W. Stuart Symington, we need a 70-group aerial defense set-up, totaling 6,869 planes and including 21 very heavy bomber groups (B–29's), 5 long-range reconnaissance groups, 5 light bomber, 22 fighter, 3 all-weather, 10 troop-carrier, and 4 tactical reconnaissance groups—plus 22 special squadrons for emergency uses. Wanted also are 27 National Guard and 34 Air Reserve groups, to bring our total warplane strength to 12,441.

Congress is already getting chinchy with the research funds. The then Army Air Force wanted $272,000,000 for this purpose in 1946; Congress cut the amount to some $200,000,000. For 1947, the allotment was a slim, stingy $110,000,000. For 1948, the best the Air Force now hopes for is the inadequate sum of $147,000,000.

This is dangerous business—taking chances with the national safety—especially at a time when Russia is spending tremendous energies on research and on building up its air force.

Let's call off this kind of gambling now, and take to spending all the money that is needed to maintain an air force second to none. In view of the heavy role aviation played in the winning of World War II, that is the cheapest and the best form of insurance we can take out against world war III itself, or against defeat if there should be a world war III.

Appointments to the Bench

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, December 1 (legislative day of Monday, November 24), 1947

Mr. WILEY. Mr. President, it has been my effort throughout my work on the Senate Judiciary Committee to bring about the finest possible nonpartisan selection of judges to the Federal bench, the selection of men unalterably devoted to our constitutional system of checks and balances.

Recently, however, the Department of Justice furnished, at my request, a report showing a continuing lopsided unbalance in the Federal judiciary. At present there are 237 Democratic judges, or 76.2 percent of the total, as against only 74 Republican judges, or 23.8 percent of the total.

In this connection, the November issue of the American Bar Association Journal contains a very stimulating editorial with regard to the British experience in nonpartisan selection of judges. My colleagues are familiar with the outstanding caliber of editorials in the bar journal, whose distinguished editor in chief is the Hon. William L. Ransom. Because this editorial is worthy of our deepest consideration for the light that it may contribute on this subject, I ask unanimous consent that its text be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"I HAVE NEVER APPOINTED A MEMBER OF MY OWN PARTY" TO THE BENCH

The first item of the striking sentences and short paragraphs which we culled from addresses at our Cleveland meeting is from the Lord Chancelor of Great Britain, Viscount Jowitt. It arrested our attention to such an extent that it seemed worthy of brief analysis, because of what it may suggest as to the election of judges in the United States. He said:

1. That as the highest officer of Britain he appoints all of the judges, from the highest to the lowest courts.

2. That he is the best qualified person to do this, because he sits in and hears cases and sees the lawyers in action, and so can best judge of their fitness for judicial office and get the best man for the place.

3. That he has never permitted any political consideration to enter in the slightest degree into his selection of any man for the bench.

4. That he has never appointed a lawyer to the bench until he has discussed him with the judges of the court or division in which his nominee would sit.

5. That he has never appointed a member of his own political party (the Labor Party) to judgeship.

Those who have the appointing power as to judicial offices in America could do much for their country and its judicial system if they would accept and follow all or most of the standards and procedures declared by the Lord Chancelor. Some day a President of the United States will extirpate partisanship, root and branch, as a factor in the selection of judges. He will not bar members of his own party—or of any party—if they possess the experience at the bar, the proficiency in the law, the innate sense of justice, and the attributes of impartiality, independence, and courage which qualify men to become judges. We do not understand that the Lord Chancelor has refused or failed to appoint to the bench lawyers of the Labor Party because they were members of his own political party.

Vivisection: Lifesaver or Fraud

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks and include therein an article, I hereby present the article entitled "Vivisection: Lifesaver or Fraud" by James R. Miller:

VIVISECTION: LIFESAVER OR FRAUD—SCIENTISTS SAY IT PRODUCES MEDICAL MIRACLES; ITS ENEMIES WANT IT OUTLAWED AS USELESS CRUELTY—HERE ARE THE FACTS BEHIND A BITTER CONTROVERSY

(By James R. Miller)

(Profit and loss on vivisection: Diabetes used to kill everyone it touched. Now insulin is keeping 1,000,000 Americans alive. The cost: 30 dogs. There was a time when paralysis of the respiratory nerves meant certain death. Now we have the iron lung. The cost: 24 cats. Until a few years ago, "blue babies" died by the hundreds. Now children afflicted with this malformation of heart and arteries—which cuts down blood supply to lungs—are being saved by an intricate new operation. The cost: 75 dogs.)

Because 6,350,000 New Yorkers hustled into hospitals, clinics, and police stations to be vaccinated, the danger of a smallpox epidemic was averted last spring.

To most Americans this was a gratifying spectacle. One small group, however, who call themselves antivivisectionists, took a dim view of it. They oppose the use of vaccines and serums on the grounds that they are developed through cruel experiments on animals.

These people want to outlaw all experimentation on living animals. If they have their way, we will be deprived of some of our best weapons against disease, and almost every medical research project in the country wil be retarded or stopped altogether.

Incredibly enough, the antivivisectionists come closer each year to having their way. In 1945 they turned up in the New York State Legislature with petitions signed by more than 200,000 people, and two bills they sponsored were killed only after a long and bitter fight. In Massachusetts a similar bill lost by only one vote. Other such bills have come before the Legislatures of Illinois, California, Maryland, and Pennsylvania.

In Washington, D. C., Representative LEMKE, of North Dakota, has urged Congress to prohibit experiments on dogs in the District of Columbia—hoping thus, he says, to set an example for all States.

Vivisection is being fought most energetically in States that support great medical centers.

The movement is nothing to be laughed at. It is powerful and dangerous.

Strictly speaking, the word "vivisection" means cutting, or operating on, a living animal. For this reason, it does not properly apply to more than 5 percent of the experiments performed on animals. Usage, however, has made it synonymous with animal experimentation in general—a circumstance which, because of the word's grisly connotations, plays into the hands of the antis and embarrasses the pros.

DOGS GET THE PUBLICITY

Many different species of animals are used in this work. Rabbits, for instance, are employed in a standard pregnancy test. Monkeys, guinea pigs, rats, and cats are all widely used experimentally.

But although dogs are used much less often than other animals, they get most of the publicity. There are two reasons for this: antivivisectionists care most about dogs, and dog experiments have produced the most spectacular results. They are, by the way, indispensable in some experiments because of their size and because their physical structure so closely resembles that of human beings.

The animals are procured in various ways. Many of the smaller ones are bred on research institution farms or in laboratories. In most communities, cats and dogs may be obtained from pounds. When this is impossible (as in New York City, where the American Society for the Prevention of Cruelty to Animals refuses to give them up) they are imported across city or State lines at considerable expense. Sometimes, no doubt, they are bought from people who have stolen them.

The antivivisectionists have organizations in almost every State and in several other countries. For financial support they take in dues and modest donations from individual animal-lovers. A couple of years ago two Chicago women each left them $2,000,000. For publicity they count heavily on campaigns in certain newspapers.

They boast the moral support of eminent individuals. Some of these, to be sure, are curiously qualified or situated, but their names resound. Irene Castle McLaughlin, the former dancing star, is their most colorful propagandist. Other big guns are William James, the philosopher (who died in 1910); Dr. Henry J. Bigelow, the Harvard professor of surgery (who died in 1890); Bishop Barry, the late canon of Windsor; "the great-minded and noble-hearted" Earl of Shaftesbury; John Jacob Astor, and others, more or less noted, more or less contemporary.

One antivivisection society enjoyed the membership of Ernest Thompson Seton for the short time it took him to learn what it stood for and to write an icy letter of resignation.

PRO AND CON

In the opposite camp we find most of the physicians and surgeons of the country. They usually come to grips with the antivivisectionists in legislative hearings. The major arguments, pro and con, are as follows:

Vivisection, according to those who oppose it, is a needless cruelty. They assert that the animals used are anesthetized only about 5 percent of the time. They say animals suffer not only from surgery but from deliberate starvation and brutal exercises enforced upon them in order to test their endurance and other reactions.

Here's what the doctors say: Animals are anesthetized only 5 percent of the time because only 5 percent of the experiments require anesthesia. Most animal experiments are only as painful as the injection of a needle or the swallowing of some fluid. Whenever surgery is necessary, it is performed with the same anesthesia and sterile techniques that are used on human beings. The fact is that it is virtually impossible to operate successfully on an unrelaxed—suffering—animal.

As to diet and endurance experiments, they are sometimes made, but not without humane regulation. Undoubtedly, some animals suffer, but that does not imply cruelty. Maj. Gen. Norman Kirk, Surgeon General of the Army, wrote not long ago: "I have visited scores of medical research laboratories. I have yet to see a single example of cruelty. On the contrary, animals are better fed, better housed, treated with more consideration than they are in most households."

The next charge, closely related to the first, is that vivisectors are sadists—or that they tend to become sadists.

The only answer to this charge is that there is simply no evidence for it. A special committee of the American Medical Association enforces strict laboratory standards, and every State has laws covering cruelty to animals.

Next, it is said that vivisection should be abolished because it is not practiced for the good of the animals involved.

The good of the animals is not, of course, vivisection's main purpose. But it is through vivisection, the doctors point out, that we have found the causes and cures for rabies, black tongue, and distemper, which have killed more dogs than the vivisectors have ever seen.

Now we hear that vivisection is a financial racket perpetrated by publicity-seeking researchers and greedy drug manufacturers.

NOT ENOUGH RESULTS?

Again, there is no real evidence presented—only the accusation. But it is true that in some communities there are people who make money by the sale and transportation of laboratory animals, particularly cats and dogs. It is estimated that labs spend a million dollars a year from precious research funds just to buy the animals they need. Yet in 1946 pounds operated by the ASPCA in New York City killed outright 55,110 dogs and 154,729 cats.

So far we have discussed the moral arguments. Now we come to the practical ones.

The first of these raised by the antivivisectionists is that animal experimentation (even if it could be justified morally) doesn't produce enough results to make it worth while.

In answering this one, doctors like to remind us that it wasn't so many years ago that we all knew of someone who had run a rusty nail in his foot and died in the awful grip of tetanus, with neck contorted and jaws locked. Not long ago parents watched helplessly while children tried to draw breath into throats clogged by diphtheria. Diabetics fought an ever-losing battle. The life ran out of soldiers and smash-up victims as they bled on the field or the street. But today, because of experiments on animals, we have antitetanus serum, diphtheria antitoxin, insulin, and blood plasma. Through similar experiments we have found the means to fight pernicious anemia, rickets, pellagra, cerebro-meningitis, and a variety of diseases of the lungs, intestines, glands, liver, and gall bladder. By tests on animals we have developed the very anesthetics without which nine-tenths of modern surgery would be impossible.

PRACTICE FOR SURGEONS

Another objection to vivisection is that it is often practiced to demonstrate or corroborate facts already known.

It is true that many experiments are repeated. This is precisely the way doctors have learned, perfected, and taught the surgical techniques that enable them to join severed arteries, graft nerves, remove kidneys, clear out blocked windpipes, and perform some 20 complicated abdominal operations. This is not a matter of fooling around. It is exploring. At this point the antivivisectionists complain that medical students practice well-known surgical techniques on animals. The answer to this is that they must practice—either on animals or on people.

Next we hear it said that vivisection is not necessary, because some of our most important medical discoveries, such as the sulfa drugs and penicillin, were made by chemical experimentation alone.

Yes; these drugs might accurately be called test-tube discoveries. But that omits the fact that they would be of no earthly use to us if researchers had not been able to test them on animals. This is an essential step in the use of almost all powerful drugs. Safety tests are required by our Federal Food, Drug, and Cosmetic Act.

ANOTHER PROCEDURE

Dr. Victor Heiser once put this problem of testing squarely before a group of antivivisectionists at a legislative hearing. He produced a small bottle which he said contained a possible cure for hookworm. This disease was then killing hundreds of thousands of human beings and dogs every year.

"Ordinarily," the doctor said, "we would test this on dogs. Since you object to that, let's try another procedure." He then nodded at one of the objectors. "I'll give you one teaspoonful." To another he said, "I'll give you two." And to another, "I'll give you three. Then we'll see what happens. You may become terribly sick, but I don't think you'll die. And anyway, you'll have the satisfaction of knowing you have served your 'best friend'."

Dr. Heiser started pouring and the antivivisectionists vanished.

The next-to-last-ditch argument is that, despite all the medical claims, vivisection can't be of great value because we still suffer so much from so many diseases.

THEY KEEP TRYING

Indeed we do. Every year 177,000 Americans die of cancer. More thousands die of heart disease, tuberculosis, and apoplexy. The antivivisectionists quote one doctor who insists there will never be a cure for cancer. But most medical men want to keep on trying. Diabetes used to kill nearly everyone it touched. But the doctors continued to fight it, and two of them at last created the magic of insulin. Today that drug is keeping 1,000,000 Americans alive. It cost the lives of 30 dogs. There was a time when paralysis of the respiratory muscles meant certain death. Now we have the iron lung. That cost us 24 cats.

Until 3 years ago, early death was certain for the stooping, gasping children known as blue babies. A malformation of heart and arteries cut down the blood supply to their lungs. Now they are saved by the hundreds because of an intricate operation perfected by Dr. Alfred Blalock, of Johns Hopkins Hospital. In his experiments, he used 75 dogs, many of which survived.

Thousands of Americans owe their lives to the bronchoscope, which makes it possible to remove foreign objects—nails, bones, safety pins, etc.—from the throat. The instrument and the technique for using it were developed in experiments on anesthetized dogs. One such dog, a dachshund named Bozo, has been used to train 14 bronchoscopic specialists. In Great Britain, on the other hand, antivivisection laws prevent this use of animals. Result: no bronchoscopists.

TOUGH FIGHTS AHEAD

The doctors have won many great battles against disease, but their toughest ones may well lie ahead. It seems only reasonable that they should have every necessary weapon at hand to help them. At the Cornell University Medical College, Dr. Ephraim Shorr is hard at work against "irreversible shock," a post-injury condition that has probably killed more soldiers than bullets have. Dr. Shorr is using dogs on this job and without them, he says, this important research will come to a stop.

The antivivisectionists have still another argument which they think is a clincher: medical research cannot really justify animal experimentation, because no matter how many tests are made, the final test must always be made on man.

They are right, but it seems eminently wise and humane to see that this final test is as safe and helpful as possible.

Let's take a quick look at some of the magazines in which the antivivisectionists elaborate on their arguments.

An editorial writer for Living Tissue, monthly magazine of the New England Anti-Vivisection Society, says: "Were it proved by demonstration that cruel experimentation on living animals leads to any real benefit to human health, I should, nevertheless, denounce it as a disgrace in a Christian land."

A magazine called A-V, published in Philadelphia by the American Anti-Vivisection Society, recently ran an institutional ad urging support of any society whose aim is the total abolition of experiments on living animals.

BATTLE OF WORDS

This magazine goes on to describe vivisection as largely a matter of vested interests, and add, "vaccines, sera, and many immunizing, inoculating, and injected substances are the result of cruel experiments on living animals—avoid them."

Such is the nature and caliber of antivivisection propaganda. It is not enough that the arguments have time and again been reduced to absurdity. It is not enough that vivisection is stanchly defended by men like Dr. Thomas Parran, Surgeon General of the United States Public Health Service; the late Dr. Elliot Cutler, great brain surgeon of Harvard; Dr. Anton Carlson, head of the physiology department at the University of Chicago; and Dr. R. E. Dyer, director of the National Institute of Health.

WHAT MAKES THEM TICK?

Despite all this, every year doctors have to leave their work to attend legislative hearings, fight the battle all over again. It has been said that the antivivisectionists are well-meaning, misguided people. But there is no reason to be so charitable toward those who lead their cause. They are irresponsibles. They insinuate, misrepresent, play cynically on the emotions.

It is hard to say what makes them tick. Psychologists suggest that they are people who have transferred their affections from people to pets. It may be. Certainly they care little about cruelty as such. They eat their meat and wear their furs with never a thought of the animals that were butchered or that wriggled and froze in steel traps. There is not one of them who can stand up against the trenchant comment of Dr. Carlson:

"If a man is not worth more than a dog, then our efforts to improve man are in error. We had better start raising more dogs and destroying more men, women, and children, so that the canine species may inherit the earth."

The Marshall Plan

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. KEATING. Mr. Speaker, the policy committee of the Rochester (N. Y.) Association for the United Nations, the largest group of its kind in the country, has taken affirmative action approving the so-called Marshall plan and has furnished me with a copy of its views, which, under leave to extend my remarks, I include below.

Although it is my intention to retain an open mind on this important question and feel that much depends upon the conditions and restrictions provided for in the specific program of foreign aid eventually presented to us and the safeguards afforded our own people in such or parallel legislation, certainly the type of constructive thinking which is evidenced in this statement is a valuable contribution and deserving of our thoughtful consideration.

I am happy, therefore, to give the benefit of these views to the chairman and members of the Committee on Foreign Affairs and my colleagues in Congress:

THE MARSHALL PLAN

For months to come the Marshall plan and its application will be the subject of intense debate. Nations of the world are directing their economic and political forces for its success or toward its failure. In the midst of this struggle, action by the United States in regard to it is of paramount importance.

The decision whether or not to implement the Marshall plan and to what extent will test to the full the vision of the American people and search its greatness.

The genius of the Marshall proposal was the Secretary's clear understanding that the people of Europe needed to substitute a high hope for the deep despair into which they were plunging. Marshall knew that even a few months might be too late and that unless an impetus was given to the forces of reconstruction, Europe might fall into a chaos from which recovery might be a matter of decades instead of years, during which totalitarianism would spread inexorably over the affected areas. A part of his vision may also have been his realization that the rich hope which he held up before the prostrated nations of Europe would force these nations into a form of cooperative study in order to avoid a lingering stagnation. They would have to conceive their economies and their futures as a closely knit cooperative unit in size and resources comparable to the United States or Russia, and with new policies and programs in line with the technological and economic trends of the modern world.

There were, as a matter of fact, several great chances involved. One, that the nations of Europe could not get together in a sufficient degree of cooperation to agree upon a workable and feasible plan. Although there will be many criticisms of the plan submitted by the 16 participating nations, some of which will be justifiable, this first risk has been adequately surmounted by the nations involved.

The second risk was that the American people might refuse to make what appear to be the enormous, immediate sacrifices

necessary and might fail to rise to the challenge of the long-range benefits implicit in the plan. The answer to this risk is still to be given by the American public. This answer will include not only the immediate steps necessary to start the program but also a steadfast and consistent support of it in the years that lie ahead.

The third risk has to do with the capacity of the participating nations to carry out the program that has been outlined. This too is a matter for the future and will depend upon the inherent qualities of the peoples involved and their ability to discipline themselves, politically and economically, into an acceptance of the hardships and self-denials necessary to make the plan a success. Will they be willing to do these things consistently over a period of years in order to achieve the dreams that can be realized for the future? Do they realize that such a fulfillment might well bring to them an overall prosperity far greater than they have ever known?

A call for a federation of western European powers might have found these nations unwilling to face the risks of Russian counteraction. The proposed plan will accomplish the major benefits of a federation of western Europe without immediately running headon into innumerable national prejudices and jealousies, or the possibility of drastic Russian action. Behind all this we must recognize American prestige and American influence are at stake. A failure now on our part will probably mean that in the not distant future, the greater part of western Europe will fall under the domination of totalitarian governments.

To the isolationists among us, this may at first blush seem a matter to which we may remain indifferent. Let them consider that we are talking of an area that contains a population of 270,000,000, of nations which contributed at least 66 percent of the prewar shipping tonnage of the world—50 percent of its imports and 40 percent of its exports—an area whose steel producing capacity nearly equals and whose shipbuilding capacity exceeds our own. This area has vast pools of brilliant scientists and great industrial and educational facilities. The thought that this enormous potential might be lost to western civilization forces upon us a realization of the immediacy of the stakes involved.

The problem of sustaining democratic Europe must be considered, however, not only in terms of possible losses in trade and business, but also from the military standpoint. If we refuse to implement the plan, we will lose powerful allies.

Woven through the entire problem afflicting Europe is the human element. The reconstruction of trade, industry, and agriculture are all pointed toward relieving the misery of millions of people. Their hunger, their need for the simplest necessities of life can only be met by a generous response from the prosperous nations.

The plan must be regarded as one that brings with it possibilities of creating a stable and free world. Coming to grips with that realization will be the greatest contribution to forging the success of the plan. In the long-range planning the American people must recognize the role they fill in the world of economics and enlightened politics. We wield the strongest moral, political, and economic weight in the world today. Having 6 percent of the population, but 50 percent of the wealth of the world, plus a heritage of freedom and liberty, our responsibilities are great.

Many people will boggle at the expense involved in the plan. This is, however, a part of the cost of winning the war. Sixteen billion dollars by itself seems a gigantic sum of money. Added, though, to $350,000,000,000 spent to win the war, plus $15,000,000,000 which have already gone in the form of temporary relief, it loses some of its proportions. Surely we did not expend $350,000,000,000 and the lives of hundreds of thousands of our boys to defeat Hitler for the purpose of surrendering Europe to social dissolution. This result is almost certain if we are unwilling to make such expenditures as are necessary. Nor would it be wise to spend lesser sums on a mere program of relief for an indefinite period without any constructive accomplishment except that of keeping Europe just above the starvation level. Such a program would not remove the probability of a totalitarian triumph on that continent. A sequel to this result would be a military budget in our country that would mean annual expenditures of a greater magnitude than those provided in the Marshall plan for European reconstruction.

Nor should we suppose that what we advance to Europe goes across the Atlantic never to be returned. The greater portion of that amount will be paid to our farmers, industrialists and laborers for the food and goods which will be transshipped.

What is the relation of the Marshall plan to the United Nations? We feel that the success of the plan will increase the possibility of establishing a powerful and significant world organization. It will mean that a majority of the nations will be dedicated to the great freedoms cherished by enlightened men and to the great democratic principle of rule by will of the majority. And the only kind of a UN organization that can work effectively for the peace and happiness of the world is one in which those same principles of freedom and majority rule in the ascendent.

We feel the immense importance of the decisions to be made but the choice is clear. We either make the necessary adjustments—protecting the gigantic investment already made, or we abdicate our position of international leadership and withdraw to the American continents to wage a far more difficult and costly effort against ever-increasing odds and pressures.

This is the great challenge with which every civilization is confronted in one form or another. Difficult, risky, and seemingly expensive as the Marshall plan may be, it not only furnishes and holds out the great hope by which the vicious economic cycle which now embraces western Europe may be broken and a beneficent upward spiral begun, but it also offers to America a great opportunity to assume the leadership of which a great nation must be capable, if it is to retain its greatness.

The plan will not be adopted unless it is understood and vigorously supported by the American people. We count on the members of our organization to contribute their part to its success, by supporting it through word to their representatives in Congress.

Pardon Me, Truman

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of the Washington Post of Sunday, November 30, 1947, under the heading "Curley's homecoming," and editorial of the Chicago Daily Tribune of today, December 2, 1947, under the heading "O pardon me."

[From the Washington Post of November 30, 1947]

CURLEY'S HOMECOMING

After a 5 months' sojourn in a Federal penitentiary for using the mail to defraud, Mayor Curley has returned to his home in a happy frame of mind, ready to resume his official duties. He was evidently well treated by his jailers, for instead of the death that he gloomily predicted when the prison doors opened to receive him, he comes back to work feeling 10 years younger. We do not begrudge the former prisoner a new lease on life, but we do hope that a renewal of energy will not add 10 years to the official activities of Boston's city head.

What really bothers us is the failure of the citizens of Boston to rise in wrath and demand the retirement to private life of an official who is a disgrace to any self-respecting community. In commenting on the public indignation aroused by the exposé of General Meyers, we expressed the belief that the American people had passed beyond the stage of cynical acceptance of wrongdoing and were no longer disposed to condone the misdeeds of those in high position. The triumphant reappearance of Mayor Curley suggests that we may have been overoptimistic.

At any rate, his hold on the voters of his own city is a reminder that a good many of our citizens still lack that capacity for feeling moral indignation which is so essential to the efficient functioning of democratic governments. That holds true not only for Boston supporters of Mayor Curley but also for the Massachusetts State Legislature and the Governor who eased the way for his return to office. Nor can it be forgotten that President Truman's commutation of sentence is generally viewed as good political strategy in a preelection year. No doubt that is true, if political strategy is judged by its vote-getting effectiveness. But if votes can be garnered by such means, how can we retain our faith in an enlightened public opinion as a safeguard against official venality?

[From the Chicago Daily Tribune of December 2, 1947]

O PARDON ME

Mayor James M. Curley, of Boston, walked out of a Federal penitentiary last week after serving less than a third of an 18 months' sentence for using the mails to defraud. President Truman commuted his sentence to let him out of jail for Thanksgiving. Mr. Truman freed another Democratic politician, Donald Wakefield Smith, former member of the National Labor Relations Board, who was convicted with Curley of operating a scheme to defraud manufacturers by claiming ability to land war contracts.

Curley is as crooked a scoundrel as walks the current political scene. He has been a crook all his life and has been charged with crime before, but until the mail-fraud conviction, the law had not caught up with him since his youth. Mr. Truman said that he commuted the sentence because Curley is 73 years old and in ill health. If a man isn't too old to steal, he isn't too old to do penance for stealing.

Mr. Truman is a product of gang politics. It is no coincidence that numerous political gangsters, and just plain gangsters, who got into trouble in the Federal courts have found him a ready and sympathetic friend. He and his predecessor, Roosevelt, pardoned more than a score of the Kansas City vote thieves who were sent up the river when that city achieved a temporary clean-up of

the Pendergast gang. Truman restored the civil rights of some of these crooks just in time for them to get out and help steal the congressional primary from Representative Slaughter, whom the President purged last year.

Another Truman pardon went to James Gavin, Louisville gambler who had been in cahoots with Democratic politicians in Kentucky. Some of those politicians were alleged to have been the sponsors of the pardon but Mr. Truman accepted the responsibility by granting it.

The parole of the four Capone gangsters who were sent to prison for shaking down the movie industry for a million dollars had obvious political connections. At the time that the paroles were in the works, the hoodlums' political organization in Chicago went to town for the Democrats in last year's election.

Abuse of the pardoning power has not been unusual in the governor's mansions in numerous States. Never until now, however, has it stained the White House.

Philippine Assistance

REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. CRAWFORD. Mr. Speaker, when the United States extended to the great people of the Philippine Republic their independence on July 4, 1946, we did not at that time finish the job in that section of the world. We now have before us this great call from western Europe. We have armies of occupation in Japan, under the leadership of General MacArthur. The Philippines have not gotten back on their feet industrially and commercially. We are receiving two primary commodities from that area, the so-called apaca or hemp, and copra from the cocoanut trees, all which we need very badly. This coming year we may be receiving a few tons of sugar from that area. But I want to join with those others of the Congress who are sympathetic to our placing some of our financial assistance in the Far East, and especially in the Philippines. I have had occasion to talk with some high Philippine Government officials, in whom I have great confidence, and things are not going too well over in that section of the world. I think it is the duty and responsibility of this Congress to pay more attention to getting the Filipinos back on their feet so that they can contribute to the production of goods and services to supply the needs of that country as well as this country.

I have also had occasion to talk with some Members of the House who have returned from that section of the world in recent months, and they tell me things are not going too well in the Philippines. I certainly hope that this Congress will be extremely sympathetic to assisting the Filipino people back in the ways of commerce and industry.

We Must View Surpluses From a Need Angle

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. ROBERTSON. Mr. Speaker, for a great many years, especially prior to the beginning of the last war, many sections of the country were confronted with what was known as depressing surpluses of farm products. This was particularly true in the Wheat Belt. And the depressing surpluses reflected themselves in the low prices that the farmers obtained, and as a result of these depressing surpluses it became necessary for this Congress to pass legislation in the interests of those who suffered.

Mr. Speaker, today the Nation stands in a different position. With bountiful crops the last 7 years in the Wheat Belt it would be a healthful situation if we had surpluses today. We have arrived at the place where perchance we might be considered the leading nation of the world. Certainly we are possessed of many of the attributes to be found in a nation that can rightfully make claim to this position. This has all come about seemingly before we were ready for it and seemingly before some people wanted it. And this tremendously great change in affairs and our relationships to the other nations of the world has changed the position that might result from depressing surpluses.

Few countries have the agricultural productive capacity that we have, and even in the days of our depressing surpluses, which reflected low prices at home, there was even then a demand for our surpluses could they have reached the proper place. Back in the days of the thirties, when the price of wheat was at a very low level, the countries of Italy and Germany could well have used all of our surpluses. And had this been possible of accomplishment, the North American farmers who grow wheat would never have suffered from the low-market conditions.

It is reasonable to assume in our new role we must take a new view of this question of surpluses. It seems to me the editorial in the Country Gentleman for December has presented this in a forceful manner, and I include this together with my remarks in the CONGRESSIONAL RECORD:

A DIFFERENT VIEW OF SURPLUSES

The common feeling toward an old farm bogey—surpluses of food and feed grains—needs changing Nearly all the proposals for a new farm program so far presented to the House and Senate committees have viewed an oversupply as an evil to be prevented or got rid of as speedily as possible.

Yet recent experience, during the war and at present, has twice demonstrated that reserves of food and feed grains are an inestimable asset. When Pearl Harbor came approximately 600,000,000 bushels of wheat, corn, and other grains were in storage, either owned by the Government or under loan. Without these reserves the expanded livestock, dairy, and poultry programs, which contributed so much to victory, would have been impossible. Right now a reserve of wheat and feed grains would be one of the greatest blessings we could have. It would avert a reduction of livestock and poultry that threatens to carry them below the country's going needs.

Such urgencies can be repeated in the future. Droughts will recur, as this year. We have embarked on a foreign program that is likely to call for emergency supplies at times. This country has nearly 12,000,000 more people than in 1940 and its growing population has shown that it wants to eat more meat, dairy and poultry products. Long-range farm programs to raise the food level in this country by expanding production along these lines have been proposed by H. E. Babcock, in Country Gentleman, and by the Department of Agriculture. They can be successful only if adequate feed reserves are on hand to stabilize operations. Without them the first drought or emergency drain on supplies would cause a liquidation of herds and flocks that would be disastrous to farmers.

Plainly an adequate reserve of food and feed grains is in the interest of agriculture, the consuming public and the Nation. The question is how to prevent it from having a depressing effect on farmers' market prices.

One logical method has been suggested. This is for Congress to establish, as a permanent Government policy, that such a reserve shall be maintained as an investment in the national security. Although it would be turned over to prevent deterioration, the same volume would be held until needed to meet shortages or other emergencies. It would be off the market until required. Any production goals which might be set up would take its existence into account. Part of the depressing effect of surpluses in the 1930's is attributed to uncertainty over Government policies. There would be no uncertainty over this policy. Such a reserve might still exert some influence on the market, but this should be outweighed by its stabilizing effect on agriculture generally.

There is the further factor of the public interest, which must be considered in any farm program. Farmers want and are entitled to price supports to protect them from disastrous price breaks. But no such insurance can be a one-sided proposition. In return for it the consuming public is entitled to the assurance of plenty of food. A safe reserve of food and feed grains is necessary if that is to be done.

With the present outlook for winter wheat and the prospect of nearly empty bins next summer, there is no chance now of building up such an extra supply. But Congress, at least, should recognize the necessity and provide for the future. The earliest possible accumulation of an adequate reserve of food and feed grains and its maintenance for emergencies should be made a definite Government policy. And such a surplus should be financed and looked upon as what it really is—an investment in the national security and a burden to be borne by the farmers.

PUREBRED PRICES

Some of the prices being paid for purebred livestock, particularly dairy and beef cattle, show plain signs of inflation. A current issue of Farm Business Notes, published by Minnesota College of Agriculture, said this about the situation: "Within recent months a dairy bull is reported to have sold for $45,000 and a dairy female for $23,500. A lot of 50 purebred dairy cattle were sold at auction by one breeder at an average of $3,082 a head. A beef female brought $25,000, one beef bull sold for $51,000 and another for $52,000. A breeder of purebred beef cattle sold 50 head of males and females at auction for an average of $5,614. * * * Although these are extreme rather than typical cases

they are mentioned because they suggest what is taking place in the purebred-cattle market." Since then all these purebred beef cattle prices have been topped.

A general boom feeling is one reason for such artificially high prices. Another is the activity of people with large, nonfarming incomes, whose breeding establishments are often a side interest. As the Minnesota publication says: "Under existing Federal income-tax laws and regulations those with large incomes are encouraged to make such investments * * * they are able to recover a higher proportion of major capital losses and depreciation through income-tax deductions."

These inflated prices are detrimental in several ways. While extreme cases, they have an effect on purebred values generally and tend to raise the whole level of good foundation stock too high for the majority of farmers to afford. This works a hardship on young farmers, many of them war veterans, who would like to start with good livestock. There is also a psychological factor to be reckoned with. The public, feeling none too well about high food costs, sees occasional reports of these whopping prices for purebred livestock and naturally concludes that farmers must be getting rich.

A similar boom after the First World War brought losses to many and downright tragedy in some cases. Reports indicate that a much larger share of the sales this time is being financed with cash and less with purebred notes. But, while the present boom may be safer, it isn't contributing to the long-time interests of the purebred industry. These consist in getting just as much good foundation stock into the hands of real farmers as possible. It can't be done with inflated prices.

More About Food

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. BRADLEY. Mr. Speaker, the Herald-American, published at Compton, Calif., is one of the leading newspapers of that area. The editor is an experienced businessman not only in the newspaper field but in various fields of commerce and industry as well. In the following editorial, he has set forth his opinion about current high prices and world conditions. I believe the Members of Congress should have the benefits of this editorial, published in the Compton Herald-American on November 20, 1947, and I, therefore, include it in this extension of remarks:

FROM THE PUBLISHER
(By Cliff Smith)
MORE ABOUT FOOD

When you clear away all of the words, whether high sounding or otherwise, two things stand out very clearly as the sole and exclusive reasons for high prices of food in this country.

The first reason is excessive Government buying and the so-called price-support program. Recent examples are the buying of the entire prune crop, the poultry crop (after the President's poultryless Thursday had ruined public demand), the entire raisin crop, the entire wheat surplus, the entire corn surplus, and a majority of the potato crop and the wine surplus, to be given away overseas. As long as no purchaseable surplus exists for the public to buy—regardless of what the commodity is—the price is going to be high.

The second reason for high prices is the shipment of excessive quantities of food overseas. During the war years no such quantities of food were shipped overseas as are being shipped now.

When we get down to whether or not there is need for this food overseas I believe some of the following facts are pertinent and illuminative.

WORK UNDER GERMANS

During the war France, with the exception of a small minority called the underground, was happy and prosperous under German rule. Everybody was working and vast quantities of food was produced and shipped to Germany to help keep the German war machine going. Now France is being given vast quantities of food by us and nearly their entire supply of coal. Right in our own community we can see hundreds of carloads of coal going through here every month to be loaded on ships at the Long Beach coal dock to be sent to France, free. We not only give them the coal, we pay the freight. I am informed by certain officials that much of this coal is then resold by France to countries under Russian domination.

What happens to our food when it gets to France? At the present time communistic strikes are in progress at many French ports and the food which we have sent them free gratis cannot be unloaded from the ships. If and when this food is unloaded, the American label is torn off and it finds its way into the black market so that the people of France do not know we sent the food. Businessmen returning from France say that the French people give Russia the credit for sending the food and England credit for sending the coal.

SHORT WEEK NOW

During the war Hitler saw to it that the French people worked. Today they have the 4-day workweek and the 6-hour day.

We have been feeding Greece since 1920 with disastrous results. We have furnished $300,000,000 to Greece recently and observers there say conditions are worse than they were before we sent the $300,000,000. Inspectors have recently found $75,000,000 worth of spoiled American-donated merchandise in Greek warehouses. This merchandise spoiled because the Greeks had plenty of this particular kind of merchandise so they merely let it lay in the warehouses until it spoiled.

ITALY IN CHAOS

A condition of chaos now exists in Italy. Half a dozen divisions of infantry would straighten the matter out and put these people to work and make them self-supporting. But no—that would not be democratic. Remember, in Italy less than 5 percent of the people know what the word "democratic" means. The last experiment in democracy in Italy was during the time of the Roman empire. That degenerated to the point that only the members of the army were allowed to vote. This led to one of the most absolute dictatorships in history and the final and complete collapse of the Roman Empire.

Communistic riots are taking place daily throughout Italy and the Government is hanging on only by a thread—it will probably fall within the next week or 10 days.

FOOD NOT EFFECTIVE

All the food on earth cannot straighten out this condition. Force is the only language they understand.

England wasted her three and one-half billion-dollar loan and is admittedly in much worse shape now than before the loan.

It is a small sidelight, however, on English affairs where Britain, which is crying so loudly that it is broke and needs help from us, can give more than $2,000,000 in gifts to its heir apparent princess. Also this same princess and her Greek prince prospective husband cannot live on $60,000 per year, so the King gives her some of his money from his million dollars a year. The President of this Nation, which is asked to keep Britain's finances from utter ruin, only draws $75,000 per year.

It has been a well-known fact since the beginning of time that you cannot buy friendship, and that is exactly what we are trying to do.

TANKER GIFTS

Ninety of our late model oil tankers have been sold to other nations. These tankers are urgently needed here because we drained a large part of our oil reserves during the war to help keep the navies of the world on the high seas. These tankers have been sold without receiving any money in return. Now the suggestion is we build more for ourselves.

I could go on and on enumerating examples of the utter throwing to the four winds of the heavens or to the seven seas the basic materials of this Nation. Every ton of food and every shipload of coal which we send overseas tends to weaken us just that much more.

The Friendship Train was a wonderful example of the big-heartedness of America but was also one of the dumbest exhibitions on record. The gathering of thousands of tons of food to give away when we did not know who we were going to give it to or whether or not the people who eventually receive it need it.

ANOTHER NEW DEALER

This is on a par with the New Deal philosophy which raised such men as Major General Meyers, assistant chief procurement officer of the Air Services, to a position where he could throw business to his own firms building aircraft or parts, and accept gifts from many of the firms from whom he was purchasing goods—Cadillac cars and a $10,000 refinish job on his apartment.

The proposal to put back into effect the wartime rationing and wartime controls is an attempt to establish a totalitarian police-governed state in what is supposed to be the greatest democracy in the world. Instead of establishing the totalitarian state here we should establish a totalitarian state in Europe in the troubled spots, put those people to work, put down their uprisings and instead of trying to teach them democracy, of which the rank and file have not the slightest conception, teach them to work and produce. A few divisions of troops would do more good than all the food we can rob ourselves of and send overseas.

Remember this—the only thing which keep prices high are: (1) Government buying and (2) the shipment of vast quantities of food overseas.

A Pension for Our Senior Citizens

EXTENSION OF REMARKS
OF
HON. NOBLE J. JOHNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. JOHNSON of Indiana. Mr. Speaker, while the Congress is giving attention to the matter of appropriating additional billions of dollars, American dollars, for the aid of Europe and perhaps also of Asia, I trust we shall not forget entirely the plight of our worthy elder citizens in the United States.

Last week we observed Thanksgiving Day. Our hearts went back over the years in gratitude and honor for all those who have contributed so generously of their energy and material resources toward the making of this Nation, which has become the envy of all the world. It was appropriate that America of today should do this. Certainly there is a debt to every generation of Americans that have played their respective roles, generation by generation down through the years, all the way from Plymouth Rock in 1620 to this very moment. They deserve every bit of honor that we might bestow upon their hallowed memory. But there is something more we can do.

A generation of those worthy forebears are still with us.

They are our own mothers and fathers now living, and, in the main, advanced in years beyond the time when they should be required to work. They are just as worthy as any generation that passed before them. They constitute our great opportunity to really "honor the fathers and mothers of America." Did we as a nation really mean those beautiful words and phrases that we used with such superlatives in our speeches, pulpits, over the radio, and in our newspapers and magazines? If we did, this question of "a decent old-age pension, uniform in all the States, adequate in amount to maintain at least a decent American standard of living" should be favorably considered by this Eightieth Congress. There is a program developing in this Congress to bring such a bill to the floor. It is not a discharge petition.

It is a friendly request, in writing, addressed to the Committee on Ways and Means, in a most cordial and respectful manner, calling for an opportunity to thoroughly consider and vote on such a bill.

The time for consideration will be at the convenience of the committee and the House leadership, but during this Congress.

The amount of the pension is reasonable, but uniform in all the States.

It is a clean old-age-pension bill, offered to take the place of old-age assistance under the Social Security Act.

It does not involve extraneous issues. It contains only a reasonable, sound, American pension, which, in my opinion, any citizen favoring better old-age pensions now will certainly approve.

The friendly and respectful approach to the committee is commendable.

Every Member of the House who has an old-age-pension bill pending in this Congress is uniting in this program.

We trust that every Member who concurs with us in regard to old-age pensions, and who has not already done so, will see either the gentleman from Indiana [Mr. LANDIS] or the gentleman from Oklahoma [Mr. MORRIS] and join us in this united friendly effort for better old-age pensions now.

This is a way in which a grateful America can really show appreciation for those who gave so generously that we might enjoy so fully the blessings that are ours today.

Those who have given their lives in the service of our country in peacetime and in war deserve our consideration.

They have given us everything that we thank God for this thanksgiving season, even to the noble sons and daughters to whom we look to defend our liberties.

Certainly their comfort and security should be adequately looked after even before we extend our billions for the relief and comfort of citizens in other lands.

We should consider the question of better old-age pensions in the Eightieth Congress.

Editorial by Manchester Boddy, of the Los Angeles Daily News

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. POULSON. Mr. Speaker, I am inserting in the RECORD today an editorial of November 18 written by Mr. Manchester Boddy, editor and publisher of the Los Angeles Daily News. Mr. Boddy is without a question one of the leading journalists of the country, known as a progressive and liberal thinker but always fundamentally sound. I think that the editorial which I inserted on November 20 and the one today definitely sustain the above statement I made. This editorial very clearly outlines the fundamental issues confronting us today. I recommend it for your reading:

MANCHESTER BODDY

That the Republican majority in Congress and a sizable number of Democrats will vote against granting President Truman's request for executive authority to restore limited rationing, power to impose control over prices, wages, and the allocation of strategic material may be taken for granted. It appears equally clear that Congress will authorize a carefully hedged stopgap-aid program for Europe calling for an expenditure somewhat short of the $597,000,000 requested by the President.

The reasons are not entirely, or even predominantly, political. They go to the very heart of the central issue of our time.

President Truman is asking a peactime Congress to put the United States on the road that leads toward state socialism with all that the term implies: regimentation, state-planned economy, rigid controls over personal liberty and private initiative.

Quite obviously, the President himself does not believe in the end product of the measures he reluctantly advocates. They should be used, he pointed out, only if conditions become more acute. He wants the American people to solve their problems through voluntary action but thinks a club in the closet might serve as a potent persuader.

In his 10-point immediate anti-inflation program the President, in fact, asked for the return of practically all the Government's wartime economic controls. It is significant, however, that he did not ask for them because he believed they should be the standard equipment of the American economic system. "I look upon them," he said, "as short-run insurance against the impairment of our prosperity and the threat to our future development."

Since President Truman thus refuses to champion state socialism per se he deprives his Republican opponents of an opportunity to go before the American people with the clear-cut ideological issue that his short-run insurance measures suggest. Instead, he says, in effect:

"I believe in the free-enterprise system. Today it is threatened with destruction by inflation and world-wide economic chaos. Therefore, I propose that we use anti-free-enterprise measures in order to preserve our free-enterprise system."

Congress will say: "We won't give you those anti-free-enterprise powers," and President Truman will reply:

"Very well, if you have a better prescription for preserving our system against destruction by inflation and economic chaos, write it."

The Republican Congress will have a difficult time avoiding that challenge. When it gets down to writing its own prescription for the Nation's ills, it will be forced to do something about inflationary bank credit, which is the mother of run-away-installment credit. President Truman wants power to control that threat. The Republicans will have to grant that power or suffer the consequences.

The President wants strict Federal regulation of speculative trading on the commodity exchanges. As long as the commodity exchanges serve as free markets they should be permitted to function with a minimum of interference. Insofar as they are used as gambling houses they should be regulated. To stop gambling on commodity exchanges does not interfere with free markets any more than outlawing gambling in the Yankee Stadium interferes with baseball. The Republicans will do well to heed old Aristotle's advice: "Every institution has within itself the seed of its own destruction."

The export situation does justify Federal action. Since aid to Europe is inevitable, there is no sense in allowing foreign nations to bring our dollars back to America and bid against each other for our food and clothing, thus sending prices ever higher.

Certainly the Government can promote full production, regulate traffic, and protect the value of the currency. There is nothing socialistic about such efforts.

If President Truman's plea for emergency powers went no further than such matters, Congress would have no choice but full cooperation. The real sting is found in proposals:

"To authorize allocation and inventory control of scarce commodities which basically affect the cost of living or industrial production.

"To authorize consumer rationing on products in short supply which basically affect the cost of living and

"To authorize price ceilings on products in short supply which basically affect the cost of living or industrial production, and to authorize such wage ceilings as are essential to maintain the necessary price ceilings."

Water running down hill eventually will hit bottom. Those measures, once employed, soon would create in the United States the very situation our dollars are employed to prevent in Europe.

The notion that we must be like Europe in order to save Europe is nonsense. The way to help ourselves and Europe is to promote the greatest possible production, and the

way to more production is the elimination of unnecessary restrictions and restraints.

The main trouble with Mr. Truman's plea is the fact that he lacks conviction, courage, and faith. He wants to "preserve and protect" the free enterprise system, but doesn't think it can meet the challenge it now faces. He proposes corrective measures but hastens to explain that he won't use them except in an emergency—because he doesn't believe in them.

An Ode (or Something!) Commemorating the Contempt Citations Which Congress Voted on the 10 "I Decline To Answer" Hollywood Reds

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. MUNDT. Mr. Speaker, as America struggles with the problem of driving Communists and their sympathizers out of Government positions and as we continue our efforts to bring out into the open the party-line activities and propaganda of other Reds and "pinks" who lurk behind false façades of loyalty and respectability and ply their poisonous craft in private enterprises, we have tried committee hearings, court action, congressional citations of contempt, loyalty purges by the FBI, and numerous other realistic and serious-minded devices and techniques. All loyal Americans rejoice these days that genuine progress is at long last being made in the direction of exposing and curtailing the un-American and disloyal activities of those who would trade our way of life away and replace it with the tyrannical and godless techniques of Red fascism as now operating in Russia and her clutch of captive countries behind the iron curtain.

Now comes Mr. George Abell, popular Sunday columnist of the Washington Times-Herald, Mr. Speaker, with a new device for destroying the enemies of freedom in this country. His weapon is ridicule and rhythm and rhyme are the techniques he employs to expose the fallacies and the selfish ambitions of those who think more of personal gain or private pelf than they do of their patriotic obligations to this land of the free and the home of the brave. In a few short but significant verses of satire and common sense George Abell strips the thin veneer of respectability off those who prate and preach about the alluring virtues of a foreign system while privately profiting to the utmost from the system which they are endeavoring to destroy.

Mr. Speaker, for 2 minutes of relaxation and for purposes of reenforcing our faith in the doctrines of the founding fathers of this country and our Constitution, I commend to Congress and the country the reading of the following verses by George Abell as they appeared in last Sunday's issue of the Times-Herald:

READY, WILLING, AND GEORGE ABELL
ON CONGRESS' CITATION OF THE HOLLYWOOD REDS

Of all those movie acting hacks;
Of all those educated quacks;
Of all who swell our income tax—
  By warbling songs of "Mommie,"
The very lowest type of worm,
The kind that makes your insides squirm,
Is without question, I affirm,
  The rich and ritzy commie.

He is the kind of lovely guy
Who trills a haunting lullaby
While pouring Bourbon, Scotch, or rye
  For "Lucky" Luciano.
He is the sort for whom, I note,
Tom Clark holds out an overcoat,
And bobby-soxers simply dote
  On him at the piano—

He is our friend "Monsieur Verdoux,"
So wistful, elfin, ingenu,
Who bravely bore a cane in lieu
  Of sword to fight the Germans—
The kind who rides a Friendship train,
And helped the Communists in Spain,
But finds it awkward to explain
  His philanthropic sermons—

The kind who calls plebeians "pard,"
And plasters down his hair with lard,
And swanks along the boulevard
  In fancy Rolls and Bentzes;
Who gives fanatic whoops and hollers
For wretched tramps in soiled collars,
But zealously retains his dollars
  For party-line expenses—

The kind of glutted parlor snake
Whose innards for the hungry ache,
While swilling caviar and cake
  At Sovietic binges;
Who bleats that Russia's kind and good,
But much prefers to stay and brood
And assuage in Hollywood
  His conscientious twinges.

At last, before the justice bar,
We see these creatures as they are—
Writer and stooge and movie star—
  A bunch of Reds and zanies;
At last, congressional fanfare
Unmasks the liberal millionaire;
America's become aware
  Of what a daisy chain is.

So if you page at Goldwyn-Mayer
A pretty boy with pinkish hair
And they reply he isn't there,
  You'll realize the reason;
And I for one sincerely hope
That he'll be dangling from a rope
Because I am a bourgeois dope
  That doesn't hold with treason.

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. GLEN D. JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. JOHNSON of Oklahoma. Mr. Speaker, within the next day or two the House of Representatives will begin consideration of the interim-aid bill, which will provide assistance to the starving people of the countries of western Europe. Later we will consider the long-range Marshall plan for continued aid for the needy people of those countries.

In directing our minds and efforts to the solving of distressed conditions in distant lands, we must not look so far away that we are unable to see the misery and suffering that exist among our own people here at home. Today, while we are bent on helping our fellow man abroad, I have introduced a bill which has for its purpose the alleviating of unhappy circumstances engulfing a certain group of our own people in this country—our dependent aged citizens.

When the Congress convenes in its next regular session, I hope and trust that the bill I have introduced will receive the same earnest consideration that is given the bills designed to aid the needy of Europe.

The bill I have introduced, and to which I invite the attention and consideration of the House, amends the Social Security Act and reads as follows:

A bill to amend the Social Security Act (49 Stat. 620) by adding a new title thereto to be known as title XIV, and for other purposes

Be it enacted, etc., That the Social Security Act as amended is amended by adding, after section 1301, a new title to read as follows:

"TITLE XIV. ALTERNATE OLD-AGE ASSISTANCE PLAN

"SEC. 1401. The program under this title shall be administered by the Federal Security Administrator.

"SEC. 1402. That any State, so electing, may suspend operation of its present old-age assistance plan and in lieu thereof pay into the United States Treasury the sum of $25 per month for each citizen of such State qualifying for benefits hereinafter provided. This amount shall be kept in a separate account, to which there shall be added by the Federal Government the sum of $35 per month for each $25 deposited by the State adopting this plan.

"SEC. 1403. Each citizen of a State adopting this plan who qualifies under section 1404 of this act shall be paid from the fund established in section 1402 hereof by the Treasury of the United States, upon certification by the Social Security Board, the sum of $60 per month.

"SEC. 1404. (a) A person to qualify under this act shall be—

"(1) sixty years of age or over at the time of filing application;

"(2) a citizen of the United States and an actual resident of the State for a period of 1 year or more immediately preceding the time of filing application;

"(3) one whose gross income or whose gross income combined with gross income of a spouse, as the case may be, was less than a minimum amount with respect to which a Federal income-tax return was required to be filed in the tax year preceding the year in which application is filed, except, of course, income provided for in this act shall not be considered to disqualify a person;

"(4) one whose capital assets do not exceed $5,000 if a single person or $10,000 jointly with the assets of a husband or wife if a married person; and

"(5) one who has filled out a form, obtainable at any post office, which shall require a sworn statement as to the name, address, residence, citizenship, income, age, capital assets, and pensions or other benefits received by the applicant.

"(b) Applicants shown qualified by such forms shall be placed immediately on the pension list and shall be entitled to receive pensions on the first day of the month following filing of application: *Provided*, That such filing was made at least 10 days prior to the first day of the month.

"SEC. 1405. Every person receiving old-age assistance under the present Social Security Act from a State adopting this plan shall be automatically covered upon certification by the State to the Social Security Board.

"SEC. 1406. (a) Any person receiving a pension, retirement pay, or Government disability compensation aggregating an amount less than the amount of old-age assistance provided herein, shall be entitled to receive the difference between the amount received as a pension, retirement pay, or Government disability compensation and the amount provided by this act: *Provided, however,* That a person so receiving benefits of as much or more shall not be entitled to benefits hereunder. The Social Security Board shall determine the correct amount due in such cases and the same ratio of payment as set out in section 1402 hereof shall be borne by the State and the Federal Government.

"(b) A qualified person who becomes ineligible shall immediately so notify the Social Security Board by registered mail and the Board upon receipt of such notice shall suspend payments to such person from that date. Any such person who knowingly and willfully receives and fraudulently cashes any check after knowingly becoming ineligible shall be guilty of embezzlement from the United States and the interested State and punished as now provided by law.

"SEC. 1407. Upon proof of death of a beneficiary under this act the Social Security Board shall pay, from the separate account provided by this act, the sum of $200 toward the burial and funeral expenses of such person, and such account shall be reimbursed by the Federal Government and the State in the ratio provided in section 1402.

"SEC. 1408. Whoever knowingly, fraudulently, and willfully, for the purpose of obtaining a pension or for the purpose of continuing to receive a pension under the provisions of this act when not qualified, shall make or cause to be made any false statement, representation, affidavit, or document, in connection with an application or other required action under this act, shall be guilty of a misdemeanor and upon conviction thereof shall be fined not more than $1,000 or imprisoned for not more than 1 year, or both; *Provided further,* That any person so convicted shall be removed from the pension list, and shall be prohibited from reapplying for benefits under this act for a period of 1 year from the date of final conviction.

"SEC. 1409. The Social Security Board and any State adopting this plan are hereby authorized to prescribe rules and regulations deemed necessary to carry out the provisions of this act, except that neither may require any different qualifications than those set out in section 1404.

"SEC. 1410. As used in this act, the term 'State' shall include the Territories of Alaska and Hawaii.

"SEC. 1411. There is hereby authorized to be appropriated such amount as may be necessary to carry out the provisions of this act."

Tidelands Oil Controversy

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. BRADLEY. Mr. Speaker, the so-called Tidelands decision of the United States Supreme Court which upset all preconceived ideas regarding the ownership of the marginal seas surrounding the United States, is not an oil fight, but rather is a fight for the basic principles of States' rights.

The editor of the Long Beach Argus, in the edition of that paper on November 6, 1947, has expressed the opinions of the people of southern California so well in this regard that I take pleasure in inserting his editorial entitled "This Is Not an Oil Fight," in the CONGRESSIONAL RECORD at this point:

THIS IS NOT AN OIL FIGHT
(By George Rochester)

For the past few years much has been said about the tidelands fight and the majority of people seem to have the impression that the controversy concerns only the oil that lies beneath the sands of a few miles of California's shore line.

This is absolutely not the case. The fight is for State's rights, and California, along with almost every other State in the Union, stands to lose if the Government is successful in proving its case that the tidelands of these various States, including those bordering on the Great Lakes, belong to the Federal Government.

While it is true that there has been discovered some oil deposits under the shores of a very small portion of California, should the Government win this case other sections of the State stand to lose a great deal of valuable shoreland. So, it is evident that this fight is not to protect the oil fields of Long Beach, but to protect the entire coast line from one end of the State to the other. Other States having tidelands are just as vitally interested as is California because they, too, will lose many millions of dollars of property now standing on tidelands and which have been built either by bond money or direct taxation.

New York, Boston, San Francisco, San Diego, Houston, Savannah, in fact every port in the United States is built on man-made or God-made land. Will the Congress of the United States allow all this valuable property to be turned over to the Federal Government and disregard all the decisions handed down for the past 100 years that the States themselves owned the tidelands to a distance of 3 miles from shore? We cannot believe it.

The only way, however, for this matter to ever be cleared up is for the Congress to pass a quitclaim bill that will forever and all time give to the States their title to the shores bordering upon each State as it was specifically stated when the States were admitted to the Union.

All this talk about the oil grab in the State of California is merely a smoke screen. This is a fight for State's right and is being fought for this and this alone. When it is taken into consideration that of the more than a thousand miles of shoreland in the State of California only 15 miles have shown any oil production, this alone should prove that the talk of the oil grab is a fallacy. If the tidelands ever belonged to any State—and it has never been disputed during all the time since the Original Thirteen States formed the Union—then California owns her tidelands.

Both Houses of Congress passed the bill that would have settled the question at the last session but the President was influenced to veto the bill. Now the fight will have to be made all over again and will be at the coming session in 1948. Whether we will be successful or not depends upon the support we get at home and in every State in the Union. We believe California will receive that support.

If the Federal Government can claim the oil beneath the tidelands along the shore of California, then what is to prevent the Government from claiming all the gold, the iron, the copper and silver mines of the various States.

No; this is not an oil fight. It is a fight for State's rights, and we hope the people will realize this and write their Congressmen and Senators to support the bill when it comes up at the next session of Congress in 1948. This is as little as anyone could do to help save the tidelands of our State and lend a hand to the other States who are fighting along with us to retain the lands granted us under the Constitution of the United States.

Do They Want Low Prices?

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the November 29 issue of the New York Sun by George E. Sokolsky:

THESE DAYS
(By George E. Sokolsky)
DO THEY WANT LOW PRICES?

The current boom, stimulated by an inflationary tendency, is favored by the administration because it benefits them politically. Everybody is at work. Everybody has money in the pocket. Prices are high, but the people can pay for what they want. There is grumbling, but no real dissatisfaction. Any lowering of prices would develop fears that the depression, which the Russians and Henry Wallace have regarded as "inevitable," has actually arrived.

Therefore, the administration keeps prices high and shouts against the inflation. They act one way and talk another. The President's 10-point program was a talking matter; not a single step has been taken to implement it, in spite of the fact that the President possesses ample powers to curb the inflation in many directions—certainly in reducing the amount of money in circulation.

Marriner Eccles, for instance, proposed that bank credits be limited, a step that would, if properly handled, lessen the inflation. As a matter of fact, sound bankers have for some time been more conservative in granting credits, particularly consumers' credits, but they ought to increase loans for productive purposes as opposed to speculation. When a loan is made that adds nothing to the general welfare but merely gives an individual an opportunity to gamble in an inflationary market, it is not sound to assist him.

John Snyder, Secretary of the Treasury, who more closely represents the administration than does Marriner Eccles, opposed Eccles's proposals for limiting bank credits. When Eccles insisted upon limiting Government expenditures, he hit the administration more fiercely than even Senator TAFT or BYRD have, for he, being in the family, even as a left-over, knows what the canker of Government spending is upon the body politic. This administration means to spend more and more between now and election day on the Al Smith formula, "Nobody shoots Santa Claus," which Harry Hopkins turned into a political gold mine.

Again in the matter of conserving food supplies, the administration talks one way and acts another. The Luckman dramatization is, of course, finished and never was needed. Nothing was actually saved by it.

Yet, there was something that both Luckman and Secretary of Agriculture Anderson could have done and did not do. A very bad practice exists in the baking industry which is unnecessary, wasteful and serves no purpose, but grew up in the competition for retail outlets; that is, the overstocking of bread in groceries and the acceptance of returns by bakers. Those returns of old bread are ground up for feed, but a great waste is involved. The bakers would like to get away from the practice, but dare not enter into an agreement lest the Department of Justice institute antitrust proceedings against them.

It certainly ought to be possible for the bakers, the Department of Agriculture, the Department of Justice, and the White House to work out a procedure for ending this wasteful practice at a time when grain is so sorely needed without the bakers taking the additional risk of an antitrust suit. But the administration does nothing and the practice continues. Incidentally, the Secretary of Agriculture says that he does not know any way to limit the weight of hogs and cattle—so how does he expect, by Government controls, to limit the consumption of grain?

The fact is that the administration is not willing to take a single step to lower prices, if such a step would antagonize a sufficiently large and vocal group, as, for instance, the farmers, just as it has been unwilling to offend the labor leaders by supporting the extremely mild controls on the predatory padrone system of the labor supply.

In a word, the administration wants to keep the prices high to satisfy those who benefit from high prices and talk low prices to please consumers. And then they can always blame the Republicans in Congress for not doing what the administration is by the Constitution and the law empowered to do. They want to keep the boom going by keeping prices high for political reasons, while they talk anti-inflation for economic reasons. They hope that this paradox will keep them in office. And it might.

Mr. Speaker, all I can add to the above article now is, and it might not. The American people gradually get wise to double talk.

Congressman Stevenson Reports From Washington

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. STEVENSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

WASHINGTON, D. C.

DEAR FRIEND: From time to time I plan to give you the opinions of Washington leaders regarding important issues before Congress as a service from my office. I hope these reports will be helpful in keeping you informed of national trends, from the Washington viewpoint.

DOES AID TO EUROPE MEAN REGIMENTATION AND HIGHER PRICES?

In a report on allocation controls by Mr. Carl Farrington, Assistant Administrator, Production and Marketing Administration, before the Joint Committee of the House and Senate on the Economic Report, the Administrator stated as follows:

"The urgency of maintaining a large flow of food to foreign countries is one of the reasons why it is essential that the Government use allocation powers and inventory controls over scarce commodities, grain, and other agriculture production."

Farrington also warned that a reduction in the amount of grain fed to cattle would be necessary in order to save such grain for foreign export. I quote further from his report, as follows:

"This reduction in the supply of feed makes it necessary that we market hogs at lighter weights, market beef cattle with less finish, cull our dairy herds and poultry flocks more closely than normal, and reduce broiler and turkey production.

"These necessary measures will inevitably result in smaller supplies of livestock in 1948.

"The supply of meat for domestic consumption per person in 1948 will be less than the present year.

"The decrease from 1947 along with a high level of consumer incomes will tend to further strengthen prices that are already at or near record levels.

"Export needs this year and continuing heavy export needs in 1948–49 create a situation which makes it essential that authority be available not only for controlling the export of wheat, but also, there is likely to be need for domestic allocation controls.

"In view of the shortages that are in prospect and the large volume of Government procurement that may be necessary for export, the following powers should again be available: I quote from the Administrator's report:

"Authority to allocate food by imposing limitations on inventories, on delivery and transportation, and requiring producers and distributors to set aside specific amounts or the entire production for acquisition by governmental agencies.

"Authority to allocate the use of facilities and materials to carry out the food program by restrictions on the use of storage facilities, controlling the distribution of farm machinery, the distribution and importation of fertilizer, and the use of transportation facilities by rail.

"The powers should be such as to make it possible for the Government to become the sole buyer of the crop."

Commenting on the stopgap relief aid for Europe, Senator WHERRY (Nebraska) said, "Mr. Farrington says 'Ration, allocate, do not feed cattle.' If we do not feed cattle the meat supply will be decreased. The same statement applies to pork and chickens. When we begin rationing one thing, whether it is corn, or whether it is wheat or livestock, it is my opinion we must go the whole way."

"If in our desire to feed those whom we should like to feed there is any doubt that it will require the imposition of allocations and controls, now is the time to think about it."

In the debate on the European aid bill, Senator TAFT said: "We are paying today approximately five or six billion dollars in taxes to give materials and supplies to western Europe. The tax burden today is a threat to our own economy. As the Senator from Florida, Senator PEPPER, says, it means higher prices for America. Mr. Harriman, Secretary of Commerce, admitted we are exporting $11,000,000,000 more in goods than we are taking in. These dollars are coming back to pay for the purchase of goods already in short supply in this country. Undoubtedly that is contributing to the tremendous price rise. It threatens a return to a completely regimented state and the elimination of the freedom necessary for full production."

We do not want people across the seas to go hungry or freeze. But if billions of dollars given to foreign countries means higher prices, higher taxes, and regimentation for our own people, then the matter of foreign aid takes on grave and serious consequences for all of us.

Sincerely and respectfully,

WILLIAM "BILL" STEVENSON,
Member United States Congress,
Third District of Wisconsin.

Radio Address to the People of My District

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over station WNBF on November 29, 1947:

Dear friends of the Triple Cities and my congressional district, the spirit of Thanksgiving is in the crisp air this season. As you and I look about us at a prostrate Europe and an unhappy Asia, we certainly have reason to give thanks to the Almighty for our own good fortune.

But we need also to indulge in prayer and contemplation to the end that the sadness in other lands is terminated soon. America's responsibility is clear-cut in this respect. We must come to succor the unfortunate, the hungry, the homeless.

Yes; America owes it to the downtrodden, the suffering millions to aid them. We want to do a good job in this respect. The answer, then, is to put the American people on a firm basis, a strong economy, to enable us to accomplish that job.

Let's make the American dollar buy a hundred cents' worth of goods, whether it be food or clothing or any other necessity. The outrageous prices people are now called upon to pay just don't permit a dollar to go anywhere.

What good are high salaries if the cost of living is twice as high? The housewife can't buy as many groceries with $10 today as she could with $5 a few years ago.

It used to be possible to clothe a large family on the average income. At present, many folks have to wear clothing threadbare and even big wages won't cover the bill.

Frankly, I'm concerned about the seriousness of the whole picture. High prices produce scarcity in the land of plenty. High prices create shortages where there is a surplus. The people see these vital goods in profusion upon the counters and in shop windows, but they cannot buy. The prices are beyond their reach.

The future of a desperate world in my opinion hinges on the success of America to keep the energy and freedom we now have.

Americans cannot produce without food themselves. They cannot protect others from the ravages of weather, if they are without protection, without shelter, without clothing.

Americans must have enough money to buy these necessities. Inflationary levels and sky-high prices render their money useless and they are no better off than without a dollar.

The advance of communism in any nation is heralded by the failure of its leaders to recognize the dangers of hunger and want among the people. The best insurance against communism or any foreign ideology, for that matter, is to make the American system work.

The task as it appears to me is to see the American standard of living, which is the

best in the world, maintained for the American people. The era we are now in should bring forth new evidence of the genius of free initiative. The citizens ought to be able to participate in and enjoy the fruits of this great peacetime production. What good will any of it be if they can't buy the modern household devices, the new automobiles, the countless additional blessings of these peaceful pursuits?

We have no alternative but to lick inflation. Our economic structure will not stand a continuation of it. The people will not suffer long from the dire consequences high prices bring without drastic action. We mustn't let violence mar the enviable record this country has had for so many years.

As your representative, I feel my duty is to to point out to the Congress that our economic house is on fire and that we must take steps now to put it out.

Therefore, I introduce this week in the House the following:

"Resolution calling on Congress to wage war against the high cost of living

"Whereas the Congress is once again convened for the purpose of meeting the exigencies of these difficult times; and

"Whereas the American people are now being forced to pay the highest prices in our history for food, clothing, and other essentials; and

"Whereas the American people expect their Congress to give first attention to the serious domestic and economic situation in which they find themselves; and

"Whereas a continuation of spiraling prices and inflationary trends will threaten the American form of government and the free-enterprise system, and give strength and encouragement to subversive elements: Therefore be it

"Resolved by the House of Representatives (the Senate concurring), That immediate action be taken, to the end that inflation be checked and the trend of prices reversed to enable the American people to feed, clothe, and provide for themselves and their families in an adequate manner."

Exports to Russia

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter signed by the members of the American history class of the Midway High School of Lewisville, Idaho. This letter is thought-provoking and shows an understanding interest in United States foreign relations on the part of these students that calls for our attention and commendation. It follows:

LEWISVILLE, IDAHO, *November 24, 1947.*
The Honorable JOHN SANBORN,
House of Representatives,
House Office Building,
Washington, D. C.

SIR: As a class in American history, we pay particular attention to events which are transpiring now in the United States and the world. We have just listened to the daily broadcast of Mr. Cedric Foster. He quoted a statement made by Mr. Harold Stassen concerning the fact that the United States is still sending heavy farm machinery and other scarce commodities to Russia under some sort of moral obligation.

We had no idea this was still going on in the face of what we are trying to do with the Marshall plan. It seems a bit befuddled and incongruous to us. It does not make much sense to build up with one hand and tear down with the other—to give with one hand and take away with the other.

The Russian Government has virtually declared war on democracy. It has openly pledged itself to tear down the capitalistic system and spread totalitarianism throughout the world.

Apparently some people have forgotten how materials we shipped to Japan were returned. With the recent return of our war dead and with diplomatic relations with Russia what they are, it looks like it is going to take something worse to jar their memories. Can't you do something to arouse Congress to stop these shipments (under any kind of moral obligation) to Russia? And before we send any more—let us collect the $11,000,000,000 they owe us.

As our representative in a place where you can make your voice heard, we are leaving it up to you to do something about it.

Very truly yours,
An American History Class of Midway High School: Marvin Green, Theo Hanson, Ranae Casper, Maurine Christensen, Yvonne Lawson, La Rene Wright, Glenda Clark, De Mont Taylor, Bob Moldi, Dallas Bybee, Stanford Olson, Doyle Lufkin, Garth Hall, Junior Pordonnet, Bill Butterworth, David Hawker, Robert Watson, La Faun Kershaw, Shirley Call, Emma Rae Berret, Robert Brown, Joe Poole, Dale Robinson, Donald Walker, Darrell Hinckley, Ronald Boyce, James R. Simmons, Merrill E. Walker, Lowell Lindstrom, Delman Yargesen.

Come to Life, Mr. President

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. SEELY-BROWN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I insert an editorial which appeared recently in the Bridgeport Post, Bridgeport, Conn., entitled "Come to Life, Mr. President." The editorial follows:

COME TO LIFE, MR. PRESIDENT

It just doesn't make any sense.

What we mean is, President Truman's public declaration that he "sees no harm" in our shipping potential munitions of war in great quantities to Russia and Russia's satellites at this moment, while Truman is planning to clamp down all kinds of rationing on us at home.

If an ordinary person made such a statement in view of world conditions at this time, with Russia arming to the teeth, making the whole world resound with attacks on the United States, insulting us, vilifying us, and lying about us—we'd say he was blind, drunk, or crazy. Since President Truman is none of these things, then what is he? If you ask us he's a very bewildered, befuddled, and puzzled little man in the White House.

To add insult to injury, the Russians are coming to our ports and carrying away the railroad locomotives, freight cars, steel rails, steel girders, and other precious fabricated steel goods, including complicated American-made machinery, in so-called Liberty ships which were constructed by us at great costs and under great pressure to the war, turned over to Russia under the smooth title of lend-lease and, of course, never paid for.

It's so simple a kindergarten child ought to be able to understand it. We are arming a nation which proclaims us to be her potential enemy. We are arming a nation which calls us warmongers while it proceeds to build up the biggest war potential in the world—in part with the very materials which are in short supply here at home.

We hope Congress stands up and tells the President what it thinks about all this folly. Not one restriction should be imposed at home until we first have (a) put an absolute embargo on all shipments of all kinds to our potential enemies and their satellite states; (b) divided what we can spare among our friends; and (c) determined then what steps will be necessary at home.

Senator Taft Right While New York Times 100-Percent Wrong

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. BUFFETT. Mr. Speaker, with tactics considerably more polished than those of the Daily Worker, the New York Times sets out to smear Senator TAFT almost every time the courageous Ohioan speaks up for the American people.

The Times' persistent policy of mudslinging at TAFT would be more understandable if the Times had matched Senator TAFT's perspicacity in sizing up New Deal save-the-world patent medicines.

The New York Times whooped it up for the multi-billion-dollar Bretton Woods scheme. That panacea device was supposed to stabilize the currencies of the world. Senator TAFT exposed its weaknesses and voted against it. With the plan operating, currency chaos is worse than ever before.

The New York Times carried editorial after editorial of ballyhoo for the British loan. The following are samples of their claims:

If the loan is approved, we can look ahead with considerable confidence to a general reduction of tariffs and elimination of preferences; to a minimum of quotas and embargoes; to an intelligent and restrained resort to Government subsidies; to general acceptance of the rule that international business should be conducted on a business basis and not as a phase of political action. (Times editorial, July 7, 1946.)

The Times spared no reckless superlatives in its propaganda for the British loan. Another of its many editorials on the loan began with this grandiose assertion:

The House of Representatives has begun final consideration of a measure which is as important for our safety, for the preservation of our way of life, and for the realization of the aims for which we fought as any measure Congress has been asked to pass upon thus far. * * *

To the outside world this credit has become the touchstone of America's policy and intentions after the war. Our readiness or

unreadiness to grant this credit must decide whether the United States is willing to do its share toward world reconstruction on the basis of free, normal, and healthy trade, or whether the nations hard hit by the war must continue and even expand and tighten that vast system of economic regimentation and discriminatory financial and trade controls which are the forerunners of political regimentation and ultimate conflict. Our action here must decide, in short, whether the world shall look to the American or to the Russian system for salvation, and whether the United States is to be a leader in the postwar world, or whether it prefers to retire to an economic isolation which would quickly nullify the gains of its conversion to international political collaboration. * * *

The whole program of world recovery, and with it peace and security, now hinge on this action. (Times editorial, July 9, 1946.)

But Senator TAFT saw the fatal flaws in the British-loan scheme, exposed them vigorously, and voted against it.

Today the British-loan scheme is recognized as the biggest hand-out flop to date, which makes it a record fiasco of some kind or other.

In Hitler's Germany one technique of national socialism was to destroy strong opponents by smear tactics. If that were to happen here, the New York Times, armored by a long tradition of honesty and fairness, would be a most effective instrument for those tactics.

Senator TAFT barred the door when President Truman, at the time of the rail strike, tried to make conscripts out of the laboring people of America. When the administration and the House were panicky, TAFT was cool and courageous.

America needs more men in high places with the integrity and ability of ROBERT TAFT.

Atomic Energy

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. McDONOUGH. Mr. Speaker, Mr. David Lilienthal, Chairman of the United States Atomic Energy Commission, in a recent broadcast urged the people of the United States to become more familiar with atomic energy because of its vast importance to the future of mankind.

I agree with Mr. Lilienthal and shall take this opportunity to speak briefly on some of the aspects of this amazing discovery from a layman's point of view. My qualifications for assuming this task is my experience and practice as an industrial chemist before entering public service.

I was engaged in metallurgy in the manufacture of steel and aluminum, and in explosives in the manufacture of nitroglycerine, nitrocellulose, tetranitroanaline, and in research work on nitro starch.

I do not want to leave the impression that I am an expert on atomic energy. I have found that much of the knowledge I used in chemistry makes atomic energy easier to comprehend.

The atomic theory was discovered by John Dalton, an English scientist, in 1808. He said all matter is made up of small indivisible particles called atoms and that the weight of an atom of one element differs from the weight of an atom of another element. This means that an atom is the smallest indivisible particle of matter and that an atom of hydrogen weighs less than an atom of mercury.

Science believed this to be the indisputable law from 1808 to 1919 when Rutherford and Chadwick, English physicists, reported that they had succeeded in knocking protons out of the nitrogen atoms producing hydrogen. This shattered the Dalton atomic theory and proved that the atom was not the smallest indivisible form of matter—that the atom had parts.

Then, in 1932 Chadwick discovered the neutron was also a part of the atom.

The third important part is the electron which for all practical purposes makes the atom therefore composed of these three parts: The electron, the proton, and the neutron. The electron is the outer shell. The nucleus or center contains the protons. There are other known parts of the atom. I am, however, confining this discussion to electrons, protons, and neutrons.

There are two principles that have been cornerstones of the structure of modern science. The first—that matter can be neither created nor destroyed but only altered in form. This is known as the law of conservation of mass. The second—that energy can be neither created nor destroyed but only altered in form. This is known as the law of conservation of energy.

For all practical purposes these two principles were unaltered and separate until some 5 years ago.

Albert Einstein as early as 1905 clearly stated that mass and energy were equivalent and suggested that proof of this equivalence might be found by the study of radioactive substances such as U–235 and radium.

To the average person without some scientific knowledge or training, atomic energy is a great mystery, beyond understanding, and something for only scientists, engineers, physicists, and mathematicians to deal with.

The average person thus closes his mind and shuts himself out from any possibility of learning anything about atomic energy, believing that it is something so new and terrifying, so deep and impenetrable that he thinks he could never grasp or understand it.

Atomic energy is not new. It has always existed. All we have done is discover it. It is as old as the hills.

Can you imagine the utter amazement of the first man that discovered fire? Think of the courage of Benjamin Franklin when he discovered electricity by flying a kite during a thunderstorm. He did not know then that he would not be electrocuted and he did not then have the slightest idea that electricity would be used to light great cities, drive great power plants, heat homes, cook food, and the thousands of other uses it has been put to.

We know what fire is and how to use and control it. We know how to use and control electricity. Frankly, now should we not learn all we can about atomic energy—instead of looking upon it as a monster of destruction, should we not see it as a great gift to humanity for good, and a means to help mankind live better and happier?

Nothing is more important to our domestic and international future than to learn all we can about atomic energy. We should know what the word "fission" means.

We should know what "neutrons" are.

We should know what a "chain reaction" is.

We should know why "uranium 235" was used in preference to any other element.

Here are some of the answers:

"Fission" means the property to break up into fragments, to split, in this instance into other atoms.

"Neutrons" are subatomic particles which are much smaller than atoms and are neutral, hence their name. That is, they are neither positive nor negative.

"Chain reactions" are the continuations of the reaction of releasing neutrons, which in turn penetrate other fissionable atoms and release other neutrons, thereby establishing a continuous reaction.

The potentialities of atomic energy are too great, too serious, too far-reaching in their effect on the future of civilized mankind to be ignored.

Before Einstein announced the theory that matter can be converted into energy it was known that neither matter nor energy could be created or destroyed. You can only change its form. In other words, to use an old adage, "there is nothing new under the sun," or all matter and energy that now exist have always existed, and no new matter can be created; neither can you destroy matter that now exists. All you can do is change or alter its form. That is, you can change ore into metal, or coal into coke, or cotton into explosives, but you do not create nor destroy matter. You merely change its form.

But we have only changed its outer form, not its inner form. We have not released any atomic energy. All we have done is rearrange the atoms of the matter we have been dealing with. These atoms, of which all matter is composed, are well protected. They are harder to budge than the most reactionary or conservative Member of Congress. I say this advisedly, because you cannot make a man do what he will not do, but can now make the atom do what you want it to do. That is, some of them. There are still many reactionary and conservative atoms. The most liberal one is uranium 235, and there is a good reason for this, because the U–235 atom has more protons and neutrons congested and compacted in it and more electrons revolving around it than any other known atom, just waiting for a chance to split up and release atomic energy. Atoms are very, very small. They are so small that 100,000,000 laid side by side would not measure an inch in length. Everything is made up of atoms—your clothes, food,

your body, house, automobile—everything.

All matter is made up of atoms.

All atoms are not alike. The principal difference between atoms is in the number of electrons surrounding the nucleus, which always equals the number of protons in the nucleus of all atoms.

This means that there is a different number of electrons surrounding the nucleus of an atom of gold than there is surrounding an atom of copper, or tin, or of aluminum, or of iron, and so on.

There are 92 different kinds of atoms. Each has a different number of electrons revolving around its nucleus, causing them to have different properties and characteristics.

The most simple or least complex atom is hydrogen, which has only one electron revolving around its nucleus.

The most complex atom known is uranium, which has 92 electrons revolving around its nucleus. That is part of the reason why uranium 235 can be used so successfully as the essential element in the production of atomic energy.

Uranium 235 is not the ordinary form of uranium that occurs in nature. It occurs naturally as U–238, and it takes 140 pounds of U–238 to produce 1 pound of U–235. It is very difficult to convert U–238 into U–235.

One pound of U–235 can produce energy equal to 3,000,000 pounds of coal. Think what that means.

Another thing about U–235 is that when its atom is split up by being shot at or bombarded by neutrons, it yields other neutrons, which, in turn, bombard and split other atoms of U–235 that are nearby. Thus the process, once started, continues, each reaction releasing tremendous heat and energy. This is called a chain reaction.

One reason why the U–235 atom does this so well is because its nucleus has—in addition to its 92 protons—143 neutrons crowded and congested within it, and 92 electrons revolving around the nucleus. Another characteristic of U–235 is that it is fissionable or subject to fragmentation. This is what makes U–235 so valuable for the production of atomic energy.

In addition to the source of power from atomic energy, one of the most important possibilities is the development of transmutation—that is, the converting of one element into another. The effect of transmutation on the economy of the world is stupendous and far reaching.

If methods are found to convert lead into gold in commercial quantities, or iron into silver or copper, you can well imagine what would happen to monetary values. And it is possible that these methods will be found through the development of atomic energy.

Transmutation has already been done. We have converted uranium into barium, nitrogen into hydrogen. General Electric has changed silver into cadmium, and silver into palladium, and copper into nickel. The October 29, 1945, issue of Time tells this story.

True, General Electric has not done this in commercial quantities, but it has been done.

Transmutation was the first thing the alchemist, the great-great-granddaddy of the present-day chemist, tried to do, but he never found out how to change one metal into another because he did not know the natural law of the elements.

The present-day chemist is on the right track because he knows the natural law of elements and is following them.

Everything that now exists will still exist just as long as Almighty God will permit.

Hollywood's Record, One of Patriotism

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. HOLIFIELD. Mr. Speaker, during the recent investigatory activities of the House Committee on Un-American Activities there has been considerable comment in the press on reports that most of the motion pictures produced in Hollywood are burdened with Communist propaganda.

I do not presume to take over the privileges of the committee in answering these reports, but I feel that I must rise to the defense of an industry and an art that has contributed so much to selling the American way of life to the entire world.

I know from my own personal experience as one who goes to the movies for entertainment that I have yet to see a film that is not American in concept and feeling. I was particularly interested in reading that a prominent Washington theater owner, Mr. Sidney B. Lust, referred to his 32 years in motion pictures during which time he failed to see or detect Communist propaganda in films. But I was more interested in the fact that the facilities of one of our greatest military institutions, West Point, were made available to Mr. Joseph Bernhard, president of Film Classics, a motion picture producing company, to facilitate the production of The Spirit of West Point, a film that, according to all critics, fully exemplifies the American spirit of competition and fair play.

I know that there are scores of other films that have been produced through the years which have done much to act as salesmen abroad for the American way of life, as well as for American products. I know that during the war the motion picture industry unselfishly devoted its time and talents without thought of reward, imbued only by the patriotic fervor that has enabled us to win victory against a desperate enemy.

I cannot let these reflections on Hollywood go unchallenged because I feel that such reflections serve only to hamper a great American industry rather than help it. I firmly believe that with such men as Mr. Bernhard, the Warner brothers, with Mr. Louis B. Mayer, Mr. Darryl Zanuck, Mr. Dore Schary, and with Mr. Eric Johnston, as with other leaders at the helm of the motion picture industry, we need never fear that Hollywood ever will be un-American.

Our Dirty Linen Is the Nation's, Too

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States of November 28, 1947:

OUR DIRTY LINEN IS THE NATION'S, TOO

There has been quite a controversy stirring both House and Senate in Washington on the publication in the CONGRESSIONAL RECORD of a speech by Senator JOHN H. OVERTON attacking Representative JAMES H. MORRISON and the latter's reply.

Much of it has hinged upon the propriety of printing both statements in the RECORD. A number of Louisiana Representatives led a movement to have JAMES H. MORRISON'S statement expunged, but met opposition from other Congressmen who said they would not vote MORRISON'S out unless the Senate voted OVERTON'S out or the Senator withdrew it voluntarily. The matter there rests at this impasse.

We are not here concerned with the propriety of "washing Louisiana's dirty political linen in the Congress," as one Representative is reported to have said in criticism of both Senator OVERTON and MORRISON. We are concerned, however, as every Louisianian should be, with the truth of the allegations, and the answers to the questions. And the Congress of the United States should be, too.

In a radio address broadcast November 11, Senator OVERTON asked JAMES H. MORRISON, candidate for governor, to answer three questions.

These were whether Representative MORRISON would affirm or deny the reports that MORRISON offered to support Jones against Long in 1940 for $60,000, and when rejected by the Jones people he accepted $20,000 in cold cash to keep silent and make the public statement that he was going fishing, the report that JAMES H. MORRISON accepted some $50,000 or $60,000 to support Lewis Morgan in the second primary 4 years ago after being eliminated from the race, and the report that JAMES H. MORRISON is being financed in the present campaign by the gambling fraternity of New York and New Orleans.

Representative MORRISON issued a statement the next day. He answered the questions about being bought to support opponents of Jones and Davis in this manner:

"In the two campaigns that have gone before this, JIMMY MORRISON has supported the men he thought best fitted for the office. I make no apologies for this. If, in exchange for this support, these candidates offered to pay some of his campaign debts, that was but to be humanly expected."

In view of the language used, and the omission of a direct denial by MORRISON that he accepted money from the supporters of Mr. Long and Mr. Morgan, which in both instances were the remnants of the old Long-Leche-Maestri crowd, it is not unfair to assume that money passed into MORRISON'S hands for his support.

In his answer to OVERTON, JAMES MORRISON did deny outright that he was being supported by New York gamblers. Then he made this statement:

"JIMMY MORRISON had no more to do with New York gamblers coming into this State than the man in the moon. JOHN OVERTON knows that this is true. JIMMY MORRISON had no more to do with them coming back into this State after they were closed up in

1940 than McCauley's traveler to New Zealand. JOHN OVERTON knows this is true likewise. If memory serves me right, these New York gamblers returned in 1942."

Nowhere in JAMES H. MORRISON's statement does he deny being aided and abetted and financed by New Orleans gamblers, though Senator OVERTON asked him the direct question.

Perhaps Representative MORRISON considers these New York gamblers, who he says returned here in 1942, purely local talent now. Perhaps he considers them New Orleans gamblers.

We do not consider that MORRISON answered Senator OVERTON. We think that the House of Representatives ought to make MORRISON answer. If his support has been bought, or if he is backed by law-breaking gamblers and racketeers, it is not only Louisiana's dirty linen, but the Nation's, that needs washing.

The American Merchant Marine

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD on the subject of the American merchant marine, I include herein a letter from the National Federation of American Shipping relating to the shipping sections of the report by the President's Committee on Foreign Aid—the Harriman committee of 19.

I heartily approve the letter and ask its perusal by all interested in the merchant marine.

The letter of Mr. Frazer A. Bailey, president of the national federation, to federation members is dated November 12, 1947, and reads as follows:

The Federation of American Shipping has examined the shipping sections of the report by the President's Committee on Foreign Aid (the Harriman Committee of Nineteen). The report shows that a thorough and careful examination has been made by this committee of the proposals contained in the Paris report of the Marshall plan nations, and in subsequent discussions with representatives of these participating nations at the government level as referred to in the Harriman report.

The federation finds agreement with many of the conclusions of the Harriman committee, whose report confirms the federation findings that savings in dollar freight costs which could be effected by the sale or other disposal of American war-built tonnage to the participating nations are but a small fraction of the total of such costs. The Harriman committee has shown that the $1,214,000,000 freight costs attributed to shipping under the 16-nation proposal should really be reduced to the neighborhood of $300,000,000 as recently projected by the federation. This latter figure is only about 2 percent of the estimated aggregate costs of the Marshall plan. The Harriman report reaches the conclusion that "the limited financial savings are not sufficient to justify the drain on United States resources for national defense which such transfers would involve."

Such savings are also not sufficient to justify the long-range damage which would be done to the American merchant marine in the future by transferring a substantial number of war-built vessels to nations whose fleets already exceed their 1938 capacities in vessels of this character, and whose competition would have to be met in the postwar manned with low-wage foreign crews. When it is proposed that funds are to be supplied from the United States to buy these ships from us, the resemblance to a gift is brought into bold relief, and the question of capital costs in a competitive situation is obvious.

The Harriman report recommends the sale of further war-built vessels to the participating nations "contingent" upon a commensurate reduction in European shipbuilding. It must be realized, however, that—

(a) before the war 75 percent of the shipbuilding facilities of the world were located in these 16 nations;

(b) shipbuilding is one of their primary industries, recovery of which is a substantial factor in the Marshall plan;

(c) whatever "contingencies" are now arranged, it is not reasonable to expect these nations to cease building in the immediate future or for any protracted time dry-cargo vessels to meet their requirements;

(d) their present fleets of such vessels of 5,000 gross tons and over (suitable for international trading) are 1,400,000 tons in excess of their capacities in 1938; and

(e) their shortage really exists in the smaller vessels required for coastal and nearby European trades which are not available in American war-built ships and must of necessity be constructed of special design to meet particular trade requirements, including shallow-draft vessels for small harbors, etc.

Even as to the large dry-cargo vessels which are included in the current European shipbuilding program, it appears that the vast majority of these are Diesel-propelled, obviously for particular trading conditions, and are not available in the American surplus fleet. This is stated in the Harriman report as the contention of the representatives of these participating nations.

We feel that the Harriman report reference to the European passenger ship construction program may be misleading to the general public. It states that only one strictly passenger-type ship of more than 20,000 gross tons is now under construction; namely, the Cunard's *Caronia*. It goes on to say that there are other so-called combination vessels with passenger capacities varying from 250 to as high as 1,800 passengers. This turns on a matter of definition. The report states that the latter such vessels in the American fleet would be classified as among our best luxury liners. Princess Elizabeth christened the *Caronia*, but Princess Margaret Rose also christened the *Edinburgh Castle*, a vessel of over 28,000 tons, which is building for the Union Castle Line, as is also the sister ship *Pretoria Castle*. These will give the Union Castle the second largest passenger fleet in the world, the Cunard White Star being first. Even with these we must not overlook two other new Cunard liners, the *Mauretania* and *Parthia*, which have gone into service recently, and the Rotterdam Lloyd Line's *Willem Ruys*, of 21,500 tons, with accommodations for 842 passengers. Meanwhile the United States fleet is sadly deficient. No comparable vessels are building in American shipyards. It is not the shortage of strategic materials, as stated in the Harriman report, which causes this condition, but rather economic circumstances under which United States shipowners have so far found it impossible to contract for the building of similar passenger vessels for United States flag operation. Meanwhile we are endeavoring to restore economic conditions in Europe.

The federation agrees with the Harriman report:

"The United States needs an active merchant marine for national defense, and we must not create conditions in which that merchant marine cannot survive."

And we might add, we need American ships to carry a substantial part of our own commerce, to maintain transportation facilities to important world areas, and as a leader among the United Nations we must keep a reasonably strong position upon the seas.

FRAZER A. BAILEY,
President.

WASHINGTON, D. C., *November 12, 1947.*

House Delays Threaten Aid Cargo Tie-Up

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the Washington Post:

HOUSE DELAYS THREATEN AID CARGO TIE-UP—COAL, FOOD IN PORTS CAN'T MOVE UNTIL ITALY AND FRANCE GET DOLLARS

(By Ferdinand Kuhn, Jr.)

The slow-moving House of Representatives' timetable on interim aid threatened yesterday to pile up grain and coal at American ports and to interrupt the flow of vitally needed American supplies to Italy and France.

A State Department official confirmed yesterday that Italy had already run out of dollars and had none immediately in sight except what Congress would provide. Secretary Marshall warned the congressional foreign policy committees on November 10 that Italy would be dollarless by now.

France still has enough dollars to continue purchasing here through December, but, oddly enough, an interruption of supplies for France is at least as threatening as in the case of Italy.

FRENCH PLANNED DIFFERENTLY

The French had hoped to use their last $100,000,000 this month to pay for chemicals, lumber and industrial raw materials from the United States and elsewhere. These items are not covered in the interim relief bill now before Congress, which is limited to food, fuel, fertilizer, seeds, fibers and medical supplies.

The French had planned, for example, to import sulfur, rubber goods, and chemicals from the United States, zinc ore from Newfoundland and Latin America, and lead from Mexico and Peru, to keep their factories going during January and to keep their zone of Germany supplied.

Now, however, the French are forced to use their dollars to pay for American grain and coal because the congressional authorization for these relief supplies has been delayed. They will have to cancel their industrial imports altogether if Congerss does not quickly carry the load of French dollar expenditures for food and fuel.

Officials here fear the result will be forced shut-downs of French factories later in the winter, with inevitable unemployment, for lack of the materials needed to keep them going. The Italians weeks ago had to abandon their purchases of comparable materials because of their shortage of dollars.

It was learned at the State Department yesterday that there are no further uncommitted funds for Italy in the $332,000,000 post-UNRRA relief appropriation approved by Congress last spring. (France was not eligible for this post-UNRRA help.)

The only possible source of additional dollars for Italy, apart from a congressional au-

thorization now, is about $20,000,000 still owed by the United States for the earnings of Italian prisoners of war in this country. But there is little prospect that the Army Department can finish its bookkeeping on this complex transaction in time to pay the dollars and bridge part of the gap caused by slow motion on the interim-aid bill in the House.

If it were not for the help of the Commodity Credit Corporation, the Italians would have to stop acquiring all food and fuel here. The CCC, however, has already bought most of Italy's 152,000 tons of grain for January, and is moving it as far as the seaports, despite the fact that Italy has no dollars to pay for it at the moment.

The present delay in the House threatens especially serious transportation difficulties if it continues beyond the end of this week.

Coal for December shipments has to start moving by December 10 if serious congestion of port and shipping facilities is to be averted. In December alone 67 coal cargoes are needed for Italy and 145 for France. The shipments, totaling 600,000 tons for Italy and 1,300,000 for France, have to be spaced to keep available colliers loaded and on their way.

ONE HUNDRED AND FIFTY MILLION ADVANCE HOPED

One informed official estimated that there would be no dangerous interruption if both Houses of Congress completed action on the bill this week. This assumes that the present bill will authorize the Reconstruction Finance Corporation to advance up to $150,000,000 ahead of the actual appropriation, as the House Foreign Affairs Committee recommended yesterday.

The one hundred and fifty million total is just about adequate to handle French and Italian needs until the end of this month. By that time, harassed officials here hope, the two Appropriation Committees will have held their hearings and Congress will have completed all the necessary action.

Address of Col. O. Pierre Lee

EXTENSION OF REMARKS
OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. ANDREWS of Alabama. Mr. Speaker, I ask consent to have printed in the RECORD a speech just recently delivered before the Auburn (Ala.) Rotary Club by Col. O. Pierre Lee, a veteran who served ably and heroically on overseas battle fields as an officer in both World War I and World War II. Colonel Lee, now practicing law in Opelika, Ala., was appointed, at the conclusion of hostilities, as judge and alternate prosecutor on American military courts for international justice at Augsburg, Germany. In his executive post with the American military government, Colonel Lee was in an extraordinary position to observe the circumstances which prevail in Germany and Europe at this time.

The speech follows:

On this occasion I am reminded of a story of a chaplain in the Eighty-second Division of the First World War who had been the Baptist minister of a little flock in a small town in Indiana prior to going into the Army. The chaplain had a habit of going among the men, saying, "Boys, you shouldn't play blackjack or poker or shoot craps, as you are endangering your immortal souls, and the wine of France is very bad for you, and also the cognac." He had very little success in his expostulations with the men and finally said he didn't believe there was a Christian in the bunch: "They are the worst bunch of people that I ever came in contact with." A while later his outfit was ordered up into the great Argonne drive, and the chaplain followed along from the rear, seeing to the burial of the dead and administering unto the dying. He saw the result of the shot and the shell that swept line after line of men away like chaff before the wind. Night came on, and the chaplain was lost, and he imagined he was between the American lines and the German lines, but he didn't know in which direction the American lines were nor where the German lines were. He fell down in a shell hole and began to pray, and directly he heard a great American voice say, "Who in hell led that ace of clubs?" He arose from his knees and said, "Thank God I am still among Christian men." That is the best way that I can express my appreciation and happiness today in being able to be with you ladies and gentlemen in Auburn, in this State of my nativity.

I have spent the last 4 years in a land of destruction, destitution, suffering, and death. Presently, I have just returned from nearly 1½ years in Germany and from traveling throughout 14 countries in Europe. I have stood in what were the streets of Berlin, which was a city with a population one and one-half times that of the great State of Alabama, and have seen in the central section of that city not one whole solitary building left standing—not one dwelling, one apartment house, or office building or factory. There are hundreds of thousands of people who have dug into the debris, dust, and ashes of that city like moles, and made caves in which to exist. There are thousands of children without any guardians, whose parents and guardians have been killed in the war, who are running at large like wolf cubs, with no caretakers, and who are literally starving to death. On a lesser scale you can see these things in all of what has been the larger cities of Germany, including Hamburg, Bremerhaven, Bremen, Frankfort-on-the-Main, Munich, and numerous others. In Italy and France the Governments are in such an unstable condition that the people have no incentive to do anything. Germany has the misfortune to be divided into four zones. In the Russian zone, which has a great deal of the natural resources of Germany, they refuse to cooperate with the rest of the country. The mark is absolutely worthless as money except to buy the sparsely rationed food for the German people. The wealthy people have a system of bartering by which they take all of the treasures which have accumulated in their families for generations to the farmers and trade them for food. Therefore, the farmers are accumulating all of the wealth and all of the trinkets of Germany, and they sell this food on the black market for exorbitant amounts. In their present state Germany, France, Italy, and Austria are cancerous growths in the economy of the world. There is only one sure way of these countries taking their place in the family of nations and doing their part in the world, and that is for them to have a money system which will be useful in their trade with foreign states.

One great step forward would be a peace with Germany and this peace is necessary before a sound monetary system can be established. The great detriments to this peace with Germany are Russia and finding some leaders in Germany who have the confidence of the German people and who would have the authority to sign the peace. The American military government in Germany has ruled that no person who was a Nazi can be placed in any position of trust throughout the American occupied zone. Nearly every person of any ability in Germany prior to the war and during the war, with the exception of Jews, were at least nominal members of the Nazi party. As an illustration of that, when I took over the governorship of a city in Italy, while the war was going on and while the German artillery was still bombarding that city, I called a meeting in the city hall for the purpose of organizing the city government. At that meeting I had called all of the leading men of the city, including the priests, heads of the schools, the mayor, the bankers, doctors and lawyers, leading merchants, and the leading manufacturers. I then asked them if any of them were Fascisti and all denied that they were. I then said, "Gentlemen, it is a very strange thing to me that in this country which is governed by Fascisti, when the German Army has just left your city, and was in control here, that none of you are Fascists, but you gentlemen are all prominent leaders of your community. To be perfectly plain and frank with you, if I had been living in Italy during this time and wanted to do well in my business, I would at least have been a nominal Fascist." Upon that, each man admitted that he was one. We had no way in Italy of telling whether a man was a Fascist or not, except upon oral testimony or the admission of the individual. But in Germany, we captured the records of the Nazi party and had a complete record of every man who was at any time a Nazi, and of his actions while he was a member of the Nazi party. These records are in the record section in Berlin. Under our military government, we precluded any of these people from being members of the government or holding any other position of importance in the life of Germany and, therefore, we have very few men of any initiative in the leading places. The British have not gone this far and have not precluded nominal Nazis from holding offices or taking their natural places in the lives of the community and, to my mind, the administration of their zone has been more efficient. By not having these good administrators, our distribution of foodstuffs and other materials has been very deficient.

Our occupation of Germany is a token occupation, and it is impossible for the Americans that we have over there to govern Germany. The only thing that they can possibly do is to generally supervise the governing and the Germans themselves have to look after the details. An exception to that is the military government courts where we try the Germans who are violators of the proclamations and all other nationals who have committed crimes or misdemeanors, whether against the German people or among themselves. I personally tried over 700 of these cases, and I think that I acquired just about as thorough a knowledge of the inside of the situation as it is possible for a foreigner to acquire who does not speak the language.

Our occupation of Germany would be successful to a far greater extent if we had American civilian or officer personnel who were trained as administrators or who had better administrative ability. Under the present set-up, it is impossible for men of ability to accept employment by the War Department in occupied Germany without great personal sacrifice to themselves, as there is no permanency attached to such employment. The result is that we cannot get career men of sufficient training and ability. In Italy our military government was much more successful, for the simple reason that it was not divided into zones, and the United States and British Governments were united in governing Italy as the Allied Military Government under one command. In Germany the occupation is divided under four commands.

Russia is the most unpredictable of any nation. The reason for this is that it is under an absolute dictatorship, and even

the highest men of authority under him are not able to predict what "Uncle Joe" Stalin will do. I was told by the head of the War Crimes Commission in Austria that his family lived about 60 miles from Vienna, outside of the Russian zone, but that in order to get there he had to pass through the Russian zone, and that on some occasions the sentry would wave him on without even looking at his permit, but on other occasions he would be stopped and his permit would be looked at, and that maybe the next time he would be taken to headquarters and questioned for sometimes as long as 2 hours before being allowed to proceed. I remember on one occasion my wife and I were traveling from Augsburg, Germany, to Vienna, and that we had to pass through the Russian zone. When we came to the edge of the zone, some Russian officers came on the train and demanded our papers. Of course, I had all papers in order, but to test out this officer I showed him a little comic book which I had in my pocket, and he, not knowing how to read English, passed us both. In another case there was a friend of mine with his wife who showed them all of his papers in Russian, English, and German, and his wife was put off at the Russian zone, not allowed to proceed, and was sent back into Germany. A Baptist missionary from Scotland told me while I was in Florence, Italy, during July that he was delivering an address to over 10,000 people in Austria inside the Russian zone when his meeting was broken up and he was arrested by the Russians and carried to Siberia. As he was married to a Montgomery, Ala., girl, General Keyes took an interest in his case, as well as the British marshal, and through their influence the Russians released him. General Keyes told him that the reason the Russians arrested him was that they thought that he knew something which he did not, and it was up to them to find out what it was. They found within a short distance of where this meeting had been held that the Russians were making 200 tanks a day. General Keyes had him escorted to the border and told him he had better not come near the Russians again, as they would probably rearrest him and he would not be heard from again, as the Russians would claim that they had released him and knew nothing of him.

From my observations, it appears to me that the only way that we can avoid war with Russia is first to have an Army and Navy and Air Force that is second to none in the world and next to help the countries in Europe get on their feet and to supervise that help in a way that will not hinder our own economy, and to see that this help goes to the proper people and to the proper places and that we, the United States, are given full credit for it and not to allow any other nationals to assist in such supervision. If this is not done, the best that we can hope for will be isolation of the United States from the rest of the world, and we know as intelligent people that, under the present conditions of travel, we can fly from any given point in the world to another point in less than 24 hours and such isolation is impossible. If he were living today there is no man who would grasp this more quickly than the "Father of Our Country." In our old foreign policy, heretofore we have had England to back up up with its might, but that might for the present has deteriorated and now the United States has to stand on its own feet. We are capable of doing it if our people will see the light. Our way of living is the best that exists in the world today, with the possible exception of the little countries of Norway, Sweden, Denmark, and Switzerland, but they are very small areas of the earth's surface. You will never realize how fine it is to travel without visas and passports and permits; how fine it is to be able to stand in a public meeting and express what you are thinking without being carried away to jail; how great it is to be able to go down to a store and buy what you want if you have the money; and when you can call what property you have your own and have the full protection of the law in your enjoyment of it. Most other nations of the earth do not have any of these privileges. As I said before, if we want to continue our enjoyment of them, we must let Russia know in no uncertain terms that we expect to maintain ourselves along the lines that I have mentioned.

It is said that "When over four centuries ago adventurers from the Old World first landed upon the southern shores of this western continent and pushed their way into the depths of the primeval forests, they found growing within its shadows a mighty plant, with vast leaves radiating upward from the mold and tipped with formidable thorns. Its aspect was unfriendly, it added nothing to the beauty of the wilderness, but from the midst of some of them up rose a tall stem, rivaling in height the trees themselves and crowned with a glorious canopy of golden blossoms. The flower of this forbidden plant was the agave, or American aloe, sometimes called the century plant because it blooms but once in a lifetime. It is of the family of lilies, but no other lily rivals its lofty magnificence. From the gloom of the untrodden places, it sends its shaft unto the sunlight. It is an elemental growth, but until the flower blooms after its ages of preparation, it seems to have no meaning, proportion, or comeliness. It is only after those golden petals reveal themselves upon the summit of their lofty eminence that we are able to comprehend the symmetry and significance of that which has waited so long to avouch itself. This lily of the ages, native to American soil, may fittingly stand as the symbol of this great American republic, which after so many thousands of years has reared its head heavenward out of the wilderness of time and revealed its golden promise to those who have lost their way in the darkness of the forests of error and of oppression."

Aid to China

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gov. Thomas E. Dewey at the dinner in his honor given by the alumni of Columbia University Law School at the Waldorf-Astoria Hotel, New York City, on Monday, November 24, 1947:

This is a wholly nonpolitical occasion. But in the state of the world today there is no subject which is not deeply fraught with heavy political implications. Economic decisions, the direction of government action, the fate of nations, and the peace of the world depend upon wholly political decisions. Accordingly, while it is quite impossible to be nonpolitical, I can and do speak about a subject which transcends political considerations and is of momentous import to the future of the United States. I shall speak as dispassionately as is possible consistent with my very strong beliefs.

Today we are, as always, interested in the security of the United States of America and in building that security for the years to come. We are also interested in preserving freedom, not only because we believe it is the highest expression of man's aspirations but because in a world engaged in a cold war we need friends. I speak, therefore, in the interest of America and of keeping our bulwarks strong enough so that our sons shall not be sacrificed in another world war.

To this end, I undertook to set forth a program for foreign assistance in a speech 3 weeks ago, in this room, urging full aid on a bipartisan, businesslike basis. Our bipartisan foreign policy which I inaugurated in 1944 has served the Nation well. Even as I speak, Mr. John Foster Dulles, having completed a tremendously burdensome session at the United Nations Assembly, has flown to London to participate in the Conference of Foreign Ministers, while Senator VANDENBERG is piloting the program of foreign aid through the United States Senate. But most unfortunately there has been no consultation and therefore no bipartisanship in many aspects of our foreign policy and that is conspicuously true with relation to China.

In addition to recommending strong and effective measures to preserve the integrity of the free nations of Europe, I pointed out that only 4 months after VJ-day we saw the strange spectacle of our own President publicly ordering our Chinese allies, under pain of losing American support, to accept into their Government the very Communists who seek to destroy it. It was my earnest hope that, in the face of great peril to China, our own Government would reverse its policy and take positive steps while there is still time.

We are facing one whole program—not little bits of problems. We have a whole struggle on our hands, world-wide in scope. We and all other nations which resist totalitarian dictatorship are being attacked by all means short of war. In America we are under attack by propaganda, falsehood, and economic sabotage. Free governments in Europe are under attack by rioting, political strikes, and armed violence. But the program of Communist world conquest of the remaining free nations is furthest advanced in China, the largest nation of all. The cold war, which has become a warm war in Europe, is a very hot and successful war in China. The inescapable fact is that unless we change our national policy immediately there is good reason to believe that the 450,000,000 free people of China will soon fall wholly into Communist hands.

The free world is now in the desperate position of a man who has gangrene in both legs—in western Europe and in Asia. As a doctor, our Government is telling the world we have a very good cure for gangrene but we will apply it to one leg only while the gangrene in the other leg destroys the patient. There can be no doubt that all Americans must be united on aid, prompt aid, to the free peoples of Europe. The ominous news from France and Italy, during these last few days, proves conclusively that international communism is on the march; that it is coldly and deliberately seeking to gain control in these countries by promoting civil wars such as those which are raging in China. It would be a world-wide catastrophe if they were to be successful. A Communist police state in the Mediterranean and in France would be as serious a blow to the freedom of man as would have been the victory of the Axis in the recent war.

But obviously the danger points are not centered exclusively in Atlantic and Mediterranean areas. We also had to fight a great war in the Pacific. We need a strong policy in both oceans. We soon found that we needed the two-ocean Navy which I was so much abused for demanding in 1940. I insist that we now need a two-ocean foreign policy.

We are generally agreed as a nation that we have no choice today whether or not to act in the world emergency. We are going to act because it is unthinkable that after winning a war we should surrender the fruits

of victory by allowing the free nations to fall into economic chaos and then under Soviet control. But if 275,000,000 people are important it seems to me that 450,000,000 people are also important. As we take action to save the 275,000,000 people of Europe for the free world, it is the sheerest folly to abandon the 450,000,000 people of China. If China falls, we may reasonably assume that all Asia is gone, and western Europe and the Americas will stand alone—very much alone in a hostile world.

Accordingly, I was dismayed to discover that in the emergency program presented to the Congress by the President last Monday there was not even a mention of China. This is utterly incomprehensible at a moment when the world is in imminent peril of losing a free China.

Now, I suppose there are many Americans who are inclined to say, "Well, China has been engaged in civil wars for decades and this is just some more Chinese civil war. Why should we undertake the impossible?"

I can understand this point of view very well, but let's look at some facts. The previous civil wars of China have been primarily internal affairs. The present struggle is a war of conquest under the leadership of a small group of avowed Chinese Communists who are serving the purposes of Soviet imperialism. The startling fact is that these Communist forces have actually conquered nine-tenths of all of Manchuria, which is larger than all of France and Germany and embraces 70 percent of the industrial might of all China. They have infiltrated nearly half of the balance of China with active and successful guerilla warfare. A less sturdy people would already consider themselves defeated. But the Chinese still hold out, hoping that America, having helped to save them from one oppressor, will not deliver them into the hands of another.

The situation in Korea is a good example of what might well happen in China. At this moment Soviet occupation forces hold the northern half of Korea and American occupation forces hold the southern half. The Communists have completely regimented the northern half, installed a totalitarian government, and built up a well-trained, well-armed, fighting army of 250,000 men under puppet leadership. In the American half there is no civilian government, no native military force—nothing but a political void.

We have now, with great pains, prepared for a plebiscite in Korea which the Soviets are cynically boycotting. They are boycotting it because they anticipate that immediately upon the withdrawal of American and Soviet occupation troops, the armed forces of the north will engulf all of Korea. This will completely outflank northern China and will result in the delivery of the 23,000,000 Korean people from Japanese tyranny to Soviet tyranny.

Next to the Monroe Doctrine our policy of the open door and the political integrity of the Chinese Republic is the oldest and most fundamental part of the foreign policy of the Government of the United States. Time and again over the years we have reemphasized that policy through Republican and Democratic administrations. Time and again over the years we have implemented that policy with strong action when required and generous assistance when needed.

There must be some basic importance to a policy so deeply rooted in the history of our country. That importance obviously stems from the fact that as a Nation we long ago decided that it was essential to our welfare to have a free and friendly China, while it was dangerous to have one under the dictatorship of an unfriendly and possibly hostile power.

It is a frequently forgotten fact of modern history that the infamous Japanese attack on Pearl Harbor was precipitated by our insistence upon the independence of China and upon the withdrawal of Japanese troops from their adventure of armed conquest. This is made perfectly clear in our official white book issued in 1943. In short, however deeply our emotions were stirred and our interests were centered on the defeat of the Nazis in Europe, it was our defense of the freedom of China which precipitated the perfidious attack on our Nation and brought us into the war. For 5 years we waged a global war at staggering cost in blood and resources—and we won it.

And now, a little more than 2 years later, our dearly bought victory still eludes us and our Government watches the same China under the same government rapidly being overrun by a new aggression.

In the face of this world tragedy, I regret to say that for the first time in our history we have a Government which has no discernible Chinese policy whatsoever. We are bankrupt so far as Chinese policy is concerned.

In excuse for our failure, it has been said that there is corruption within the Chinese Government and that the most we can hope is that about 70 percent of any aid we might send would be effective. I do not know whether it would be 50 percent effective or 80 percent effective and I doubt if anyone knows. Of one thing I am sure; it would be immensely more effective than nothing. Now, I do not excuse the fact that there is corruption in the Chinese Government. I do not suppose anyone excuses the fact that the Greek and Turkish Governments do not wholly fit our ideals. There are obviously faults in the British and the French and the Italian Governments, and I suppose we have a couple of faults ourselves.

But the fact is that these Governments have taken their stand on the side of human freedom, which we are struggling to preserve in the face of remorseless, spreading totalitarianism. We in America have chosen sides in a mighty movement. We chose our side a century and a half ago. It is still our side. We are on the side of freedom against tyranny and I hope we always will be.

But to be specific: This is the same Chinese Government, headed by the same individual, which we have supported against Japanese aggression since the invasion of Manchuria 16 years ago, in the year 1931. It is the same Government which we supported in 1939 through the note of Secretary Hull demanding that the Japanese surrender their conquests. It is the same Chinese Government in defense of whose independence our Nation demanded that the Japanese cease their attacks in 1941. It is the same Government with which we fought shoulder to shoulder for 5 years.

It was this Chinese Government to which we insisted Marshal Stalin pledge his "moral support and assistance with military equipment and other resources"—an agreement which is now openly and flagrantly violated.

It is unnecessary to rehearse in detail the history of our own broken pledges. But it is worth noting that having provided small arms, artillery, and airplanes to the Chinese when they were fighting the Japanese at our side, we committed ourselves at Cairo to support them in reestablishing their territorial integrity after the war. Yet, even as the need became acute, our Government suspended the shipment of the ammunition without which those arms are today useless and the parts without which many of those airplanes are today useless. It was not until a year later, in May of this year, that we released a small amount of ammunition, meanwhile allowing the half billion credit previously earmarked for China by the Export-Import Bank to lapse. Recent allocations of ammunition and aircraft are grossly inadequate. The miracle is that, beset on every hand, the Chinese still fight on in the dim hope that our country will finally redeem its pledges before it is altogether too late.

The tragic result of our Government's ineptitude and lack of policy in Asia has been to allow the Soviets and their allies to make rapid progress in liquidating their problems there and completing their expansion in the Orient so as to be free to turn all their effort to the subjugation of Europe.

Desperate as the situation is, it is still not too late. The tremendous resiliency, the hard work, the great loyalty of the Chinese people can still be mobilized if aid is extended. The total omission of any reference to China in the President's call for emergency foreign aid, is an error which can still be repaired. Any one of several administrative actions which are immediately available could partially repair the damage. The recent, faltering steps must be accelerated. They must be integrated into a comprehensive and effective program.

Insertion of even modest aid in the bills now in preparation by the Congress would help materially. But if at least some aid is not given immediately by these bills, the moral effect upon our Chinese friends will be terrible beyond contemplation.

Now, let me make myself perfectly clear. I know very well that there is no simple solution to this problem. But I can neither understand nor excuse a government which is too timid or befuddled to attempt a solution. I urge most earnestly that however hard a job it will be to shape a policy and carry it out, it will be no harder than the war we fought, among other objectives, for the preservation of a free China. With a tiny fraction of the effort we expended in the Pacific theater of the war we could provide the resources and skills which we might reasonably hope would save China—would save one-fifth of the whole world for the growth of the institution of human freedom.

I believe that sooner or later our Government will discover its errors and will inevitably, in the interest of the American people, return to our traditional policy of backing a free China. The only question is whether we will do it soon enough—while there is still a government to support and while it can be done without tremendous cost. Events are moving swiftly. Last August the Chinese dollar stood at forty thousand for one American dollar. The ensuing decline in three short months has carried it down to one hundred thousand for one American dollar. The combination of Communist successes and loss of hope in America has accelerated tragedy for the whole Chinese people. The Chinese know that without American help they are doomed to become victims of a Soviet scheme of world conquest. And that knowledge is reflected in the events from day to day.

So much of China is mountain and desert that pressure of population on the arable land is intense. Eighty percent of the Chinese are farmers and live for the most part at a subsistence minimum. But perhaps because of this only the strongest have survived, and the Chinese can work harder on less food than any other people in the world. The average Chinese exists on the equivalent of about 40 American dollars a year. At the same time they preserve a level of courtesy and tolerance in human relations which might well be an example to the rest of the world.

In the long Japanese war most of China's industrial regions, great cities, and banking centers were occupied. The nation could maintain only a small portion of the cost of war by taxes or the sale of bonds. The result was that the war was financed to the extent of about 70 percent by the issuance of paper currency. The cost of living, expressed in Chinese dollars, was recently 30,000 times what it was in 1937.

The whole Chinese Government is maintained at a total cost at the current rate of international exchange of 1,000,000,000 United States dollars a year, including the cost of its current war, which accounts for 70 to 80 percent of the budget. In this condition of economic prostration it is obvious

that the Government is unable to purchase in the world markets any substantial amount of essential supplies.

It is equally obvious that a comparatively small expenditure by our country should produce enormous results. Even seventy-five to one hundred million dollars in the present bill before the Congress for emergency aid to China would change the entire situation psychologically.

The longer-term program should be worked out by competent experts on the spot. It has been estimated that an annual program as small as $250,000,000 a year for 3 or 4 years would provide the necessary imports to maintain China's economic life while she wages the struggle against her Communist enemies. A smaller sum in addition should meet all needs for purchase of military equipment and service of supply.

There are in existence at this moment surplus supplies which would provide a large proportion of the material immediately necessary to the Chinese armies. These supplies are actually in the Pacific now—situated in the Philippines, Guam, Okinawa, and Japan. Only an order is needed from Washington and they could be shipped immediately to armies where men are dying for lack of them.

In short, sums of money are needed which would be comparatively modest additions to our foreign air program. The supplies in the Pacific are presently available. The military personnel urgently needed to provide technical advice to the Chinese armies is to a large extent on the spot and needs only orders to go to work. We need a man to run the job in China who not only knows China but who has the broad, economic, social, and governmental training so essential to a task of this magnitude. Above all, we need an honest about-face which will produce immediate administrative action to restore the honor of the American Republic in keeping its commitments and in keeping one-fifth of the world in the area of human freedom.

This program is essential, in my judgment, to the safety of the American Republic. It is a traditional and vital part of our American policy. With vigor and competence there is reason to believe we can succeed. I earnestly hope that our Government will speedily move to keep the faith by action which will bring cheer to free men everywhere and will stand as a bulwark of American liberty and independence in all the years to come.

Letter of Mr. Otto Dieckmann, of Cincinnati, Ohio

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert a letter from Mr. Otto Dieckmann, chemist, of Cincinnati, Ohio. The clipping referred to advocated the inclusion of tobacco as incentive goods under the Marshall plan:

CINCINNATI, OHIO, *November 26, 1947.*
HON. BRENT SPENCE,
Representative from Kentucky,
Washington, D. C.

DEAR MR. SPENCE: The attached clipping is from the Cincinnati Times Star and with your permission I wish to comment on this and give you some information about the Germans as I have known them.

I was born and raised in Cincinnati and studied chemistry in Germany, spring 1895 to fall 1898. Many of the men with whom I studied became outstanding industrialists and others noted men of science, as for instance Prof. Dr. Otto Hahn, now of Goettingen formerly of Dalem (Berlin), the man who split the atom for the Germans. I maintained correspondence (off and on) with more than 80 men and more recently only 32.

I may say that not one single one of these men ever fell for that ideological baloney called nazism.

In the course of more recent correspondence practically all are asking me to send them some tobacco, notably cigarettes. I have always complied, but not since sending of cigarettes has become a verboten item.

I would very much like to continue sending cigarettes to these men and am confident that the few I send would be used and not find their way into the black market. But I wish to do this legally and not in an underhanded manner.

It is my opinion that such acts as sending tobacco will do more to build up good-will and a desire for collaboration with the western countries than the money sent under the Marshall plan. All of these people have been men of substance and were accustomed to luxuries, so that the least we can do is to let them have their tobacco.

In closing I trust that some arrangement can be worked out to at least permit us to send our friends a smoke that they enjoy.

Very truly yours,

OTTO DIECKMANN.

Postage on Relief Parcels

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. KEATING. Mr. Speaker, one factor severely militating against voluntary assistance to foreign nationals by their relatives and friends in this country is the high postage cost on relief parcels. Certainly individual assistance and aid from privately financed agencies should be utilized to the greatest extent possible in the effort to relieve the stricken peoples of other countries before, or at least contemporaneously with any call which may be made upon the already overburdened and harassed taxpayers, now nearly every citizen in the Nation, to finance relief measures through further deductions from pay envelopes. Probably private individuals and agencies cannot do a complete job, but certainly they should receive full cooperation from their Government in their worthy efforts.

Time and again it has been communicated to me by constituents of mine who have relatives and friends in Europe that they often find themselves unable financially to do all they would like to do for their brothers and sisters across the sea because of the exceedingly high postal rates on shipments of merchandise. Oftentimes, they tell me, the postage exceeds the actual value of the package itself. I am informed that the rate is 14 cents a pound, which means that they must pay $1.40 for a 10-pound package, or $2.80 for a 20-pound package. For a family of modest income, much as they might want to share their bounty with the less fortunate, this large postal charge is a definite deterrent.

Title 5, section 372 of the United States Code reads as follows:

> The Postmaster General, by and with the advice and consent of the President, * * * may reduce or increase the rates of postage or other charges on mail matter conveyed between the United States and foreign countries.

Under existing law, the Postmaster General, therefore, has clear authority to decrease, temporarily, postage charges on foreign shipments of relief supplies.

Accordingly, last month I took this matter up with President Truman, emphatically urging that immediate steps be taken to effect a substantial reduction in the postal charges for shipment of goods abroad, particularly foodstuffs, clothing, medical supplies, and necessaries. The President promptly referred the matter to the Postmaster General, who has advised me that, while he appreciates the urgent need and realizes the hardship imposed upon many mailers in sending articles under the existing schedule of parcel-post rates, he regrets that no reduction in postage charges can be made at this time, due to general increased operating costs in the Post Office Department. He has, however, agreed to study the rates further "for the purpose of determining if the present rates are equitable or if any change is necessary in connection therewith."

In the meantime, however, and in anticipation of a possible final adverse decision from the Postmaster General, it seems to me that Congress might well adopt appropriate legislation on this subject. To that end I am today introducing a bill providing for a reduction by one-half in the present rates of postage charged on parcel post relief packages sent to addressees in foreign countries. Rather than to attempt to restrict the items covered by this measure solely to the category of food, clothing, medical supplies, and other necessaries, it has seemed preferable administratively to provide that the Postmaster General may define by appropriate regulations just what is meant by "relief packages."

This bill necessarily carries authorization for an appropriation to the Post Office Department of an amount sufficient to make up the deficit arising from such a reduction in postal rates. Certainly from a purely fiscal standpoint, this relatively minor contribution is the most economical manner of extending aid and would materially decrease the requirements of many foreign nations for assistance from our own public treasury. In addition, it has the merit of granting substantial encouragement to the extension of voluntary help which is in the finest American tradition.

I am conscious of the fact that bills have been offered at this session to eliminate entirely any charge for postage on foreign relief shipments. I am not intending by this action to express any opposition to the worthy objectives of the sponsors of such legislation. On the contrary, I should be happy to support it. Realizing, however, the practical as-

pects of the problem and feeling that it is highly improbable that such measures would receive favorable Committee and House action, I suggest as an alternative, this plan for a 50 percent reduction, at least temporarily, in the postage charges on such shipments. I am confident that those who send goods abroad would be happy to defray a part of the cost, provided this governmental assistance might be rendered.

Favorable action on this legislation would go far toward relieving much distress and suffering overseas and would be enthusiastically welcomed by the millions of American families who by reason of family or national origin ties, desire to extend help to their stricken relatives and friends across the seas in a measure far greater than they now find themselves able to do under existing postage charges.

Congress in Action

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. LECOMPTE. Mr. Speaker, I find in one of the small but splendid weekly papers of Iowa, the Gazette, published by Mr. Alvin B. Jones at Fremont, Iowa, a description of Congress in action by George S. Benson, the president of Harding College at Searcy, Ark. I do not recall that I have ever met President Benson, nor have I any knowledge of this college, but the World Almanac states that the college was founded in 1925 and has a student body of approximately 400. President Benson, it appears, recently visited Congress and observed the proceedings and has written an interesting analysis of our legislative processes and, incidentally, has given his conclusions about representative government. I commend the reading of this article to every Member of Congress.

Under leave to extend my remarks, I include the article from the Fremont, Iowa, Gazette of November 22, 1947:

LOOKING AHEAD

(By George S. Benson, president, Harding College, Searcy, Ark.)

CONGRESS IN ACTION

Spectators at a recent Congressional inquiry guffawed. I hope that some of them got the point. A movie actor had just remarked, dead-pan: "I've heard people say that we would have a more efficient government without Congress." A very serious point was contained in that statement, which apparently struck spectators as a humorous jibe at lawmakers, present and not present.

It is somewhat of an American custom to poke fun at our elected officials. Some steam is released that way, like the blowing-off of a safety valve. That's all right. But that any sane American to suggest doing away with Congress is no laughing matter. You might as well say that we ought to give up our democratic way of life, in the interest of greater efficiency. One would be equivalent to the other. But who wants an efficient tyranny?

OUR SAFEGUARD

I am going to say that I appreciate Congress. I am not ashamed to say it. Moreover, I am concerned that there are those who fail to recognize the essential dignity and worth of this branch of our Government. Out of the welter of political turmoil in Washington, I think there is still room for a healthy respect for what our Congress does. And we must never forget that Congress represents the will of the people, of the majority. Congress is a mighty safeguard.

When any congressional session is over, try looking back over the record. It will usually surprise you how much was accomplished. Especially so, if you are one of those Americans who like to chant: "Why, oh why, doesn't Congress do something?" When the recent Congress adjourned in late July, final action had been taken on at least 17 major issues. This was an array of achievements, when you recall that this Congress was the first new Congress following the war.

ANOTHER LOBBY

Action was taken on Presidential tenure and succession, labor-management relations, portal-to-portal pay, excise taxes, National Science Foundation, continuation of the RFC and the CCC, crop insurance, continuation of certain subsidies, Army-Navy unification, cashing of terminal-leave bonds, executive reorganization, continuation of first-class postal rates, rent control, and termination of existing credit regulations.

This Congress was also economy minded. It should be credited with saving between two and three billion dollars for taxpayers. This Congress actually did more to economize by cutting down Federal expenditures than has any Congress in at least 15 years. There was stubborn resistance to every attempt to economize. This time one of the most active and persistent lobbies was the full-grown bureaucracy of the Federal Government.

A THANKLESS TASK

Considering the fact that the American people already spend more for government—local, State, and national—than they spend for food, we should be grateful to an economy-minded Congress. For Congress saved money for taxpayers, despite widespread "scare" tactics of a powerful and well-mobilized bureaucracy. Realizing the resistance to reductions of expenditures, we should be happy that we have a Congress that stands for economy.

Fateful problems will face this same Congress in its special session and the regular session to follow. Our sincere commendation should go to legislators for their efforts and for their sincere public service. Their thankless but necessary persistence will remain necessary as long as we maintain this republic.

The Threat of Inflation

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. DOLLIVER. Mr. Speaker, the American public is greatly concerned about the threat of inflation. As evidence of this concern, I have received numerous communications from my constituents who are very much alarmed by the actions of some of our governmental agencies accentuating the inflationary trend. I ask that one of these letters, typical of others, be included in my remarks. The letter follows:

COMMERCIAL SAVINGS BANK,
Carroll, Iowa, November 18, 1947.

Hon. JAMES DOLLIVER,
House of Representatives,
Washington, D. C.

DEAR JIM: I heard Senator TAFT'S speech over the radio last night regarding rationing and inflation and was very much impressed. However, in my judgment, the Government and Congress can do a lot toward keeping down inflation if they will only take off some of the free, easy credit systems that they have promoted during the Roosevelt administration and the New Deal in order to try to prime the pump. The pump has now been primed and is flowing gushers, but there doesn't seem to be a thing done by the Government to restrict and hold down the easy credit and low interest that now prevails.

An example of that just happened at my desk this morning. An insulation concern operating from Omaha is in Carroll this morning selling insulation to home owners on a long-term easy payment set-up. The party that has just purchased a $750 insulation job is a mechanic whose credit, to my knowledge over the past years, has been very meager and small due to his small income. Yet under the FHA set-up in which these loans are insured, the finance company finances a $750 insulation job where this party has been getting along for years without this additional insulation. Were it not that the government has this plan insuring this insulation, I doubt if anyone would venture a $750 loan for this project. I know we will not and we are not even going to finance the set-up at all. This is just one sample of what is happening because of the Government's efforts to produce jobs and furnish easy credit terms over a long period of time. The salesman goes out and sells the job with the proposition that it costs the customer a little over $20 a month to pay for the work, and as long as they can get these easy terms and long-time credit, they are easily sold.

Now that is just one $750 inflation act which is a concrete example of why we cannot hope to control the spending until the Government will revise some of those old programs that were inaugurated to prime the pump. I believe the should all be discarded now and if the occasion arises again that we need them, they can easily be adopted again. It is my guess that with these high-powered salesmen in this community, they will probably sell eight to ten thousand dollars' worth of insulation jobs that could well afford to wait until conditions become a little more normal.

I sincerely hope that somebody in the Congress will make an investigation along this line and I firmly believe it will help as much to curb the inflationary spiral as anything we can do at the present time.

Sincerely yours,

R. M. MOEHN,
President.

The Federal Tax Outlook

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, November 28, 1947

Mr. KNUTSON. Mr. Speaker, pursuant to permission granted me to extend my remarks in the RECORD, I desire to insert an address delivered before the

American Institute of Accountants on November 6 by Dr. Roswell Magill, former Under Secretary of the Treasury, entitled "The Federal Tax Outlook," which I hope will be read by every Member of Congress. The address follows:

To speak with assurance about problems of domestic tax policy these days involves a degree of omniscience that few of us possess. There was a time when a speech on tax policy could be introduced merely by a paragraph on Federal expenditures. That paragraph stated that if expenditures could be brought under control, particularly WPA expenditures, and the Federal Budget balanced, then taxes could be revised and reduced. It is still true that if expenditures could be brought under control, taxes could be greatly reduced, but the problem of expenditures has become much more complicated. Today the demand for relief expenditures comes not from our own citizens, but from across both oceans, and it is fantastically greater in amount than ever Harry Hopkins dreamed. In addition, every day's events witness the pressures of many other insoluble problems that vitally affect the American budget and tax picture. How much of an Army and Navy can we and must we maintain? How much can we and should we pare down the Federal debt? How long can we expect the present unprecedented levels of employment and national income to continue?

A tax lawyer is no expert on world politics. He strains his capacities when he discusses tax economics. Yet some premises about items in the budget have to be laid down if questions of tax policy are to be discussed at all. I shall make mine explicit, even though I cannot debate them here with you this morning.

Actual Federal expenditures for 1947 were $42,500,000,000, and we wound up the year with a net surplus of $753,000,000, about the same as the surplus in 1929 and 1930, the last preceding fiscal years in which the budget was balanced. The President recommended budgetary expenditures of $37,500,000,000 for 1948, and retention of present taxes, which he estimated would produce (with other miscellaneous receipts) $1,300,000,000 more than enough to balance the budget. The Congress trimmed the budgetary expenditures somewhat; indeed, the Appropriations Committee of the House did a much more careful and thoughtful job of analyzing proposed expenditures by each department and bureau than it has been given credit for. Nevertheless, the President has recently stated that expenditures in the current fiscal year will probably be around $37,000,000,000. Receipts may total $42,000,000,000, leaving around $5,000,000,000 for debt reduction or tax reduction. The President includes $3,600,000,000 for "international affairs and finance."

It is evident that if Federal expenditures can be further reduced, as they certainly should be, money will be available for such other purposes as debt reduction or tax reduction. We must not let ourselves become complacent about present Federal budget levels. Not only are expenditures four or five times what they were in the thirties (and the thirties was not a period notable for rigid economy), they are far above what fiscal students have estimated to be necessary.

Several studies came out a few years ago, forecasting Federal budgets of $15,000,000,000 to $22,000,000,000, with $18,000,000,000 as a general average. Tremendous production, full employment, and unexpectedly great national income have combined to make present Federal budgets bearable, but can we count on all three factors to continue for the indefinite future? I have not seen an investment advisor who thinks so. Therefore, we should be well advised to continue to trim Federal expenditures all we can, to get the budget down nearer to a level we can afford in an average year, not merely in an unusually prosperous one. A $20,000,000,000 to $25,000,000,000 budget is certainly possible for a normal year, without undue curtailment of proper Government functions.

The Federal budgetary expenditures present to a layman an immensely complicated maze. If ever there is justification for a citizen leaving the subject to the experts, there is here. Yet it must be evident that we must not leave the determination of the size of the budget merely to Federal bureau chiefs. Any bureau chief shares the natural human desire to make his bureau bigger and better, to improve his staff, to advance into new fields. Therefore, he just must have more money. We all witnessed a demonstration last spring of the intense unwillingness of the Federal bureaucracy to cut expenditures, of the propagandist appeals that can so readily be developed against any cuts. We are, therefore, very fortunate in having vigilant congressional appropriations committees, well-staffed to search out and to find the soft spots in departmental budgets. As citizens and as professional guardians of the profit and loss statement, we owe the country the duty of assisting intelligent supervision of the budget in every way we can, and of supporting efforts to bring it under control.

We need not despair of the practicality of cutting the total of expenditures. We need a strong Army and Navy, certainly; and we want vigorous and effective Government departments. Experts tell us that we can have them within a $20,000,000,000 to $25,000,000,000 budget. Therefore, let us strive to that end, for if we can attain it, crushing tax burdens can be eliminated. On the other hand, if we cannot get our expenditures under real control, the prospect for tax reduction, for a continuation of present business activity, for economic health here and abroad, is not bright. Finally, one way to get expenditures down is to reduce taxes so that the money is not there asking to be spent.

I

Three items—debt reduction, tax reduction, and expenditures abroad—offer the major competing claims to any excess of Federal receipts over expenditures. My premise is that a budgetary surplus should be divided among the three; that the excess of receipts should not be devoted solely to one or even two of the three.

Humanitarian motives combine with good judgment in favor of help to European countries which will do their best to help themselves. We certainly do not wish to play Santa Claus to the world, but we do want to preserve, if we can, a democratic civilization in which we may hope to live at peace. If widespread starvation in Europe is to be avoided and if its economy is to be revived and restored, aid from us appears to be essential. With the best will in the world, Europe cannot restore itself to physical and economic health.

We certainly have our own domestic problems to consider, as well as the world's. We are one of the few remaining countries in which a free private enterprise system persists. Our domestic health, as well as our aid to foreign countries, depends entirely upon the vigor and vitality of that productive system. We must continue to produce and produce mightily, for it is goods and not merely dollars that are in great demand today.

Since taxes always operate as a brake upon the economy, and our individual taxes remain at almost the war peak, it is especially necessary both to reduce the over-all tax burden, and to remove the tax injustices that have grown up through the years by the rigid and rigorous application of the revenue laws. We cannot expect men indefinitely to work harder and to produce more, when the Government gets more than they do out of their additional earnings. We need a more favorable tax climate in the interests both of satisfactory production and of satisfactory Treasury receipts.

Finally, the debt ought to be pared down a few billions. We ought not, I think, to devote excess revenues merely to debt reduction, and to refuse to reduce individual income taxes at all. Paring down the debt alone will not remove any brakes on the economy. It will not cause men to produce more, nor will it increase anyone's incentives. Moreover, in the past, we have found that an intelligent reduction of tax rates may result in more revenue than the previous high rates did. It is quite likely that the same result would be produced today. We will have the revenue to pay off enough of the debt to demonstrate that we regard the debt as a real obligation which we mean to discharge; and also to give all sorts and conditions of workingmen the incentive of more pay to take home after taxes.

II

If you have followed me thus far, you can join with me in filling in the details of my tax proposals for the Federal Government. Whether or not a tax program of any kind, or such a tax program as you and I regard as wise, can be put through in a Presidential election year is a nice question. Certainly none of us would choose such a year as the best time for calm consideration of individual income tax rates and exemptions, nor of technical amendments. Nevertheless, there is clearly a strong will in Congress to do the job in 1948. Since revenue revision is badly needed, you and I ought to do what we can as citizens to bring it about.

It is likely that there will be two revenue bills in 1948, one dealing primarily with rates and exemptions; one primarily with amendments to the tax structure to remove injustices and restrictions upon the proper functioning of our economy. Probably tax reduction will largely be limited to the individual income tax, plus perhaps some of the excises. The corporation will only benefit from the adjustments to the tax structure. Such a program is justified because corporations have had a major tax reduction since the war, the repeal of the excess-profits tax, and individuals have not. The tax reduction bill will, of course, have more political repercussions than the revision of the code; and I enter with great misgivings into this field of political prophecy.

H. R. 1 and H. R. 3950, both vetoed by the President last spring, were attempts to reduce the tax burden on individuals by a more or less flat percentage cut in rates across the board. The reduction in dollars for the big income taxpayer was thus much greater than the reduction in dollars for the small taxpayer, but only because the former started off with a much heavier tax burden than the latter.

An alternative method of income-tax reduction would be an increase in exemptions. The effect of such a procedure would be first to eliminate millions of taxpayers from the tax rolls, and thus from direct tax responsibility to the Government. Second, the revenue cost of even a slight increase in exemptions is great, for all taxpayers are affected.

With Government costs what they are now and are going to be for some time to come, we cannot afford to reduce income taxes much. Moreover, since the great bulk of the income stream flows to taxpayers with net incomes under $5,000, we cannot afford to increase exemptions much, at least if the income tax is to continue to be the mainstay of the Federal revenue system. In a democracy all able-bodied citizens may be called upon to fight to support and maintain our Government in time of war. Should not all citizens with incomes, at least above a minimum subsistence level, pay direct taxes to support and maintain our Government in times of peace?

The fact is that exemptions have been severely reduced and rates severely raised dur-

ing the war years since 1939. Previously, during the thirties, exemptions were not much changed, but rates were steadily raised. Hence, in beginning an approach to a more normal peacetime tax system, it would seem just and wise to raise exemptions a little and to reduce rates a little.

In my judgment, the whole surtax rate schedule should be revised, if we still believe in the old American dream that a country boy can work his way to the top, and that he should be encouraged to do so. The present scale is so steeply graduated and the rates are so high that added work and accomplishment are not much rewarded. The surtax rates on the higher incomes produce little revenue, but they do discourage risk taking and endeavors to advance in the business world. In general, there is much to be said for the proposition that, in normal times, a man should not be asked to do more than share his income equally with the Government. A thorough revision of surtax rates perhaps cannot be done in 1948, but surely a start can be made by some percentage reduction of surtax rates.

Another plan to increase the equity of the individual income tax is to permit husbands and wives in the non-community-property States as well as in the community-property States to compute their respective taxes by first dividing their total incomes evenly between themselves. Surely there is no sufficient reason for taxing a man earning $50,000 in California or Texas $6,194 less than a man with the same income in Illinois. With tax rates so high, injustices of this sort are intolerable, and there is every reason to believe that they will be remedied next year. Since the dollar benefit of the change would flow mainly to persons earning incomes in excess of $5,000, the adoption of such a plan will doubtless be accompanied by a reduction in rates or an increase in exemptions that will be beneficial primarily to persons with incomes under $5,000.

III

So much for the income-tax-reduction bill, which may be the first revenue act of 1948. The second bill, in which we are more interested as tax practitioners, may be the bill to improve the structure of the revenue act, to eliminate injustices, to enable business and the tax administration to function more smoothly. A vast number of amendments of this sort have been proposed by individuals and professional organizations. They have been widely discussed and thereby perfected; and a large measure of agreement upon them has been reached by the proponents, the staff of the joint committee, and the Treasury. The great problem is to consider, sift out, draft, and enact these so-called technical amendments. There are dozens and even hundreds of them. Many of them present debatable questions of policy. Many of them are hard to formulate.

The Committee on Ways and Means and its staff consequently confronted a very formidable task. It decided to accept it and perform it, not to lay it over for the indefinite future. Hearings have been going on for months. Volumes of testimony and of briefs have been submitted. The committee does not lack for data, but the job of sorting out proposals and drafting the actual revenue bill is a staggering one. The committee and the staff have done valiant work to accomplish it.

Last June Chairman KNUTSON, Congressman DOUGHTON, senior Democratic member, and the committee asked a group of 10 men to help out. That group, called the Special Tax Study Committee, has just made its report to the Committee on Ways and Means. I shall not go over all the detailed recommendations with you here this morning, for I hope you will each read them for yourselves. Let me emphasize rather our general purposes.

First, the committee decided to make no recommendations on such major policy questions as individual income-tax rates and exemptions. The Committee on Ways and Means and the Congress are charged with the duty of determining national policy on these matters. The relevant data is readily available, and the committee and Congress are better informed than we are on the considerations pro and con.

Our committee thought we could perform more useful service by reviewing and reporting upon major structural amendments. We have made recommendations on about 50 major topics, many of them with several subdivisions. Our basic purposes were largely twofold. The Treasury and, to a degree, the whole world, is greatly dependent upon the active functioning of our economy. We need to produce more than we have ever done before. Therefore, we need to eliminate those provisions of the tax law which tend to make it difficult for business to function at its best. Our recommendations relative to depreciation, section 102, and pension and stock-purchase plans are examples of our attempt to carry out this purpose. Second, we wanted to eliminate serious inequities and injustices. The tax load will continue heavy for a long time to come. Therefore we must use our best endeavors to distribute it fairly. So we have made recommendations to improve the taxation of family income, to eliminate the double tax on corporate income distributed as dividends, and to ease the tax on small corporations. We hope that another result of our recommendations will be to reduce controversies with the Treasury and litigation in the courts.

Many difficult problems, both of policy and of draftsmanship, are presented by any project to revise the revenue laws. There are several possible ways, for example, to alleviate or eliminate the double tax on corporate dividends. Which shall be adopted? One is a variation of the old undistributed-profits tax—let the corporation deduct dividend distributions as well as interest payments, and itself pay a tax only on such income as it retains. Another is the British scheme—treat the tax paid by the corporation as a payment on behalf of the stockholder, withheld at the source. Thus the amount of the dividend which the shareholder must return is the amount he received plus his portion of the income tax paid by the corporation.

The simpler plan which our committee recommended harks back to that embodied in the revenue laws from 1913 to 1936: let the stockholder take credit at the initial rate of normal tax and surtax for the tax the corporation has paid. At present this would mean a 19-percent credit for a 38-percent tax. The ultimate goal of this plan would be equivalency between the starting rate of tax applicable to the individual and that applicable to the corporation. Some day we may reach that utopia. In the meantime, the credit is reasonably fair and is more intelligible and practical than either of the other two plans.

Much of the trouble the practitioner has confronted in recent years is really due to court decisions that seem unreasonable and, at any rate, are very hard to live with. Why should a foreclosing mortgagee be taxable upon interest he didn't receive, merely because he bid the amount of principal and interest for the property? He made the bid of interest because it cost him nothing, and in all probability he really had a loss, not a realization of income, on the whole deal. Why should the essential elements of a recapitalization or a reorganization be shrouded with so much judicial mystery, when it is plain that Congress intended to and did embody in the law the complete catalog of specific technical requirements for a reorganization? When a sale of property is in fact made by corporate stockholders personally after a liquidation, why should the sale be taxed as having been made in substance by the corporation? How can anyone know what "substance" is, when we know that it is not fact?

Our committee has tried to correct each of these difficulties. The last two presented serious problems for the draftsmen. We have recommended that Congress state expressly that the conditions, qualifications, and requirements set forth in section 112 are all that are to be applied, unless the Commissioner shall prove, by a clear preponderance of the evidence, that the principal purpose of the plan of reorganization was tax avoidance. We realize that the proviso perpetuates uncertainly, but could we reasonably give the Commissioner less? We have further recommended that the gain on a sale of corporate property, whether preceded or followed by a liquidation, should be subjected to only one capital gains tax, thereby eliminating entirely the materiality of the issues of fact which the courts have been trying not very happily to resolve. We have great hopes for both changes.

The amendments I have outlined, plus the 50 others we have recommended to the trust provisions, the pension provisions, the estate and gift tax sections, and so on, do not involve much revenue. The ordinary layman would not regard them as major matters. Yet you and I know that the smooth functioning of the revenue laws; indeed their utility and efficiency in raising billions of dollars fairly, depends upon the justness and decent operation of just such sections as these. Our revenue system could break down because of recognized overcomplexity and inequity; and it is approaching unpleasantly close to that situation today. The Committee on Ways and Means deserves a very good mark for recognizing the need of a thoroughgoing revision of the code, and the possible utility of a citizens' advisory committee to help out. I know you join me in hoping that the effort for sound basic reform of the revenue laws will actually be successful.

One word more. Some of our recommendations go a long way toward sustaining the taxpayer's accounting practices and business decisions, unless the Commissioner proves him wrong. Thus, the burden of showing that surplus is improperly accumulated for section 102 purposes is put on the Commissioner, as well as the burden of showing that the taxpayer's method and rate of depreciation are erroneous. Both provisions reverse the former presumptions. These provisions will only work well if taxpayers in general make honest, defensible business decisions. Our committee has based its work on the premise that the great bulk of taxpayers are honest businessmen. If we are shown to be wrong, the country will be in for another decade of tax evasion investigations, witch hunting, and loophole closing. You public accountants can take a great part in seeing that business plays the game fairly according to the rules.

The perfection of the revenue laws is probably a never-ending task. Many wise men have worked at it—men like Cordell Hull and George May and Arthur Ballantine and A. W. Gregg and Randolph Paul, to name only a few—and yet so much remains to be done. Accountants and lawyers are key men in the process, for we see the system in action every day, and we know what the actual impact of each section is. Our committee earnestly hopes that our report will appeal to such men as yourselves, that you will find its recommendations technically sound, and that you will work for its adoption. The code will not be perfect, even if all our ideas are embodied in it. But if you agree with us that it will be greatly improved thereby, and will make your endorsement known, we ought to be able to make a long step forward in 1948.

Alaska—Unfortified Bastion

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to call the attention of the House to an excellent article about Alaska which appeared in the New York Herald Tribune for December 1. Entitled "Alaska—a Bastion Unfortified, and an Easy Pearl Harbor No. 2" it was written by Wilbur Forrest, assistant editor of the Herald Tribune:

ALASKA—A BASTION UNFORTIFIED, AND AN EASY PEARL HARBOR NO. 2—CIVILIANS AND THE MILITARY FEAR CONGRESS' FUNDS WILL BE TOO LITTLE AND TOO LATE; TERRITORY AS IT IS TODAY WOULD TOPPLE IN INVASION

(By Wilbur Forrest)

ANCHORAGE, ALASKA.—The current debate in Congress over funds for European rehabilitation has a peculiarly ironic interest in Alaska today. While Alaskans appreciate the dire humanitarian need of foreign help from the United States, they fervently hope that the intimate, urgent, and vital problem of defending America is not to be wittingly neglected.

People here in Alaska—both civil and military—know all too well that Alaska is at this moment a land of potential Pearl Harbors as well as a prospective victim of a too-little-and-too-late policy of penurious congressional appropriations for defense.

The truth is that should an effective enemy attack Alaska tomorrow this great bastion of North American defense would be lost to the United States because Congress is not providing the funds for its adequate protection. An enemy would simply use our installations and airfields for further invasion southward.

AIR-BORNE INVASION

Any foreign incursion into Alaska would be made by air-borne troops armed to the teeth. They would come from across the Bering Strait, no great air distance either from Seward, the principal port of entry, or from Anchorage and Fairbanks, nerve centers of the American Alaskan Military Establishment.

At these places and elsewhere in Alaska American service troops are withstanding minus-zero temperatures and unaccustomed weather conditions to build up facilities which one day may accommodate American combat forces capable of fending off air-borne enemies and aviation fighter units fast and powerful enough to catch an enemy before he arrives. In Alaska today, however, there are neither combat troops nor air fighters in numbers worthy of mention. Moreover, the radar screen which our forces desperately need around the Alaskan periphery awaits a comparatively piddling appropriation in Washington of some $35,000,000.

The Bering Strait is a hostile barrier between the United States and Russia, a sort of No Man's Land over which even American Eskimos are barred. Russian and American commanders remain on their respective sides and have utterly no contact of a social or official nature. American aircraft are forbidden to fly over Russian territory on the almost certain penalty of being shot down.

It is the thinking of so many Alaskans with whom I have talked and that of our conscientious and self-sacrificing military people of the air, ground, and sea here in Alaska—that if the United States Government and the American people do not want to defend Alaska adequately as a matter of national security, then we should pull out and cease making gestures here in the far north. It will require a generation to bring Alaska to a state of real defense at the present rate of doles from annual budgets. Much can happen and may happen in a fraction of that time.

THE ISSUE OF STATEHOOD

Alaskans believe that statehood is closely tied with a military and air defense of Alaska. It is probably true, as claimed here, that 98 percent of Alaskans are for statehood and that the opposition springs solely from vested interests which would deplore taxation for roads, railroads, and other betterments Alaska so desperately needs if her large territory shall ever be well populated and self-supporting, and not a stepchild of the Department of the Interior.

If Alaska is to be defended, roads and railways are of paramount military importance. The present Alaska Railroad is a tottering 385-mile span from Seward to Anchorage and from Anchorage to Fairbanks. In favorable weather it can haul an inconsequential 1,400 tons daily. It was submerged inertly in snow for 21 days last winter. Almost alone on land it serves the mainland of Alaska, an area one-fifth the size of the United States.

The mission of our forces in Alaska is:

1. Air defense.
2. Experimental and field testing operations under Arctic and sub-Arctic conditions.
3. Training of fighter, bomber, and other aircraft personnel under conditions not found elsewhere.

Unfortunately, the lack of facilities has made our No. 1 objective rank third. Our No. 3 objective also may be said to have been hamstrung by lack of facilities to train more than one bomber group and one fighter group during the year. Lack of facilities has been caused primarily by a dearth of American taxpayer funds which, in the view of many Alaskans, are going to Europe and everywhere except to the frontier of American defense—Alaska.

Other reasons holding back Alaskan defenses are, of course, weather, the short construction season, difficulties of getting materials into the interior, and a short labor market in which civilian workers know how to exact time and a half and double time for overtime.

URQUHART IN COMMAND

At Point Barrow recently I met Lt. Comdr. J. B. Urquhart, United States Navy, of Columbia, S. C., commanding naval installations there. The most poorly paid Eskimo dog team driver or caterpillar train worker receives about $70 weekly. Urquhart's pay is inferior. Of course, Urquhart has a future which excels that of the Eskimo.

Alaska is commanded by Lt. Gen. Nathan D. Twining, a top Air Force general who under the new services merger is Alaskan and Aleutian boss of Air, Army, and Navy, and all of the technical branches. Immediately in command of the Air is Maj. Gen. J. H. Atkinson, chief of the Alaskan Air Command, which is the operational and tactical element of Alaskan defenses.

His responsibilities are:

1. Defend Alaska and Alaskan approaches to the United States.
2. Conduct aerial reconnaissance and surveillance of Alaskan areas and approaches thereto.
3. Deny any possible aggressor bases in the Alaskan area from which attacks could be launched and supported.
4. Establish and maintain a continuous training program for tactical forces in Alaska and the Aleutians.

General Atkinson has the obligation to defend the principal naval operating base in the Aleutians, now under Rear Adm. A. E. Montgomery, commanding the Alaskan sea frontier and the Seventeenth Naval District. General Atkinson, whose Air Force record is particularly distinguished, will do his best with what Congress and the American people give him. He must also defend the Anchorage and Fairbanks areas in the Alaskan interior.

Our commanders in Alaska are brave men indeed to expect what they may be obliged to face from nearby Asia, realizing what they have to face it with.

The recent testimony of General Spaatz, Air Force chief of staff, before the President's Air Policy Commission in Washington, gave emphasis to this Alaskan situation when he quoted intelligence reports of a 14,000-plane Russian Air Force of which possibly 1,000 are bombers of the B-29 type and hundreds are of the fast, jet-fighter type.

Alaskans do not think that it is warmongering to talk about a probable attack on Alaska from across the top of the world or over the Bering Strait. They recall too well that we did not fortify Guam for fear that it would upset the delicate feelings of the Japanese. In this day and age, when Russia has neglected nothing to vilify American acts and falsify American intentions—an attitude unprecedented in the modern history of allied nations—then Alaskans believe they are justified in bringing their sentiments out into the open.

Your Stake in the United Nations

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. KEATING. Mr. Speaker, throughout the Nation local branches of the American Association for the United Nations are doing an outstanding job in acquainting the public with aims, objectives, and accomplishments of the only body in the world today organized to promote world security and peace.

Numerically the largest, and probably the most active and effective of these units is located in Rochester, N. Y., a city which is always found in the forefront of constructive, worthwhile efforts. The directorate of the local association is composed of leading educators, professional men and women, labor leaders, industrialists, club women, clergymen, and other citizens of the community.

They have performed a public service of incalculable value in bringing to every fireside a better understanding of the way the machinery of the United Nations operates and a clearer realization that the best chance of achieving and maintaining a just and enduring peace lies in enthusiastic support of a world organization.

The most recent accomplishment of the Rochester Association has been to arrange with the editor of one of the leading newspapers to present each week a summary of the work of the United Nations. I congratulate both the local association and the editor for this constructive step. I commend this action to the consideration of my colleagues and urge that in the communities which they represent, if such an informative program has not yet been undertaken, they bend

their efforts toward bringing that about in order that there may be the widest possible dissemination of the facts relating to this timely and important subject.

Dr. Dexter Perkins, of the University of Rochester, an illustrious professor of history, who heads the local association, in a foreword to the first in this series of articles, has this to say:

The United Nations is by no means a panacea. It has neither great economic resources nor as yet any physical power. It is, however, an agency which serves to focus attention on international problems, and it may in time become competent not only to make recommendations which have a moral weight but to provide the machinery for carrying out its decisions. No institution can be judged after it has been in existence only 2 years. The success of this new agency of international cooperation depends upon the support it receives from public opinion all over the world, and particularly upon the support it receives from the people of the United States. That is why it is important to understand it.

In September it was my privilege to address a rally during United Nations week. Under leave to extend my remarks, this address follows:

YOUR STAKE IN THE UNITED NATIONS

For millions of people today all over the world the words "United Nations" sum up their hope for peace and security.

The delegates, gathered at San Francisco in June 1945, sought to create a new organization founded upon the ideals and common aims of all the peoples whose governments were determined that mankind should have a better world in which to live.

Many of us have read, and speculated, upon what the world is to be in this atomic age. With man's mind, talents, and inventive genius reaching out into the infinite, we must choose the direction we are to take. Will it be upward to a brighter world of peace, understanding, and tolerance among men, or will it be a headlong plunge into darkness and despair, with mankind seeking to survive underground while great fertile fields and large industrial areas are being wiped from parts of the earth? The time to make that choice is upon us; we cannot avoid it.

To have peace, lasting peace, in the world today, nations must forget their sometimes petty interests or at least learn to harmonize them with those of the whole human race. Two world wars and the possible prospect of a greater holocaust have completely overshadowed national interests as such. If the nations of the world insist upon pursuing a purely nationalistic course and upon maintaining international hostility between one another, the chaotic outlook is dreary, indeed.

When one compares the nations of the Old World, which have been at each other's throats for more than a thousand years, with the United States, it is not difficult to understand why our way of life is the envy of millions far from these shores. These millions will lose faith in all things should some international organization like the United Nations fail to keep the peace. They know, or should know, that only through the combined efforts of all nations everywhere for a lasting peace will it be possible for them to survive and live as freemen.

But this lasting peace, of which we speak, cannot be left to the mercy of Old World powers still harboring the hatreds of generations. To supplant these hatreds with the ideals and aims which will preserve the peace may call for more than mere platitudes to the effect that war is waste and peace is the great desire of all peoples. It cannot be worked out so simply. The failure of the League of Nations after the First World War is proof of that. Obviously some organization with a very great deal of power is necessary to persuade the countries of Europe, and of the Orient too, to drop their hatreds and suspicions and pull together.

Hence, to bring about complete readjustment of national psychology in every country of the world, it is essential that some organization of great power have at its command the most highly skilled students of humanity, economy, government, and statesmanship, if law and order among nations are to be maintained. The only other alternative to such an organization is a complete imperialistic despotism, either on the part of the United States or on the part of Russia. And there is only one way to prevent this: Nations must cooperate, either through persuasion or compulsion. Effective persuasion can be accomplished through the United Nations.

It is hardly necessary for me to add that our way of life in the United States would disappear completely under the imperialistic policy of Russia. For the peoples of the world it is a matter of Hobson's choice: It is to be a cooperative world or no world.

To forestall a possible war of extermination, it was necessary to bring about a world organization designed to do all in its power to prevent such a catastrophe. The delegates of the nations who labored at San Francisco were not perfect. The relations between the countries they represented were not perfect. The plan they produced is not perfect. But it is a plan dedicated to the task of preventing war.

That it was not successful from the beginning, that there have been delays, bickerings, and fumblings within the organization, does not mean that it will not work. Eventually we must see to it that it does work.

But there are certain elements within the organization which have consistently obstructed some of the most important measures before the United Nations.

If members refuse to use the machinery they have created for international cooperation, that machinery of itself can accomplish nothing. We must spare neither patience, time, nor effort in our endeavor to surmount these difficulties. We must see to it that this effort to outlaw war does not fail.

From its inception I have been a stanch supporter of the United Nations organization. I feel strongly that the peace of the world is dependent in a large measure upon some such form of world organization. The ideals and aims upon which it is founded are the markers along the upward road mankind must take if he is to survive.

These ideals and aims, expressed in the preamble of the United Nations Charter, are: to prevent war, to accomplish the peaceful adjustment of international disputes, to remove economic, social, and other causes of war by cooperation among nations, and to promote social progress and better standards of living in keeping with a faith in fundamental human rights and in the dignity and worth of the individual.

These words express the objectives of all peoples whose governments joined together to form the United Nations. They are of vital concern to all the peoples of the world because they point the way to the fulfillment of man's highest aspiration, a dream that has persisted through the long, dark night of history that man would someday lift himself from the blood of war into a new world of peace and understanding among his fellow men. Certainly, it is a goal worth striving for.

What is the United Nations doing to bring us closer to this goal? The accomplishments to date have not been spectacular, but they are a step forward in the right direction.

For example, various questions affecting peace and security have been brought before the United Nations—the Iranian question, the Syrian and Lebanese question, the Indonesian question, the Spanish question, the Greek and Balkan question on three separate occasions. These questions have been debated in the Security Council; differences of opinion which might otherwise have led to incidents, have been aired, and where no unanimous resolution could be reached, various suggestions were put forward in the debates and received world-wide publicity.

On the long, and sometimes rocky road to its objectives, the achievements and efforts of the United Nations have left an imprint on each man's doorstep which is often overlooked. Many of these achievements and efforts can be translated into terms of bread, farm output, timber and houses, medical services, transportation jobs, and freedom of ideas.

For instance, one of the United Nations agencies which might be of great benefit to any one of us, is the World Health Organization Interim Commission. If you are unfortunate enough to be ill, it is conceivable that your doctor might be able to cure you in less time because the World Health Organization has standardized the drugs, serums, and vaccines he uses.

At a meeting of physicians in Geneva last June, work was begun for bringing the new war-born drugs like penicillin and the sulpha series into standardized form for world use and prescription. Such a plan lays the basis for improved fabrication and reduced prices, making it possible for more people to share in scientific and technological gains.

Controlling of development or spread of epidemics also will be aided by the warnings and recommendations of this organization. The fight against tuberculosis and malaria on several continents is now being carried on by specialists of this World Health Organization.

We know of the terrible plight of people in Europe during the winter following the last war. As a result of the efforts of the Emergency Coal Organization, these people will be less cold, not warm, but less cold this coming winter.

No international organization for the preservation of peace—whether it is the United Nations or any other—can exist or exert any lasting influence unless each member has a thorough knowledge of the hopes and aspirations of all the other signatory nations. Countries, like individuals, can only understand one another by friendly discussion of each others' problems. So often the reason for their hatred is because ignorance has twisted and distorted the true picture of one another.

The United Nations Conference on International Organization at San Francisco recognized this vital need for freedom of information by embodying the Council for Social and Economic Progress in the final draft of the Charter. In encouraging the international meeting of minds on questions of common concern, much of the fear born of ignorance which contributes to future wars is dispelled.

Not all of the organizations affiliated with the United Nations are in the formative stage. Nor are some of them new. Others, concerned with improving the way you and your family live, have been operating for some time. The International Labor Organization was an autonomous branch of the League. Now it is a specialized agency of the United Nations.

In June 1946 some of the member nations through this organization agreed upon a precedent-setting convention which fixed a minimum wage for seamen. Improved food, berths, and working conditions were included and new standards of social insurance. Hours of work, age for beginning work, social insurance, safety on the job, and working conditions for women, are other matters on which international agreements have been worked out.

What are the educational problems for children in the war-battered areas of the world? Children who have experienced the

terrors of enemy occupation of their countries, who have been separated from their families, who have huddled together in some roofless hideout wondering what tomorrow would bring? For years some of these children have been without toys, books to read, instruments to play; they have been without all the good things a child should have to live a happy and normal life.

What is the United Nations doing for them?

One of the most important agencies in the United Nations is that dealing with the welfare of children, particularly those children affected by the war. UNRRA set aside a fund to be used by a permanent organization for this purpose. Its first work is to meet the emergency needs of the underfed, underclothed, and undercared-for youngsters. Recently in Congress we passed a bill authorizing contributions up to $50,000,000 to what is to be known as the United Nations Appeal for Children.

UNESCO, the educational, scientific, and cultural organization, also looks after children's welfare. It seeks to mobilize teachers and governments for the rebuilding of the educational systems in war-shattered countries.

As the world grows smaller, the number of ways in which you are affected by international relations multiplies. Your radio, your health practices, your passport, the facilities for getting news into your newspapers, the kind of house you live in, the methods of raising and shipping food, your job, even the way your child is taught, will all move toward the highest common denominator our common ideas and resources can bring about.

These few examples of the efforts and achievements of the United Nations give us some idea of its purpose and of the benefits we may enjoy if we do not sidestep the obligations it imposes. In view of the benefits which have already accrued, and of others which we can confidently expect in the future every one of us should lend his moral support to the noble ideals finding expression in this organization. And he should look a second time at its critics.

He should also do his utmost to defeat all subversive elements bent upon retarding its effective operation, or the ultimate destruction of the organization and its ideals.

No nation can long endure without the favorable public opinion and the moral support of its citizens. Likewise, the success of the United Nations depends upon the peoples of all nations working together for the common welfare. Only then can we be assured of peace on earth and good will to all men.

Shipments to Russia

EXTENSION OF REMARKS
OF
HON. A. LEONARD ALLEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. ALLEN of Louisiana. Mr. Speaker, in view of the attitude of Russia toward this country, I am surprised that our Government continues to ship great quantities of tools, farm implements and other things to that country. During the 12 months ending September 30, 1947, our exports to Russia totaled $155,398,000. Many of these exports consisted of machinery, vehicles and farm implements which are very scarce here and are very difficult for our own people to obtain. I confess that I am not in accord with the view of those who think we should continue to ship this material which is in short supply here at home to a nation which manifests the attitude Russia does. I know from personal experience that farmers are unable to buy farm machinery which they badly need.

In view of the great inroads that communism is making in the world and in view of the fact that Russia today is the great exponent of communism and stands as a threat to the entire world, I confess that I cannot understand the position of our Government in continuing to ship to Russia machine tools, electric equipment, industrial tools, farm implements, and other items which are in short supply here and which are bound to strengthen Russia. Feeling as I do, I have advised the Secretary of Commerce of my position and I have protested the continuance of this practice, since that Department has full authority over this matter.

America's Stake in the World Economy

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. CRAWFORD. Mr. Speaker, the National Foreign Trade Convention was held in St. Louis, October 20, 21, and 22, and a program of action drawn up which is worthy of deliberate consideration by Members of Congress.

Realizing that the outcome of the conflict of economic and political ideologies in the world is at the moment a matter of grave concern to citizens of the United States because turmoil abroad brings lowered productivity there, and a disruption of world trade, the convention developed its program for action in connection with a foreign economic policy for this country.

I submit for the consideration of my colleagues the first of two parts of the summary of the final declaration of the foreign-trade convention:

FINAL DECLARATION OF THE THIRTY-FOURTH NATIONAL FOREIGN TRADE CONVENTION

AMERICA'S STAKE IN THE WORLD ECONOMY

The thirty-fourth national foreign trade convention declares its adherence to the principles relating to the conduct of American foreign trade as defined and sponsored by the thirty-second convention in 1945, and to the proposed foreign economic policy for the United States put forward by the thirty-third convention in 1946. Conscious of the growing magnitude of America's stake in the world economy, the convention offers to the American people a program for action, conceived in the light of these principles and dedicated to the effectuation of the proposed policy.

The course that foreign economic policy takes in the months ahead is the first and vital concern of this convention. Speaking as it does, in this field, for the international trading and investment interests of American private enterprise, the convention does not deem it within its province to pass judgment on the foreign policy of the United States in all of its manifold phases: it recognizes that national action in the field of international affairs, designed as it must be to promote our security and well-being as a nation and to safeguard our free institutions, embraces considerations extending far beyond the field of the economic alone; and it recognizes that foreign economic policy is, of necessity, an integral part of this larger pattern. But the convention recognizes also that foreign economic policy has a vital purpose, in its own right, in fostering the development of an optimum flow of foreign trade and investment to the end that the American people may be benefited through an increased production, interchange, and consumption of useful goods and services. The concrete recommendations advanced in the program for action presented with this declaration are focused, therefore, upon those aspects of foreign economic policy which, while serving the broader purposes of the foreign policy itself, may also bear importantly upon the opportunities available to American private enterprise in the conduct of the Nation's foreign trade.

In its basic concept, the program is consistent with the thesis that foreign economic policy must reinforce and implement the foreign policy of which it is a part. It is predicated upon the underlying truth that an expanding production and interchange of goods and services, and the nurturing of democratic values everywhere, are requisites of enduring peace and prosperity; and it assumes, as its specific premise, that the security and well-being of the United States and the preservation of our own democratic forms and processes, are bound up inextricably with the pattern of events as it comes to evolve in the world as a whole.

This pattern today is tremendously confused and complex. The problems to which it gives rise, extending over the whole range of the social, economic, political, ideological, and military considerations involved, constitute an immediate and continuing challenge to the achievement of the purposes our foreign policy is designed to serve. The solutions to many of these problems lie, admittedly, beyond the economic area with which this convention is competent to deal. Yet, the impact of the economic forces at work is deep and all-pervading, and the fact remains that until the material well-being of the world is assured, there can be no sound and lasting basis for the peace and security to which mankind aspires.

The degree of material well-being to which the world can attain will depend, in the last analysis, upon the energy and intelligence with which, in every country, the natural resources at hand or within reach are converted to the use and enjoyment of the consumer. In their pursuit of this material well-being, the nations of the world are confronted with a choice between two opposing economic courses. The first course, to which we in America are committed, is the course of economic freedom, with its reliance upon free, private, competitive enterprise as the mainspring of accomplishment and progress, and its recognition of the dignity and worth of the individual as inherent in political democracy and in the spiritual concept of freedom itself. The second course is the course of economic regimentation, with its invitation, under socialism, to the materialistic concept that the individual is the servant of the state and a cog in the collectivist machine, and its subversion not only of economic freedom but of political freedom as well. In some countries, where socialism has been imposed by fraud or by fiat, political freedom has already been destroyed; in others, the economic goals of socialism are still being pursued under the forms and processes of political democracy. Yet, however it may come into being and whatever political associations or implications it may have, the inevitable result of economic regimentation is the paralysis of those individual initiatives and incentives that underlie America's greatness.

The outcome of the conflict of economic and political ideologies existent in the world today is a matter of profound concern to the people of the United States. Even where political freedoms have been preserved, the practice of socialism carries a threat to our well-being in America by reason of the effects it brings in lowered productivity and the disruption of world trade. But more important still is the fact that economic regimentation, in face of the failure to which it is destined, calls increasingly for political regimentation to insure its continued application. It is this prospect of progressive abandonment of the democratic process throughout the world, and of resort to the authoritarian controls of the police state—which we have come to identify as communism—that holds the greatest threat to our own security and to the integrity of our institutions.

It is no accident that communism flourishes where it does. So long as underproduction and persistent poverty exists, the specious appeal of a dictated collectivist security will be compelling. So long as wretched, undernourished peoples take refuge in that appeal, the world will rest in precarious balance, and we ourselves will stand in jeopardy. In seeking to arrest the spread of the Communist virus, the exercise of diplomatic and other pressures is not enough; the seeds of danger lie far too deep to make such measures in themselves effective. They lie, actually, in the basic frustration of human beings, who, aspiring to a decent standard of living, have not yet found the means for its attainment.

Clearly, under this conception, the steps that have been taken toward checking the expansion of the Communist ideology as a world force, and toward checking the expansion of Communist Russia as a world power, can be construed as only a beginning. No effort to save the world from communism will be successful until a solution is found for the economic problem on which communism feeds, which is, at its roots, the problem of underproduction and the poverty that underproduction brings. The solution of this problem demands that the free nations of the world work together to increase their productivity, not merely to the prewar level, but far above that level. It demands that the peoples of these lands be given the opportunity to apply their energies and initiatives more fully and more efficiently in utilizing the resources which they possess or can acquire.

We in America, in making use of the resources available to us, have applied our energies and our initiatives under a political and economic system which brings out the best there is in human incentive and achievement, and which has produced the highest standard of living ever known. We hold the place we do in the world today by reason of this accomplishment, and by reason specifically of the ability we demonstrated, during the war, to apply these energies and initiative in defense of our free institutions. That ability was manifest, and the war was won, because the Nation stood united in a common cause. Now, with the war behind us, we find ourselves faced with a new challenge—a challenge related just as surely as the other to the safeguarding of our future and the preservation of our security and strength. That challenge, the building of a groundwork on which an enduring structure of world productivity and world peace can be erected, will demand, as the challenge of war demanded, the united force of our national will behind it.

It is not mere altruism or a sense of humanitarian responsibility that impels us to meet this challenge; the issue is one which involves, deeply and critically, the enlightened self-interest of the American people. If we refuse to answer the call that is put upon us by the world's need for greater productivity; if the efforts we make to create a liberal system of world trade are unavailing; if we fail to secure, by the power of example, the adherence of other peoples to the economic concept in which we believe, then the destructive doctrines that Karl Marx preached will have gained new and dangerous strength.

America's stake in the world economy is one which far transcends the stake of our material welfare alone. Profound social, moral, and spiritual values are at issue, depending for their realization upon the creation in other lands of an environment in which free institutions can survive and flourish. The creation of such an environment is vital to our own security and to the preservation of our institutions, for if the freedoms we cherish for ourselves are lost to the rest of the world, we may be very sure that they will be lost also to us.

Conscious of this deeper reality that lies beneath the concrete proposals it makes, the convention offers to the American people a program for action, as developed and endorsed by the board of directors of the National Foreign Trade Council, in the earnest hope that it will find acceptance and support without regard to sectional or party interest.

A PROGRAM FOR ACTION

To the end of promoting an economic environment in which world productivity will be fostered, the interchange of useful goods and services expanded, and a basis laid for enduring peace and prosperity, the convention calls for the following action:

1. Provision of subsistence relief, during the present emergency, to those peoples in devastated lands who demonstrate a national determination to become self-supporting and to preserve their political freedoms.

Alleviation of hunger and distress is the first requisite to the restoration of the processes of production. The foodstuffs, medicines, clothing, and other essentials required for the release of human energies to the tasks of reconstruction, whether made available in the form of loans or as outright gifts, represent an investment by the American people in the world's recovery and well-being.

The United States Government, in undertaking the major burden of this relief, with such assistance as may be forthcoming from private sources, should take into account the ability of the American economy to withstand the drains it will entail, and should seek, as an integral part of the program, the cooperation and participation of other nations in proportion to the respective capacities they possess.

2. Control and coordination of the distribution of relief to the end of assuring its most productive utilization in achieving the goals of economic reconstruction.

Relief benefits, within the countries receiving them, should be extended on an entirely nonpolitical and nonsectarian basis, and distribution should be carried out, wherever possible, under the supervision of trained American specialists working through approved local agencies. Recipients should be made aware of the source of such relief, should be informed as to its emergency nature, and should be made to understand that it is motivated by a desire to alleviate suffering and distress and to improve the capacities of the recipients to achieve self-support.

3. Provision by the United States Government of financial assistance, during the period of transition and reconstruction, to promote the economic productivity and monetary stability of those countries requiring such aid and manifesting a determination to maintain free societies and to work out their own salvation.

Financial assistance designed to serve the ends intended should be confined to those countries and to those fields of activity where conditions are still such that private capital cannot be attracted; and, in any event, should not be extended for purposes inimical to the investments of American citizens within the recipient countries, nor to those countries which have followed policies of expropriation of properties of United States nationals without prompt, adequate and effective compensation.

Provision of governmental financial assistance must be realistically related to the likelihood of attainment of the desired goals of rehabilitation, and to the prospects that exist for eventual repayment in the form of useful goods and services. Such financial assistance should be extended only after thoroughgoing investigation in collaboration with competent industrial and financial specialists, and only after due consideration has been given to the maximum potentials of national and regional self-help; to the adequacy of our own resources and productive capacity, and to the ability of our economy to withstand the inflationary pressures involved.

4. Encouragement of American private investment abroad, where the economic and political environment is conducive, as a vital means for securing the efficient utilization of available resources, facilities, and techniques in increasing productivity.

The demonstrated advantages of private foreign investment should be sought, domestically, by tax legislation designed to foster capital formation, and, internationally, by the negotiation of treaties of friendship and commerce and other agreements, which will provide the incentives and safeguards demanded by those who invest their capital in foreign lands.

Where private investment is not currently feasible, and the capital for foreign industrial rehabilitation is provided from United States Government funds, it is imperative that the channels of private investment be kept open by making use whenever possible of the facilities of private enterprise in carrying the program forward.

5. Utilization, in conjunction with the projection of both public and private capital abroad, of such managerial and technical skills as may be required to ensure the most productive application of the funds employed.

In the instance of governmental financial assistance, the Government should satisfy itself, as a prerequisite to its provision, that competent management and technical personnel, if not available locally, can be provided from American or other sources.

In the instance of private investments, where competent management and techniques will normally accompany the capital, assurances should be secured that no impediments will be placed in the way of the freedom of entry and employment of the personnel required.

The presence of skilled American personnel on the ground will serve not only to make more productive the new facilities created with American funds, but, collaterally, will assist the recipient countries in utilizing more efficiently the facilities and resources they already possess.

6. Emphasis upon such internal financial and monetary reforms, by those nations receiving economic aid, as may be required to establish sound currencies and realistic international exchange relationships, thereby providing an essential stimulus to greater productivity and increased trade.

Internal monetary stability and sound international exchange relationships are prime requisites to the restoration of economic health. Unless these are achieved, no economic assistance designed to restore productivity and to expand international trade can be effective.

The International Monetary Fund was created for the precise purpose of stabilizing national currencies and international exchange relationships. The International Bank and the proposed International Trade Organization are designed to facilitate the economic development and the trade essential to the achievement of this monetary

stability. The usefulness of these institutions will be limited, however, until the participating nations achieve internal financial order and stability. Unbalanced budgets and deficit financing, and the attempt to conceal the effects of these devices through unrealistic official exchange rates, make for monetary chaos and vitiate any efforts to achieve monetary stability from without.

It is essential, therefore, that our Government and its representatives in the fund and the bank collaborate, where appropriate, with the recipients of economic aid in developing programs for internal financial and monetary reform; and that proper regard be given, in providing such aid, to the demonstrated good faith and capacity of the recipients to carry out these programs.

A nation's productivity cannot be restored until confidence is established in its currency as a means of payment and exchange; nor can confidence in the currency be restored until that nation's productive wealth is marshaled behind it. Cause and effect are inextricably mixed, and the attack, to be successful, must be made on both fronts simultaneously.

James J. Davis

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. VAN ZANDT. Mr. Speaker, much has been said the past week in eulogizing the life and achievements of the late Senator James J. Davis, whose death occurred November 22, 1947.

Jim Davis, as he was affectionately known to countless friends, deserved the popularity he enjoyed because he never lost the common touch. As a result, he made friends in every walk in life and thus his death is universally mourned.

I knew Jim Davis personally and have many pleasant memories of our years of friendship.

In paying my tribute of respect, I should like, at this point, to read the following editorial from the November 25 issue of the Clearfield (Pa.) Progress because it is a brief yet graphic picture of the life of genial Jim Davis from his autobiography written 25 years ago.

The editorial is as follows:

JAMES J. DAVIS

James J. (Puddler Jim) Davis, who died Saturday in a suburban Washington hospital, liked himself better in the role of humorist and philosopher than that of a politician.

The immigrant boy who became United States Senator from Pennsylvania and later Secretary of Labor shows his preference clearly in his autobiography written in 1922, while he was serving in the President's Cabinet. One reviewer called the volume "a human book, a document of toil and sweat and funny stories and homespun philosophy and egotism."

When he was 8 years old and his parents told him they were leaving Wales for America, the deceased wrote that he thought they were going to fight Indians and commented wistfully: "That would have been as much fun as going to Sunday school.

His mother destroyed his illusions—they were going to work in a steel mill. The disappointment was so great that his father had to drag him from under a bed by the heels when the time came to make the voyage.

The book tells all the events of his younger days of which he was proud—how he started work in the steel mill at 11 and became an iron puddler at 16, the thrashing of the town bully, the home-made suit of clothes, the licking given the crooked contractor, the speech that stopped a strike, the superiority of beer over water when one works in a puddling mill.

He says:

"A land where a boy can enter the mills at 11, learn two trades, acquire a sound business education, and make a competence in his thirties is not such a bad country as the hot-headed reds would have us believe."

He tells of roaming the country as a young man, working in some 50 steel mills, and gives his thoughts on economics:

"Labor makes the present day safe—but the present day only. Capital safeguards the future."

"The white man who doesn't want to work is sick. He needs a dose of medicine, not a dose of millennium."

"The time to quit work and divide the wealth is just 2 weeks before the end of the world."

GI Subsistence Allowances Now Pitifully Inadequate

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. HAVENNER. Mr. Speaker, the subsistence allowances authorized by the GI bill for veterans attending educational institutions are now pitifully inadequate. Those subsistence allowances were calculated on the basis of reasonable living costs at the time the bill was enacted into law. Since that time the cost of living has mounted so extravagantly that many married veterans, in particular, are now finding it impossible to purchase the bare necessities of life for their families and keep up their school work.

During the present semester more than 55 veteran students at the University of California alone have been forced to leave college and take full-time jobs, in the hope of saving enough money to return at some later date to complete their education. The possibility that many of them will be able to do so is very remote.

If this Congress persists in the majority policy of drastic economy, without making proper provision for the minimum living requirements of our veterans, it will be guilty of a deliberate violation of the Government's solemn pledge to enable them to complete the educations which were disrupted by the war.

The following letter from one of my constituents gives a graphic illustration of the cost-of-living problems which confront a married veteran today:

This letter is designed to supplement knowledge which you undoubtedly already possess concerning the living status of veterans attending educational institutions under the GI bill.

The subsistence allowances which were authorized under that legislation were calculated on the basis of reasonable living costs existing at the time of enactment, but it is all too commonly realized that these costs have climbed approximately 80 percent from that time to this. Despite this change in living conditions which the veteran, and everyone else, must face, it is evidently presumed by the majority of Congress that the subsistence payments are capable of being stretched to almost double their originally calculated buying power.

On the other hand, salaries paid to Federal employees under civil and military service do not seem to possess this magical ability to buy the same amount of necessities at higher price levels, because they have been adjusted to some extent in line with rising price levels. State and local wage and salary scales also, for the most part, reflect the increased cost of living. Cannot something be done to enable the veteran attending school to purchase at least the necessities of life? We do not ask a luxurious living standard, but it is unreasonable to expect a veteran to keep up his school work when he is continuously worrying about meeting day-to-day living costs.

I am a married veteran attending the University of California at Berkeley. I have an 8-months-old daughter. Here is our family budget:

One-month budget (averaged for the past 6 months):

Rent	$25
Utilities (we have no phone)	6
Food (wife and I)	51
Food (baby)	12

Carfare	10
Entertainment and miscellaneous	5
Total	139

This budget does not include unpredictable expenditures such as dental bills, new prescriptions for eyeglasses, cost of same, etc., which nevertheless crop up all too frequently. Furthermore, we cannot afford magazine subscriptions, newspapers, and the like. The budget here given is the result of every possible economization.

We spend nothing that is not absolutely necessary to the maintenance of our family health, or to a minimum regard for future contingencies. To spend less would mean an inroad upon that health, or upon our ability as a family to meet possible emergencies. This seems to us a reasonable attitude in the circumstances in which we find ourselves.

It is clear from these figures that we cannot live on the existing subsistence payment of $90 per month, which is granted to veterans attending school, provided they are married. Incidentally, there is no recognition of the increased expense due to children, be they 1 or 10 in number. Had we not saved some modest sums while I was in the service we would not now be able to meet our expenses. What we shall do when these savings are exhausted I do not know.

There are, of course, two courses of possible action: First, to obtain part-time work while continuing my studies. This presumes that such part-time work is available. As a matter of fact, the type of job where one can work on a haphazard schedule during the week on a temporary basis is indeed rare, and the pay for such work is generally quite low. It presumes further that the adoption of such a schedule would not interfere disastrously with school work. At the present time I spend 16 hours per week in the classroom and a minimum of 2 hours of home or library study for each of these hours, making a total of 48 hours. Assuming I could get part-time work paying $1 per hour, I would have to put in about 15 hours per week to make enough to meet our budget requirements, including extra carfare ex-

pense, etc. This would make 63 hours per week. If the job paid less, more hours would be needed. I doubt that I could put in that many hours per week and be sufficiently alert to obtain from my class work the amount of benefit which the Congress no doubt originally intended should be derived.

The other possibility is to leave school and take a permanent position, hoping to be able to save enough money to return at some later date and go on for a degree. Already, in this very semester, more than 55 veteran students at the University of California alone have taken this course. They have dropped out in the midst of their studies and have gone to work. It is to be doubted that all of them will be able to return later. In any event, such an interruption is highly disruptive and demoralizing.

Mr. HAVENNER, I believe that I speak for the majority of veterans attending school when I say that all we want is an adjustment which will reflect the original intent of the Congress when the GI bill was enacted. It seems to me that intent would be nullified if veteran students either jeopardize their school work by undertaking heavy part-time work schedules, or leave school entirely with the intent of returning later. Furthermore, it is impossible to estimate the number of veterans who are impelled to give up even considering attending school in the first place, because of the inadequacy of the allowances, and who are therefore denied the benefits to which Congress intended that they should have access.

I feel sure that you have already received considerable correspondence along these very lines, and that you are therefore already engaged in an effort to restore the ratio between allowances and living costs which existed at the time the bill was passed, but my wife and I feel that we should add our voice to the many in a corroborative rather than an initiative manner.

Furthermore, while veterans' organizations have also taken up the cudgel in this matter, there is always room, it seems to us, for the affected individuals to send in their stories, too.

Don't Tamper With Coal

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. VAN ZANDT. Mr. Speaker, recently Acting Secretary of the Interior Chapman asked the House Banking and Currency Committee for quick congressional authority for rationing and price controls on coal, oil, and gasoline if a serious shortage develops.

If Congress wants to hamper coal production, all that is necessary is to restore governmental control of the coal industry.

Production in the coal fields today is nearing a new high and according to those who operate the industry and dig the coal, the supply is adequate to meet the demands at home and abroad.

The United Mine Workers of America represent the men who dig the coal. As an organization, they oppose governmental controls of the coal industry and, in so doing, echo the sentiments of thousands of coal miners in Blair, Centre, and Clearfield Counties, which comprise my congressional district in Pennsylvania.

According to an editorial appearing in the December 1, 1947, issue of the United Mine Workers Journal, the coal industry can meet the need for coal and increase production 1,500,000 tons weekly if the railroads will provide an adequate car supply. The editorial frankly points out that it is a transportation problem and not an over-all direction of price fixing and distribution that confronts the Nation.

The editorial in the United Mine Workers Journal is timely and is as follows:

DON'T TAMPER WITH COAL

The bureaucrats are licking their chops for one more chance to control coal. The Interior Department has asked Congress for power to impose price controls and rationing of coal. The bureaucrats who will take over will publicly state how they dread the assignment, but secretly they welcome the opportunity to boss coal again with as much mental glee as a gypsy troubador invited to a festival.

Of course, control of oil was included in the request which is allegedly tied to President Truman's anti-inflation program. Both oil and gas will be in short supply. Oil executives admit the oil supply will be below demand by approximately 15 percent.

The Government proposes to fix prices on both oil and coal. Gas prices are fixed by public service commissions and consequently the only controls that could be exercised in the case of gas would be diversion from manufacturing to domestic usage.

Frankly, there is nothing wrong with coal, including profiteering mine prices, that an adequate railroad car supply will not solve, and since the twenty to thirty thousand cars that have been hauling lake coal, plus new car deliveries, will be available for transporting coal to industrial and domestic consumers in the Middle West and East after December 1, there appears to be no conceivable reason except bureaucratic desire for the Government to tamper with the coal industry.

Regardless of the prevailing shortage of certain coals and sizes, there is plenty of substitute coal available to meet every transportation, industrial, and domestic need. In fact, many coal operators are convinced that there will be a softening of prices by February in the steam market if present production rates are maintained.

As of the week ending November 15, with 6 weeks more operating time remaining, the 1947 bituminous output totaled 538,070,000 tons. At present we are maintaining a weekly rate of production from a million to one and one-half million tons higher than was maintained at this time of year in 1944 when record production totaled 620,000,000 tons, which will in all likelihood be equaled this year when consumption is not as great as it was in 1944.

Anthracite production is only 6 percent behind 1946, the decrease being due entirely to the refusal of anthracite consumers to buy in the spring and the conversion from anthracite to oil burners. Now that oil cannot be provided for the burners installed in furnaces that previously used anthracite, the domestic consumer victims of the "go-getter" oil salesmen are demanding anthracite coal for reconversion from oil back to anthracite.

Analyzing the situation carefully, we think there is more than meets the eye in the bureaucratic request for control of coal. The Government won't be able to roll back prices. Many operators recognize this fact. Consequently there are some antiunion-minded operators who view the situation as water on their wheel. They figure that the Government take over can be continued beyond the next period of bituminous wage negotiations and consequently they can have the Government front for them when wage negotiations start. This type of operator is willing to undergo any bureaucratic dictation that gives promise of stopping the progress of the UMWA and creates an over-all control by which he can chisel and take away from the coal miners the rights and privileges that coal miners now enjoy.

We think President Truman is being grossly misled by the bureaucratic advice given him as regards coal.

The widespread complaints being registered by the public and echoed by thinking operators, wholesalers, and retailers are primarily aimed at the unwarranted export of choice metallurgical and domestic coals to foreign lands.

The Journal has received letters telling the results of lodge meetings in condemnation of the program, from business organizations, from coal operators, from wholesalers, retailers, and the public at large, and these complaints plainly state that they have had enough of giving preference of select coals gratis to foreign countries.

And like the public, the coal miners have had enough—in fact too much of Government meddling in coal affairs and we want no more of it.

The coal industry can make good every domestic, industrial, and transportation coal need if the railroads will provide an adequate car supply, and this can be done to increase production 1,500,000 tons per week. So it is a transportation problem and not an over-all direction of price fixing and distribution that confronts the Nation.

If the bureaucrats seeking to tamper with coal, which will certainly backfire on Truman if he permits coal to again became a bureaucratic play toy, possess the mental qualifications to supervise production and distribution, then God knows they should be drafted for the more serious Government tasks ahead such as the purchasing and export of food and other materials to meet the requirements of foreign relief that are involved under our uncharted spending of the taxpayers' money.

The Despoilers on the March

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. LEMKE. Mr. Speaker, recently you have heard a lot about Alaska. You have heard from the would-be despoilers, who would like to keep Alaska in the status quo so they can denude and loot it. The truth is that Alaska must be settled with Americans if it is ever to be developed.

My answer to those who oppose the enlarged homesteads for veterans, under the Lemke-Peden bill, is that they are either ignorant of the facts, or servants of a few would-be pulp and lumber barons. These tools are misrepresenting the Lemke-Peden bill and continue to do so in magazine articles and elsewhere.

However, they will not get away with it. Alaska is going to be settled and the veterans are going to be given some consideration. The 21,000,000 acres of virgin timber is not going to be leased to a

few timber-pulp barons to slash down. It is going to be given to veterans to be maintained under a sustained forest yield.

The homesteads are going to be large enough to take care of an average family of seven on the American standard of living. Bureaucracy and the pulp grafters are not going to get away with another Tea Pot Dome scandal. The veterans have first claim on Alaska in the way of enlarged homesteads. The Lemke-Peden bill does not deny the right to anyone else to take a homestead, but his homestead will be subject to the present homestead laws unless he is a veteran. What we need in Alaska are the defenders of our Nation, not the despoilers and would-be denuders.

Below you will find an article by a real settler in Alaska. You will note how these settlers have been hindered by the creation of useless parks and national monuments. The Lemke-Peden bill respects all these existing parks and monuments, but there may be some that later on should be abolished if they serve no park purpose or have no scenic value to offer as a park.

Here is the article by a real American Alaskan:

THE BATTLE FOR GUSTAVUS

(By Charles Lincoln Parker, Sr.)

At Gustavus, the most beautiful and virgin wealthy land in the North American Continent, we have everything, yet we have nothing. How is that possible? you may ask. My answer is lack of cooperation and man-made obstacles. But this is ahead of my story of oppression and hardship which a family of real pioneers has had to experience in the conquest of our last frontier—Alaska.

Let's go back to the days our family, the Parkers, first arrived in Alaska. Father Parker joined the gold rush in 1897. Seeing an opportunity to aid the gold-mad stampeders, he stopped for a spell at Lake Linderman, which is on the Canadian side of the Chilkoot Pass. There he established a halfway house, to feed and shelter the gold-seekers as they came musking in with their supplies over the Chilkoot Trail.

Our mother at Portland, Oreg., with her three little children, Eunice, May, and myself, wished to be with our father, so bundling up her tiny tots, set sail from Seattle on the steamer *Alki*. This ship was loaded to the guards with supplies and gold seekers. What courage you will say, the bravest of the brave. Our mother, a lady always sheltered from the rough side of life, had to experience such a voyage to join her husband and our father. Her very courage protected her like a cloak and these rugged stampeders treated mother like an angel, which she will always be to her loving children.

The steamer *Alki* landed at Skagway July 15, 1898. From there we went to Dyea with our father, who was now with us. Everything at Dyea was in a turmoil; shelter was hard to get; so mother and father decided to take us tiny tots over the Chilkoot Trail, to our halfway house at Lake Linderman. We were to stay there until suitable shelter could be provided at Dyea, for mother and us little ones.

The next morning we started out. The strongest packers, the French Canadians, volunteered to pack us tiny stampeders over the rugged and perilous trail. What a procession we must have formed. I was but 11 months old at that time, so extra care must be taken of me. The great and powerful riverman, Gene La Rose, later my father's partner, bundled me on his broad back and led the way into that rugged and unknown country. I traveled like a king in search of an empire to conquer. Mother was helped along the trail by father and at times had to be carried over the hardest going, but without a protest. She was happy to be with our father and the little family together again. What an example of indomitable courage.

Later on we moved to Atlin, B. C., where our father had a placer claim on Spruce Creek. While there two more children were born, Albert and Leslie. The going was rugged for all of us. Food for tiny tots was very scarce, but we tightened our belts and didn't complain. As always, Mother was cheerful and doing all in her power for her little ones.

About 1905 we moved to Skagway, Alaska, where our baby brother Glen was born. Father was operating a sawmill at Winton, British Columbia; and with his partner, Gene La Rose, was shooting the Whitehorse Rapids with rafts of lumber for Whitehorse and other camps down the Yukon River. After Gene La Rose was lost in these rapids, father abandoned the sawmill at Winton and moved permanently into Alaska.

Now we will skip a few years and arrive at the spring of 1917. Our family had been tempered like the finest steel in frontier life. What would be more natural than for us to take homestead land in this frontier country? After looking over various locations we decided to locate at Gustavus Land, the beautiful level land at the northern headwaters of the inland passage and at the panhandle of Alaska. Little did we know then of the opposition we would encounter in carving out a home and future in this natural frontier country.

We arrived at Gustavus early in June 1917, set up our tents and went to work, prepared a garden and built permanent shelter. Being we were at war, I left later that summer and joined the Marines. In 2 years I returned from service and found our family had accomplished a good deal in permanent buildings and were very optimistic about the future. Why shouldn't we be optimistic about the land at Gustavus? Here for future settlement we had 100,000 acres of grazing and agriculture land. Most of the land was as level as a floor with huge, open meadows of joint grass, fine all-the-year-round feed for cattle except when it snowed heavy and buried the 2-foot joint grass. We even talked about having regular, dependable mail-boat service and small-boat harbor and docking facilities for large ships, schools, churches, stores, and other facilities when this fine land was known and located by others. We dug in and built a sawmill, barns, miles of fences and began to raise cattle in earnest. All four boys and sister May took up their own homesteads beside the home ranch of father's. This was all done without any financial aid.

Then came the time when the pressure was put on us. The bear were killing our cattle and destroying our actual livelihood. When we applied for assistance to rid the country of bear, a bear reserve was established with an imaginary line just north of our patented homesteads. This same land had been open for homesteading previously. It was impossible under the circumstances to range cattle any more. What few homesteaders had joined our settlement were disheartened and most of them left. They had actually patented their land and still had no road from their homestead to the small-boat dock east of Salmon River.

In 1939 all of the unpatented land at Gustavus was taken over by the Glacier Bay National Monument. This destroyed our only chance of making a settlement and having schools, etc., and left us an isolated few. Is it fair to reserve land that was open to settlement and rob the homesteaders that have patented their land of a settlement?

In the spring of 1941 I decided something must be done to turn the eyes of the Nation on the situation that had developed at Gustavus. As Gustavus was a natural site for a great air base, I went to Anchorage and contacted my loyal friend, the late Gen. Simon Bolivar Buckner, Jr. He was the greatest general of all time, the man who saved Alaska when the enemy was heading for the mainland and Gustavus in 1942. I pointed out to General Buckner the fine weather conditions at Gustavus and the huge area of flat land in a country as mountainous as southeastern Alaska. Also that I had built an emergency landing field here, that had taken me 10 years to complete in my spare time and that a number of planes had used my landing field in emergency already. After an examination of this site, General Buckner ordered this field to be built, and I proudly maintain that this is the finest airfield in the North.

The situation here today is enough to discourage an iron man. The one hundred thousand acres of agriculture and grazing land surrounding our 2,000 acres of patented land is reserved in the Glacier Bay National Monument, Bear Reserve, and Military Reservation. The small-boat dock is rotting down and is unsafe to use; we have no small-boat harbor, school, stores, church, or other facilities that make a community, but the little band of pioneers carries on. This struggle has lasted for 30 years. If we fail how can Alaska be settled? What chance for statehood in Alaska if the settlers are driven out?

We have made one more bid for freedom from this man-made oppression, that is, a small-boat harbor. At Salmon River in the heart of the airport and our patented land, we wish to have a small-boat harbor built. We can then ship quick frozen fish by plane direct to the fish-hungry Midwest. Also, on our 2,000 acres of patented land, we can lay out a city and invite fishermen and other homebuilders to establish their homes here. We can also ship by plane our delicious strawberries and countless other Alaskan farm products to the States. When people move to Gustavus, we can then open up our rich mineral deposits in this region and utilize our forests and other natural resources that are in abundance in this virgin country.

When people settle here and see all this fine land for agriculture and stockraising, the high snow-clad mountains surrounding this great level country like a gigantic, rugged wall, the sunlight changing the tinting on these peaks from pink to gold, they will gasp in amazement at such magnificent natural beauty. They will make their homes here permanently and thank our little band of pioneers who have blazed the way to a great empire, Alaska.

Peace With Preparedness

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. LARCADE. Mr. Speaker, under previous authority granted me to extend my remarks in the RECORD, I wish to include a copy of an editorial by Hon. William Randolph Hearst, published in the Hearst newspapers, April 6, 1935, and which at this time I believe to be just as sound and patriotic as it was when the same was published more than 12 years ago.

The editorial is submitted below:

PEACE WITH PREPAREDNESS

(From an editorial by William Randolph Hearst published in the Hearst newspapers, April 6, 1935)

The duty of our Government is to keep America out of war, and to keep war out of America.

The second part of our duty is as important as the first part.

We must keep the ravages of war out of our own land.

We must be prepared to protect our country and our people.

We must have an army and a navy and an air force to defend our people from attack.

Every intelligent citizen knows that we want military forces for defense, not for aggression.

We want them to preserve peace, not to make war.

And it is as much the duty of Government to protect its people from the assaults of enemies from without as it is to protect them from dangers from within.

The primary obligation of good government is to insure conditions of peace to its people, protection from danger and disturbance, so that they may spend their lives, enjoy their liberties and prosecute their occupations in safety and security.

The motto of America should be: Millions for defense but not one cent for oppression and aggression.

W. R. HEARST.

The One Who Told Us

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Oklahoman, Oklahoma City, Okla., of November 3, 1947:

THE ONE WHO TOLD US

Possibly columnist Alsop is right in saying that sky-high prices give such price restrictionists as Chester Bowles and Paul Porter abundant reason for saying, "I told you so." Certainly those worthies did say forewarningly that bounding prices would follow the termination of all price controls.

But it would seem that if anybody has warrant for saying, "I told you so," it is Bernard Baruch positively, and Representatives Mike Monroney and Albert Gore possibly. When war first began to stimulate prices and shove them upward, Baruch came forth with his plan to freeze all prices and all wages at the prewar level. He warned the Government most solemnly that if all prices were not frozen it would be futile to freeze just a few. At the same time MONRONEY and GORE were warning the Congress that any system that failed to control all prices and wages would soon wreck itself.

In Canada, where the pattern outlined by Bernard Baruch was followed substantially, comparatively little trouble with booming prices and inflation was encountered. But for reasons which appeared sufficient to our Government it refused to accept the Baruch plan. It sought to restrict the prices of certain commodities while allowing most prices to play a game of deuces wild. Of course, failure came from that bifurcated policy, because nothing but failure could come from it. If anybody is tempted to say, "I told you so," that privilege goes first of all to Bernard Baruch, Mike Monroney, and Albert Gore. For they actually told us, and they told us first of all.

Sea Power and Security

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. RIVERS. Mr. Speaker, sea power is an indispensable adjunct to the security of this Nation. Until planes yet beyond the vision of man are constructed, the Navy will have to protect American ships and protect our shore line.

The versatility of the Navy's missions in the Pacific in the recent war should be known to every American. Its achievements read like a story book.

So well has her part in World War II been pointed out, I am privileged today to place in the Appendix of the RECORD an address entitled "Sea Power and Security" delivered on the occasion of Navy Day at Charleston, S. C., before the Propeller Club of the United States, Port of Charleston, by a distinguished Marine colonel, Col. J. H. Fellows, who saw activity in both wars and knows whereof he speaks.

The address is as follows:

It is indeed a privilege to be here this evening, and I am especially flattered that the occasion of my presence is the observance of Navy Day.

On the chance that to some of you it may seem strange that a marine should be addressing your organization on this occasion, permit me to remind you that the Marine Corps is an integral component of the Navy and the only essential difference between marines and Navy men is the uniform.

Twenty-five years ago, in 1922, World War I had been over for 4 years and everyone was enjoying a feeling of safety in the belief that there would probably be no more wars. So why should they continue to pay taxes for armed forces? Why not reduce the Navy and the Army? Why pay for fire insurance if there was no danger of fire?

And so representatives of the family of nations met in Washington and agreed upon limitations in the size of their navies as a step to a warless world. The United States thereupon sank or broke up a large number of naval vessels as its part of the agreement, and thus brought this Nation eventually to such a state of military weakness that our influence in world affairs became too ineffectual to prevent the very catastrophe that the disarmament program had sought to avoid.

Today, therefore, we once again find ourselves in a postwar era following a Second World War. A war that a quarter of a century ago was naively thought to never again be possible.

But this time there is a difference in the general outlook, for in spite of a successful conclusion of the greatest conflict in the history of the world, the road to the type of peace for which we fought is beset by difficulties and distrust.

World War II was concluded only 2 years ago, but today the word "war" appears in editorial usage with almost equal frequency to the term "peace."

Even so, it is apparent that the inevitable reaction following every great war effort has again promoted a tendency toward a generally apathetic outlook with regard to our national security.

Our possession of the atomic bomb, and talk of rocket propulsion, guided missiles, and of other new devises and weapons, have stimulated this apathy by promoting an entirely false sense of security in the minds of a large part of our population. It has even been said that push-button warfare is here, and there is no further need of maintaining existing military forces.

After the amazing scientific and mechanical developments which have emerged from this latest war, I am sure no one will ever again decry the wizardry of Buck Rogers. But let us not be led into the realms of fantasy.

Admittedly, our thinking must be progressive, but what is even more important, it must be realistic and we should remember the disarmament conference of 1922.

It is true that guided missiles are in existence, but research and developments in these weapons have barely scratched the surface of their possibilities.

The atomic bomb, although the most devastatingly destructive weapon yet developed by men, is still a bomb. Like other bombs, it requires land-based or carrier-based airplanes to deliver it.

At Bikini, the atomic bomb sank or damaged a number of ships and killed animals inside of ships for some distance from the area directly under and over the bomb explosions, and was found to be unquestionably an effective weapon against ships that are close together and against naval bases. But, the tests also led to the conclusion that navies will still be needed and that the bomb has not made them obsolete, though it may result in changes in the design of ships and in the methods of naval operation.

The discovery of the atomic bomb, and the development of guided missiles, will undoubtedly bring some important changes in all armed forces and in design of their tools of war. But modern wars are not won alone by a single type of weapon, or exclusively by air action, or by naval action, or the sole action of some other type of armed force. Armies do not exist solely to fight armies or fleets to fight fleets. There was no Japanese fleet at Okinawa, yet the capture of Okinawa by Army and Marine Corps forces would not have been possible were it not for the physical presence and support of American naval forces, which alone suffered 16,000 casualties in the operation.

Modern war is waged by the combined action of sea, land, air, diplomatic, and economic effort. For example, the airplane, as employed by the United States Navy in the war against Japan, was an integral element of our sea power and supplemented the mobility of the ship to produce flexible and mobile concentrations of power of our fast carrier forces.

In the Battle of Midway, in 1942, these forces destroyed nearly half of Japan's carrier-based air strength, which enabled our amphibious forces to establish themselves in Guadalcanal 2 months later, thereby wresting the initiative from the Japanese—an initiative which he never regained.

In the Battle of the Philippine Sea our carrier forces destroyed the last remnants of Japanese naval aviation, thereby materially lessening the naval resistance to the invasion of Iwo Jima and Okinawa.

Aircraft from these fast carrier task forces sank 40 percent of the Japanese Imperial Navy's tonnage, while the Navy as a whole sunk 78 percent of all Japanese ship tonnage lost.

The atomic bomb dropped on Hiroshima undoubtedly decided Japan to surrender when she did, but Japan was not beaten by the atomic bomb. She was beaten because we gained command of the sea, which in modern usage means control of the areas under, above, and on the surface of the seas for one's own use while denying their use

to the enemy. We gained mastery of the sea by destroying her navy and thus were able to strike her with our landing forces and air power wherever we willed. She was beaten because our Navy stopped the flow of seaborne supplies essential to Japanese existence and because of the devastating destruction of American aircraft, particularly the long-range B–29's, operating out of the Islands of Guam, Saipan, and Tinian, in the Marianas group.

But those B–29's, our longest-range aircraft, the plane that finally carried the atomic bomb to Japan, could not effectively bombard Japanese cities from a base further distant than Guam. Guam was not recaptured until the summer of 1944, after 2 years of fighting our way across the Pacific Ocean. Fighting which involved the capture, by amphibious landing forces, of land bases which were essential to the operation of our naval vessels and land-based and carrier-based aircraft. Fighting by naval surface and subsurface forces to insure that the sea lanes to our bases would remain open to the cargo vessels transporting the prodigious and continuous flow of gasoline, fuel oil, food, ammunition, weapons, and equipment and supplies of infinite category required by armed forces in combat. Fighting which was successful because during that 2 years we gained command of and thenceforth dominated the sea.

Without our dominating sea power General MacArthur could never have moved into the Philippines; Admiral Nimitz's forces would never have occupied the Marianas Islands and Okinawa, and we would, therefore, have been unable to establish the air bases essential to the effective bombing of Japan.

In short, no decisive action would have been possible had not our sea power been such as to insure this mastery, and had we not been able, with our merchant vessels, to transport the millions of tons of supplies essential to the support of the operating forces.

And so it was sea power, which implies a balanced and integrated force of ships, aircraft, submarines, and amphibious forces with their foot soldiers who must invariably put the seal on final victory, which gave us command of the sea and the ability to move our ground forces and supplies to strike the enemy when and where it was desired and so defeat the Japanese.

The defeat of Germany was due in part to her ignorance of the use of sea power, an ignorance ranking high in the list of fatal strategic, political, and psychological miscalculations of her leaders. She was beaten because England refused to admit defeat; and because Hitler, on breaking through to the English Channel, was not prepared to launch an amphibious invasion of England with ground forces. And later it was too late for a successful Channel crossing because, with their dominating sea power, control of the Atlantic Ocean passed to the British and American Navies. And the United States could then pour the full weight of its men and resources across the Atlantic to supply Russia and Great Britain, too.

The United States is, strategically speaking, an island as is Japan and Great Britain. An island nation cannot be attacked, nor can it carry war to an enemy without crossing an ocean. But some people believe that even if wars cannot be abolished, they will be won by transoceanic bombardment with great masses of guided missiles, and by transporting, completely by air, invading armies, and millions of tons of materials to keep them supplied. Perhaps that day will come, but it is not here yet.

Even if the United States could be bombarded by transpolar missiles or by air attack, a decisive conclusion can only be obtained by ultimate assault in force and by the invasion and occupation by foot soldiers. Until aircraft are developed which can operate at will regardless of weather conditions, and can be built in such numbers that they can transport whole divisions of troops, land them at will, and maintain an unbroken flow, in overwhelming quantity, of troop replacements, equipment, munitions, and supplies, the sea will be the principal medium of transport to either ourselves or our enemies.

For example, in 1942 the problem arose of moving 100,000 long tons of war materials per month under war conditions from San Francisco to Australia, approximately 6,500 nautical miles. This was only a fraction of the tonnage moved monthly as the war progressed, but for this task it was determined that forty-four 10,000-ton cargo ships would be required, with 3,200 men to man them and 165,000 barrels of fuel oil for their operation.

On the other hand, to move this tonnage by air would have taken ten thousand 4-engined airplanes and 120,000 highly trained specialists to operate and maintain them, 9,000,000 gallons of gasoline would have been required to keep them flying, and a total of 89 tankers would have been necessary to furnish the gasoline, most of which would require hauling to successive island base fueling stops across the Pacific.

In conclusion, then, the United States must, in an emergency, be able to control those waters which are essential to our hemispheric security with whatever weapons are most effective. World War II has made it clear that oceans are not truly effective barriers and that the security of our coasts and country demands a strong, properly balanced Navy as well as an adequate ground Army and Air Force.

History has shown that in the intervals between our wars there is a tendency to forget the need for a strong Navy, but this time the American people must heed the lessons they have learned at so great a cost. They must not forget that history has also shown that the victorious nation is the nation with a sea power capable of insuring mastery of the sea.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. BEALL. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the speech of Donald McCoy, a student at Fort Hill High School, Cumberland, Md., entitled "I Speak for Democracy." I think this young man very ably expresses what a great many of us personally feel, and I am delighted that he won the oratory contest sponsored by the Junior Chamber of Commerce of Cumberland.

I SPEAK FOR DEMOCRACY

I am the youth of America, and I speak for democracy. Why does democracy mean so much to me? Well, maybe it is because I've been brought up under the Constitution and the Bill of Rights. Or, maybe it is because I want to be able to look into the future and see happiness and security. When you say democracy most people think of laws and government, and I suppose they are right, but to me democracy means something more. To me, democracy is reading the books I want to read and thinking the thoughts I want to think. It is a mother's love and ambition for her son; it is a little boy kneeling in church giving thanks for the God-given goodness of the world he sees around him; it is a mind without fear, a faith in fundamental human rights, and the dignity and worth of the human person; it is the equal rights of men and women and of nations, large and small; it is social progress and better standards of life in greater freedom; it is the practice of understanding and living together as good neighbors. Democracy is humanity echoing the words of the inspired Walt Whitman:

"Comrade, I give you my hand,

"I give you my love, more precious than money;

"I give you myself before preaching or law."

I find democracy in many places. I find it in the tune the paper boy whistles as he tosses the paper on the porch. I find it in the little girl on the corner chewing bubble gum and in the clear call of the school bell; in the inquiring mind of youth; in the cheering football stadium; in the roar of the printing press; and the conviction of the radio commentator. I find it in the voice of the ballot, in the factory whistle, in the contribution of the scientist and artist, the dreamer and the scholar. I find democracy in the mingling of all races, in the deliberation of the lawmaker, and at the table of the United Nations. I find democracy in the inspiration I get when I stand and sing the Star Spangled Banner.

Yes, I speak for democracy—that noble heritage won with a sword of courage, stained with the blood of our patriots, and cleansed with the tears of their loved ones. I'd like to pass this heritage on to the next generation not tarnished but made brighter with careful use; not diminished but made even greater by its extension to all people everywhere, for democracy is the hope of the world.

I must be careful how I use my democracy. I must guard against its abuse and be ever alert lest some force try to snatch my democratic way of life from me. My best guarantee is to see always that I preserve for you and me and all men everywhere human rights—that I perform my obligations; that I share and build and understand and live in such a way that brotherhood is a living reality.

Oh, they can try me with other ideologies; they can eulogize communism and glorify fascism, but I'll stand firm. They can have their monarchies and their socialism and all the other isms, but when they say democracy I'll lift up my head and say that's my way of life you're talking about—that's for me.

Always I'll keep alive in my heart that great symbol of democracy, the tall lady who stands in New York Harbor, holds high a torch and proclaims to the world the shining generosity of a democratic Nation with the words:

"Give me your tired, your poor, your huddled masses yearning to breathe free;
The wretched refuse of your teeming shore.
Send these the homeless, tempest tossed to me.
I lift my lamp beside the golden door."

And so I shall, with my countrymen, seek always to "Measure out new liberties so none shall suffer for his father's color or the credo of his choice;

"To post proofs that brotherhood is not so wild a dream as those who profit by postponing it pretend;

"To sit at the treaty table and convoy the hopes of little peoples through unexpected straits;

"And to press into the final seal a sign that peace will come for longer than posterity can see ahead;

"That man unto his fellowman shall be a friend forever."

In this manner shall I speak for democracy—with my words, my heart, and my every action.

DONALD MCCOY,
Fort Hill High School,
Cumberland, Md.

Promise and Performance, the Eightieth Congress

EXTENSION OF REMARKS
OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. PLUMLEY. Mr. Speaker, on the 13th day of August last, I addressed a group of several hundred Vermonters on The Green at Danville, Vt. Under leave heretofore granted, I am inserting in the RECORD a verbatim copy of the speech I then and there delivered. I named it Promise and Performance, and here is what I said:

PROMISE AND PERFORMANCE, THE EIGHTIETH CONGRESS

Having talked with the people of Vermont as their commissioner of taxes for 6 years, as speaker of the Vermont House for 3 years, as president of Norwich University for 14 years, and as their Representative for 14 years in Congress, I submit it is not my fault if they do not know what I think and where I stand.

Seven times my record in Congress has been reviewed and examined by the voters, who, to the tune of some over 80,000, have approved my record. I am humbled by the responsibility incident to such an endorsement.

Obviously, I cannot expect to satisfy all the voters all the time, for I still entertain the opinion so well expressed by Edmund Burke long ago when he said:

"Certainly, gentlemen, it ought to be the happiness and glory of a representative, to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinion high respect; their business unremitted attention. It is his duty to sacrifice his repose, his pleasure, his satisfactions, to theirs, and above all, ever, and in all cases, to prefer their interests to his own. But, his unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrific to you; to any man, or to any set of men living. These he does not derive from your pleasure; no, nor from the law and the Constitution. They are a trust from Providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion."

THE EIGHTIETH CONGRESS

The first session of the Eightieth Congress has been hectic and historic. As the third ranking member of the Committee on Appropriations I have been forced to devote a considerable portion of my time and attention to the fiscal affairs of the Government. We were unable to attain the savings we sought by reason of Presidential opposition to cuts we tried to make and lack of cooperation on the part of the Executive with the legislative branch of the Government insofar as matters pertaining to our domestic economy were involved.

Yet we made a very good start. The direct savings upon budget estimates from reductions amounted to nearly $3,000,000,000 and the recissions effected totaled over a billion and half more. The Appropriations Committee figures show without any possible successful contradiction that by reason of what the Congress accomplished the country and the Treasury are $4,423,000,000 better off than they would have been had we followed the estimates submitted by the President of the United States. Four billions and a half of dollars saved to the taxpayers is something to talk about when you recall what we were up against.

I should point out the fact that our first task was to put into operation the Reorganization Act, which I helped to draw and which was adopted by the Seventy-ninth Congress. This involved the reorganization of 47 committees and their reduction into 19 major standing committees. Seventy-four Republican Members and 30 Democratic Members were now elected in November 1946. This reorganization was some job and it took us over 6 weeks to get the machine into gear, which was a very short time when you stop to consider the amount of work which was necessitated.

Then we were confronted with the responsibility of transferring from a wartime to a peacetime economy. We avoided the chactic conditions which have followed previous wars. Employment set a reasonably high record, national revenues were increased, reductions in expenditures accomplished. We have commenced to restore the Nation to a proper peacetime economy. We will not be able to finish the job but we will make an increasingly noticeable effort in the second session.

TAFT-HARTLEY LAW

I suppose that the labor legislation attracted as much attention as anything which was enacted. In my judgment the President made a great mistake from the standpoint of the people in vetoing the legislation which veto I was glad to vote to override. Many efforts on the part of those opposed to any labor legislation were made to mislead the rank and file and to misinform the public. The men and women who work should make it their business to understand the purpose of the law in order that they may know what their rights are. A man looking for a job cannot hereafter be denied a job because he does not belong to a particular labor union. A worker cannot be fired on union orders unless he fails to pay his union dues and he can express his views with reference to the leaders of the union, urge other members to get out of it and go set up a rival union if he desires to, and in doing all these things he will have freedom of action and his Government will protect him. Of course, the union has to make a report of its financial affairs and methods of doing business, which provision was very unsatisfactory to some labor racketeers, and it also has to file a copy of its constitution and bylaws and make a report containing complete information as to salaries of its officers. This information is just as valuable to the workers as it is to the public.

No longer may a worker be assessed for political activities, and a worker cannot be fired for failure to participate. So soon as the public and the workers understand the provisions of the law, the quicker it will be recognized that there is nothing in the law which destroys labor unions, is against a responsible labor union, but it does make sure and certain that a clamoring minority may not pull off a strike without consulting the proper authorities. This security will be appreciated by the wives and families of workingmen and by the public generally.

TAXES

Then perhaps the second matter which attracted the attention of the public was the question of reduction of taxes. The Eightieth Congress tried continuously to have a new tax law enacted which would reduce personal income taxes. The House of Representatives and the Senate passed such laws twice, only to have them vetoed. The House overruled the veto on the second tax law, but there were not enough votes in the Senate to override the veto in that body. It is easy enough to criticize a program, but it is not easy to substitute a system which will be any more acceptable. In my judgment, the plan which was submitted was reasonable and should have been carried out. It would have saved a lot of people in all walks of life a lot of money by the saving in taxes which it afforded, and it would have exempted a large number of people from the payment of any tax. Despite what anybody may tell you to the contrary, it is my well-considered judgment that the tax cut was feasible. The estimated revenue for 1948 will be $41,000,000,000 plus. The expenditures as estimated will reach $34,500,000,000, which would leave a budget surplus of better than $6,500,000,000.

Now this tax cut of $4,000,000,000 for the calendar year 1948 would have reduced the revenues by only $2,000,000,000, which would have left $4,000,000,000 with which to retire the debt or to cut taxes, so I do not see how anyone can question the ability of the Government to make such a tax cut nor the feasibility of the law which Congress twice enacted.

POLITICS OR TAXES

Everybody knows that the President played politics with the tax question. He might have known better but he followed poor advice. It is practically certain that he has learned his lesson and it is just as certain he will not continue to adhere to the policy of no tax reduction in 1948. Neither will he try to make any attempt to curtail the budget of expenditures. The man who tries to straddle a fence is liable to get chafed.

The tax bills he killed were for temporary relief of the low-income taxpayers and for the encouragement and stabilization of industry to the end that production might be expedited. The encouragement which would have been afforded business by the enactment of an interim tax-reduction bill this year has been lost, as have also the benefits from increased business volume which usually follow tax reduction.

Having predicated his vetoes upon a concern for the low-bracket taxpayers, the President is committed to a policy of tax reduction by which the personal exemptions will be substantially increased. If this is to be brought about he must realize that the budget demands must be very substantially decreased. It is absolute folly to demand that fifteen to twenty million taxpayers shall be relieved of paying taxes and at the same time demand revenues to cover budget estimates in the thirty billions, despite a continuance of our present inflated national income. Either way you look at it, the President and those who support his position with respect to no tax reduction have "a bear by the tail."

In order that Vermonters may have the situation brought home to them as individual taxpayers in the several counties let me say that failure of enactment of the tax-reduction bill will cost Vermonters some $5,177,000. If the tax-reduction bill sponsored by the Republican majority in the House had passed it would have saved the common, ordinary, small taxpayer of the Nation about one-third of his next tax bill.

About $5,177,000 would have been saved the 138,553 Vermonters who it is expected will be paying a Federal income tax in 1948. Right here in Caledonia County the savings would have amounted to something like $284,000. And it takes a lot of milk checks to make up that amount of money; money which must come right out of the pockets of the small Federal taxpayer.

I received a large number of letters from Vermonters commending me for my vote in favor of this measure both times it was before the House, and for my vote to override the President's veto. Those Vermonters who wrote me not only complained of the heavy tax burden on them as individuals but agreed with me that it was time for substantial tax relief.

I think it will interest Vermonters generally to know just what it would have meant to them in tax savings, by counties, had this measure been enacted. A table based on tentative data indicates there would have been saved to Addison County taxpayers about $126,000; to Bennington County taxpayers a saving of $440,000; to Caledonia County taxpayers a saving of $284,000; to Chittenden County taxpayers a saving of $1,094,000; to Essex County taxpayers a saving of $40,000; to Franklin County taxpayers a saving of some $219,000; to Grand Isle County taxpayers there would have been a saving of some $21,000; to Lamoille County taxpayers a saving of $134,000; to Orange County taxpayers a saving of $58,000; to Orleans County taxpayers a saving of some $241,000; to Rutland County taxpayers a saving of some $747,000; to Washington County taxpayers a saving of about $840,000; to Windsor County taxpayers there would have been a saving of some $523,000; and to Windham County taxpayers a saving of some $410,000; or a total saving in Vermont of some $5,177,000. Moreover, as an individual on the basis of my experiences in tax affairs, I venture the assertion that there could be many more dollars applied to reduction of the debt, and a much larger reduction of taxes in the lower brackets accomplished, if the Administration would not persist in its reckless, wanton spending in order to play politics, pure, simple, and defiled.

AGRICULTURE

My place as second on the Agriculture Subcommittee of Appropriations for Agriculture is unique in that I am the only Representative on that committee east of the Mississippi, north of the Mason and Dixon's line. And again it is understood I represent the small farmers of the Nation as against those who come from areas where a thousand acre farm is small.

The farmers of Vermont ought to realize by this time that the Department of Agriculture is out to socialize and to federalize agriculture, to consolidate farms, and to put the small farmer out of business. The Department is for its own expansion, consolidation of farms, and control of the farmer. I am opposed to such regimentation and against the program of socialization.

We did pretty well by agriculture despite all you have heard to the contrary from the mouths of those who still go along with the New Deal program of socialization "to spend and spend and spend in order to elect and to reelect."

We left the Extension Service intact without a reduction. We made no reductions with respect to Forest Service as to items where there seemed to be justification for the requests for money, such as forest fire and farm forestry cooperation. Nor did we reduce appropriations for many of the field and research functions which the Forestry Service pursues.

Everywhere we could put our finger on duplication we cut it out but only commenced on that program awaiting further reports from our investigators who are now in the field. We cut the Bureau of Agricultural Economics because of the apparent duplication of effort therein, but appropriated a sufficient sum for special research involving all types of agricultural problems here and in Alaska.

We carried and approved the budget estimate for experiment stations, while we gave the Bureau of Dairy Industry and of Plant Industry all they asked, as I remember it. At any rate we gave them all they need.

We approved $38,000,000 for soil-conservation service which probably is more than can be used wisely, while we restored $750,000 for soil-conservation research to develop sound soil-conservation action in the field.

So far as the school-lunch problem is concerned we appropriated around $75,000,000 for it, but our report in that connection deserves to be called to your attention. We said: "The conferees on the part of both the House and the Senate have agreed to direct attention to the fact that in the consideration of funds for the school-lunch program they have emphasized that it is essentially a local program and that the States have not done their full share in complying with the spirit of the matching provisions contained in the National School Lunch Act. The conferees of both Houses have also agreed to direct attention to the fact that it has been repeatedly asserted that many State legislatures have adjourned without taking action to provide funds in the nature of contributions to the school-lunch program. The conferees on the part of both Houses desire to make it abundantly clear, therefore, that in connection with a reexamination of this matter for the fiscal year 1949, they are now placing the respective States on notice with respect to their obligations under this program and that failure of the State legislatures to act in the premises will have no effect in determining the future requirements of this program."

The Congress was satisfied that the Rural Electrification Administration, which despite what anybody says to the contrary, as a matter of record, has always had more money appropriated for it than it could spend because of shortage of copper and other necessary equipment, had been extravagant and unwise in its management, and it said so in very plain language. And that is not all of the story. That this bureau is in for a very thorough investigation of its personnel and of its management of its affairs is very obvious. The necessary funds for the continuation of the REA program were, however, appropriated while strict accountability for the use of the money will be enforced. Vermont has always been fortunate with respect to those administering REA within its borders. Not so in many areas.

I forgot to say, with respect to soil conservation, that we appropriated $150,000,000 for the program, fiscal year 1948, with a maximum limitation of $500 to any one participant.

And so I might go on, did time permit, to cover the subjects on which we spent 70 days in hearings which were decidedly interesting if not always instructive.

The Appropriations Committee is farmer minded while opposed to the exploitation and socialization of the farmer by the Department of Agriculture, its stooges, its socialistic aiders and abettors, which seeks to build itself up into the most powerful octopus among all the bureaus. The Department has "gone hog wild" in its attempts to expand only to duplicate its own efforts at the expense of all the taxpayers, more especially the farmers whose servant, not whose master, it should be.

If I had time I could talk to you about the liberalization of the civil-service legislation; the action taken by the Congress providing for the voluntary cashing of terminal leave bonds which enables the men who need the money to get it now and save the Government $62,000,000 and over in annual interest. I could talk to you about a lot of things which we did, for we worked hard to carry out the wishes of the American people as expressed in the election of '46. We examined every request for appropriation with care, but savings which we effected were made without jeopardizing national security. We treated all requests for money for research with great liberality. We were exceedingly generous in our contribution made for the welfare of less fortunate countries. We are sending to all points of the globe special committees to explore all manner of things to determine for us wherein we can save the people of the United States money and determine policies which shall be followed in the second session of the Eightieth Congress.

Over the opposition of parlor pinks and leftists and fellow travelers, action was taken which resulted in the elimination of disloyal persons from the Government service by the thousands. The extent to which this type of person had infiltrated responsible official positions is only realized when I tell you that over 1,000 civilians, as a result of the activities of the Congress, were released from positions of confidence in the Army, the Navy, and the State Departments. We intend to see to it that all those of questionable loyalty are sought out and that they are prevented from occuping positions in which they could be of harm to the security of the United States.

Fellow travelers, parlor pinks, Communist sympathizers object to the efforts of anybody to ferret out these people. They complain of the Committee on Un-American Activities and the methods it employs to locate the political termites, who, subversively boring from within under cover of quasi respectability, are among the most dangerous groups to be found and dealt with for our own protection. There are too many of them right here in Vermont.

Today America has become the last great nation of the world which puts her complete faith in a philosophy of freedom, a philosophy which recognizes the inherent rights of every citizen—freedom of speech, freedom of religion, freedom of enterprise.

That philosophy in a century and a half made this country the greatest nation on the face of the earth. That philosophy made America strong enough to win the war. I propose to help to keep it strong.

Many proposals have been advanced under the false label of liberalism, designed to assure all the people in this country a high standard of living, regardless of what the individual does for himself, simply by passing a law. All history should prove to us that such a guaranty to individuals will be paid for eventually in a very precious coin indeed—the coin of individual human freedom. Liberty cannot be legislated.

Communists, parlor pinks, and fellow travelers are alike in their devotion to the proposition that the end justifies the means. To a liberal, on the other hand, the means are as important as the end. Neither can be destructive of individual freedom.

That is why liberals must fight communism and those endorsed by Communists as bitterly as they fight fascism, even though it means being called red baiters. That fight is more difficult because liberals must always defend the very freedoms which Communists abuse to achieve their end, which is the destruction of freedom. It is more difficult because conservatives in the past have too frequently cried, "Communist" simply to defeat liberal and not authoritarian proposals, and consequently many people refuse to believe there is really a wolf there this time. There are wolves in sheep's clothing in Vermont. You don't believe it? Well, it is time you did.

Mr. Tom Clark, Attorney General of the United States (a member of the administration who takes his oath of office seriously), delivered a speech before the Chicago Bar Association. He declared:

"One of the greatest dangers, in my opinion, to civil liberties of our fellow citizens, and one which should be taken literally by all the members of our profession, is the method of communism to shackle democracy by indirection."

Declaring that "no one but a complete crackpot can be deluded by what we see going on today," Mr. Clark said:

"We know that there is a national and international conspiracy to divide our people, to discredit our institutions, and to bring about disrespect for our Government.

"Why should we blind ourselves to obvious facts?"

A lot of leftists do not like me because I am opposed to all the hare-brained theories once buried with Athens and Rome and other ancient republics, undertaken to be resurrected again and foisted upon us now. The men who founded this Republic would have

none of these theories which even as of their time were so long dead as to preclude resurrection.

Vermonters who have a drop of the real blood of their Green Mountain ancestors flowing through their veins are not fooled by the new clothes in which the corpses of dead civilizations march out as substitutes for the principles on which this Union of the States has grown into the mightiest Nation the world has ever known.

I prefer to have history record me as one who recognized the dangers and respected the lessons history teaches than to be written down as one so unwise as to respond to pressure groups whose sole aim is selfish but destructive, no matter how good their misinformed intentions may be. Hell is paved with good intentions, and the history and story of government from its beginning proves how wrong these people are.

I will not tolerate as a private citizen, much less as your Representative, the attempts now being made by quasi Socialists, American Communists, fellow-travelers, parlor-pinks living off what their fathers left them by reason of the opportunity the good old United States afforded them—I will not tolerate their attempts to wreck the greatest governmental experiment in all history attacked subversively, by throwing the dead cats of buried philosophies of government into the machinery which has made possible all you enjoy.

If that be treason, make the most of it.

St. Lawrence Waterway

REMARKS
OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. LARCADE. Mr. Speaker, since 1924 the development of the St. Lawrence River for navigation and power has been a public issue. In one form or another, it has been before Congress on several occasions and each time has failed of approval. Perhaps there has never been a more controversial public-works project in the history of our Nation.

It is difficult, therefore, to talk of it without repetition after nearly a quarter century of controversy, since most of the issues involved have been so thoroughly and exhaustively debated in years gone by.

Mr. Speaker, these are the opening statements contained in an article in opposition to the construction of the proposed St. Lawrence waterway, contributed to the November issue of the Nation's Agriculture, official publication of the American Farm Bureau Federation, by Hon. JOHN H. OVERTON, senior United States Senator from Louisiana, and which article I have requested be printed in full in the Appendix to the RECORD following these remarks.

As a member of the former Rivers and Harbors Committee, now the Public Works Committee of the House of Representatives, I have been greatly interested in the proposal for the building of the St. Lawrence waterway, and in order to be fully informed, I have read much about the project, have followed the committee hearings, and have made every effort to obtain all information possible with respect to the proposed project.

Mr. Speaker, my interest in this project has not been only because of the magnitude of the proposal, but also as to how such a gigantic project would affect the economy of the whole Nation, and especially the balance of the waterway and transportation system of the United States, my district and State. I was particularly interested in this project as I represent the city of Lake Charles, La., which has the second port in Louisiana, handling during the past year more than 10,000,000 tons of cargo. I think the discussion of the subject by Senator OVERTON is most illuminating, and the facts and arguments presented in opposition to the proposal are pertinent and sound.

I am particularly impressed with what Senator OVERTON has to say about the ill effects that the development of the St. Lawrence waterway might have on our American merchant marine.

Prior to World War I, it was our policy to let the ships of other nations carry our foreign commerce on the theory that they could do it more cheaply than we could do it ourselves. But when hostilities began, England and other countries upon which we depended commandeered their merchant vessels for war purposes, leaving us stranded high and dry, and striking a crippling blow at our ocean commerce.

Commodities for export piled up on the docks, in elevators, and in warehouses. Agricultural producers were hit harder than any other group. For example, the cost of shipping cotton from Galveston to Liverpool rose from $2.50 to $50 per bale. The cost of carrying other commodities rose in the same proportion.

Under the stress of absolute necessity we then proceeded to build our own merchant marine, which under wartime conditions cost us about $3,000,000,000, or several times as much as it would have cost under normal conditions. It has been estimated by competent authorities that the losses sustained by agriculture alone because of the lack of shipping facilities during the early years of World War I would have built the kind of merchant marine we then needed so desperately. We do not want a repetition of such an experience. An adequate American merchant marine is indispensable both in peace and in war. Anything that would injure our merchant marine should be shunned as being contrary to the national interest.

Senator OVERTON'S article is as follows:

[From the Nation's Agriculture of November 1947]

ST. LAWRENCE WATERWAY?—NO, SAYS SENATOR JOHN H. OVERTON, OF LOUISIANA

Since 1924 the development of the St. Lawrence River for navigation and power has been a public issue. In one form or another it has been before Congress on several occasions, and each time has failed of approval. Perhaps there has never been a more controversial public works project in the history of our Nation. It is difficult, therefore, to write of it without repetition after nearly a quarter century of controversy, since most of the issues involved have been so thoroughly and exhaustively debated in years gone by.

The St. Lawrence waterway has been presented now to the Congress in a new wrapper, decorated with a gaudy tinsel calculated to resolve opposition and foist this gigantic and, from an economic standpoint, highly dubious project upon a gullible public. This lure and enticement is in the form of a so-called "self-liquidating" provision which would impose a toll upon every ton of traffic moving through the waterway.

SERIOUS THREAT

The toll system can, by its very nature, not only defeat the proclaimed desires of the proponents of the St. Lawrence seaway, but it can eventually nullify all of the benefits which have accrued to the Nation through the development of its rivers and harbors for cheap transportation. The advocates of this proposal, I am sure to a large extent unwittingly, are playing into the hands of the bitterest enemies of waterway development.

For many years those who have been opposed to the development of our rivers and harbors for navigation have asked for legislation which would levy tolls on water commerce.

I could never subscribe to their views because I believe that the great rivers of our country should be open to all on equal terms. They are a natural and national resource which, to my mind, should be fully developed and used for the benefit of the people. To levy tolls for their use would largely nullify their benefit to a huge portion of our population.

TOLL IMPOSITION

Once the St. Lawrence is authorized for development on a toll basis, the proponents of toll imposition on all our waterways will have their "foot in the door." In my estimation, the Congress will be almost immediately engulfed with bills calling for placing of tolls on the Ohio River, the Kanawha River, the upper Mississippi River, the Illinois River, the Missouri River, the lower Mississippi River, and all other streams in our great inland waterway system. Should these efforts be successful, those who advocate the St. Lawrence because of their belief that it will mean cheap transportation for the farmers of the great Midwest will, by their support of the toll feature on the St. Lawrence, have defeated their own purpose. Placing of tolls on the Mississippi River Basin waterways will immediately destroy the freight-rate system in much of the great Midwest, for a measurable increase in the cost of water transportation shows an immediate effect on the volume of goods moved.

ECONOMY OF MOVEMENT

Economy of movement is probably the principal factor in water traffic, since it can seldom compete either in convenience or in rapidity of movement. When the difference in cost of shipment by water and other means of transportation becomes negligible, then shippers, as a general rule, prefer the other means of transportation, because it is quicker and more convenient. Tolls will therefore quickly take much tonnage off of our rivers and eventually dry up river traffic. When our waterways are no longer competitive, then we will see rates by other forms of transportation skyrocket.

It follows that the same farmer who might be helped by the St. Lawrence seaway on the one hand can be destroyed on the other because of the toll feature. It will be irony at its worst.

The addition of the toll cost to the ordinary cost of operating a ship will, at least, absorb that much of the alleged saving to the shipper. The more narrow the margin of cost between shipment via the waterway and the cost via other means, the easier for other forms of transportation to compete with the waterway. It would, therefore, be altogether probable that much traffic which would use the waterway without the toll will, with the imposition of this additional cost, find the St. Lawrence no cheaper than other available forms of transportation. There has

always been serious doubt as to the economic justification of the waterway, even without the toll provision.

The St. Lawrence seaway has never been the object of a regular, thoroughgoing engineering and economic study, such as the Congress requires on all waterway projects, the claims of the proponents that such a study has been made to the contrary notwithstanding.

The established method provides for the direction by the Congress of a preliminary examination and survey of the project by the Army engineers. If the report is favorable, a complete survey and examination is undertaken, first by a District Engineer, then by a Division Engineer who reports his conclusions to the Chief of Engineers.

The Chief of Engineers first sends the report to the Board of Engineers for Rivers and Harbors, which then conducts a hearing on the project.

The Board of Engineers for Rivers and Harbors then submits its report to the Chief of Engineers who, in turn, also studies the entire case and drafts a report which is submitted to the governor or governors of the State or States involved for comment. The Chief of Engineers then submits the entire report to the Congress.

If the examination and survey has been favorable, the proper committee in the Senate or House calls a public hearing. These hearings are exhaustive and frequently extend over a considerable period of time. If the congressional committee then decides that the project is meritorious, appropriate authorization legislation is reported. The project then bears the scrutiny of the entire Congress and, if passed, must go to the President for signature, as does all other legislation.

I insist that the St. Lawrence seaway is in no different category than any other waterway project in the country.

I am well aware of the argument which has been advanced by the proponents that the St. Lawrence seaway is different and that it cannot and should not be considered as our other waterway projects because of its international aspects. That argument collapses of its own weight. The St. Lawrence, except for length, is no different from the St. Marys River, which connects Lake Superior and Lake Huron. It, too, is on the international boundary. The improved project falls within both Canada and the United States. The locks, however, are, as in the case of the project now under consideration, within the United States. But the improvements on the St. Marys River were subjected to the same study and authorization process as were the improvements on the Ohio River, as it should have been.

ENGINEERING REPORT

All the Army engineers have ever been asked for on the St. Lawrence seaway is to determine whether the project was feasible from an engineering standpoint. They have never been consulted on the economics angle. My position is that before the St. Lawrence seaway proceeds any further, the Army engineers should be directed forthwith to make a regular examination and survey of the project, both engineeringly and economically, and determine in the regular way, in the established way, in the proper way, if it is economically justified. Such a study would once and for all remove the question of economics from the picture.

A subcommittee of the Senate Foreign Relations Committee last spring heard witnesses testifying to the vital necessity of the waterway for the future defense of the United States.

From this testimony I could not but be impressed with the fact that there was one aspect of our national defense which would be very seriously crippled if and when the St. Lawrence seaway becomes a reality, namely, our merchant marine. The future of American shipping may well be dealt a crippling, if not fatal, blow by construction of the St. Lawrence channel.

Years ago the principal ship operators in the country were asked for their views. All except 1 of the 32 operators who responded to the inquiry opposed the seaway and stated that in the event the seaway is constructed, they would not be able to extend operations to the Great Lakes area.

Since the channel would be only 27 feet, ships drawing more than 24 feet could not use it. American ships, practically all of which have been constructed to much greater drafts, could not operate economically on the route, but many foreign ships could.

The St. Lawrence would open our shipping to the tramp steamers of the world, taking from American bottoms American goods which should be transported on American-flag ships. For many, many years our Government has subsidized our merchant marine to make it competitive with the fleets of other nations, who build ships and man them for a fraction of the cost which a United States operator must pay. Even then an inadequate merchant marine always has been a source of anxiety to our military leaders when they were faced with the problem of defending our country.

Certainly the American seamen who transported fighting men to fronts which covered the globe, and then made it possible for them to stick there by the constant flow of ammunition, food, clothing, equipment, played an extremely vital role in the victory. Without our merchant marine we would never have been able to have maintained ourselves in the dark days of 1942 and 1943.

I think it would be just as unwise for us now to scrap our merchant marine as it would be to say that in these days of rockets and atom bombs, the tank no longer is a practical means of warfare, and we will therefore abandon our armored forces. That would be nonsensical and yet the proponents of the St. Lawrence seaway are asking us to do to the American merchant marine what they would not dare propose for our tank and air forces—cripple and destroy it.

OBJECTIONS

Among the objections offered by the shipline operators was that the seaway would be in use only 7 months per year, since ice conditions would prevent operations during five winter months. They explained that port facilities and offices would have to be maintained the year around, even though cargoes could be handled only 7 months. At the same time, they said, similar facilities would have to be continued at Atlantic ports to provide for traffic during the time the seaway was inoperable.

One operator pointed out that Chicago is only 1,500 miles from the ocean via the Mississippi River system to New Orleans, while the route through the Great Lakes and the St. Lawrence to the ocean would be in excess of 2,200 miles. He expressed the opinion that current freight rates, including the cost of transfer from ship to barge at New Orleans, are cheaper than the ship rate would be from Chicago to the Atlantic by way of the St. Lawrence, since the reduced draft and high insurance rates caused by the rocky canal channels and 15 locks through the St. Lawrence would, along with the distance involved, offset any other considerations.

Now we come to an extremely important question. What assurance does the United States now have that if it enters into this agreement and proceeds to construct its portion of the project, Canada will do likewise, and the St. Lawrence seaway will at any time in the foreseeable future become a reality? I raise this question because it is one we must face. The British Empire has never in its long history faced such an economic crisis as that with which it is now confronted. Can Canada—and will it—discharge its financial responsibility within the Empire and build its portion of the St. Lawrence seaway? I do not propose to know the answer, but it is an answer which should be had before this project should be considered further by the Congress.

Liquor Imports

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, while we see campaigns to save grains by not feeding livestock we witness the use of grains by other countries for liquor. Yes; even when our own breweries and distilleries are asked to close shop.

The following official letter indicates the amount of liquor and beer sent by England and Holland to the United States in 1946:

UNITED STATES TARIFF COMMISSION,
October 2, 1947.

Hon. REID F. MURRAY,
Member of Congress,
Ogdensburg, Wis.

DEAR MR. MURRAY: We have your letter of September 24 in which you ask for information concerning importation of distilled spirits from the United Kingdom and beer from Holland.

In the calendar year 1946 imports of whisky and gin from the United Kingdom totaled 4,373,000 proof gallons. Using a rough conversion equivalent of 4½ proof gallons of spirits per bushel of grain, this represented a total equivalent of grain of about 970,000 bushels. In the fiscal year ended June 30, 1947, the total imports of whisky and gin from the United Kingdom amounted to 5,213,000 proof gallons, representing an equivalent of 1,158,000 bushels of grain.

In the calendar year 1946 imports of malt liquor from the Netherlands amounted to 303,000 gallons. Using a rough equivalent of 1 barrel of 31 gallons of beer representing 1 bushel of grain, this importation was equivalent to about 10,000 bushels of grain. In the fiscal year ended June 30, 1947, imports of malt liquor from the Netherlands amounted to 477,000 gallons, representing a grain equivalent of 15,000 bushels.

If we can supply further information, we shall be happy to do so.

Sincerely yours,

OSCAR B. RYDER,
Chairman.

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C.

PRODUCTION OF BEER AND SCOTCH WHISKY IN GREAT BRITAIN

During the year ending March 31, 1939, a normal prewar production year, there were 24,674,992 bulk barrels of beer produced in Great Britain. Production of beer in bulk barrels totaled 25,759,500 in the year ending July 31, 1946, and 24,523,635 bulk barrels in the year ending July 31, 1947.[1]

Production figures for Scotch whisky in Great Britain are available in rounded numbers. Nineteen hundred and thirty-eight to nineteen hundred and thirty-nine was considered a normal prewar production year, and in that year 29,100,000 proof gallons of Scotch whisky were produced. In

[1] An English barrel is equivalent to 1.394 American barrels.

1944–45, production was about 10,000,000; and in 1945–46 it was about 13,000,000 proof gallons. Production for 1947–48 is estimated at about 16,000,000 to 17,000,000 proof gallons from grain allocations to the industry.[2]

According to the Department of Commerce there is no Scotch whisky produced in Holland; and there have been no figures on beer production since the late 1930's.

Foreign-Aid Bill

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. KERSTEN of Wisconsin. Mr. Speaker, as we approach the problem of foreign aid it is of interest to note the comments of veteran commentators like George E. Ready, such as the following given this morning over Station WOL in Washington. The evaluation of legislative action herein made is not necessarily my own but it provokes considerable thought as we come to consider the momentous questions involved.

The administration's $597,000,000 stopgap bill for aiding Europe, has cleared its first hurdle in championship form. It passed the Senate, by the overwhelming majority of 83 to 6 votes—a margin which leaves no doubt as to the support behind the measure.

However, the bill will now face a far stiffer test. It must go before the House, which seems determined to give it less sympathetic treatment. In fact, the House Foreign Affairs Committee has already voted to cut the measure by a good big chunk.

The Senate legislation would grant all of the $597,000,000 to France, Italy, and Austria. The House committee limited the authorization for these three nations to $530,000,000. However, it provided an additional $60,000,000 for China.

The House Republican leadership has decided against any attempt to bind their followers on a vote. So the debate will be a free-for-all in which anything can happen. There are even some prospects that the figure will be increased.

It is, of course, a virtual certainty that the House will pass some kind of a foreign-aid bill. The real question is just what it will contain and what the final outcome will be after the House and Senate compromise their inevitable differences.

It is generally believed that some figure halfway between the Senate amount and the House amount will ultimately prevail. That is the usual outcome of paliamentary procedure. It is unlikely that either Chamber will agree to the legislation written by the other.

When this session began most observers thought it would afford them a clue to the destiny of the Marshall plan. They reasoned that votes on the stopgap bill would bear some resemblance to the votes on the long-range program.

Already it is apparent that they will be disillusioned if they follow this reasoning through. The stopgap bill will afford no yardstick whatever for evaluating the support of future legislation. Even though it passes the Marshall plan may fail.

This is obvious from conversations with many of the men who will support the interim-aid bill. A large percentage of them say they will reverse themselves in voting on the Marshall plan. Their attitude reflects many considerations.

First of all, they are unwilling to permit America to lose face in foreign affairs by rejecting the President's program. The present session, they point out, was called specifically to consider foreign aid, and they believe steps should be taken in that direction.

Secondly, many of them can comprehend the stopgap measure but are staggered by the sheer size of the Marshall plan. They do not think America can stand the draining away of $20,000,000,000 worth of its resources, even over a 4-year period.

Finally, there are some who believe that if Europe can get through this winter, it is saved. They think that the interim program can accomplish the immediate job. After that, they argue, Europe should be able to get along by itself.

It is still probable that something in the form of the Marshall plan will be approved next spring. But it is likely that it will bear little resemblance to the program advanced by our Secretary of State. He may refuse to claim paternity for the child.

Opposition to the program has been mounting rapidly ever since the President hooked it up with price controls. Whether this opposition can go far enough to tie up the plan with crippling amendments is something that only the future can tell.

[2] The British gallon as a measure for distilled spirits is larger than the American gallon and the proof standard is different, so it is necessary to multiply the British gallon by 1.368 to convert it to an American gallon.

The Irrigator Looks at Erosion

EXTENSION OF REMARKS
OF
HON. ERNEST W. McFARLAND
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Thursday, December 4, 1947

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "The Irrigator Looks at Erosion," delivered by Hon. William E. Warne, Asistant Secretary of the Interior, before the National Reclamation Association, at Phoenix, Ariz., on October 29, 1947. The address points up a problem of great concern to the West, where soil erosion is a menace to the future of successful irrigation. I am glad to see the Department of the Interior dealing actively with this problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The irrigationists of today who face reservoirs clogged with silt have much in common with oldtime California farmers who raised justifiable howls over the hydraulic mining debris that inundated their land. For whether the debris comes from hydraulic mining or from eroded land, the result is devastating. To get a better perspective on this modern problem of silt, which is more common and less easy to cure, let us look back at what happened in the Central Valley of California during the heyday of hydraulic mining.

The men who answered the gold call of California in 1848 swarmed over the Sierra Nevadas into the inviting valleys. Here they found soil ripe for plowing and mountain stream beds rich with gold. The new population grew quickly as the products of soil and stream became famous. Competition for the best land and the best placers kept steady pace.

It was soon apparent when local rich deposits were overrun that they needed faster and more efficient methods of mining. So the engineer suggested a way for rapid extraction of small amounts of gold from sand and gravel. He made use of hydraulic mining techniques, directing streams of water under a head of several hundred feet against deep unconsolidated beds of ores. The water-borne gravels and sands were easily run over sluices where pockets of mercury picked out the gold. This was a bonanza for the miner but a tragedy to the farmer.

The miner in his zeal for gold forgot that the clay material would clog the river channels. "Slickens", as this clay debris was called, lodged in the valley or found its way to the tidal waters of San Francisco Bay.

Then came the floods. Sands and gravels borne by spring freshets moved toward the lowlands. The debris increased in volume at such a rate in the lower reaches of tributaries of the Sacramento River that the valley farmers were greatly alarmed.

The heavy material was deposited in the lower mountain valleys and debouched upon the plain; the streams were overloaded, the river bed rose, and lands formerly protected by natural or man-made levees were in great danger. The volumes of sands and gravels excavated were almost beyond comprehension. Between 1849 and 1909, hydraulic mining in the Upper Feather, Yuba, Bear, and American Rivers amounted to more than a billion cubic yards. This debris moved by hydraulic mining operations in the Sierra was nearly eight times as great as the volume moved in constructing the Panama Canal.

As the debris from the mines was allowed to go where it might, it lodged in the narrow canyons, sometimes filling them to a depth of 20 to 50 feet. Each winter's freshet swept larger masses of debris down into the valley and caused overflows during the spring. In many localities, thousands of acres of orchards and farming lands were almost entirely covered by silt and debris.

Now the farmers took this just so long and then they started court actions against the miners. The plaintiff's case was based on the burial of farming lands by debris, obstruction to navigation, and raising of flood levels.

The valley farmers had no trouble proving that hydraulic mining was directly responsible for their troubles. The farmers won their battle with court injunctions restraining the miners from allowing trailings to be dumped into the streams. Since the miners had to bear the expense of restraining works, many of the smaller hydraulic mines were forced to close down.

Today the western farmer is again faced with a similar debris problem. The difficulty is not so obvious; the cure not so easy; the importance much more subtle. Reservoirs on which the future of irrigated farming relies are filling with debris at an alarming rate. Sedimentation of river valleys has in many places resulted in damage even from small and moderate floods. Erosion of the watersheds is depleting the productivity of the land and is directly affecting the flood problem in the irrigated valleys. Since the intensified use of the western range, the process of erosion has been gradual but relentless. The present widespread erosion of western watersheds first became noticeable in the eighties and more marked in the first decade of this century.

Because these changes began during the early days of our grandfathers and in the boyhood of our fathers we cannot clearly realize how radical the transition has been. In certain areas there has been a change from

lush grass to sparse and meager range; from meadows and marshes to barren gullies and arroyos.

Movement of this eroded soil from the whole western range would make the debris of hydraulic mining look like a molehill. The process is slower, but the result is the same. The areas affected are larger and the causes and cures harder to resolve. But this analogy we are drawing between the debris problem and the gold-rush days and the erosion problem of the present-day irrigation farmer is not so far-fetched as it may seem. The major difference lies in this fact: In the case of the hydraulic-mining problem, the persons or activities causing the trouble were obvious; in the case of the widespread soil erosion which is affecting our reservoirs and certain irrigation developments, the causes are not so clearly evident and the activities responsible are much more difficult to name. Let me review these points.

It is clear that the depletion of vegetation which holds the soil will leave the surface vulnerable to washing by rain. The most casual observers note that large areas in the West are now undergoing rapid erosion. It is also clear that erosion is a natural process. In some areas, the rate has changed little since the advent of the plow, the ax, and the cow. It is generally recognized that many areas which once had soil-holding grasses now are depleted and gullied. They are a blot on the landscape.

Range lands over wide areas are not so productive as they used to be. Ground water and wells have been affected in many places by gullying. A gradual transition over wide areas from palatable grasses to less palatable herbs and weeds has been recorded. The density of grass has been reduced as well.

The erosion problem, of course, is not a new one. Engineers have been wrestling with it for many years. They have devised the construction of desilting works such as those at the head of the All-American Canal. All large reservoirs now have a certain amount of dead storage capacity to provide a backlog of years during which sediment can accumulate behind the dam without drawing on the usable capacity allocated to irrigation, flood control and power. The day will come—on many reservoirs it is here now—when sediment will progressively and actively deprive water users of much needed storage capacity. New dams to provide additional and replacement storage are of course under study, and in some instances under construction in the West.

But building new dams will give only temporary relief. New dams, increasingly costly, will never solve the long-range problem of sedimentation. This kind of relief may get us by the present generation and perhaps well into the next, but there is a limit to the number of reservoir sites. And what then? On certain watersheds it is possible that construction of dams on all available, economical, and feasible sites will be completed within a few decades. The United States Government cannot be satisfied with such short-sighted planning. The Department of the Interior and the Bureau of Reclamation, in drawing up comprehensive plans for development of certain watersheds, should recognize these long-range problems and pursue a course accordingly. I think this means that we must broaden our planning to make it include both channel aspects and also the watershed itself, high up out of the stream.

Let us take a look at the way soil erosion and changes in a watershed have affected irrigation economy in the Southwest. I am referring to the Middle Rio Grande area in New Mexico.

The Middle Rio Grande from Whiterock Canyon to Elephant Butte Dam is a fertile valley admirably suited to irrigation agriculture. Although some of the valley floor was naturally too marshy for farming, the larger percentage of the land was right for irrigating. A few decades ago, it was easy to obtain sufficient water supplies by the construction of relatively small diversion dams on the main river.

Floods resulting from spring freshets were of some concern, drainage was necessary, and canals, headgates and diversion structures were needed.

The Middle Rio Grande Conservancy District, organized in 1929, offered a means of financing a program of flood control, drainage, irrigation works and reservoir construction. Levees were built to keep the river in its channel. Drains were dug to reclaim swamp land and to provide adequate subdrainage for irrigated land.

It was hoped that the construction of El Vado Dam would provide stored water for the dry years. It was further hoped that the construction of levees would control floods, and that these measures would guarantee permanent agriculture on a stable base.

As the years passed, however, large volumes of sediment were carried by tributaries to the main channel. The main river could not transport all of this material. As a result, debris accumulated in the main channel and the bed of the river gradually rose in elevation. This decreased the capacity of the channel to transport floodwaters, and the middle valley faced a gradually increasing hazard from floods.

The present capacity of the leveed channel is sufficient to pass only the most modest flows. Each year the spring rise from melting snow brings a potential danger of broken levees and flood damage.

The sediment load of the stream further complicates this flood problem. When the stream swells, its swifter current picks up sediment from the river bed. When the stream falls, the weaker current drops the sediment which forms bars and shoals. The water then strikes these obstructions and rebounds from them forcibly against the banksand levees, undercutting them. This means that the irrigated lands are endangered by undercut levees just as certainly as they are endangered by overtopping of levees. The community, unassisted, cannot be expected to finance and organize any further protection of the banks and levees.

The rising bed of the river has had another serious effect on the economy of the irrigation farmers. The outlets of drainage ditches are plugged by sediment, and resulting inefficiency of drainage works has caused waterlogging of the land. The increased costs of operation and decreased returns from irrigated farms have contributed to a deterioration of the irrigation structures as the farmers were caught in a financial squeeze. Delinquency in taxes and in payments on conservancy bonds naturally followed.

To remedy these evils, the Corps of Engineers and the Bureau of Reclamation have been working on plans for flood control and rehabilitation of the irrigation in the Middle Valley. They have reached recently an agreement on a mutually acceptable coordinated plan.

Though the prominent aspects of the Middle Valley problem are those of flood control and rehabilitation of the irrigation facilities, the problem, in essence, is the basic one of sedimentation. The plans of both the Departments of War and Interior call for the construction of dams across the Rio Grande in its upper reaches and across those tributaries which contribute the most important portions of sediment. These plans would provide for flood and sediment control, irrigation, and future power development.

The dams will hold sediment which would otherwise be deposited in the channel of the main river. In addition, the clear water released from the dams will scour the channel and, in this manner, the river bed will tend to degrade. This action has been observed in the reaches of the rivers below Elephant Butte and Hoover (Boulder) Dams after the building of those structures. Despite the studies by a number of agencies of the sedimentation problem in the Rio Grande, sufficient data are not available to make any more than the roughest guess as to the time required for the lowering of the river bed. The estimates of cost which will be required to maintain the channel and the bank-protection works during the course of channel stabilization are difficult to evaluate except in the most general way.

The rates of sedimentation of these proposed reservoirs are of great interest. Present estimates indicate that, without special erosion control measures, these proposed reservoirs will have a fully useful life of approximately 50 years, the time required for sedimentation of the storage volume reserved for silt, and that thereafter their usefulness will steadily diminish.

Another example is found right here in Arizona on the Navajo Indian reservation. The Navajo Indians have lands and grazing rights totaling about 16,000,000 acres. These lands are being used by 8,700 families and, of these families, fewer than 200 have enough sheep for family subsistence. According to our studies, this requires a flock of at least 250. Parts of the reservation are seriously overgrazed, and certainly the lands are inadequate to the demands of the Navajo people.

Let's look at this problem from the irrigator's point of view. The Navajo Reservation comprises 14 percent of the watershed above Hoover Dam. It contributes about 2½ percent of the water that flows into Lake Mead, which has been created by Hoover Dam, but this 2½ percent of the water carries not less than 20 percent of the silt that is being dumped by the Colorado River into that all-important reservoir. The average annual rate of erosion from a considerable portion of the reservation is estimated between 100 and 150 acre-feet of silt per 100 square miles.

Through this common denominator of erosion and siltation, the Indian problem becomes the irrigator's problem in the far Southwest.

These problems are of major importance, not only in the Rio Grande and Colorado Rivers which have been used as illustrations, but in watersheds throughout the country. None of us thinks of our occupation of these wonderful, beautiful western lands as being limited by five centuries, much less 50 years, but if we are driven out of the valleys and if we have no reservoirs, where will our children's children live?

The sedimentation problem of the middle Rio Grande, which involves both the rising stream bed and the sedimentation of the reservoir created by Elephant Butte Dam, stems from the widespread erosion of watershed lands observed during the past half century. There is no need to argue concerning the degree to which various types of land use have contributed to this problem. Erosion is a fact and the problem of erosion is on the doorstep of the irrigation farmer.

Here in brief are the ways in which erosion affects the irrigation farmer:

1. The deposition of sediment in storage reservoir robs him of storage capacity needed for irrigation. The Guernsey Reservoir on the North Platte lost 21 percent of its capacity in 12 years; Cucharas Reservoir in Colorado lost 35 percent in 26 years.

2. Reservoir sedimentation increases the amount of evaporation, relative to the amount of stored water.

3. Gully erosion makes farm operations more costly, and with sheet erosion it clogs stream channels, thereby increasing the damage to irrigated farms and valleys resulting from floods.

4. Erosion adds suspended silt to irrigation water. Where this suspended silt is excessive, use of the water for irrigation is impaired.

5. Sedimentation of stream valleys often results in less efficient drainage of irrigated lands, as in the case of the clogged drains in the Rio Grande.

When the farmers in California found themselves menaced by the movement of mining debris, they brought legal action to restrain the miners from the continuation of hydraulic mining methods, except in cases where the debris could be controlled or stopped by a dam or other structure. The western irrigation farmer, even if he were to organize in this manner, would not know exactly whom to enjoin to attack his problem today.

Various governmental agencies are concerned with these problems. All agencies in the West dealing with land are involved. But more important, all persons utilizing the land are directly concerned. To a great extent, solution of these problems must rest ultimately with those people affected—the irrigation farmer on the one hand and the users of the watershed on the other.

Between these groups and even within the groups there are divergent points of view. Such differences of opinion will resolve themselves in the face of analyzed facts, and these facts are being collected by the research activities of the Government.

Corrective measures, equal to the task, might temporarily reduce income from grazing and certainly will require initial investments of relatively large sums for conservation works, both structural treatment and land management. The Federal Government, which is the largest landowner of the West, must, I think, provide and prosecute the plan for correction. The States, with their land holdings, must also concern themselves with steps needed to protect their land resources, both public and private. The private landholder as well, if he be alive to his own self-interest, will collaborate in effectuating needed land practices. The tide of erosion must be stemmed through the joint effort of those agencies, both public and private, which are aware of the consequences of erosion and determined, in spite of the ravages already wrought, to conserve the land and the water resources of this Nation for their best use.

An Editorial in the Washington Post Appeasing Communism and My Answer to the Editor

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. McDONOUGH. Mr. Speaker, herewith I submit a copy of an editorial which appeared in the Washington Post on December 1, which is critical of my bill (H. R. 4581) to define communism and to make the practice of communism a treasonable act in the United States.

This editorial is, in my opinion, an unjustifiable appeasement of communism in the United States, which deserves nothing but condemnation.

I have replied to the editor of the Washington Post and submit herewith the editorial and my letter to the editor:

[From the Washington Post of December 1, 1947]

COMMIPHOBIA

Hysteria now and then becomes so extravagant as to result in a revelation of its own absurdity. Congressman McDONOUGH, of California, has supplied this saving reductio in respect of the commiphobia which now so permeates the atmosphere on Capitol Hill. He has introduced a bill intended, in his own terms, "to define communism and to make the practice of communism a treasonable act in the United States."

Mr. McDONOUGH'S proposal may well be considered but the ultimate in a series of circumventions aimed at the Constitution's splendidly clear clause on treason—that "treason against the United States shall consist only in levying war against them or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court." This is, of course, a narrow concept, born of the eighteenth century experience with attempts by the British crown to suppress as treasonable all criticism or dissent. It makes conviction of treason extremely difficult and may even be said to go extravagantly far in risking the security of the state to safeguard the security of the individual. Yet the Nation has survived this risk for more than a century and a half—and, indeed, has prospered from the taking of it.

We have countenanced, however, a progressive debasement of this safeguard. We have allowed men to be stigmatized as disloyal when they could not be convicted of treason and we have charged men with being security risks when we lacked the evidence to call them traitors. Mr. McDONOUGH'S measure goes further. What constitutes the practice of communism we do not profess to know; membership in the Communist Party, we surmise, or adherence to the doctrines of Karl Marx. The offense, in any case, is a matter of political affiliation or belief—a very different thing from an overt act. What the Congressman proposes to do is to take one of the steps that the Communists would take, in the unlikely event of their accession to power in the United States, to deprive us of our liberty.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., December 2, 1947.

HERBERT ELLISTON,
Editor, Washington Post,
Washington, D. C.

DEAR MR. ELLISTON: Referring to your editorial under the title "Commiphobia" in the Washington Post of Monday, December 1, 1947, which you informed me was written by Mr. Barth of your staff, criticizing my bill, H. R. 4581, which is titled "To define communism and to make the practice of communism a treasonable act in the United States," had Mr. Barth telephoned me before writing an editorial with so much personal reference to me, he could have written an editorial containing much more accurate information.

He has completely missed the point, and I am a little surprised that you would permit your editorial writers to be so promiscuous in their interpretation and comments on important legislation of this character.

Mr. Barth (for the Washington Post) admits in his editorial that there is a need for a clear definition of communism when he says, and I quote, "What constitutes the practice of communism we do not profess to know." Does Mr. Barth mean to imply that treason is too light a penalty to pay for the active practice of communism in the United States? Is this editorial an apology for communism?

He opens his editorial by stating "Hysteria now and then becomes so extravagant as to result in a revelation of its own absurdity." I agree. Mr. Barth's editorial in my opinion is an hysterical attempt to appease communism. On the contrary, my bill, H. R. 4581, is a logical approach to abolish communism in the United States and protect this Nation.

It is generally admitted that communism advocates the overthrow of—not the modification of—democratic government established by the free will of the people and especially the overthrow of Christian constitutional democracy as we know it in the United States. Is it not therefore logical to assume that the active practice of communism is treasonable and, therefore, unconstitutional?

I have introduced H. R. 4581 for the purpose of establishing a clear definition of communism that can be easily understood. My bill does not deny the privilege of nor penalize anyone for believing in any "ism" he pleases. In other words, there is no attempt to set up a policy of thought control. No man can be penalized for his thoughts or beliefs in the United States.

It is only when he puts his beliefs into active practice and thereby by precept and example conspires with and influences others to follow him in the active practice of communism that an overt act is committed. This is a fine distinction between other types of legislation against communism, and I do not want it construed or misunderstood—H. R. 4581 condemns and penalizes only the active practice of and not the belief in communism or any other kind of ism.

Americanism and communism cannot mix. Christian democracy and communism are incompatible. Freedom and liberty as we know them cannot tolerate communism. We must be vigilant and alert to the wiles and insidious influences it is attempting to inflict upon us.

We want to expose Communists, reveal them as enemies of the United States and deal with them accordingly. But first we must define communism. Without a legal definition of that term our law enforcement agencies are helpless, in many cases, and even the courts are at a loss to act with conviction.

Recently the United States Circuit Court of Appeals in Illinois was called upon to decide a case in which the defendant was accused of libeling the plaintiff through the use of the term "Communist" applied to the plaintiff in a syndicated column of political commentary written by the defendant. A district court dismissed the suit on the ground that no cause for action had been established since the word "communism" had no definite meaning.

The United States circuit court of appeals reversed the prior ruling, and ordered the case to trial, stating:

"It is libelous per se (of itself) to write of a man or corporation that they are Communists or communistic sympathizers."

It continued:

"The label of Communist today in the minds of many average and respectable persons places the accused beyond the pale of respectability and makes him a symbol of public hatred, contrary to the statutes."

During the arguments before the court of appeals in this case, it was definitely established that the word "Communist" had no definite meaning, but that its appearance as a characterization in a newspaper political editorial is sufficient to destroy a person's presumably good reputation with the public.

There is every facility and opportunity under our constitutional form of government in the Republic of the United States to bring about the most liberal policies in government, if we use them properly.

Communism is restrictive, limited, autocratic, and totalitarian.

Democracy is elastic, adjustable, and subject to the will and needs of the people.

Let us use the freedoms and liberties we now possess in our constitutional democratic form of government in the United States to preserve and protect those liberties and freedoms from the corruptive and destructive influences of communism.

You agreed to publish my reply on your editorial page. I have therefore submitted the facts.

Very truly yours,
GORDON L. McDONOUGH,
Member of Congress,
Fifteenth District, California.

Our Freedoms Are in Danger

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely and patriotic address which was given by Col. Robert R. McCormick, editor and publisher of the Chicago Tribune, at a Constitution Day luncheon in Chicago, on September 17, 1947:

In order to avoid repetition, I have looked up the talk I made last year and find that its principal theme was that our Constitution was entirely American made and in no way developed from the English and, in particular, not from Magna Carta, the angels of the Freedom Train notwithstanding. Today I will call attention to various continuing efforts to sap the Bill of Rights and destroy our liberties.

The first amendment to the Constitution says:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

For reasons I do not know, freedom of speech was never extended to the stage. There has always been censorship of the theater. How inefficiently it works is shown by the fact that, in England, though Tories used their control of the theater vigorously, they were too stupid to censor George Bernard Shaw, whose plays contributed so heavily to the socialization of England and to the overthrow of the aristocracy. How viciously it can be administered we have recently learned, when the movies were forced to support communism; in particular, to put on that utterly false play Mission to Moscow. As you know, the well-censored New York stage is prependerantly anti-American.

Except for the Jehovah's Witnesses case, properly decided by the Supreme Court, freedom of religion has not been tampered with. Not so freedom of speech.

No one has alleged that freedom of speech, as guaranteed in the first amendment, has been affected by speech over instruments. No one has questioned the right to speak freely over the telephone or into the phonograph.

The interference with freedom of speech over the air is not based upon the large audience reached. Indeed, at the time the first amendment was adopted, speaking trumpets were in use and halls were designed for their acoustical effects.

No; the interference with freedom of speech over the air is based, as one might have expected, on the doctrine of communism, accepted in principle by Congress and administered, as is communism, for the benefit of the single-party system.

When broadcasting became known, far-seeing, speculative, or scientifically minded men bought broadcasting instruments as centuries ago men bought printing presses or, perhaps a better precedent, as men settled on the public domain. Some less far-sighted men bought out the first users. Others, oblivious of the rights of the owners, infringed upon their wave lengths. Confusion resulted.

The matter should have been left to the courts to construe under the common law, but Congress chose communism on the theory that the people who did buy transmitting instruments and devoted their time and money to broadcasting had no right to the airways, and that those who did not devote a cent or a minute to broadcasting had all the rights, and that a commission of commissars should administer them.

It is as though commissars should take and distribute the farmers' grain which, by the way, is also in the wind.

The Communist form of government has not prevented the limitation of program production to four chains, as compared with thousands of newspapers and scores of magazines. As a matter of fact, time has shown that there are more wave lengths than there are organizations able to produce acceptable programs. That political influence is feared by chains and stations alike is attested by the fact that there is no excess to which administration supporters may not go and do go, while chains and stations refuse to accept the most parliamentary of antiadministration speakers, even when they are sponsored and the time paid for, and that free time on the air must be given for administration political speakers and withheld from antiadministration political speeches. This is the price we pay for putting communism into our form of government and denying freedom of speech to the radio.

In 1943 Postmaster Walker saw a chance to extend the domination of the Government excesses to the press by means of another bad law—the second-class postage law—which purports to give him a color of censorship powers. As his opening wedge he withdrew this rate from the magazine Esquire, saying that it was not "originated and published for the dissemination of information of a public character or devoted to literature, the sciences, arts, or some special industry" * * * and "not for the public welfare and public good."

If this ruling had been allowed to stand, its scope would have been gradually extended until it became as bad and pernicious as the radio law.

Freedom of the press refers to every kind of press—religious press, lay press, medical press, legal press, single issues, periodicals, dailies, and, as in the case of speech, it has been extended to all of the mechanical and commercial developments of the press.

It works out this way: Extremely controversial and religious statements only find their way into the religious press and are only read by those who agree with them. Medical and psychopathic stories revolting to laymen are only seen by doctors.

The indecencies of sex crimes are not carried in the paper; the facts that they occur are published as a necessary spur to officials.

Actual censorship is extended to books only in the reactionary State of Massachusetts. Book publishing and book reviewing is largely in the hands of Red sympathizers, but as this fact is being realized, it will be corrected.

Legislative enactments and some court decisions against the freedom of the press have occurred a number of times in the last 25 years. It is to be noticed that they were all aimed at the newspaper press.

I think it will hardly be challenged that the newspapers as a whole are both more accurate and more self-controlled than the periodical press. Why, then, were they selected for attack? The answer would seem to be because they are more influential, hence the more feared.

The consequence of the adjudications in Illinois, in Wyoming, and in the Supreme Court of the United States, with one bad exception, has been to define very clearly the meaning of freedom of the press. We are surprised then to find that men who claim to have devoted much study to the subject should say that freedom of the press has not been defined for 100 or more years. It is strange to find that the Encyclopedia Britannica and the chancellor of the University of Chicago gathered together a large committee of well-known Reds; brought before them some 60 secret so-called witnesses; asked them especially prepared questions to elicit desired answers; allowed no cross-examination; and then brought out a lengthy book full of utter falsehoods for the purpose of inducing Congress or the courts to introduce the radio and Walker second-class postage law to control the press.

The object of the report is to set up some sort of professor supervision of newspapers. What about magazines? Books? The Bible? What about teaching in the colleges? There is no guaranty of academic freedom in any constitution.

What about the Encyclopedia Britannica? I have occasion to read it from time to time and am impressed that, although owned in America, it is still Britannic in its coloring of news. This conspiracy is linked with another one. Professor Chaffee, of Harvard, one of the cabal, was a witness before the committee, which so far has suppressed the bill in Congress to restore to newspapers equality before the law.

A more subtle attack upon the freedom of the press is being attempted. During the war and the cutting off of paper from Europe, a large demand for war purposes and an unnecessary and unwise reduction of the Canadian supply caused a paper shortage in the United States. In consequence Congress passed a law rationing paper and fixing the price thereof. There was some, but not much, political manipulation in the administration of this law.

With the close of the war, the demand for paper increased to a greater extent than did production and imports. The resulting condition has permitted the use of a falsehood technique by calling the overdemand a paper shortage.

Subversive influences have called for paper allocation. Such allocation would put in the hands of the commissars powers similar to those exercised by the radio commissars. Paper would be allocated to administration supporters and withheld from administration opponents.

The situation has been remedied in part by an increase in the price of paper from the newsprint mills and the conversion of other paper mills to the manufacture of newsprint at what are termed "black market prices" which, in turn, are not so high that purchasers at those prices cannot make a profit on them.

It is my guess that the final solution will come with another increase in the price of paper which will bring the demand down to the supply.

You see that efforts to introduce communism by evading the first amendment are continuous and insidious, and clearly indicate a conspiracy.

The first amendment is not the only one under attack. The sixth amendment to the Constitution says:

"In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor; and to have the assistance of counsel for his defense."

Congress evaded this provision by the statute of conspiracy, which provides that where the alleged conspirators live in different States the trial may be held in the State and district in which any of them live.

The first dishonorable use of this statute with which I am familiar was used against the packers, who were haled into districts supposedly hostile to them. As I recall, a conviction was obtained in Wisconsin, but there was an acquittal in Kansas.

The most revolting abuse of the statute was in the so-called sedition case. Here, with the aid of a newspaper, entrapment was practiced upon certain opponents of the adminstration to bring them within the jurisdiction of Washington, where the bar and a large part of the population are under Government domination.

The World War II mass-sedition case was begun in 1942 with a fanfare against administration critics. Admittedly weak indictments were returned July 21, 1942, against 28 persons, who were accused of writing and distributing materials intended to undermine the morale of the military.

New indictments with further details of the alleged conspiracy were returned January 4, 1943, against the 28, 5 others, and 1 corporation. One count was dismissed March 6, 1943, by Federal District Judge Jesse C. Adkins. A third indictment naming 30 persons was returned February 28, 1944. It accused the 30 of conspiring with Nazi officials to unseat the United States Government.

The trial opened in April 1944, before Chief Justice Edward C. Eicher, of the District of Columbia Federal Court, and droned on until the following November, when it ended in a mistrial because of Justice Eicher's death.

In 1946 the case was handed to Justice Bolitha J. Laws, who dismissed the case against the remaining 26 defendants. Of the original 30, one had died and three were granted severances. Many of these innocent defendants had been kept in jail for years. The dismissal was upheld by the United States court of appeals June 30, 1947, the majority opinion being written by Chief Justice D. Lawrence Groner. July 31, 1947, the Justice Department failed to appeal to the Supreme Court and the case ended. If jury trial had not been compulsory, I fear that Judge Eicher would have held the defendants guilty.

The worst feature in this case, as bad as the Nuremberg murders, was that a German diplomat, Baron von Stempel, was coerced to testify against the defendants by John Rogge under threat of judicial murder.

The fact that this trial has completely broken down and has been withdrawn raises the suspicion that where convictions were obtained, they were unjustly obtained. It would seem to be the inescapable duty of Congress to investigate each of these convictions.

The purpose of this persecution was to obtain conviction of penniless, somewhat crackpot individuals, without followers or friends, in order to make a precedent to coerce or terrify dissidents of greater importance. It would seem obvious that impeachment of the guilty Attorneys General should be voted.

The Constitution says: "Congress has power * * * to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress."

The militia consists of all able-bodied males. The Constitution is explicit. They are to be trained by the States, according to the rules laid down by Congress, and their officers are to be appointed by the States.

In various wars, Congress has voted to fill the Army by conscription and the Supreme Court has upheld this power, discreetly refusing to write an opinion upholding its decision.

We now have a movement thoroughly organized to take the militia away from the States and to turn them over to the Regular Army.

Aside from the fact that the proposed law is unconstitutional, there is the historical objection to a large standing Army going back to Cromwell's army, to James II's "Lambs," and to the British Army in Boston. There is an additional objection from the changed attitude of the brass to civil power, with generals telling congressional committees that they must not inquire into Army recommendations. There is the wholesale rush toward decorations, far transcending either souvenirs or awards for gallantry.

After the Civil War, the Spanish-American War, the Philippine War, and the Mexican border campaign, campaign ribbons were issued. These were taken as pleasant souvenirs. The Civil War was fought with only the Congressional Medal of Honor and that conferred by Congress itself.

In the First World War GHQ was surprised to find French corps and Army commanders under whom American divisions were serving giving our soldiers the Croix de Guerre and Legion of Honor.

More in self-defense to retain the affection of the troops than from policy, the Distinguished Service Cross and the Distinguished Service Medal were created. Not a great many of them were issued. I received the latter and I believe I was not so much pleased in getting it as I would have been disappointed if I had been held less worthy than a number of other officers of my rank. The receiving of foreign decorations is an evil.

When I was given a foreign decoration I first refused it, and only accepted it when the consul, who was entrusted to present it, said he would be greatly embarrassed if I did. I don't wear it. The receiving of foreign orders conferring knighthood is equal to bribes for divided loyalty.

Today an officer of any considerable rank is covered with ribbons like the officers of an aristocratic country.

When the conferring of the Medal of Honor was turned over to the Executive I do not know, but there has been created in the Army the following decorations for the brass:

Medal of Honor, Distinguished Service Cross, Distinguished Service Medal, Legion of Merit, Silver Star, Distinguished Flying Cross, and in the Navy, Medal of Honor, Navy Cross, Distinguished Service Medal, Legion of Merit, Silver Star Medal, Distinguished Flying Cross, and a total of 46 other medals and badges, and, in addition, decorations for individual battles. Now the President is empowered to issue orders to foreigners and civilians raising them above the status of American citizenship.

The Constitution says:

"No title of nobility shall be granted by the United States: And no person holding any office of profit or trust under them, shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever, from any king, prince, or foreign state."

This provision is flagrantly violated in spirit by our present hierarchy of decorations.

The time has come again where we must fear for our liberties from an oversized aristocratic army.

So you see our freedoms are threatened by the Federal Radio Commission, the Postmaster, a group of crackpot professors, some Members of Congress, the Department of Justice, and the Army.

You will do well to be on guard to save your liberties.

Use of Section 32 Funds

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, section 32 funds are obtained by setting aside 30 percent of the customs receipts. The funds are supposed to be used to dispose of agricultural surpluses. Over the years, the tendency has been to invite more imports of livestock and livestock products, and then use the 30 percent of the customs receipts for disposing of soil-depleting crops and follow up with long and many speeches about soil conservation. The old formula is evidently still in operation. Eggs are the only livestock product purchased up to October 1. Wool imports have accounted for a large percentage of the section 32 funds. As more and more livestock and livestock products are invited as imports, the more funds will be available to subsidize soil-depleting crops.

The following is the report on the allocation up to October 1, 1947:

OCTOBER 2, 1947.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: As requested in your letter of September 19, there is furnished an attached list of section 32 (Exportation and Domestic Consumption of Agricultural Commodities) programs, approved from July 1 through September 30, 1947.

The section 32 programs are approved in advance of anticipated needs and the dollar amount set forth for each program is the maximum for use during the fiscal year. Total section 32 obligations through August 31, 1947, are $1,278,527. This obligation represents only 1 month's program operations since the Agriculture Appropriation Act for fiscal year 1948 was not passed by the Congress until late in July.

Further, as requested in your letter, we shall advise you each month of the use of section 32 funds based on programs approved during the preceding month for the remainder of this fiscal year.

Sincerely yours,

JESSE B. GILMER,
Administrator.

Exportation and domestic consumption of agricultural commodities (sec. 32), fiscal year 1948

APPROVED PROGRAMS (AS OF SEPT. 30, 1947)

Purchases for direct distribution:	*Amount*
Irish potato	$3,000,000
Sweetpotato	750,000
General vegetable	500,000
Peach	1,000,000
Dried fruit	4,600,000
Egg	750,000
Total	10,600,000
Exportation: Cotton	1,000,000
Diversion: Cotton insulation	500,000
Total approved programs	12,100,000

NOTE.—General vegetable program includes perishable vegetables such as green beans, peas, onions, beets, carrots, cabbage, and spinach. Dried-fruits program includes apples, peaches, raisins, and prunes. Administrative expenses for fiscal year 1948 (not included above) are limited to 4 percent of total funds available, which is $1,760,000.

New Orleans, La.

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 2, 1947

Mr. HÉBERT. Mr. Speaker, once again I ask the indulgence of the House to direct to their attention another splendid column by John Lester, of the New Orleans Item.

It is unnecessary for me to elaborate on Mr. Lester's piece. It speaks for itself and brings many attainments, attributes, and accomplishments of my native city of New Orleans to your notice which perhaps have heretofore escaped your attention.

I commend Mr. Lester's article to you for a fuller and better appreciation of a city which has already established itself in the minds and hearts of the peoples of the world.

LAGNIAPPE

(By John Lester)

ON THE RECORD, IT'S HARD TO BEAT

New Orleans has long been recognized as America's most interesting city, and not without reason. Its fame began with its founding by Bienville in 1718. Today this fame is greater than ever and rests on countless examples of ancient and modern merit. Although the list of New Orleans' firsts and unique features is surprisingly varied and impressive, it might well begin with the fact that this was the first American city to revolt against a foreign power as well as the first to observe and celebrate the Fourth of July, in 1804. New Orleans was also the first American city to establish a school for girls, Ursuline. It boasts America's oldest cathedral, St. Louis. The oldest restaurant of its kind in the entire world, Antoine's. (New Orleans food is the most famous in America.) The oldest building in the Mississippi Valley, Madam John's Legacy. America's oldest saloon, The Old Absinthe House. America's first office buildings, erected here early in the nineteenth century. Likewise, the first department stores, with the first delivery systems in the world. Pralines were first made here. The cocktail first concocted and named. Orleanians introduced the tomato to the American table (it had previously been considered poisonous by the rest of the country), also popcorn and ice cream. Bananas were introduced to America through the port of New Orleans. The first American hotel was built in New Orleans in 1838. Sugar was first grown on the site now occupied by the Jesuit Church and was first refined on the grounds occupied by the Sugar Bowl, the home of America's greatest postseason football game. The Pontalbas were America's first apartment buildings. America's first skyscraper (four stories) was built here in 1814 and still stands. The first artificial ice plant was built in New Orleans. Authorities agree unequivocally that New Orleans street names are the most fascinating in America. New Orleans was the first American city to boast a permanent opera company with its own opera house and is regarded as the cradle of opera in the New World. Its theaters were the first in America to be illuminated by gas.

New Orleans first to elect own city officials

New Orleans was the first American city to elect its own officials. This was provided for in the State constitution of a century ago. Tulane University was the first American school to teach civil (written) law and, today, only two other American schools teach it: Loyola and LSU. (The reason is Louisiana is the only State in the Union to have its law based on the Napoleonic Code. All others adhere to the English or common law.) The first gloved heavyweight championship fight, between Jim Corbett and John L. Sullivan, was staged here in 1892. The longest fight in history, 110 rounds, was held here in 1893. (The last ring battle on the turf was fought here the same year.) The American institution known as "the free lunch" was introduced in New Orleans. Also, the games of poker and dice. The first American saint, Frances Cabrini, was an Orleanian. The railroad freight platform was perfected here. New Orleans' Boston Club, named after a card game, is the oldest social club of its kind in the South. New Orleans was the first city in the South to have building and loan associations, "homesteads." The bowie knife was introduced here as a weapon of both offense and defense. The Texas revolt from Mexico was planned in New Orleans. It was here, also, that Abraham Lincoln became imbued with the ideas that later took the form of the Emancipation Proclamation, one of the greatest of all human documents.

The term "Dixie," by which the South is now known, was coined in New Orleans, and the song by that name, long the South's anthem, was first introduced and published here. The first practical submersible submarine was built in New Orleans. Water hyacinths were introduced to America by New Orleans. The longest litigation suit in the history of the world was carried on here against the city itself by Myra Clark Gaines. New Orleans' famous Mardi Gras is the biggest free show in the world. New Orleans was the first home of Audubon, America's greatest naturalist, and the birthplace of Paul Morphy, probably the greatest chess player in history. The first woman pharmacist was an Orleanian, an Ursuline nun. New Orleans was the focal point of the Louisiana Purchase, the largest real-estate deal in the history of the world, as well as "the Mississippi Bubble," the world's greatest real-estate (unsuccessful) swindle. Concentration of fire power, a sensational new phase of warfare, was introduced at the Battle of New Orleans, the battle that saved America.

Haugherty statue another New Orleans first

The first statue in America to be erected to a woman went up in New Orleans in 1884, honoring one Margaret Haugherty. What we now recognize as the press association system (Associated Press, United Press, International News Service) was born here over 100 years ago. The first dental X-ray was made here. New Orleans is the only city in America that drains away from a river instead of toward one. (It drains about 350,000,000 tons of rainfall annually for another all-American record, and its present drainage system is not only the finest in America but is copied all over the world.) New Orleans is also the only American city completely surrounded by levees. The only American city ever to use hollowed-out cypress logs for its sewerage and water systems. (New Orleans is still the only American city that furnishes free water for sanitation purposes to its citizens.) New Orleans was the first major American city to adopt a commission-council form of government (1912). Present nonpolitical controls (the board of liquidation) over the city's debts are unique in America. New Orleans has the world's largest cotton warehouse. It is the home of the cottonseed products industry. The wash-suit capital of the world. The absinthe capital of the world. The "Celotex" (sugarcane fiber insulating board) capital of the world.

New Orleans is the largest chicken-eating city, per capita, in America. The largest candy-eating city. The largest veal-eating city. The largest "coke-" and coffee-drinking city. Baseball's "rain check" and "ladies' day" innovations were added to the great American pastime here. The Fair Grounds, because it's a civic venture, is the only race track of its kind in the world. (Any smart tout will tell you a New Orleans owner was the first man to put blinkers on a horse.) New Orleans' French Quarter, internationally known, is the finest and most unique tourist attraction of its kind in the world. New Orleans' Little Theater, with its $100,000 plant, is generally regarded as the finest in America. New Orleans' deposits add up to a world supply of salt. The port of New Orleans is the deepest in the United States, its coffee and banana imports lead the country and it has the lowest fire-insurance rates of any other American port. Orleanian Al Gallodoro (his name means "The Golden Rooster") is the world's greatest saxophone player.

Only United States art form, jazz, was born here

Jazz, the only American art form, was born in New Orleans. New Orleans' tombs and cemeteries are acknowledged to be the finest in America. New Orleans' Florida Avenue is the widest street in the world. Doctors say the city's year-around temperature, about a 70-degree average, is the finest in America and is the same as that recommended for hospitals. (The cure for yellow fever, one of the worst scourges known to mankind, was first demonstrated in New Orleans in 1905.) New Orleans is the only American city with an ordinance forbidding shoeshining on Sundays. The only city in Louisiana with streetcars. Its city hall is probably the finest example of pure Ionic architecture in the United States and was modeled after the Temple of Erechtheus in Athens. New Orleans women spend more money on hats and less on other articles of wardrobe than the women of any other American city. New Orleans boasts an ancient fan system (it's in Kolb's Restaurant and looks smack-dab like a Rube Goldberg invention) that is the only one of its kind in America, and its owners have refused museum bids up to $40,000 for it.

Bill Benton—American

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. MANSFIELD. Mr. Speaker, it was with deep regret that I read during the congressional recess of the resignation of the Honorable William Benton as Assistant Secretary of State. In my opinion Bill Benton was one of our country's most outstanding public servants. Under tremendous difficulties and at a great personal sacrifice he undertook and organized a highly important and much needed Office of Cultural Affairs and Information. Despite very strong opposition and with pitifully small appropriations he developed a program which proved its worth and effectiveness and which must be considered, by any standard, a success.

It was no easy task to lay the groundwork for the dissemination of American information abroad; it was no easy task to overcome the congressional opposition which expressed itself so vocally; and it was no easy task to develop and make effective the type of personnel required

to do the job in a capable and patriotic manner. Bill Benton was successful in making the American people and the American Congress understand the importance of having America's story told—factually and truthfully. He brought his great enthusiasm, his magnificent energy, and his undoubted ability into the very controversial job he was asked to take over.

Bill Benton came up in life in the American tradition. He earned everything he received. He gave unselfishly and unstintingly of his time and knowledge because he believed in his country and the need for telling its story. It is to our country's credit that men like Mr. Benton can be found to accept responsible positions in our Government but it is to our shame that we do not give them the cooperation and credit which is their due.

The worth of Bill Benton as an administrator is amply attested by the fact that no successor to his position has, as yet, been named. The worth of the information and cultural program can be attested by the reports brought back from investigating trips all over the world by Members of the Congress. The recognition of Mr. Benton and his program will be accorded in the passage of the permanent authorization bill for the information program now in the Senate, and an increased appropriation for its activities next year.

Bill Benton, whose services at present are being utilized as chairman of the American delegation to UNESCO, now meeting in Mexico City, must have the personal satisfaction of knowing that his job was well done and that his program will go ahead. That it is absolutely necessary there can now be no question, but it is to our sorrow that, in achieving the recognition for this program, we have lost the services of the spark plug who made it work. It is my hope that Mr. Benton will not be lost to Government service but that instead he will be called upon again to undertake, in behalf of the people of the United States, another assignment which he can, with his great ability, fill. He was one man who, in the face of difficulties and opposition, could be depended upon to do a sound job in any position he was asked to assume.

The United States Government has lost, for the time being, a really great public servant. The State Department has lost a truly able administrator. The American people have lost a champion who believed in their program and fought for it down the line and against any and all opposition.

Good luck, Bill, you have done a great job for our country.

[From the Washington Post of September 28, 1947]

AMERICA'S STORY

The odds were all against William Benton when he undertook to organize in the Department of State an effective peacetime Office of Cultural Affairs and Information. The innovation had the superficial appearance of running counter to the traditions of the country. Americans were uneasy at the idea of having their Government operate an acknowledged instrument of propaganda. Conservative news agencies such as the Associated Press opposed the plan. Conservatives on Capitol Hill, the chairman of the powerful House Appropriations Committee in particular, denounced it as newfangled, New Deal extravagance. And to these difficulties, Mr. Benton added personality traits, rooted perhaps in his advertising background, which rubbed certain legislators the wrong way.

Mr. Benton's heroic efforts in the State Department are by no means, however, to be dismissed as a failure. He succeeded in shaping an effective organization out of the heterogeneous elements which came to him from OWI, COI, and other wartime agencies. He made the American people understand the importance of having their voice heard and their story told in a world in which propaganda has become a principal factor in foreign policy. He has even, it appears, begun to overcome the prejudice of the Congressmen who thwarted the program he had planned. Representative MUNDT declared in Warsaw recently that the members of a congressional investigating committee had changed their minds about the importance of an American information program. Thus the way will be greatly smoothed for Mr. Benton's successor. Let us hope that the State Department will be able to enlist a man of the necessary caliber for its big job, and that he will be able to build effectively on the solid foundation that has been laid.

[From the Birmingham (Ala.) News]

BENTON'S DEPARTURE

The State Department's information and cultural affairs program may be reexamined perhaps with benefit with the President's acceptance of the resignation of William Benton, Assistant Secretary of State. Mr. Benton had been in charge of the program to tell the world about America. The Voice of America has been a highly controversial effort. Whether it has succeeded, whether it could succeed in the future, seems a matter of conjecture. Much like the Government's wartime psychological warfare, gaging results is difficult.

William Benton made an earnest effort to produce a useful program. Some foreign correspondents have said that radio programs beamed at Russia, for instance, are being listened to; other correspondents have denied that there is evidence of any general interest in the United States programs.

In leaving, Mr. Benton returns to the post of chairman of the board for Encyclopedia Britannica. His record testifies to devotion to his Department; some say that he endeavored to "oversell" his product. Others have emphasized their belief that Mr. Benton may not have known all that was going on; they charge that "false" pictures of the United States were being given foreigners. The thread of argument consistently ran: Should the good and the bad of America both be presented as news to those abroad, or should only the things which show America in a good light be told? In this debate there is much to be said on both sides.

The President, in accepting the Benton resignation, pledged that the effort to "tell the world" about the United States would continue; no mention has been made, however, of a successor to Mr. Benton, and it may be a difficult post to fill. Congress has been quick to criticize the effort and only reluctantly has granted funds.

[From the New York Herald Tribune of September 21, 1947]

A DIFFICULT POST TO FILL

When Mr. William Benton resigned as Assistant Secretary of State he told reporters that he would have had no trouble with his information and cultural program—including the Voice of America broadcasts—"if Congress could have been sent to Europe for 60 days." Reports from Congressmen now in that confused continent go far to bear out his contention. The experience of wartime agencies such as the Office of War Information has demonstrated that it is easy for stay-at-home Americans to find fault with governmental information services and hard to convince them of the necessity of such services, even under the conditions which existed during the great struggle. In time of peace, though it may be so uneasy a peace as now exists, it requires actual contact with the glut of propaganda, the straitened ration of uncolored fact, that make up the news available to many regions of the world, to make vivid the worth of an official American program of information.

Lacking a Congress acquainted at first hand with the situation abroad, confronted by the traditional American distaste for anything smacking of governmental propaganda, Mr. Benton had an exceptionally difficult task. But with courageous persistence he fought for his program, and now, on his retirement, will have the satisfaction of knowing that something at least of his plans has been salvaged, and that the need for restoring much of what was eliminated by a suspicious Congress has been recognized by many who opposed him. And that is a return not often afforded so speedily to men who, like Mr. Benton, have given unselfishly and unstintingly of their time to the public service in a new and largely experimental field. Moreover, the head shaking in Washington over the problem of replacing Mr. Benton is an additional testimony to the difficulties he encountered. It is to be hoped, however, that no pains will be spared to get the best possible man to continue the work in which Mr. Benton has pioneered. Even the widest recognition of the need for a Government service of information abroad will not insure that the need will be met unless it is accompanied by forceful and intelligent direction.

[From the Baltimore Sun of September 26, 1947]

LET THE VOICE OF AMERICA STICK TO AIMS AND POLICIES

Mr. William Benton, Assistant Secretary of State for Public Affairs, has announced his resignation, to be effective on October 1. As head of the State Department's Office of International Information and Cultural Affairs, he has been responsible for the Voice of America program, broadcast to foreign countries, which led to so much controversy. The House of Representatives, it will be recalled, denied the program funds and then reluctantly appropriated $6,857,000 for its continuation at the urgent request of Secretary of State Marshall.

According to Mr. Benton, a directive from the White House defined his duty as seeing to it "that other peoples receive a full and fair picture of American life and of the aims and policies of the United States Government." Mr. Benton's difficulties could well have been due primarily to a faithful and conscientious effort to carry out the first half of the directive.

When Americans set to work to sell anything, it is their natural characteristic to deal in superlatives, as almost any advertisement illustrates. Other Americans are accustomed to this and instinctively make allowances for it. In selling the idea of American life to other peoples, the temptation is strong to employ the same method. But, foreigners, unaccustomed to that approach, are in danger of getting a distorted picture and dismissing it as idle and unpleasant boasting. Unless such a program is handled with consummate skill, we run the risk of making more enemies than friends and being held up to charges of propaganda.

On the other hand, it is not only legitimate but essential to let other peoples know what our policies are and the reasons for

making them. A foreign-language program based upon these salient facts, with no more entertainment features than are required to attract attention, ought to be all that is necessary to make our position understood. Such a program would offer little ground for the criticisms which have hounded "The Voice of America" here at home or which may have been leveled at it abroad.

Whoever the successor of Mr. Benton may be, he should be provided with a better directive than the one under which Mr. Benton labored.

[From the New York Times of September 26, 1947]

MR. BENTON RESIGNS

An advertising man was a somewhat disturbing innovation in the State Department. So was the Department of Cultural Affairs and Information, organized for peacetime activities out of the Office of War Information. But it needed an advertising man of William Benton's energy and persistence to tune up and get this new organ going and to persuade and browbeat a reluctant Congress not to cut the whole overseas program, including the Voice of America, out of the budget. Mr. Benton and his program were targets of controversy, but as he resigns it is generally recognized that he has performed a service to the Department and the country that required the zeal and drive he manifested. The President and the Secretary of State agree that he has laid the solid foundation for a work that must go forward.

Criticism of the Voice and the program in general, while sometimes deserved, was due in large part to our traditional repugnance to government propaganda in any form in peacetime. To Americans there has always been something suspicious and self-defeating in official information. Unfortunately, we live in a world where large areas are cut off from the ordinary means of communication. To penetrate into those walled compounds, and to counteract as far as we can the spread of doctored news, false testimony and widespread anti-American propaganda—all officially disseminated—the American Government has to use information as an instrument of foreign policy.

The opposition to the Voice was also due to the shortsightedness of Congress. Congressman MUNDT announced a few days ago in Warsaw that his colleagues on the congressional investigating committee had changed their minds during their visit to Europe about the necessity of telling the world the facts about the United States and its policies. Such first-hand observations, together with the course of events, have vindicated Mr. Benton's contention, strongly supported by Mr. Marshall, that the foreign broadcasts should be extended rather than cut.

Mr. Benton will continue as a special consultant to the Secretary on matters connected with the United Nations Educational, Scientific, and Cultural Organization, of which he is the moving spirit, internationally and in promoting popular interest in its aims in this country. Thus his experience will be to some degree available, which is more than can be said for other retired officers of the State Department. Except for William Clayton, Under Secretary of State for Economic Affairs, Mr. Benton, after 2 years' tenure, has served longer than any of the top officials in the Department. This is sadly symptomatic of the lack of continuity which distinguishes all branches of the public service, and weakens it at a time when we need all the knowledge and experience we can muster. A certain amount of turn-over is necessary and even desirable, as conditions change and fresh minds are needed, but it is easy to think of a large panel of ex-officials and diplomats who could bring varying and valuable facets of experience to the problems of their successors as a board of consultants on foreign policy.

[From the San Francisco Chronicle of September 28, 1947]

WELL DONE

William B. Benton, the State Department's big, curly-haired information director who supervised the Voice of America broadcasts to foreign countries, exploded last summer. He stormed that he would "get the hell out of Washington" if Congress refused to give him the $31,000,000 he demanded to continue the broadcasts. Congress, not moved by the threat, handed Benton less than half his request.

Last week, after the Voice of America had been reduced to a whisper, Benton put his resignation on the President's desk and received in return a "well done" note from Mr. Truman. The President said he realized the "difficulties and frustrations" Benton had confronted in the job. The White House made no mention of a replacement for the State Department post, but said Benton would continue as head of the American delegation to the United Nations Educational, Scientific, and Cultural Organization which will meet in Mexico City in November.

[From Broadcasting of September 29, 1947]

BENTON LEAVES STATE DEPARTMENT; LAUDED BY TRUMAN, MARSHALL

William Benton, one of the most controversial figures to hold public office, resigned last week as Assistant Secretary of State for Public Affairs.

President Truman, in accepting the resignation, highly commended Mr. Benton for the job he did during the last 2 years as head of Information and Cultural Affairs, including the Voice of America overseas broadcasts. Mr. Truman said he realized "the difficulties and frustrations" he had encountered in trying "to project throughout the world a genuine picture of American life and the objectives of our democratic system."

"The United States Government," added the President, "has a continuing obligation to make available to the peoples of the world the facts about this country and the policies of our Government * * * particularly in the critical times ahead." Mr. Benton, he said, had succeeded in building a solid foundation upon which the work could go forward.

Secretary of State George C. Marshall, in a letter to Mr. Benton, also expressed his thanks and best wishes and said he was sorry to lose Mr. Benton.

Mr. Benton, who was appointed to his State Department post September 14, 1945, said in his letter of resignation that he had full confidence that the program which he has directed in the State Department "will continue to grow in public understanding and to receive the press and congressional support which it so manifestly deserves."

A suggestion that his successor would have an easier time with Congress was dropped by Mr. Benton to reporters after his resignation was announced. Referring to the 40-percent slash which an economy-minded Congress handed his division, Mr. Benton said, "I would never have had any trouble with my program if Congress could have been sent to Europe for 60 days."

Concern was expressed by some officials that President Truman would have a hard time finding someone to fill Mr. Benton's shoes. In that case, Howland Sargeant, his deputy, would have to take over when Mr. Benton steps out on Tuesday. But other sources said that the President already had a list of names to fill the post.

Mr. Benton will continue in the field in an advisory capacity by serving as consultant to Secretary Marshall and the Department. In November he will go to Mexico City as chairman of the American delegation at the UNESCO conference.

Formerly an advertising executive and university vice president, Mr. Benton plans to become chairman of the board of Encyclopedia Britannica and of Encyclopedia Britannica Films, in which he owns all the common stock. He also owns Muzak Corp., which supplies recorded music to restaurants, industrial plants, and other places, but he is undecided about resuming chairmanship of that concern.

[From the St. Louis Post-Dispatch of September 26, 1947]

EXIT MR. BENTON

Just about the most pinch-penny action of the Eightieth Congress was the slicing of 40 percent from the appropriation requested for the State Department's Division of Information and Cultural Affairs, the agency in charge of broadcasting the Voice of America overseas. So it is not particularly surprising to learn of the resignation of Assistant Secretary of State William Benton, in charge of this department.

As President Truman said in acknowledging his letter of resignation, Benton was subjected to many difficulties and frustrations. Virtually all of them were unreasonable, matters of carping detail. About the fundamental necessity for getting a true picture of America and American policies to the peoples of other nations, especially those behind the iron curtain, there could be no honest dispute. Even Switzerland boasts of such a radio set-up, but Congress begrudged one to the State Department.

Economy certainly has its place in Washington, but it can never excuse short-sightedness. In this instance, Congress not only crippled a strong prop of American diplomacy but also drove out of the administration a man of high caliber, a man of a class not easily brought into the Federal service.

[From the Washington Post of November 19, 1947]

STRONGER VOICE

Almost without exception, Members of Congress who toured Europe this summer have come back convinced of the necessity for expanding our international information program. As Senator H. ALEXANDER SMITH, chairman of the Senate group investigating the program in operation, said in a radio broadcast last week: "We found in every country we visited that we are losing this war of words. Our own Voice of America is pitifully weak compared not only with the efforts of Russia and her Communist satellites but also with the efforts in the same field that are being made by friendly countries such as Great Britain and France."

In other words, if we are to overcome the deadly effect which endless repetition of slander and lies by the Moscow propagandists is bound to have, we must strengthen our facilities for making the truth known and strengthen them immediately with all the tools at our command. We hope that in light of these reports Senator TAFT and others who have opposed a broadened information program will be persuaded to change their minds. Three steps are essential, in our view, to make American efforts more effective. The first is a deficiency appropriation to restore the cuts which limited the program for this fiscal year to $12,000,000. The second is to pass the Mundt bill, which will place our information activities on a permanent, business-like basis. In this context we need to expand not only our radio broadcasts, but also our libraries abroad, our daily overseas press bulletins, and our student exchange program. The third step is for the Administration to appoint a man to direct our information pro-

gram who is both an evangelist and an administrator who can command the confidence of Congress.

There is one danger which we hope Congress will avoid in augmenting the Voice of America. In their zeal to meet the attacks the Communists are making on us, some Members may be tempted to insist that we fight fire with fire. Nothing could do our cause more harm than to have our information program perverted into a mere anti-Communist crusade or a vehicle devoted solely to extolling our virtues as benefactors. Either of these courses would convince the people for whose minds we are contending that we too were merely engaged in propaganda. What our information program needs is facts, not invective or self-adulation. The objective truth can be just as devastating as Moscow's name-calling, and far more effective.

The Forgotten Production

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, December 4, 1947

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Forgotten Production," delivered by Henry J. Kaiser over the American Broadcasting Network on Sunday, November 23, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today, if the fearless voice of F. H. LaGuardia could be heard at this hour, he undoubtedly would give you a searching size-up of the special session of Congress and President Truman's message of the week. I don't profess to tell you what he might say.

But I do know the spirit in which he would face today's problems of inflation and desperate shortages of basic materials and goods. Because, just before his death, the man you called "The Little Flower" asked me to take his place one day on his program. He asked me to answer those we believed were trying to sell America short.

Now that Congress is in emergency session, you can be sure that F. H. LaGuardia would speak out against those who are muffing the chance really to solve the present crisis of shortages and soaring prices. I am sorry that much thinking in Washington is not giving adequate attention to the basic economic problem facing the country. I believe industry is anxious to do the job that's essential, but it must have constructive, speedy Government cooperation, which I'll outline later in this broadcast.

You can directly attack the cause of inflation. The way to fight it can be spelled out in terms simple enough for your child to understand.

If your son hears you complaining about high prices and asks, "Why does everything cost so much?" you can tell him:

"There aren't enough things being produced to go around. People want homes, and all that goes into homes; they want automobiles. They are making good money and they want to eat and live well. Other countries have to buy our machinery in order to revive. People are going to keep right on wanting to buy things at home and abroad—a lot more things than our present factories produce.

"So when folks want to buy more goods than are made, they are bound to bid up prices. That's called inflation."

Your boy likely would reply, "Say, that's awful simple. The way to stop inflation is to build more plants to make more things."

Our number one inflation cause arises from critical shortages—yes, criminal shortages.

Both President Truman and most of his critics have failed to put enough stress on making an immediate frontal attack against the causes of high prices. The President proposes a crisis program, emphasizing possible rationing and fixing of prices and wages. Perhaps there are some nonluxury items that require price controls and allocations. But why? Because the Government should have fostered industrial expansion last year; yes. It should have started 2 years ago.

Now, any necessity for controls can be minimized by striking directly at the causes of scarcities.

The President, in his message to Congress, put his finger lightly on the real trouble. He said, "Our long-range programs must stress ever-increasing production."

How long away can "long-range" be?

Senator CAPEHART, of Indiana, minced no words on a radio forum the other night when he strongly championed the expansion of factories and food production as the immediate solution.

The President, it is important to note, again pried into the very nerve center of today's pressing economic problems, when his message said:

"To expand industrial output, we need a long-range program to overcome basic shortages in capacity and equipment."

Certainly, Mr. President and citizens, we need a "long-range program." Yet how long away can "long-range" be? We need action right now, action tomorrow by administration chiefs in Washington, action by industrialists to obtain and operate idle existing facilities, and immediate measures to expand their plants, action tomorrow and every day to gear up this country to full production and to supplying wants of customers.

When the way to lick shortages and ever-rising prices is to increase manufacturing facilities and production, there can be no excuse for dilly-dallying and ducking this fundamental issue.

There literally are scores, if not hundreds of actions, that can be taken—not on some far-off program—but forthwith. Now I'm sure I'm talking the language of "The Little Flower," because he never could tolerate the evasive, put-it-off, confused boys who beat around the bush and failed to smash right to the heart of the problem.

Here are a few lines of attack:

Steel: Our factories still are being hamstrung by lack of enough steel production. This steel famine can get much worse before it gets better, because we must divide some of our critically needed steel in order to help save people of other lands from ruin. There is no end even in sight to shortages.

As you know, there is a Kaiser Fontana steel plant in California. Not only the west coast but the whole country needs to see this Fontana plant expanded at the earliest possible moment to produce sheet steel and other products needed not only now—but permanently.

Well, I announced a plan to expand Fontana and to produce sheet steel there—the kind used for making refrigerators, stoves, automobile bodies, and scores of products. Only 4 days after we announced the plan to expand Fontana, the United States Steel Corp. said it was planning to build a sheet rolling mill at Los Angeles.

The only way to prevent concentration of economic power is to stimulate competition. The Government has the power and duty to support real competition.

Immediate action is called for on the shortage of steel for pipe lines, because great projected pipe lines are held up by lack of steel. This, in turn, causes shortages of natural gas needed to keep industries running and growing.

The shortage of iron and steel scrap, as you know from your newspapers, is highly critical, thereby forcing high prices. To correct it requires the Maritime Commission, War Assets Administration, Army and Navy to sell to industry all the metal junk and surpluses possible, in order to produce the scrap that's so essential today to make more steel.

I can report from conferences with John Steelman, assistant to the President, that Mr. Steelman is taking determined and extremely effective, direct White House action and is forcing more useless, surplus ships to be made available for the production of desperately needed scrap.

Reports to the magazine Steel assert that the War Assets Administration could pour into industrial production 4,000,000 tons of scrap in a few months. Only day before yesterday, Mr. Steelman and the newly appointed War Assets Administrator, Jess Larson, thrilled me when they declared how vigorously they intend to wage an all-out drive to release Government scrap. I can assure steel users that Mr. Larson will leave no stone unturned, and industrialists now should help him uncover all the potential scrap they can locate in their different areas. This will make millions for the taxpayers from Government stock piles.

One long-standing labor-management deadlock is depriving the country of upward of 3,000,000 tons a year of high-quality metallurgical coal. Three West Virginia mines closed July 1 in a dispute with 2,200 miners. During almost 5 months of shut-down, industry has lost hundreds of thousands of tons of coal. That's tragic. The Government should do all possible to bring about a speedy settlement and to start up production. Think of the immediate possibilities of using hundreds of thousands of tons of coal to make coke—to make pig iron, which is one of our critical shortages today.

Aluminum capacity now is five to six times prewar levels. Yet aluminum is completely oversold. The aluminum shortage hurts nearly every type of industry. Before we can increase output of aluminum, we must develop more hydroelectric power. One-sixth of our aluminum plant at Spokane is shut down now for lack of kilowatt power. Skeptics said the Pacific Northwest would "have power to burn" after the war. But instead, the available hydroelectric power, not only of the Northwest, but of all California, is being overtaxed.

We must produce more kilowatts across the country in order to produce more goods in every field.

Now, take the food situation: The President said: "We need a comprehensive farm program." I trust the word "comprehensive" doesn't mean that action is to be put off into the distant future. Again, there are several measures—just as we found the way during the war—that can be taken at once to raise food production.

This Nation can't forever talk of dividing up the scarcities we have—splitting with this industry and that, and not getting enough to increase production and stabilize prices, splitting up with stricken peoples around the world; and we must do this, even though we don't have enough for ourselves right now.

The advocates of a scarcity economy would keep us on the ragged edge of shortages endlessly. We simply must make more basic materials.

Let's stop talking about more production. Let's get more production.

The administration and Congress will have to reject the let's-wait-and-see boys and the it-shouldn't-be-done crowd.

When we were hit at Pearl Harbor, the people knew we had to do a terrific job in expanding and producing. We went all-out to

do that job. Now we face a Pearl Harbor of peacetime. Once more industry and Government can act—and fast.

The least we can do is to get existing plants into immediate full production.

When there's a steady flow of materials, assembly lines won't constantly be interrupted for lack of one part or another. Then you'll find the record of workers' productivity rising. And that will be tremendously important, because a worker's job and his wage dollar are only safe and valuable when he is producing efficiently. We are being hit below the belt—or I should say smack in the pocketbook—by shortages.

How can the Government stimulate industry to increase production facilities? The same way it did in war. It worked then. A tax-incentive system was set up to encourage companies to expand their plants and equipment for war production. The act allowed management to claim income-tax exemption for depreciation of new plant facilities at the accelerated rate of roughly 20 to 25 percent a year, instead of the peacetime rate of only 4 percent. This brought about a gigantic expansion.

This same stimulation is needed now, in order to encourage and safeguard industries making the expansions that are so necessary. In fact, tax laws should be reformed permanently in such a way as to encourage the small businessman and risk-taker to go ahead into new ventures that will build an ever more flourishing economy. This would mean more and better things for you to buy—and cheaper.

Mr. LaGuardia always was standing up for the forgotten man.

But who now is thinking about the forgotten production? The forgotten, neglected, kicked-around but fundamental problem is to increase production—and without further delay.

Let's not soft-pedal that the real issue is to expand plants.

Instead of spending all the time on dosing up the patient, won't Congress and the administration do something—yes, tomorrow and all week—to tackle the task after task that can be solved at once?

Let's really act in the spirit of that Bible quotation that says: "So we built the wall, for the people had a mind to work."

Prices and Foreign Relief

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, December 4, 1947

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an able and interesting discussion of prices and foreign relief, delivered November 18 before the South Central Business Association, Kansas City, Mo., by the Honorable Alf M. Landon, of Kansas.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What is the first duty of government heads today everywhere? It is to bring about peace—normal conditions—lasting peace—not merely a truce.

Two years ago we thought we were triumphantly and proudly facing a peaceful world forevermore. Almost every succeeding month has seen our high hopes diminished. Peace has not had its ups and downs. It had all been down.

Whatever we do for others we must do out of our own savings. Saving at the table—saving in the cost of our Federal Government—if we are to stop soaring prices. We should not allow anyone to delude us into thinking that domestic prices are not directly tied to international relief.

Also, we should not adopt any makeshift stopgap program.

Now, the United States is an extraordinarily strong nation. We can stand strains of unbelievable magnitude and continue to move forward. Nonetheless, there is a limit beyond which we cannot go and if there is any one fact which is clear in the international field today it is that world recovery will not be aided by having this country bled white through wasteful and inefficient dissipation of our resources for the perpetuation of fundamentally unsound conditions in Europe.

In my judgment we know so little of the actual European food situation that it is difficult to develop a program which anyone can be certain will fit the situation. Throughout Europe we have such a bad currency situation that the public in each of the countries is unwilling, except under dire necessity, to trade good goods for bad currency. This means that farmers and everyone else have a tremendous urge to hoard and the necessary effect of this is that all food statistics are inaccurate, perhaps in a very major degree.

This does not mean that there is not a food shortage in Europe. Within the cities there is a food shortage beyond any doubt, and this will continue to be the case as long as there is a currency situation which makes those who raise food unwilling to sell their products. In the country districts it is highly doubtful that there is any real danger of serious undernourishment and I suspect, although clearly I cannot prove it, that if it were possible to get a good distribution through free markets in the various European countries we would find that, with few exceptions, the over-all food picture is much less serious than is being painted to the American public.

For the moment, however, I am willing to accept the thesis that aid is necessary and probably fairly substantial aid. But there has to be some realism about it. The know-it-all hallelujah internationalists are once again hurling epithets at anyone trying to approach this question realistically. It seems to me, nonetheless, that it is only a part of elementary common sense to distinguish clearly between what we offer in the way of aid to prevent human suffering and what we provide in the way of funds for rehabilitation. This distinction theoretically is being maintained by the administration, but in practice the two types of aid are so intermingled that, if we are not careful, we will find that all of our money is used for purposes which when it is gone will leave Europe in just as bad shape as it is today.

In other words, we are in grave danger of repeating the error which we made in our so-called loan to Great Britain. When this loan was made it was told to the American public that this would carry Great Britain over 5 years and enable her to get back on a sound basis. The loan now has been used up in a little over 1 year, rather than 5 years, and Britain is no further along the road to recovery than she was when we first granted the loan.

The only possible salvation of Europe is not to keep her on the relief rolls, as we have been doing with the $20,000,000,000 already spent but as an investing partner to require policies as a condition of our participation which will increase production. Government action alone can do that. For government alone can provide good money—free prices, and open markets which give men the incentive to work. Those conditions, however, should be made with full sympathy for the social and political aspirations of European peoples.

My personal opinion is that the place to start being tough in forcing increased production is in Britain. It is almost fantastic that France should be shipping her gold to the United States for the purpose of buying coal while Britain goes ahead on a 5-day week in her coal mines. While Germany is the heart of Europe I suspect that there never will be a sound solution of the European problem until Britain is straightened out. Also, I am convinced that Britain will never dig out under her present policies of short days and long week ends.

It seems to me, therefore, that in offering to become a partner our Government in advancing money should impose conditions of performance which really are tough from the point of view of production. I can see no conceivable reason why we should continue to provide funds for th perpetuation of governments which, by their policies, make it impossible to reestablish sound economic conditions within their countries.

Up to date we have repeated, on a much larger scale, our mistake after World War I when we wasted six and one-half billions in uncontrolled advances to Europe in 1919–20. After the smash we made small loans under strict conditions which European Nations accepted cheerfully and which set them going again.

As a partner in reconstruction of any country I believe we have the right to insist on the adoption of taxing policies that will get at the wealthy classes of Greece and France, for instance, which are hiding their money in this country. We have the right to insist on balanced national budgets which mean stabilized currencies.

Now, how much can the United States afford in the way of relief and rehabilitation, granting sound conditions are imposed in the granting of such help? My personal conviction is that we can afford all that is required for preventing starvation. But that we cannot afford one thin dime for the perpetuation of non-productive policies in the foreign countries. And that is exactly what we have been doing in the postwar years.

What I am saying, in other words, is that the Krug Report and all other such studies of that character are basic eye-wash. In general the things which Europe is asking for are the very things in which we have shortages in this country. It is not a question of taking the total export figure and relating it to our gross national product. What one must do is compare what we are going to ship of a specific commodity in relation to our own situation. And, before we go too far, we had better keep in mind what already has been happening.

For example, one of the greatest shortages that we have had, which has had repercussion throughout our economy, has been a shortage of freight cars. Yet, during the first half of this year we exported 41 percent of our total production of freight cars. During the first half of this year we exported 42½ percent of our total production of machine tools. In the same period we exported 21½ percent of all motortrucks. There are no over-all figures on steel, which is another great shortage in this country, but it is estimated by men who should be able to appraise this problem that when you consider both steel and the products made out of it that not less than one out of every five tons produced was sent abroad.

When we start talking about further grants of aid we need pretty seriously to sit down and ask how much more of the products in these fields we can afford without causing serious economic disturbance here.

Those are some of the facts which the administration prefers to ignore. Nowhere

is this more evident than in the report of the Council of Economic Advisers. That organization, just as the Krug committee, necessarily would come up with the conclusion that this country can well afford any relief program which the administration proposes. To do otherwise would mean a repudiation of administration policy and that certainly was not to be expected. Everyone is familiar in the political field with investigations designed to whitewash the behavior of this or that bad actor. What is not so generally recognized is that you can have exactly the same kind of whitewashing on the ideological level, and that is what these two reports have attempted to do. I do not mean by this that they have used fraudulent statistics. All I mean is that they have made a selection of facts which enable them to draw the conclusions which they wanted. In other words what they don't say is fully as important as what they do say.

There is another point which deserves emphasis. For 18 years the thinking of the Federal administration has been dominated by those who want to spend money. That is still true. If reports are to be believed, President Truman last year passed the word along that every projected budget cut should be fought. At present the story is going around that Mr. Truman's new budget will be in the neighborhood of $40,000,000,000. Since revenues are estimated at about $41,000,000,000 this means there is no margin for reduction of the national debt or reducing taxes. In fact, we get the clear inference, even in the Nourse report, that it will take good management to eliminate the necessity for still higher taxes.

Such a thesis at this time is simply incredible. A decent economy program on the part of the Federal Government could reduce total expenditures, not including foreign aid, to about $3,000,000,000. With revenues of $41,000,000,000 this would mean that there would be about $11,000,000,000 to be distributed between tax relief, payment on the public debt, and foreign aid. If the American public is not given tax relief in the face of this possibility it will mean that the administration is deliberately attempting to hold a high level of expenditures and that it is willing to devise any kind of a program in order to prevent the public from getting tax relief. There is the basic cause of high prices.

It constantly is being said that we cannot afford tax reduction because that would be inflationary. When the Government taxes money away from the public and then turns around and spends that money, which is what the Truman administration is planning, all it means is that the bureaucrats rather than the public spends the money. Certainly it is no more inflationary to let a wage earner spend his money than it is to have some bureaucrat take a part of his wage away and then the bureaucrat spends it. In fact, letting the public spend its money, instead of having it spent by the Government is likely to be less inflationary because the public will spread its spending over a much wider area than the Government may. Certainly it would be less inflationary to leave with the American public an additional two or three billion dollars which they would spread over the entire field of production than it would be for the Government to take this money and spend it on the relatively small list of items which will be purchased for foreign relief.

In the final analysis only the strictest economy—not regulations—on the part of the national administration will solve our problems at home and abroad.

The administration has in its hands the strings that affect America's interests throughout the world. It knows that if you pull one string it affects others. It has known for months that the present situation was developing. Yet, there is no agreement on policies in administration circles.

The Secretary of the Interior, the Secretary of Agriculture, the Secretary of the Treasury, and the Secretary of State have all publicly disagreed. It has kept the ringmaster busy getting them back on their tubs.

Last week the Se retary of State doubled the estimate of other administration spokesmen on the cost of the makeshift 1 year stopgap and hiked their ante considerably on the permanent plan.

We went through a war believing after it was over that all our complexities and difficulties would level off. They have not. That not only applies to our international situation, but to our domestic situation as well.

There is a black market in my business created by exporting material we needed at home. You read in the newspapers of a threatened shortage of oil. There would be more wells drilled and more oil produced if it were possible to get the steel pipe to case those wells. There is a black market in steel pipe, which ranges as high as three times the established market price. The same situation exists in newsprint. A friend of mine—a publisher of one of our small Kansas dailies—said to me last week that he needed an additional amount of newsprint to enable him to increase his circulation, and take additional advertising to offset his increasing cost. He is unable to obtain it in the regular channels. He was offered a carload of newsprint, however, at three times the established price.

There is a subject that calls for a sweeping and thorough congressional investigation or activity by our Justice Department. Some authority with the power of subpena should go into the steel industry and the newsprint industry and find out why it is that they are unable to supply their established customers at established prices when black-market operators are able to get their hands on oil-well casing and newsprint. That is a very real problem. Costs are going up all the time. The only way the small independent oil producer or the small publisher can stay in business is to increase his output.

Today, he is absolutely limited and fenced in. The restriction laid upon him at this time is simply that he cannot obtain enough of the commodity necessary to the conduct of his business to provide a volume that will absorb all of his heavily increased and increasing cost.

It is a proper function of government to throw a sheltering arm around us by giving relief on something we cannot do anything about ourselves. That sheltering arm is to use all the power of government to clear up all this disgraceful and organized black market situation. Government should do that for the businessman of this country rather than continually seek to limit his own activities by Government regulations and rules interpreted by bureaucrats far beyond the intent of Congress.

If the Justice Department does not move promptly and vigorously on that black market situation a congressional committee should forthwith issue subpenas for those offering newsprint and oil well casing at three times their established price, and find out how they got hold of these commodities to sell. They also should subpena the heads of the steel companies, the heads of newsprint manufacturing companies, the jobbers and others guilty of similar practices, to find out how this pipe, how this newsprint and how these other articles get into the hands of black market operators instead of their regular customers. There is only one place these black market operators can get that pipe and that newsprint or any other of the widening black market commodities, that is from the manufacturers. That is true of every other product in America today of which there is a black market, and there are many of them, including all kinds of farm machinery.

We are learning the hard way the lesson of history that the mismanagement of the making of peace can destroy the conqueror as well as the conquered.

The Gambler

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, December 4, 1947

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Gambler," by Frank C. Waldrop, from the Washington Times-Herald of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GAMBLER

(By Frank C. Waldrop)

The world's biggest single gambler in food, money, and property rights as of today is Clinton Anderson, United States Secretary of Agriculture. And what he's doing with the United States taxpayers' dollar should make your hair stand on end.

For instance, consider peanuts. To you, peanuts may be just something that Virginians plant to build nitrogen back into tobacco land or feed hogs on to give Smithfield hams that flavor.

But in the world as a whole peanuts are one of the most important of all sources of fats and oils. And the world is miserably short on fats and oils, as everybody knows.

Why, then, has Anderson started a project to limit United States peanut acreage in 1948 and slap on quota controls? Answer: Because Commodity Credit Corporation, a trading corporation under Agriculture's management, has a tremendous supply of last year's peanuts in warehouse and "doesn't want to lose money on it," so is tinkering with ways to maintain false prices.

There, citizens and taxpayers, is a little gem—or rather a very big gem—and sample of what happens when you put the Government up to trying to control prices, production, and values.

Again, take prunes. For some reason prunes are funny. People make jokes about them. But nevertheless they, too, are an important food in that they don't spoil easily, carry a high sugar content, and are cheap, or used to be.

But not since Commodity Credit Corporation got into prune trading. You may not realize it, but your tax money is forcing up the market price of prunes, raisins, dried peaches and apricots.

If you don't find these items on the counter in your grocery, or if you do find them on the counter at a price out of your reach, then thank Gambling Clint. He has billions of dollars to trade with and he trades on an in-and-out, day-by-day basis to "protect the investment."

Gambling Clint has warehouses full of tax-boughten peanuts, prunes, and apricots that he could let loose on the market to knock down the spiral of inflation.

The release of these foods at open market prices would be extremely influential in pulling down the whole high cost of living. What's Clint gambling for? The 1948 farm

vote, tacked onto false prices for agricultural products and coupled with price and wage control in the city?

We've all lived with these gadgets for enough years now to know them for what they are. Let's call them by their right name—Government gambling with our money.

The biggest demonstration on this line concerns the wheat that we were all rushing around to save last month by not eating Chuck Luckman's chickens on Thursday.

That poultry show was put on in an atmosphere of terrible need for the country to lift Europe from hell and devastation over the week end. Save a slice of bread a day. No meat Tuesday. No chicken Thursday.

Now comes the truth, as revealed in the Senate appropriations committee proceedings of less than 10 days ago:

"Secretary ANDERSON. We have procured the necessary wheat for our export program through the month of March 1948, in wheat. We are using commodity credit money to do that.

"Senator BALL. In other words, you have the grain already to ship to cover the interim (relief) program; all you need is the authorization of the money?"

Then Anderson made the astonishing admission to Senator FERGUSON that as far back as last July while Congress was still in session, the Agriculture Department had known what Mr. Truman's supposed "emergency relief" dust-up would call for in the way of wheat and had begun to buy them with money already in hand.

Think of it! Six months ago, Truman, Anderson and Co., knew what they were going to ship abroad. Did they tell anybody? Not at all. Did they give Congress warning? Not at all. Did they let the country in on the facts? Not at all.

They let Congress adjourn and then put on a fancy fandango performance with full soap opera attachments, to make it appear the country must go back under wartime controls before Christmas.

And what was the hullabaloo all about? The committee records make it astonishingly clear. Simply this: Gambling Clint has spent all the money in his Commodity Credit Corporation account on the foreign relief program Congress is now supposedly just beginning to finance.

He is fresh out of cash and wants more to continue supporting farm prices and restricting farm production contrary to free market operations.

To put it another way, the so-called "emergency relief" appropriations actually are just a shot of inflation for United States farm prices intended to keep Hiram happy in 1948.

And, of course, the other half of the deal, price control, is supposed to keep the city suckers happy, too, for a few months.

Until, as before, the whole thing blows up in another OPA-black market, wage-price war as in 1945-46. But by then the elections will be over and it will be time for something else.

The Lawyer's Version of the Twenty-third Psalm

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, December 4, 1947

Mr. MURRAY. Mr. President, in the October 1947 issue of Case and Comment, a lawyers' publication, there appears what is entitled "The Lawyer's Version of the Twenty-third Psalm," written by Louis Lande, of Washington, D. C.

In view of the fact that the legal profession is often regarded in the public mind as a cold, relentless, and calculating group in our American economy, it might be well to call attention to this fine profession of faith which Mr. Lande indicates truly charts the course of members of the American legal fraternity. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE LAWYER'S VERSION OF THE TWENTY-THIRD PSALM

The Lord is my judge; I shall not fail.
He guideth me to a safe shore.
He charteth my course.
He keepeth my record straight.
He ruleth my conduct to the court and to litigants.
Yea, though I live midst strife and dissension, I counsel peace and forbearance.
For Thou art ever in my thoughts.
Thy law and Thy commandments are with me always.
Thou givest me courage in adversity and consolation in defeat.
Thou art my court of first resort, my tribunal of last appeal.
Surely the approval of my brethren shall be my reward during my life.
And I shall live in the memory of my friends forever.

—*Louis Lande.*

WASHINGTON, D. C.

Special Session Is Too Important for Congressional Partisan Politics

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Tacoma (Wash.) Times:

SPECIAL SESSION IS TOO IMPORTANT FOR CONGRESSIONAL PARTISAN POLITICS

A battle in Congress is at hand.

This grows increasingly clear as opposing groups close their ranks for Monday's opening-day special session on the cost of living and European aid.

We believe the chief issue in the Marshall plan is clear:

Does this Nation intend to continue "Operation Rathole" and continue to dole out barely enough food and funds to keep Europeans alive?

Such a course would inevitably lead to the economic collapse of Europe with a disastrous effect on our own economy. It can scarcely be doubted that communism would make new advances.

Yet this, in effect, is the course recommended by Senator ROBERT A. TAFT and his cohorts such as Representative GEORGE H. BENDER, also an Ohio Republican.

Senator TAFT proposes European aid next year of about half the amount the Harriman committee recommended as adequate to help Europe revive.

And the Harriman committee was heavily weighted with such conservative thinkers as W. Randolph Burgess, vice chairman of New York's National City Bank, and Chester C. Davis, St. Louis banker.

Representative BENDER, leader of a subcommittee of Senator TAFT's Joint Economic Committee, submitted a report Friday recommending that Government-financed export, meaning food for Europe, be pared to the bone in order to halt inflationary pressures.

Meanwhile, Communist-led riots in Italy and France are as advance gusts in the gathering European storm.

It seems scarcely possible that a man with Senator TAFT's acknowledged intelligence could fail to see the effect this storm would have on this Nation if it were allowed to break.

Yet we would hesitate to accuse any Senator or Representative of playing politics with an issue of such great importance to the United States as the Marshall plan.

The only other likely answer is that Senator TAFT and his followers are so much opposed to the return of Government controls in any form that to avoid them they are willing to undermine the Marshall plan.

Senator TAFT has, in fact, vigorously opposed restoring any of these controls he took such an active role in ending.

It seems obvious to us that revival of Europe, as conceived in the Marshall plan and recommended in the Harriman report, is essential to the future of this Nation as well as of Europe

We believe that if some Government controls in the United States are essential to carrying out the Marshall plan, then, despite our distaste for such controls, they should be imposed.

The cost of living has continued to increase. According to a report Friday by the Labor Department it rose another 2 percent between mid-August and mid-September, to a new all-time high.

Soaring prices are having a disastrous effect on millions of Americans. The Federal Security Agency says inflation has forced nearly 1,000,000 more Americans on public relief rolls since the war's end.

Millions of other families are going deeper and deeper into debt as they futilely attempt to balance steady incomes with rising costs.

Not only is an end to the current inflation essential to the future of the United States, it is equally essential to carrying out an effective program of European aid. For the cost estimated under the Marshall plan would have to be boosted considerable to have any effect if United States prices continue to soar.

Congress is confronted with a problem demanding the utmost statesmanship. Nothing less will suffice.

Preconceived ideas and partisan politics must be put aside if Congress is to serve the best interests of their own and other freedom-loving nations.

Is Our Financial and Economic Policy With Reference to European Countries Irrational and Contrary to Natural Laws and Forces?

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, it is so refreshing to have the opportunity to read and study the reactions of some of our best students on financial and economic problems, espe-

cially pertaining to our relations with the European countries.

It does not require much ability, and only the minimum exercise of energy and mental effort, to follow blindly and credulously the fantastic and idealistic conceptions of the administration on these subjects. I maintain that the Members of Congress owe it to their constituents, and to the country as a whole, even to world-wide civilization, to study seriously both sides of the question.

In an effort to know the reasoning and thinking of the people who do not have any ulterior motives, and who do not always agree with the New Deal program of planned economy, one can enjoy a realistic conception of what it all means. The historical background, the present indelible facts and reasoning from such premises to a logical conclusion should make it possible to determine more accurately our plain duty in the controversial issue now before us.

One of the greatest economists of the country has sent me a transcript of his views on the so-called Marshall plan. This economist sent me this speech September 19, 1947, a month before Congress was reassembled to consider the administration's program of foreign relief, and it is a pleasure to be able to present for the consideration of my colleagues, and the public, the following views of this great economist:

SOME FACTS AND PROBABILITIES REGARDING THE FOREIGN SITUATION, WITH PARTICULAR REFERENCE TO THE UNITED STATES AND EUROPE

1. We are now commercially exporting, or in many cases actually giving away, annually many billions of dollars worth of our essential products. The ratio of the value of our exports of goods and services to our national income is now around 10 percent, as compared with around 5 percent in normal prewar times. In many industries the proportion of exports is substantially higher than the above average. At any rate, we are now exporting enough of many products to raise their prices in our domestic markets to record high levels and to hold them there. In the meantime, the high cost of living sets in motion an apparently ceaseless wage-price spiral.

2. Although the United States customarily has from 35 percent to 40 percent of the world's income and wealth (undoubtedly substantially more at the present time), yet we produce not more than 10 percent or 12 percent of the world's food supply. We cannot possibly fill even a small proportion of the hungry bellies of the world without seriously undermining our own situation and without greatly boosting our own cost of living, thus reducing our purchasing power and our standard of living.

As shown in the attached report, which I believe is as true today as it was when written some 5 years ago, even though the rest of the people of the world should continue to work as hard as before—which they would not—and even though we should give them approximately five-sixths of our income, evenly distributed, and even though in this process we would raise the income of the rest of the world by approximately 50 percent, yet in actual dollars and in actual command over the good things of life, the increase per capita would be negligible—certainly not more than $30 per year at prewar levels. At the same time, even though there were no economic loss in the process, our own standard of living would have been reduced to a level only one-sixth as high as we have customarily enjoyed. In other words, we would all be in the soup together.

As Speaker MARTIN said the other day, "I never heard of a man saving another from drowning by going down to the bottom with him."

3. It seems to me, further, that all we are accomplishing by our generous "gifts" to European countries, is to "cushion" for them the impact of socialism and communism. We are, I believe, weakening their moral fiber and encouraging acquiescence in "things as they are", instead of stimulating resistance to the spread of communism. I believe that unprejudiced records will show that France, for example, has been flirting with communism and radicalism for a long time—she is obviously decaying at the top. The same might well be said of Italy. Germany is, as one of my refugee friends put it, now little more than a "stinking corpse", which can probably never be resurrected into anything but a second- or third-rate nation. The middle European countries have already been almost completely absorbed by Russia, and they, as well as others, will naturally tend to affiliate themselves with the strongest power which lies closest to them, i. e., Russia.

4. It seems to me, also, that our American businessmen have been sold one more false and misleading slogan, i. e., that if we do not throw substantial and continuing aid into the various European countries, then they will all go communistic, but that they can be saved from this fate by the extension of such aid. This line of chatter seems to me almost an insult to real intelligence in view of the well-known long-time trends to the left in most of these countries.

More particularly, however, I would call attention to the case of our mutual mother country, England. Although for the second time in a generation we helped her win a World War which initially was of no major concern to us and our domestic economic welfare; although we extended her between $25,000,000,000 and $30,000,000,000 of lend-lease goods, services, and munitions, on balance; although we have forgiven all the debts of the previous war, and on the very eve of our making her an additional loan approaching $4,000,000,000; yet the good people of England saw fit to kick out the conservative Churchill government and to vote in by an overwhelming majority the most radical government in her history, sworn to nationalize all the leading industries of Great Britain.

Furthermore, I would call attention to the fact that many of the leaders of the church in England, even before the Second World War began, had affiliated themselves closely with the Soviet philosophy, and passed resolutions, made statements, and wrote books in favor of Moscow. In fact, the best selling book ever written defending the Soviet philosophy of government and economics was written by the dean of Canterbury.

In view of all these things, why should any sane man believe that a few more millions or billions of dollars scattered around the fringes of Europe will save those countries from communism?

5. May I call your attention further to some cold and brutal facts which seem to me more significant than a flock of beautiful but half-baked theories:

(1) For the United States in normal times, our export trade has been not more than 5 or 6 percent of our estimated national income, whereas in most other important countries of the world it has constituted any place from 15 or 20 percent to as much as 30 or 40 percent of the national income. The loss of most of our export business, while it would seriously curtail a few of our domestic industries, would normally have no very far-reaching and serious effect in our entire national economy. On the other hand, a substantial loss of their foreign trade by those countries depending largely upon foreign trade for their income, would be a very serious matter.

(2) Further, we might as well admit that after every great war the tendency is for all substantial countries to become more nearly self-sustained in their economies, in order to avoid the dangers and privations of future wars. This is a normal and unavoidable human tendency. After the period of reconstruction, therefore, there is likely to be relatively less rather than more foreign trade, as compared with the total business or national income of the leading countries of the world.

(3) It logically follows, therefore, that if Great Britain, for example, should be able to double her export trade, in physical quantity, as undoubtedly she would have to do in order to recoup her losses and regain her position of leadership in the world, she would simply have to take a great portion of that additional trade away from other countries, including the United States. Just where would such a program leave us and other countries? Why should we and others be impoverished for an indefinite period of time for the benefit of England or any other country? Why should we admit British or any other goods to our market to the disadvantage or destruction of many of our own manufacturers?

(4) In this connection, it is probably not generally known or realized that in the fiscal year ending on March 31, 1947, Great Britain collected approximately $2,500,000,000 of tariff on her imports, indicating an average rate of duty between 45 and 50 percent ad valorem on all her imports. During the identical period the United States collected approximately $500,000,000 in duties on an amount of imports substantially the same as those of Great Britain, or at an average rate of rather less than 10 percent ad valorem.

In other words, despite all the pious protests of our own politicians who would like to do away with our tariff protection, and despite the broad statements which are continually made by our British friends and others, the United States at the present time has about the lowest tariffs of any important country in the world, for its average rate of tariff is little more than one-fifth of the average British rate, while our tariff burden per capita is only one-fifteenth that of Great Britain.

6. Before the Bretton Woods banks were created, i. e., the International Bank for Reconstruction and Development, and the International Monetary Fund, we were told that the future peace and prosperity of the world depended on these banks, and that once we would go into them in a big way, international economic conditions would be stabilized, etc., etc. Of course, any careful student who would study the history and logic of the situation and not be carried away by slogans, knew that this idea was almost 100 percent bunk, as has already been demonstrated by the developments of the past year or two. Any country which is on a sound monetary basis needs no international bank to assist in stabilizing its currency. Only the bankrupt nations, the shyster nations, and those headed by political adventurers have any need for such institutions. The real purpose is, of course, to bail out poor and busted countries with American funds.

Furthermore, there isn't, in fact, the remotest need for the bank for reconstruction and development. It isn't the proper function of any free government to make commercial loans to any other government. Furthermore, any loan which is so precarious as to be unfit to be handled by the various private banking institutions which are so plentiful in the United States and in Great Britain, is not fit to be made by any government-financed intermediary bank. It is all eyewash and economic, financial, and political chicanery.

The have-not nations, which can outvote the United States, have hoped to use these organizations as a clever way of evading interest rates sufficiently high to compensate for the risks of making private loans

to them. Everybody is trying to bail himself out at the expense of Uncle Sam and, if you will, of Canada. Relatively sound countries like Switzerland and Sweden have no need for this kind of artificial stimulus.

Notwithstanding all the hullabaloo for these spurious financial organizations, we are now told that events are marching so swiftly that the United States must directly pour untold billions into these various foreign countries to fill up bottomless rat holes.

7. We are told in this connection that there is a shortage of dollar exchange throughout the world. This is the new semantics for saying that the rest of the world is trying to live at the expense of the United States workman. They are trying to eat their cake and have it too.

While they loaf and strike and sabotage and fight and destroy and produce virtually nothing for export, they expect us to give them not only sufficient goods and credits for their current living but also enough in addition to reconstruct and replenish their fund of capital goods, which it has taken hundreds of years of sacrifice and saving for them to build up, until virtually everything was destroyed by the recent war.

This is a fantastic concept. Those countries can never really recover except under their own steam, which means the process of recovery will take generations—not years—and if the United States or Canada expects to underwrite European recovery then all of us will be in a condition of self-imposed slavery as far ahead as the human mind can forecast.

8. All of the above boils down, wittingly or unwittingly, to a diabolically clever plan and program, that is, the New Deal in the United States having failed miserably at home and having been overwhelmingly repudiated at the polls in November 1946, is now trying to sell to the people of the United States a very old brand of international socialism under new names and new slogans. Our cost of living has been pushed to the highest level in modern history as a result of Government buying for European aid. Workers have been encouraged to strike by the Government in order to secure higher and higher wages. The approved doctrines, methods, and policies of Karl Marx are being carried out day after day by the officials of the United States Government, and the American businessman is being sold indirectly the Soviet doctrine under the slogan that the steps being taken will protect him from communism because such steps will prevent European countries from going communistic.

9. The conclusion of the matter, as I see it, is that, if we continue to "relieve" Europe at anything like the present rate, we shall within a short time have a return of allocation and rationing in the United States, and probably many new drastic controls of industry and prices. Such moves are already being carefully considered and examined by various high officials in Washington.

Our present strangely illogical and financially unsound policy can, in my judgment, lead to only one end—an undermining of the social and economic structure of the United States and, relatively, a progressive strengthening of the Russian system. Russia has already taken over and expects to hold virtually all of the surplus producing territory of central Europe, including the agricultural territory of Germany. She can afford to be stubborn and to wait, knowing that her population is increasing very rapidly and that she can make full preparations for war behind the "iron curtain," while we western peoples have no unanimity of policy or action and are floundering about in a bottomless sea of impractical "idealism," which we still futilely believe can be imposed on an ancient world which has never understood any policy but the rule of force, or the Machiavellian duplicity of diplomats.

Incidentally, it is estimated by careful actuaries that within the next short generation the Soviet Republic will have more men of military age within her prewar boundaries than will the United States, Great Britian, France, and other small northwestern European countries put together. With the addition of territories in central Europe normally having between 125,000,000 and 150,000,000 population, Russia will have many additional millions of male adults who will serve her purposes in a condition of semi-slavery, unless the entire picture is suddenly changed by an external force, which the United States only could conceivably exert. It is no wild dream to envisage a Russian-controlled white population approaching at least 500,000,000 people within the next 25 years or so; and it is quite possible that, in addition, she may control 500,000,000 Chinese, Koreans, and Manchurians, more than 50,000,000 of whom are already in her hands, plus another half billion people in India and other parts of southern Asia. In fact, Russia, if not checked, might easily dominate three-fourths of the population of the world within the next few years.

10. Perhaps I can best sum up some of the more or less obvious economic conclusions of the various foregoing suggestions by saying that loans or gifts from grandchildren to grandparents are neither normal nor sound; nor can they possibly buy goodwill or aid for the grandchildren.

On the contrary, grandparents who need help from their grandchildren are economically through—they can never repay. They can never effectively assist their grandchildren if they themselves are already impecunious, and they can never build up anew financial independence in their old age. If in old age grandparents become mendicants, they will so remain. If they love their grandchildren, they will continue so to do. If they dislike their grandchildren, they will dislike them the more because they have had to accept charity, and they will be jealous of the better status of their grandchildren.

In my judgment, our financial and economic policy with respect to old and decadent European countries is completely irrational and completely contrary to the working of natural laws and forces. We are now trying to support and restore various policies and practices in European countries which our forefathers well knew were not only unsound, but wholly detrimental to the good life. If we do not all make the foregoing errors, then we seem to jump to the conclusion that human nature can be made over in a day, and that our system of free republican government—which we ourselves are not yet intelligent enough to operate—can be immediately, or at best within a few short years, imposed on the more backward peoples of the world.

I have written plainly because it seems to me that, looking toward the future, very grave issues are involved. Nature abhors weakness in animal life, in plant life, and in national life. Famine and disease and natural disasters have frequently destroyed what war has left. Every nation has its day and passes out of the world theater. Babylon, Assyria, Egypt, Greece, Rome, the Empire of Mohammed, Spain, Germany, and Japan—all rose and fell. Britain and France have already persisted longer than most of these, but their sun now seems to be setting. The clock of history turns not back. Only two apparently strong powers now remain—one a great idealist, the other decidedly a realist. Which will weaken first?

While the British Empire is disintegrating in India and probably in other parts of the world, while Europe is in chaos and her civilization is in all probability decaying, it is quite possible and rather probable that Russia may grow proportionately stronger. Russia needs practically no foreign trade; she enslaves, or buys at a great price, the know-how from Germany and from other countries. She has no commercial costs of production; she cares little or nothing for money as such; she has no serious foreign-exchange problems. To all intents and purposes, she is almost completely self-contained and seems likely to grow more so. Few are now alive of Russia's 200,000,000 who remember any but the Soviet form of government. Will she fall apart soon of her own weight?

Probably the future of civilization in the world rests squarely upon the shoulders of the United States and of Canada, which at the present time have well over half the wealth and income of the world.

I cannot for a moment, however, believe that we shall ever help the world back to a higher state of civilization and progress by taxing our own people to death in order to rehabilitate far-away foreign countries which have had their day in the sun and which, through either political or economic incompetence, have lost out in the race of mankind. At any rate, history records no example of a come-back under such conditions.

RELATIVE ECONOMIC POSITION OF THE UNITED STATES AND THE REMAINDER OF THE WORLD

As nearly as we can estimate on the basis of very detailed calculations first made by us in 1930, the wealth and income of the United States before the outbreak of the present war compared substantially as follows, in round numbers, with the wealth and income of the remainder of the world:

1. Population: World total, latest estimates (1938–39), around 2,145,000,000. United States, corresponding date), around 130,000,000 (present, around 134,000,000). Percent of world total, around 6.

2. Wealth: World total, around $1,100,000,000,000. United States, around $330,000,000,000. Percent of world total, around 30. (Around 1930 the wealth of the United States was estimated to be from 33 to 35 percent of the world total.)

3. Income: World total, around $210,000,000,000. United States (1940), $72,000,000,000 to $75,000,000,000. Percent of world total, 34 to 36. In 1929 the United States income was estimated at 41 to 42 percent of the world total.)

It is significant that the relative position of the United States gradually deteriorated during the decade of the thirties, due to the fact that recovery in other leading countries was much more rapid than in the United States.

To make the problem as simple as possible, the United States, with 36 percent of the world's income and 6 percent of the population, has a living standard per capita equivalent to 6 units of income (36 divided by 6). The rest of the world, with 64 percent of the income and 94 percent of the population, has a per capita standard equal to two-thirds unit of income, or on the average one-ninth of that of the United States.

In order to establish equality throughout the world, the United States must retain only her per capita share of the total world income, i. e., she must reduce her income to 6 percent of the total, and must give away the remaining 30 percent of the world income which she now holds, so that 94 percent of the population outside the United States will also receive 94 percent of the world income. This operation would theoretically raise the rest of the world to an average per capita income of 1 unit—which is a theoretical gain of 50 percent from the present average. But the average citizen of the United States would, in the process, lose five-sixths of his income.

In other words, if there were no economic loss in this process of redistribution, and if the rest of the people of the world who receive our gifts would continue to work as hard as they do now to produce their own sustenance, we would reach a theoretical equilibrium with all people in the world (including the United States) having a standard of living one-sixth as high as that now prevailing in the United States.

In actual dollars this would mean roughly a distribution of a little more than $60,000,000,000 to something over 2,000,000,000 people. The average man outside the United States would have his income increased by a little more than $30 per year. This might be a fortune for a Chinaman or a heathen dweiler in the tropics—but purchased at a price which would mean the utter degradation of the people of the United States.

Further, in view of our well-known experience with the Negro in the South, and the observed reactions of the most backward people throughout the world, it is probable that, if this country should redistribute its income in the manner indicated, the great bulk of the recipients thereof, who are already existing on two-thirds of a unit of income, would merely work half as hard as before in order to support themselves, and would thus maintain their income at the old two-third-unit level by earning only one-third themselves, and bringing up the balance with the one-third unit which we contribute. Also, under the conditions outlined, productivity in the United States would rapidly decline.

That the foregoing is no idle analysis is shown by the following quotation from the Bulletin of the United States State Department, under date of December 27, 1941, page 589:

"Lend-lease countries cover two-thirds of the earth's surface and contain nearly two-thirds of the population of the world. Up to the present time, the defense of 33 countries, including the British Empire, has been declared vital to the defense of the United States, and steps are being taken to strengthen the defenses of these countries."

Already most of the world outside the United States and the countries dominated by Germany, Italy, and Japan, are covered by a plan which commits the United States to the indefinite extension of credit, and shipment of all kinds of commodities, without any hope of repayment. It is further the announced policy of our Government to supply our resources in order to rehabilitate even the Axis countries after they shall have been defeated. That completes the present program for world redistribution of our wealth and income.

Correction of Inflationary Forces

REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 2, 1947

Mr. CRAWFORD. Mr. Speaker, the chairman of the Federal Reserve Board of Governors before a Senate committee the other day had this to say:

In the monetary field and credit field inflationary forces have already gone so far as to cause very serious maladjustments within the economy. A correction is overdue, and the longer it is postponed the more severe will be the inevitable reaction.

He stated:

We are already in the advance stages of this disease.

He further commented:

The question we must ask is whether any further expansion in the aggregate amount of credit is desirable or dangerous. If it in fact calls for more production it would be desirable. If it only permits one borrower to bid against another for scarce goods and thus adds to upward pressures on prices, it is dangerous. It is our best judgment that over-all expansion of the money supply at this time is inflationary and dangerous.

We should keep that in mind in connection with the financing of the relief which is to be voted next week.

Prior to the opening of the special session I sent each Member of the House a letter with respect to a resolution I expected to introduce on this particular subject. This resolution is being introduced today. I think this Congress needs to be better informed on what is taking place in connection with destroying the buying power of the accumulated savings, the current wages, and the future credit of the people of this country. I agree with Chairman Eccles that the hour for correction is overdue. A thorough understanding of what has already occurred would assist the Congress in deciding how far it will go in assisting the Board of Governors of the Federal Reserve System to bring the inflationary forces under control.

Birthday Felicitations to Judge Oscar E. Bland by Hon. Alexander Wiley, of Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, December 4, 1947

Mr. WILEY. Mr. President, last evening at the Hotel Raleigh about ninety friends of Judge Oscar E. Bland gathered at the festive board to celebrate his seventieth birthday.

For 25 years Judge Bland has graced the bench here in Washington, and now he has laid aside the ermine.

It was my privilege to be one of the guests at the dinner, and on that occasion I paid my respects to him in the language which I now ask be incorporated in the Appendix of the RECORD.

Among those present were the Chief Justice of the Supreme Court of the United States, and other justices and judges, as well as Senators, Representatives, doctors, and members of the bar.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Judge Bland, and friends, as I listened to the sonorous, Shakespearean-like fluidity of expression of my dear friend, Senator Ashurst, our toastmaster, this evening, the hands of the clock were turned back, and it seemed to me that I was listeninf to him again speaking in the Senate.

It made no difference what the subject was. He was always adequate for the occasion. If the subject was bees, you could almost hear the bees hum; or if it was the Constitution—well, he made it a thing of inspiration and vitality. No matter whether the subject was protective tariff, politics, Arizona copper, democracy, Indian claims, or courts—he did the job well and inspired us with his learning, his faultless diction, and what I have called his fluidity of expression. And although he has now retired from the Senate, the melody lingers on.

As a result, when he retired, there was a void in the Senate which has not been filled.

And so, Judge Oscar E. Bland, your retiring will leave a void on the United States Court of Customs and Patent Appeals. Ever since 1923, when you were elevated to the bench, you have distinguished yourself and the court.

And now that you are retiring from the bench, you do so with honor and distinction. Life to you is still a thing of zest, and you will carry on like our distinguished toastmaster. He has a philosophy that never acknowledges defeat or permits himself to "let down." There is every evidence that he is not a retiring sort, and I say God bless him for that quality.

The years have been good to you, Judge, because you have been good to the years. You have known how to grow along with the years, and this is one of the master works of wisdom.

Now, with old friends, and with the consciousness that your work in the law has been well done, you can renew your youth, taking time to reread Dickens and Thackeray, Dumas and Hugo. Yes, you may even reread the Leather Stocking Tales, by Fenimore Cooper, and all the old masters in literature. Then perhaps you will delve into philosophy and seek to find through it and through the teachings of the prophets and seers and saviors of the world the meaning of life, and thus fulfill the ambitions for which time was inadequate heretofore. And if I sense the situation correctly, you have a lot of aspirations and dreams which may now come to fruition. With your fine trained mind, who knows what bigger things are yet to be for you.

We who are gathered here—some having been retired, some, like yourself, having retired voluntarily, and others who time will see retired—all of us wish for you a life packed full of good things—a life of health, happiness, and high adventure in this wonderful age of new things.

Paraphrasing Browning, in part, we might say:

"Grow young, friend, with me,
The best is yet to be.
Man's spirit at noontide stands,
Reflecting the intelligence of that hand
That shaped the spheres.
So man, through the years
In mind, whole, complete,
Remains immortal, with powers replete.
And though mortal anchors slip away,
Man lives forever and a day."

Report to the People—Part 2

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, December 4, 1947

Mr. O'DANIEL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD, under the order made last Monday, my second report to the people, broadcast on September 11 last from radio station WBAP.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REPORT TO THE PEOPLE—PART 2

(Radio address by United States Senator W. LEE O'DANIEL, of Texas, over radio station WBAP, Fort Worth, Tex., September 11, 1947)

How do you do, ladies and gentlemen, and hello there, boys and girls. This is your United States Senator W. LEE O'DANIEL,

speaking from the studios of WBAP 820, at Fort Worth, Texas. This is the second in a series of four radio broadcasts I am making in a Report to the People regarding the serious conditions confronting this Nation on both the domestic and foreign front.

I am endeavoring to point out that these serious conditions are not brought on by natural forces, but are brought on by the activities of the gang of big-headed professional politicians who have lived in Washington so long at taxpayers' expense that they actually feel they must dictate to every citizen of this Nation just how he must run his own private business, and how other nations on this earth should conduct their affairs.

At this time I want to ask the citizens of this State how they would like for Joe Stalin to come over here and organize a citizens' army of twenty-five or thirty million people, put them on his pay roll so they would obey his orders, and then tax you folks for the entire cost of the proposition. Well, I believe that you would resent such a move on the part of Joe Stalin, or the ruler of any other foreign nation. But let me tell you that, in effect, this is about what has been done, and let me tell you further that your pussyfooting Congress and executive branch of your Government in Washington have aided and abetted this movement by enacting communistic legislation, and issuing communistic edicts. Now, of course, the deceptive gang of professional politicians which infest the National Capital do not come out frankly and tell you what they are actually planning, when they enact destructive and communistic legislation, but they generally dress the legislation up in labels that read just exactly opposite to what they mean. For instance, they call the Wagner Act, the National Labor Relations Act. I believe it should be labeled the Communists' Recruiting Act. They call FEPC the Fair Employment Practices Committee. I believe a more descriptive name would be Unfair Employment Practices Committee. Now, if you were going to set up an army of Communists or communistic sympathizers in this Nation, you would first realize the necessity of raising money with which to finance such an organization. Well, here is the way the Congress and the President of the United States set up this money-raising organization. They first had to kick the Constitution of the United States out the window because the Constitution plainly states in article I, section 8, as follows: "The Congress shall have power to lay and collect taxes." Our wise forefathers put that provision in our Constitution so that no organization except Congress could ever be set up in this Nation that would have the power to lay and collect taxes. They thought that would be protection for the citizens of this Nation, because the citizens themselves elect the Members of Congress. But here is what Congress did. Congress abdicated its throne by transferring to the communistic labor leaders of this Nation, the right to lay and collect taxes. They did it by enactment of the Wagner Act and the establishment of the National Labor Relations Board, which process placed the working men and women of this Nation in the slave camp, and prohibited them from getting jobs without paying a work-permit tax to these communistic labor-leader racketeers or slaveholders. During the war those labor czars, acting in their capacity as officers of duly organized labor unions in conformity with the laws set up by your duly elected representatives, charged a tax as high as $5 per day, or as high as $100 to $200 or more for a work permit for American citizens to work for their own Government to produce arms and ammunition for our fighting boys to use in battle to save our Nation.

Billions of dollars were thus taxed and collected from the citizens of this Nation and placed in the coffers of the labor unions, for the purpose of spending to elect their stooges to Congress, or to defeat good candidates or for any purpose they desired. The money came right out of the pockets of you folks when you bought a ton of coal, a pair of shoes, a suit of clothes, a dress, an automobile, or a dozen eggs. I want to substantiate my statement that Congress has given to the labor union bosses the power to lay and collect taxes. I want to quote to you a statement made on the floor of the United States Senate by a Senator who was considered to be one of the most conservative members, a man who was considered to be one of the greatest authorities on constitutional law, and a Member who was highly respected by all students of government in this Nation. I refer to the great Democrat and statesman, the late Josiah W. Bailey, of North Carolina. Here are his exact words as contained in the CONGRESSIONAL RECORD:

"The time has come when it is the clear duty of the Federal Government to face the issue and obtain information from the labor organizations. Hear me about that for a moment. We have given the labor organizations of America the power to tax, and we all know it. We may call it what we please, but the labor unions have the power to tax. They can tax the workers and indirectly tax the American people. They not only fix the dues of their organizations but we put the workers in their hands. We collect their dues, in a great many instances, by what is called the check-off. We do not limit the dues; we do not know what the dues are; we just give them ad lib opportunity to charge the workers all that the traffic will bear, and we raise no question."

Now, friends, there is a sound statement of fact, and I would not care to have better authority to prove to you the statement I have often made, that your lawmakers in Washington have abandoned the Constitution of the United States. Here is a brand new form of taxation, under disguise, which has fleeced the American taxpayers of billions of dollars, and this is a form of taxation which catches the little fellow that you hear so much about. It is nothing more or less than a sales tax, because it is added into the price of everything you buy to eat, wear, or use. I have the statistics from the United States Treasury on part of the amount of these deceit taxes levied on the people of this Nation by the labor leader racketeers for 1943 and it amounts to the stupendous sum of $390,000,000. Now some of my listeners may be thinking that I am hollering "thief" after the barn door has been locked by the passage of the Taft-Hartley bill. But let me cite to you just one illustration to prove that the system is still working, at an increased pace, even since the Taft-Hartley bill was enacted. I refer to the new contract imposed upon the coal operators of the Nation by John L. Lewis, who himself stated it was the best contract he ever negotiated in his life. The tax which that one labor czar imposed upon the people of this Nation, by and with the permission of your lawmakers in Washington, will amount to millions, if not billions, of dollars. It amounts to from $3 to $10 per ton on coal. The tax on coal is passed on to steel, and from steel to automobiles, refrigerators, incubators, bathtubs, frying pans, farm machinery, and everything manufactured by the use of fuel, whether that fuel be coal, oil, or gas. The oil corporations have announced that they were forced to increase the price of fuel oil simply to stop the rush of consumers changing to oil from coal on account of the increase in the price of coal. So while I am glad that the Taft-Hartley bill was enacted, and I believe it is a step in the right direction, yet it is not the cure for the evil that is ruining our democratic form of government, and our American system of private enterprise.

There are plenty of Members of Congress who know it was not the cure, but it was better than any other labor legislation enacted by Congress during the past 14 years. This labor legislation is intended to protect the laboring people of this Nation, and most of the laboring people know this is true. A few of the communistic labor leader racketeers recognize the fact that it curtails their power to control the men and women who work, and to profit from their labor.

Everybody who knows my record knows that I have always been a true friend of men and women who actually work. I have been a member of the laboring class most of my life. I was born in poverty and know what it means to work. I have always fought for the rights of laboring people. Of course, the labor bosses and the communistic labor press always have tried to make it appear that I was unfriendly to laboring people, but they knew that is not true. They knew I was fighting the labor leader racketeers, and they were hiding behind the skirts of the laboring people when they attacked me. But the working people know I am their friend, and most of them have supported me in every election.

I think my friendship for the working people was proven when the President of the United States, and his gang of so-called friends of labor, sent a bill to Congress that would have put men into the Army if they went on strike. I think that is one of the most un-American bills ever introduced in Congress, and it only shows what this New Deal gang will do to the laboring people of this Nation when the time comes, providing they stay in power long enough. They will do to them just like Hitler did and just like Stalin did. I voted against that asinine bill that threatened to put men in the Army if they exercised their constitutional right to quit their job or lay off or strike.

You cannot tell me that you are doing anything for the laboring man when you make him plunk down his hard-earned cash to some labor leader racketeer to pay a tax for his God-given right to work, and you cannot tell me that the skilled workmen of this Nation are happy when they work side by side with unskilled men who produce less than one-half as much work as they do, yet draw the same wages. A laboring man who has talent and skill and ability should have the opportunity to receive wages commensurate with his skill, just the same as a businessman has the opportunity to earn more money when he has more talent and ability. The whole idea of the Wagner Act, and the plan of Washington demagogues and bureaucrats to control the working men and women of this Nation, is a rotten racket, and besides destroying the liberties and freedom of the working people themselves, it is leading this Nation headlong into communism, socialism, and destruction. Your pussyfooting lawmakers were not content with transferring to the labor czars the right to tax you, even though that was taking from your pockets billions of dollars and placing it in the treasuries of the labor czars, but they aided and abetted these labor czars further by following their demands and enacting legislation to bleed the United States Treasury of millions, or billions, of dollars in the form of subsidies to help pay the grocery bills and fuel bills and other bills of the members of these communistic labor-racket organizations.

The first step in communizing any nation is to control production, and destroy accumulated savings of the people and their government. Our Federal Government has been practicing those two destructive tactics headlong for many years. You may ask me what I am going to do about it, or what I propose to do about it. Well, I will tell you that I am not just now starting to do something about it. I have been working at this job for many years. And while I cannot claim to have stopped the destruction altogether. I do want to remind you that I have been shouting this alarm during all these years when it was extremely unpopular to say anything about it. And I think it might be well

to call your attention to the fierce and determined fight which has been waged against me during all these years just because I do go to the people and expose all this skulduggery. Whenever you see these big-shot professional politicians who have made millions out of their connections with the administration, and some of these foot-kissing newspapers who are making millions out of their Government-granted radio licenses and other subsidies they get from the Government, go around shouting and printing every little personal thing they can trump up about my buying a home, or selling a home, or mowing my lawn, or making a profit, or getting my hose supporters on backward, or anything just so it is insulting or insinuating; you know they are not interested in those things at all. They are simply trying by insidious propaganda to poison the minds of the voters to try to get me cut of the United States Senate. Oh, yes, they also start their paid stooges around over the country to tell the people that O'DANIEL can't get anything done in Washington. Well, they are not worried about O'DANIEL not getting anything done. They are scared nearly to death because O'DANIEL has gotten too much done, and because O'DANIEL is going to keep on telling the people the truth, until we do get a whole lot more done. For instance, the gang that kept the President in power for four terms didn't like the way I was shouting all over the Nation on 125 radio stations that we should limit the tenure of the President to one term of 6 years or two terms of 4 years each. But while they were shouting criticism about O'DANIEL buying a home for his family, the people were listening to O'DANIEL explain the evils of long tenure in office, and we get enough support to pass through Congress during this last session a constitutional amendment to limit the tenure of the President to two terms of 4 years each. Isn't that getting something done? Did that make them mad? The answer is yes. They are now scared to death because they fear that O'DANIEL may keep telling the people the truth about the evils caused by long tenure in public office so long and so loud that some day the people may limit the tenure of all Federal-elected officials—and, oh! What a calamity that would be to some of those old fossils who have been sucking a Government sugar teat in Washington, ever since or soon after they got dry behind their ears.

Oh, yes; these two-bit politicians here in Texas have a great time worrying about who in the world they can get to replace O'DANIEL in the United States Senate. Yes, my friends, they are nearly worried to death, but I am not worrying at all because I know what I am going to do about running for the place next summer, and they don't know what they are going to do because they don't know what I am going to do. Aren't they in a terrible fix?

And another thing that is worrying them is not that I have not gotten anything done about this labor-czar racket, but because I have already gotten too much done to suit them. I have told you that I am glad we got the Taft-Hartley bill passed, but that it will not cure all the trouble. Do you know what I did to help get the Taft-Hartley bill passed? Well, those politicians know. It is what I have done that worries them—not what I have not done. You know in almost every county seat here in Texas somebody shows up every few days who says, "I think O'DANIEL is a pretty good man and he has generally voted right, but he can't get anything done." Now when you begin to trace these stories down to their origin, it is easy to find they are pure political propaganda being peddled all over Texas with the idea of fooling some people who are my sincere friends and who do endorse the work which I have done in the United States Senate. I am not going to talk long on this particular subject, but I want to ask you this question: Won't you all agree that the biggest question that has been before this Nation in the last 3 or 4 years has been the question of how we might regain control of government in this country from the hands of the Communist labor leaders and the labor racketeers? Won't you agree with me that under the provisions of the Wagner Act and under the provisions of the Norris-LaGuardia Anti-Injunction Act and under the protection which was granted to labor unions under our antitrust laws, we were fast moving to a position where they were making themselves the absolute masters of the Federal Government, of State governments, of employers and employees? The whole future of this Nation depended upon someone having the courage to fight this combination and to point the way out so this situation could be corrected. Now I believe all of you, or at least most of you, whether you are now or ever have been a supporter of mine, will agree that the statement I have made is a fair statement of the situation which faced this Nation.

Now, then, let's go back a little. Don't take my word for it, because what I am going to say to you comes from the RECORD—go to the RECORD of the Congress of the United States and see what I have advocated to correct this situation and when I advocated it. You will find that in the first year I served in the United States Senate I introduced a constitutional amendment and I also introduced a bill which would outlaw the closed shop in America. Please bear in mind that that was done at a time when it was not popular to stand out on the firing line and face this issue—that was done when the Democratic high command branded any man as a dangerous demagogue who opposed these Red labor agitators. Well, did O'DANIEL get anything done about that? I ask that you read the Taft-Hartley Labor Act and you will find in that bill that the closed shop, which I condemned, has been made illegal in industry throughout this Nation. Isn't that getting something done?

I also introduced legislation which would stop the use of force and violence in labor disputes. Now I will admit that the Taft-Hartley bill does not go as far as I think it should on that issue, but, on the other hand, it does outlaw force and coercion on the part of labor unions, but the penalty is not as severe as I think it should be—nevertheless, this thing I advocated has been made the law of the land. Isn't that getting something done?

I urged in legislation that I introduced in Congress that labor unions be made responsible for their contracts. I urged that the secondary boycott be outlawed and that labor unions be made responsible for prosecution under the terms of our antitrust laws the same as all other citizens. Read the Taft-Hartley bill and you will find that today these things which I advocated have been made the law of the land. Isn't that getting something done?

I introduced legislation to amend the Wagner labor law by making it unlawful not only for employers to coerce their employees, but I also advocated that it be made unlawful for anybody, including labor unions, to use force and coercion to drive people either into labor unions or to keep them out of labor unions. Read the Taft-Hartley labor bill and you will find that that feature which I advocated is now the law of the land. Isn't that getting something done?

I also introduced a bill in Congress the purpose of which was to grant to the employer the right of freedom of speech in discussing matters pertaining to labor relations with his employees. I called attention to the fact that, under the provisions of the Wagner Labor Act, the employers were hog-tied and were not permitted to correct false statements which were circulated about their business establishments by these labor racketeers. If you will read the provisions of the Taft-Hartley labor bill, you will find that, too, is now the law of the land. Isn't that getting something done?

I also urged on the floor of the United States Senate that it was absolutely essential for our labor laws to be so amended as to protect the rights of owners of business establishments. Under the Wagner labor law, the employer was made responsible for any statement made by any supervisor or any foreman and the excuse which the National Labor Relations Board used was this: They stated that foremen and supervisors were a part of management, and therefore the employer was responsible for their acts. I stated in a speech I made down here in Texas and in other places that I was willing to accept this theory, but if the foremen and if the supervisors were a part of management, and if the employer was responsible for everything they said and did, then the employer should not be called upon to deal with these representatives of management through labor unions that represented his other employees. If they were called upon to do this, then you were asking one division of management to engage in collective bargaining with another division of management. Obviously the loyalty of the supervisors and foremen should be first to the employer and they could not have first loyalty to the employer and first loyalty to a labor union both at the same time. If you will read the provisions of the Taft-Hartley labor bill which Congress just enacted, you will find that this principle which I advocated is now written into the law and today is the law of the land. Isn't that getting something done?

The record shows that on many occasions I urged that if we were going to permit vast organizations of labor to grow up in this country which were in fact bigger and more powerful and better financed than even our biggest corporations, then when these unions sought to misuse this power they should be subject to prosecution under the provisions of our antitrust laws for their misuse of power. If you will read the Taft-Hartley bill, you will find that, too, is now the law of the land. Isn't that getting something done?

Not one time, but many times in speeches made by me, I have pointed out the inequity and the injustice of the provisions of the Norris-LaGuardia Act, which prevented the employer from going to our courts for protection where such protection was essential to the welfare of his business conducted along legal lines. I urged the theory that that was what our courts were established for and the doors of the courts should never be barred to either the employer or the employee. You will find, if you will read the Taft-Hartley labor bill, that this principle which I advocated is written into this law. Isn't that getting something done?

If you will refer to the RECORD, you will see that the very things I forecasted would happen under the then existing provisions of the wage-and-hour law did happen, and you will further see that in order to protect the people of this country it became necessary for Congress to pass what is generally referred to as the portal-to-portal pay bill, which had the effect of relieving employers from blackmail suits that were being held over them for millions upon millions of dollars on the technical charge of having failed to comply with all provisions of the wage-and-hour law.

Now, my friends, we get back to that propaganda being distributed by the politicians around over Texas that "O'DANIEL is a fine man, but he musn't be continued in the Senate because he can't get anything done." I have an answer to that—it seems that all of the legislation which I advocated on this most important subject of controlling labor-leader racketeers is now in the classification of "things done."

Now I did not carry the flag while this legislation was being passed. I had sense

enough to know the work which I could do to secure this legislation had already been accomplished through the efforts I had put forth, together with the efforts of thousands of other people in this country, and brought to the attention of the American people the absolute necessity for some sound constructive labor legislation. I contented myself to vote for this legislation on two separate occasions—when the bill was first passed and the second time when we passed it over the veto of the President of the United States.

Now let me give you a little side story, and it is this: What these worried politicians are disturbed about is not the fact that W. LEE O'DANIEL, as your Senator, cannot get anything done; that doesn't bother them. What they are worrying about is that I can get too much done, and the things I get done do not suit them.

I am perfectly willing to admit that there is much important legislation which the Congress of the United States should pass, but has thus far not passed. There is important legislation which I have advocated that has not been written into law; however, within the field of legislation to break up this labor-union monopoly, I have cause to be gratified. I have seen most of the program which I have advocated enacted into law, not only in the National Government, but down here in the State government. These labor racketeers who tell you that W. LEE O'DANIEL can't get anything done are not nearly so much bothered about that down here in Texas as they are about a few things I got done while I was Governor. They remember our antiviolence bill which we wrote on the statute books of Texas while I was your Governor, and they also remember that a large number of other States have picked up this Texas law and have now put it on their statute books. They remember that I traveled over this Nation and made speeches before certain State legislatures, and in one instance the labor racketeers picketed the State legislature while I was delivering an address to that body. But as a result of my fight and the fight of others for the adoption of this kind of legislation, the following States have adopted legislation similar to the laws enacted by Texas while I was your Governor, to include the right to work and an antiviolence strike law. Here is a list of States that have adopted by statute or constitutional amendment the right-to-work law: Nevada, Arizona, New Mexico, Texas, Nebraska, South and North Dakota, Iowa, Arkansas, Tennessee, Georgia, Florida, North Carolina, Virginia, Ohio, Delaware, Maine, and Vermont.

I am simply discussing this question for the purpose of uncovering the method and making clear to the people the means by which this political machine is constantly seeking to destroy the confidence of the people in the man whom the citizens of this State have elected to serve them in the United States Senate. So the next time you hear someone say that O'DANIEL can't get anything done, just ask him this question: Is the trouble "O'DANIEL can't get anything done," or is the trouble "he has been getting too much done"?

Now, folks, I am slugging right at the very heart of the things that are destroying America. The spending spree habit—the public-debt habit—the labor communistic racket. And the record shows that more and more people are joining my crusade every day. I expect to keep on leading the fight for the recovery and preservation of our American form of government, and our American system of private enterprise.

This is your United States Senator W. LEE O'DANIEL, Democrat of Texas, speaking. I will be on these same stations at this same time next Thursday night, when I will address you from the studio of WOAI, San Antonio.

Good night.

The Registered Nurse and Cancer

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, December 4, 1947

Mr. REVERCOMB. Mr. President, the fight is still going on against the terrible affliction of cancer. The medical profession, both in practice and in research, has made great contributions. I also want to call the attention of the Senate this morning to the great contributions made by laymen. An outstanding lay leader is Mr. George E. Stringfellow, of New Jersey, who has so unselfishly given of his great ability to this vital work. On November 14, 1947, he delivered an address over Station WAAT, Newark, N. J., entitled "The Registered Nurse and Cancer." I ask unanimous consent that the address by Mr. Stringfellow be made a part of the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Cancer is killing at least 170,000 Americans annually. Seven thousand three hundred and twenty-six deaths from this dread disease were reported in our State last year. The rate is increasing.

The fight against cancer is the most challenging—the most important health problem of today. The lives of thousands of our citizens depend upon what we do, and when and how we do it.

Control of cancer is not the sole responsibility of the medical profession, the laymen or the health agencies. It is the responsibility of everyone. In the State of New Jersey, the medical men, the registered nurses, the laymen, and the health agencies, are accepting this responsibility and are putting forth a united effort to—

1. Reduce the number of deaths from cancer;
2. Find the cause; and
3. Develop control.

The nursing profession is playing an important role in the American Cancer Society's control program. The profession is discharging its responsibility in an admirable manner. We laymen realize that doctors are the first line of defense against this disease. At their sides, aiding them in this struggle to save human lives and reduce suffering from the dread disease—stand the nurses.

Because the American Cancer Society represents an organized effort to control cancer, the activities of our Society are of vital interest not only to the nursing and to the medical profession, but to the sufferers from this horrible disease and to the public at large.

The New Jersey Division of the American Cancer Society was organized in 1945. Since that time its cooperative efforts among all segments of our human family have brought forth understanding and good results, but much is yet to be done. We have only started in an organized way. Since August 1946, about 15 months ago, the New Jersey Division of the American Cancer Society has allocated $324,630 for 52 service and education projects in 17 of our 21 countries. These funds were allocated from money contributed to the Cancer Society in 1945 and in 1946.

In our fund-raising campaign last April, the people of New Jersey contributed $713,148. Forty percent of this sum was sent to the American Cancer Society headquarters in New York to support the National Research program, which is guided by the National Research Council, the group of scientists who directed the atomic research for the Government. The balance will be spent for service and education within the State, and allocations now are being made.

Faced as we were a year ago with the need for improvement of services in cancer clinics of general hospitals, the medical profession decided that our money would best be spent for X-ray machines, radium, other equipment, and for the payment of nurses and follow-up workers for these clinics.

Therefore, we allocated $106,413 for deep X-ray therapy units; $59,125 for radium and radon; $83,754 for bedside nursing, services in cancer clinics, and improvement of secretarial and follow-up in cancer clinics.

Another important phase of our cancer program is education. We are told by the doctors that 50 percent of those who die of cancer need not die. Think of it. Fifty percent need not die. Early diagnosis would save many lives. Our education program is designed to inform the people that many cases of cancer can be cured if detected in time. Complete physical examinations will often result in early diagnosis and therefore save lives.

The public has responded enthusiastically to our program. Many thousands of our citizens have received physical examinations by their family doctors. The march to the doctor to avoid death from cancer is on.

To be of maximum service, nurses must be familiar with the early symptoms of cancer. They must be able to translate scientific knowledge of cancer and its treatment into simple nontechnical language that will be understood by nontechnical minds. The registered nurse is helping the American Cancer Society to convince the public that cancer is not a disgrace—it is a misfortune—one that can be overcome if caught in time. Timing is one of the most important things in life. Timing—where cancer is involved often means life or death. Catch it in time and you save lives.

The nurses can do much toward counteracting the general pessimistic attitude and dispelling the fear and horror of cancer.

The care of cancer cases in the home is recognized more and more as a desirable possibility, not only during the terminal stages but also during periods of convalescence or of temporary discharge from the hospital between intervals of treatment. The Cancer Society of New Jersey is meeting this particular problem by giving financial aid to visiting nurses associations. Through agreements between our county chapters and the visiting nurses associations, arrangements have been made to pay the nurses who attend cancer patients who are unable to pay for such services. In several counties of the State this program—which started only a few months ago—is bringing hope and comfort to many cancer patients. It is hoped that other counties will follow this program at an early date.

In these cases, the visiting nurse can render a most welcome service both to the patient and to the family. If dressings are needed more than once a day she can instruct the patient or some member of the family how to do them. Incidentally, dressings can be secured without charge from the Field Army Division of the Society which is conducting an education program in every county of the State. Last year, the 275 units of the Field Army Division made 330,000 dressings. These women are crusaders in the true spirit and are making a great contribution to this cause.

Registered nurses throughout the State are now working with hospital clinics made possible by funds raised by the Cancer Society. The scientists who are directing the research to discover the cause and develop control of cancer have high hopes of success. They do not know when success will be attained.

However, the outlook for control of cancer is brighter now than ever before.

Many lives will be saved when all the people realize that cancer is curable if caught in time. Annual physical examinations by their family physicians will often discover cancer before it is too late. There are people who still mistakenly believe that cancer is "catching" and too many who do not realize the danger signals.

The nursing profession can be of tremendous help in attaining the goal of the American Cancer Society, to—

1. Reduce the number of deaths from cancer;
2. Find the cause; and
3. Develop control.

The registered nurse has a dual role in the cancer-control program—that of education and of service.

She can help to educate the people that cancer can be cured if caught in time.

She can inform them of the danger signals.

She can help to convince them that cancer is not a disgrace.

She can serve by fulfilling the traditions of her profession in bedside care by familiarizing herself with early symptoms of cancer and translating scientific knowledge into laymen's language; by follow-up of clinic and hospital cases to make sure they continue to receive treatment.

She can serve in the clinics of the general hospitals of the State.

Cancer, of all diseases, offers the nurses the greatest opportunity to exercise the qualifications of good nursing; especially the true and tender sympathy shown by the gentle touch, the cheering smile, and the encouraging word, of which these patients are sadly in need.

A great challenge confronts us. A challenge that can only be met by the cooperation of the medical and scientific men, the registered nurses, the laymen, and the health agencies.

All combined are a great team that is fighting a dread disease—cancer. When victory comes it will be the result of such cooperation.

Inflation: Its Causes and Cures

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, December 4, 1947

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a discussion of the subject, Inflation: Its Causes and Cures, held on the American Forum of the Air, November 18, 1947.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

ANNOUNCER. Pilot Radio Corp. proudly presents America's oldest radio forum, now in its nineteenth year of public service—The American Forum of the Air. [Applause.]

Inflation: Its Causes and Cures! Once again from the Shoreham Hotel, Washington, D. C., we present the vital issue of the week discussed on your American Forum of the Air, founded in 1928 by Theodore Granik, attorney and moderator.

Tonight our four authorities are: Senator Homer E. Capehart, Republican, of Indiana; Senator W. Lee O'Daniel, Democrat, of Texas; Leon Henderson, former Administrator, OPA; and Richard Gilbert, former chief economist, OPA.

And now here is your moderator, Theodore Granik.

Chairman GRANIK. Good evening. Inflation is the top subject on every tongue today. What is the cause of it? How can we cure it? Yesterday when the President appeared before Congress he presented a 10-point program for stopping inflation. He asked for a renewal of rationing of goods in short supply, and selective price and wage controls.

Within hours after the message was presented, there was a sharp division of opinion in Congress—some for the plan, some against. It has been called everything from a courageous and positive program, to an attempt at economic dictatorship.

On one point nearly everyone is in agreement. Something must be done about inflation. The question is, should we attack it in the way the President has suggested, or should we follow the advice of men like Senator ROBERT TAFT of Ohio, Senate GOP policy boss, who says inflation can be stopped by a reduction in Government spending, by lower taxes, and limited exports?

Tonight the American Forum brings you a discussion of this vital question. We are now ready for our first speaker in tonight's discussion: Inflation, its causes and cures. Senator HOMER E. CAPEHART, Republican of Indiana, one of the ranking members of the Senate Banking and Currency Committee, which will shortly consider the President's plan. Senator CAPEHART.

Senator CAPEHART. The program offered by our President yesterday is the same old philosophy of scarcity. A return to wartime controls will not produce a single additional pork chop, ear of corn, bushel of wheat, pair of shoes, or automobile.

I wish to propose a program based on a plan of plenty—a program based on increased production. Briefly, the plan is as follows:

1. Increased grain production by 20 percent next year.
2. Allocate scarce materials to farm machinery manufacturers and provide funds to enable the farmer to purchase farm machinery.
3. Make funds available to farmers to purchase fertilizers, seeds, and breeding stock.
4. Provide and allocate funds and raw materials for increased production of fertilizer.
5. Increase legal work week from 40 to 44 hours for 2 years and provide tax relief to compensate workers for loss of overtime pay.
6. Appropriate for increased domestic production of metals, study the possibilities of lowering tariffs for importation of scarce metals, and provide for control of raw material inventories.
7. Immediate requirement that the Federal Government release its enormous stock piles of food and materials for relieving world food shortages.

Chairman GRANIK. Thank you, Senator CAPEHART. And now Leon Henderson, former Administrator, the OPA. Mr. Henderson.

Mr. HENDERSON. There is no mystery as to why we have inflation now. Congress destroyed the controls which held inflation in check. During the war we stabilized the cost of living. From mid-1943 until VJ-day, the cost of food, for example, did not rise 2 percent, and yet we produced enough to feed 12,000,000 men in the armed forces, to help feed our allies, and to feed the folks at home.

Then price control was killed. Look what happened. The cost of living went up 25 percent; food prices went up 40 percent. Unless this spiral is halted soon, we face a paralyzing smashup.

Everyone recognizes how serious the situation has become—even the executioners of price control. Now they are coming out with programs. A year and a half ago these same false prophets told the country that if we would just let prices go free, everything would be all right. Why should we believe them now? Why should we take their fancy schemes when there are tried and tested methods which we know will work?

I hate controls—but I hate inflation more. The people of this country are looking to their Government, as they have every right to do, to stop inflation immediately.

Why not try price and other tested controls wherever they are needed?

Chairman GRANIK. Thank you, gentlemen.

And now for our spontaneous discussion. Mr. Gilbert, do you agree with Senator CAPEHART that a return to price control will not increase production?

Mr. GILBERT. Emphatically, I do not. All across this country there are billions of dollars of goods being hoarded for speculative profits; while the country desperately needs these goods, while the country desperately needs production, businessmen are speculating instead of producing. Put price control back into effect, stabilize the cost of living, and it will mean not only prices you can afford to pay; it will mean more production just as it did during the war.

Chairman GRANIK. Senator O'DANIEL, how do you feel about returning price control?

Senator O'DANIEL. Senator CAPEHART said OPA would not produce pork chops or another bushel of wheat. I might add that OPA might lay another egg, like they did during the time they were in existence; and I might also say that OPA will not only lay eggs but it sits on its own eggs and hatches out statistics like Leon Henderson passed out tonight that are entirely untrue and false, because he said the price of food only rose 2 percent while OPA was in existence, and everybody knows that the price of food went up out in the black market, the only place that you could get food or clothing at that time.

Chairman GRANIK. Will you answer that, Mr. Henderson?

Mr. HENDERSON. That is not true that it was the only place you could get food; there were some articles black-marketed mainly because Congress would not appropriate enough to keep it in check, but the actual cost of food, as I said, went up about 2 percent, and that still allows something for the black-market cost.

Senator O'DANIEL. Those are OPA statistics, and they are unreliable and untrue. All those who bought any meat or any food know they are untrue; prices went up; the only place you could get food you wanted was in the black market; and it has not gone up as much since OPA went off as before.

Mr. GILBERT. I should like to ask this audience whether in their memory the OPA ever laid an egg compared with the egg laid by the Congress when it killed price control and got an increase in the cost of living of 25 percent in less than a year and a half.

Senator CAPEHART. There is one thing we can do tonight, and that is be honest and keep the record straight.

Chairman GRANIK. What is the record?

Senator CAPEHART. The record proves the decontrols were done—the controls were taken off by President Truman and not by Congress.

Mr. GILBERT. Very interesting.

Chairman GRANIK. Mr. Gilbert, opponents of price control contend that price control was a failure. What is the record?

Mr. GILBERT. The record is just as clear as a bell. Between 1941 and 1945 when the war ended, we had in this country the most remarkable expansion of production in all history, and that increase of production was achieved under price control, and the people of this country could afford to buy the goods that were being produced and one-third of the people in this country cannot afford to do it today.

Senator O'DANIEL. Tell me why or how OPA increased any production.

Mr. HENDERSON. I think the Army and Navy will both tell you that the OPA made it possible for them to get increased production on account of stable prices and keeping down the cost of Government goods, running up between seventy-eight and eighty billion dollars in an entire year.

Senator CAPEHART. I would like for you to tell me how OPA or any other lawmaker or Congressman or Senator or bureaucrat can produce one single item, lay one egg or produce one bushel of wheat.

Mr. HENDERSON. I thought we were talking about holding inflation down.

Senator CAPEHART. There is another thing I want to ask, Mr. Gilbert.

Mr. HENDERSON. I subscribe to a lot of the proposal which you have made, and I wish you had brought it out when you were killing the OPA; but the OPA itself kept prices from going up. That was the job that was assigned to it by Congress under full legal debate and authorization.

Senator CAPEHART. May I ask you this question, Mr. Henderson: Why the need today for price control? The need is because of a scarcity of merchandise; isn't that correct?

Mr. HENDERSON. Yes.

Senator CAPEHART. Lack of production, isn't it?

Mr. HENDERSON. You could have the same amount of increase of production under price control and still not have a 25-percent increase in cost of living.

Senator CAPEHART. Mr. Gilbert always falls back on the old worn-out phrase that businessmen are hoarding merchandise. I would like to have him prove that point. I hold in my hand a list of what the Government is holding, which is the biggest hoarder in America. They are hoarding today $500,000,000 worth of food, and if I had the time to read the articles that they are holding here, it would astound the American people. They are holding 100,000,000 pounds of eggs—100,000,000 pounds of eggs. That is almost a pound for every American.

Mr. GILBERT. That is right; they are holding it for the period of short supply when we will need it more desperately than we need it today.

Senator CAPEHART. Why don't you throw it on the market today?

Mr. GILBERT. Just one moment, Senator. From Biblical times, as I recall, it made good sense not to eat everything you had as soon as you got your hands on it.

Senator CAPEHART. Why do you complain that the manufacturers and businessmen hold back some merchandise?

Mr. GILBERT. I did not think it was even open to question that businesmen—and this is no criticism of businessmen; they are out to make a profit; that is what this system is for.

Senator CAPEHART. You condemn them for hoarding.

Mr. GILBERT. Quite the contrary.

Senator CAPEHART. You say it is all right for the Government to hoard.

Mr. GILBERT. Quite the contrary. I am condemning the Congress for setting up the conditions in which it would be profitable for businessmen to hoard. Businessmen are sitting on goods, and it is just human nature for them to sit on goods.

Senator CAPEHART. You haven't any proof of that statement.

Mr. GILBERT. Of course I have; the Department of Commerce gets those figures out every month—billions of increased inventories over the past year and a half. Raw materials that are desperately needed, finished merchandise that consumers ought to be getting, are being held because men expect prices to go up every month.

Senator CAPEHART. Is that true of food?

Mr. GILBERT. Certainly it is true of food. The poultrymen just the other day, in objecting to the voluntary program, pointed out the millions of chickens that were in cold storage today, waiting for price increases.

Chairman GRANIK. Senator O'DANIEL wants a word here.

Senator O'DANIEL. Yes; a little while ago Mr. Henderson laid the blame on the Congress for killing OPA. I wish it were possible for me to be given credit for killing OPA myself. I talked over 8 hours on the Senate floor trying to kill it, and in all of my conversation and talk I never at any time said that killing OPA would give us lower prices. I was trying to get back the freedom and the liberty of the American citizens to buy what they wanted to buy and to sell what they wanted to sell.

Mr. HENDERSON. There are about 15,000,000 families today that cannot buy all they want to buy. Is that your idea of freedom?

Senator O'DANIEL. My idea of freedom is if a woman on the farm wants to milk a cow and churn the butter and if she can go to town and sell that pound of butter for $1, or $1.50, or $5, it is no business of the Federal Government what price she gets for that pound of butter, and whenever she has to sell her butter at a price set by somebody else, she has lost her freedom and her American liberty is gone, and we are in a sea of communism just like they are in that communistic New Deal outfit that thrust OPA onto the American people.

I see some of them are here in the audience tonight.

Mr. HENDERSON. Fifteen million families that have had their cost of living increased 25 percent and their cost of food increased 40 percent might have a different idea of what liberty is and what the responsibility of Government is.

Senator O'DANIEL. You check it up with the American people. They won't sell their liberty to have some dictator set up in Washington to tell them what price they can pay for a bushel of wheat or a loaf of bread.

Mr. HENDERSON. Do you mean that if Congress debates and passes under the same terms that it passes any other legislation, price control under standards, that you have created a dictatorship?

Senator O'DANIEL. Yes, sir. I want to hand you a copy of the Constitution of the United States, Mr. Henderson.

Mr. HENDERSON. You hand that to the Congress.

Senator O'DANIEL. I hand it right here to you. I don't know whether you ever read it or not.

Chairman GRANIK. Senator, let's go back to the question of prices.

Senator O'DANIEL. I want to say in Amendment X of the Constitution of the United States it says that powers not delegated in the United States by the Constitution are reserved to the people. And you show me one word, syllable, or sentence in that Constitution that gives the delegates to the Federal Government the right to set the price on a dozen eggs.

Mr. GILBERT. Is this a monologue?

Chairman GRANIK. Let me ask you: If price ceilings are imposed as President Truman recommends, at what level would prices be frozen as of today, or do you favor rolling back prices at a lower level?

Mr. HENDERSON. I favor, as soon as we can, rolling back the extraordinarily high prices, and I think a lot of businessmen would support that. Most business people are scared today as to what is going to happen when the crash comes. You pay off on inflation in deflation, bankruptcy, and loss of capital through inventory losses.

Senator CAPEHART. I would like to ask you gentlemen why it is that prices in America today, as high as they are, are still much lower than they are in almost all other countries of the world? For example, Argentina is selling wheat throughout the world at $4.50 a bushel, and Canada is selling wheat and barley at a higher price than we are in this country, and the French farmers, for whom we expect to appropriate a lot of money in this Congress to help feed them, are getting $4.50 per bushel for wheat. In communistic Russia, God only knows how much they are getting for wheat and corn. We know they are getting as high as $20 to $30 for a pair of shoes. They have controls over there, 100 percent controls, in communistic Russia. Why is it that prices, high as they are in this country, are still lower than they are in the countries that we are asked now to appropriate billions of dollars to help?

Mr. GILBERT. They have the disease worse than we have, Senator.

Senator O'DANIEL. We will catch up with them at the rate the New Dealers are proposing.

Mr. GILBERT. We will catch up with them if men of your ilk have their way. History shows what happens to nations that help inflation along its course. Do you forget what happened to German inflation after the last war? Do you not know what is happening in China today? In the name of freedom—in the name of license, I might say—are you willing to see this proud country of ours dragged into the dust, smashed in an economic smash-up? Is that the sort of thing you are asking for?

Senator O'DANIEL. Mr. Gilbert, let me tell you that setting prices is not the answer to this problem. It is definitely not a Government problem. If we are to operate under the Constitution of the United States, the price of ham and eggs and other commodities in this Nation is not a problem to be handled by the Federal Government or any branch or department of our Federal Government. The pages of history are dotted with instances all down through the ages where powerful nations attempted to control prices, but each and every attempt, without a single exception, has ended in catastrophe and ruin. The unwavering and unfailing law of supply and demand has always prevailed against those who are fickle enough to believe they can control the ebb and flow of prices, Mr. Gilbert.

Chairman GRANIK. Mr. Henderson, do you want to answer that?

Mr. HENDERSON. I have heard that thing, that you couldn't do anything about the law of supply and demand, and yet during the war when $90,000,000,000 were going to war in goods and services, prices were controlled. As far as the constitutional question is concerned, it certainly has been passed on several times by the Supreme Court, and I will take their word for it.

Senator O'DANIEL. The New Deal Supreme Court.

Mr. HENDERSON. I don't see anything wrong with a New Deal Supreme Court.

Senator O'DANIEL. I shouldn't think you would, but a whole lot of people who believe in our Constitution see something wrong with the New Deal Supreme Court.

Mr. HENDERSON. Not the majority of people.

Chairman GRANIK. Senator CAPEHART, did you have a question?

Senator CAPEHART. Gentlemen, there is no war today. The war is over, and it has been over for two and a half years.

Mr. HENDERSON. How about the effects of the war?

Senator CAPEHART. You can talk, as Mr. Gilbert did a moment ago, about this proud Nation, but let me say to you that the greatest thing this Nation enjoys and has enjoyed for 165 years has been freedom and liberty and the private enterprise system. If you ruin that, if you ruin our form of government through returning to wartime controls, where you tell the people what to sow and when to sow and how to sow it, and what price they shall sell this at, you will ruin the only form of government on this earth today where you have free men.

Mr. HENDERSON. You are just completely wrong.

Senator CAPEHART. Wait a minute. Let me talk a minute. You are talking about con-

trols here, and you are patterning it after Russia; you are patterning it after the foreign countries. They have controls over there. Communistic Russia has controls. They had controls in Germany, and they had them in Italy.

Mr. HENDERSON. So did all the democratic countries, Senator. I would like to say something on this.

Senator CAPEHART. They had controls over there, and what has it gotten them? Where are they today? They are looking to us and begging us to send them food. We in this country can do it because we have——

Chairman GRANIK. Will you let him answer, please?

Mr. HENDERSON. I say to you that in a free country that keeps all its institutions open, that passes things by majority control, even if it is under a control of price schemes, and makes it possible for every citizen to speak and every citizen to appeal to the courts, as long as those things are kept an integral part of our democratic system, you can depend on people taking those steps which are necessary to protect themselves. I am not afraid of my Government. There is evidently somebody here who is afraid of his Government. As long as you keep the democratic processes open and as long as you do not impose a lot of things on labor and go to all kinds of property schemes, as the last Republican majority did, I will never worry about protecting the people, the people's right to vote, the people's right to pick their Congress; the courts will take care of things.

Chairman GRANIK. Go ahead, Senator CAPEHART.

Senator CAPEHART. Why can't we get out of our Government and our leadership and you people who had charge of OPA and who want charge of it again——

Mr. HENDERSON. That is not true.

Senator CAPEHART. Why can't we get a philosophy out of you of increased production? Any 10-year-old child knows that the only way in the world that you are going to break inflation and maintain our high standard of living is by growing more food, more grain, more pigs, more cattle, by producing more automobiles, more steel, more of everything. Why can't we adopt a policy and have leadership in this Nation to encourage the people to grow more? Why don't we say to the farmers of America, "Let's grow 20 percent more acres in grain next year"? Why don't we do these things? Why do we have to control?

Chairman GRANIK. Senator, please let him answer that.

Mr. HENDERSON. Senator, the cost to the American public for the same living is about $33,000,000,000 more than it was a year ago, and you don't seem to want to advert to that. The reason for control is that this grandiose scheme of going to the free market didn't succeed.

Senator CAPEHART. Do you want to give up the free market forever in America?

Mr. HENDERSON. No.

Senator CAPEHART. When do you want to go to it?

Mr. HENDERSON. My record is clear on that from the NRA right on down through the Monopoly Committee, which you will remember.

Senator CAPEHART. Will you answer this question: When will you recommend that controls be taken off?

Mr. HENDERSON. I recommend that controls be put on only where they are needed to prevent inflation, and taken off when the inflation is over.

Senator CAPEHART. When production has been increased on those particular items. Is that right?

Mr. HENDERSON. When production has been increased.

Senator CAPEHART. On those particular items. Why don't we set about to increase that production?

Chairman GRANIK. Gentlemen, we pause now for a summation of the arguments advanced this evening.

I see our speakers are ready to sum up tonight's arguments. First, we will hear from Senator O'DANIEL.

Senator O'DANIEL. Mr. Granik, I think that the debate tonight has been a complete flop, because we have been discussing whether we should revert to a police state, using the words of President Truman, because he said a police state is where you control prices.

I think we ought to continue with our American system of government, our constitutional system. There is not one word, syllable, or sentence in the Constitution wherein the people delegated to their Federal Government the right to set prices on commodities or services. Those rights and privileges and powers were retained by the people of this Nation. Therefore, I stand squarely on the Constitution of the United States and say that the one and only way to solve the price problem in this country is for the Communistic New Deal government in control in Washington to take its filthy fingers out of the price pie and let the producers and consumers, the citizens of this great Nation, buy and sell articles at prices upon which they both agree. It is their problem, and not the problem of their public servants.

Chairman GRANIK. I am sorry, Senator O'DANIEL, your time has expired. Mr. Gilbert, will you sum up, please?

Mr. GILBERT. Ladies and gentlemen, the issues before us are very simple. Are we going to control the cost of living now, or are we going to sit on our hands and wait for a boom and a bust that will put this country flat on its back?

Already the cost of living has gone up 25 percent since OPA was killed. Millions of American families have seen their standard of living cut sharply and their savings melt away. And the cost of living right now is rising more rapidly than it has at any time during the past year and a half. Unless something is done, and done soon, it will be too late.

The American people, in my judgment, have had enough of inflation. The American people want the cost of living stabilized, and they want it stabilized now. In spite of all the double talk, the American people know that the cost of living can be stabilized because during the war it was stabilized. That is not a theory; it is a fact—and we remained a democratic nation as we are today.

Chairman GRANIK. I am sorry, gentlemen, our time is up. [Applause.]

You have been listening to the American Forum of the Air discussion—Inflation: Its Causes and Cures.

Our speakers have been: Senator Homer E. Capehart, of Indiana; Senator W. Lee O'Daniel, of Texas; Leon Henderson, former Administrator, OPA; Richard Gilbert, former Chief Economist, OPA.

Now for a word about the exciting program for next week from our announcer, Steve McCormack.

ANNOUNCER. Thank you, Mr. Granik.

In view of the President's statement that he will shortly submit to the Congress his recommendations concerning the aid-to-Europe program, the American Forum of the Air will present a discussion of this vital issue next Tuesday night. This program will again originate from our home studio in the Shoreham Hotel, Washington, D. C.

Our four top authorities include Beardsley Ruml, noted economist, industrialist, and financial authority; Paul Porter, former Administrator, OPA, and former special envoy to Greece; Louis Bromfield, noted author and lecturer; and Congressman George Bender, Republican, Ohio, chairman of the House War Investigating Committee. You are invited to attend the broadcast at the Shoreham. No tickets are required.

It promises to be another stirring debate.

Silver for China

REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. JUDD. Mr. Speaker, most Americans have the common sense to realize that it is short-sighted, if not almost criminal, to have spent tens of billions of dollars and sacrificed tens of thousands of American lives to keep one totalitarian militaristic nation—Japan—from getting control of the manpower, resources, and markets of China; and then to abandon China to the control of another totalitarian, militaristic nation—Russia.

Furthermore, they know that if the Chinese Communists, through our failure since VJ-day to give vigorous help and support to the government of China, succeed in getting control of that country or even of the northern part of it, so that Russia will have nothing to worry about on her Asiatic front, then she will be able to turn all her attention to western Europe with a far better chance of succeeding in her announced determination to defeat the economic rehabilitation of the free nations there—the so-called Marshall plan.

To prevent all the help we have given and will give to Europe, and all the money we have put and will put into Japan and Korea from being just another Operation Rathole, it is important that we do everything possible to keep China from being subjugated by the armed Communist minority there.

Many Americans who agree thoroughly with the above are understandably confused as to how best the United States can render effective assistance at this tragically late date. Some very able men, both American and Chinese, have been considering the possible role some of our silver stocks might play in dealing with the problem of stabilizing the Chinese currency. Under leave to extend my remarks I include a letter just received, along with an article, on this subject:

THE C. C. ISELY LUMBER CO.,
Dodge City, Kans., November 26, 1947.

DEAR CONGRESSMAN JUDD: Since aid to China has been included as part of the world recovery program, I want to urge the most effective way to achieve that end.

Monetary help must be first. Anybody should see that there must be an immediate termination of China's monetary chaos, part of which is our fault. Suppose you have to pay your office help with worthless paper money, money more worthless every day. As I have suggested before, a gift of our surplus silver is the easiest and quickest way. I am attaching a short paper.

I had three sons in the Pacific area, but only two came home.

Yours sincerely,

C. C. ISELY.

FIRST AID
(By C. C. Isely)
SILVER FOR CHINA

Now that our world recovery program includes China, it is well to examine what we

can do speedily to help that long-suffering nation.

Inflation has hit China more severely than any country. This was true before VJ-day and we have been sending, every few days, a plane load of printed money from New York.

The Bullitt report on China put monetary and economic health first. The same week that report was published, Kansas Methodists, in conference at Wichita, proposed that a portion of our surplus silver seigniorage be made available to China.

It has become fashionable among "economists"(?) to consider gold, or any metal, outmoded as a money base. Yet gold hunger is so acute in many parts of the world that our leading financial journal recently reported that despite Treasury opposition there was stil a black market in gold and that quantities of it were going to China.

Bishop Lacy, of Foochow, reported months ago that all large commercial transactions in China were in gold. Inevitably the small producer resorts to barter which chokes normal trade channels. Why should a farmer sell a bag of wheat, or rice, or kaoliang for depreciating money? He will hoard it or hide it, if necessary, so that China's own supplies of essential food are not available. Germany had the same experience 24 years ago before the Dawes plan was effectuated, but in China a gold-based paper money would probably not be acceptable among her illiterate millions after their current unhappy experience. Americans should not be surprised, nor should they be critical, because Chinese soldiers and civil servants, paid in worthless paper money, are inefficient and dishonest. An American contemporary of our Revolution said of our depreciated Continental currency: "It corrupted public administration, enervated trade and husbandry, and went far to destroy the morality of our people." Bishop Lacy reports that teachers paid in paper are hardest hit, and on these teachers we depend to lead in achieving western ideals and democracy.

We could spare silver with the least disturbance to our economy. It would not be like shipping gold or wheat or meat. As of April, the Treasury reported $1,071,000,000 in seigniorage. This only indirectly supports our vast issue of silver certificates. For 60 years silver certificates have been exchanged by the Treasury for gold-based currency.

Once China has an acceptable monetary medium it should bring out vast stores of food and other goods now hidden or hoarded and reduce the call on us. Today, $15 for a pure bristle paint brush and paint manufacturers' inability to purchase tung oil are both the direct result of China's internal monetary disorder.

Our moral obligation is accentuated when we remember that our silver buying spree, in the thirties, drained the silver out of China, locked up her banks, economically softened her for the Japanese invasion, and, as pointed out by Mr. Soong last March, was the beginning of her inflation difficulties.

The writer, in April 1933, witnessed from the Senate gallery the opening salvo in this silver barrage which helped wreck China. Senator (Cotton Ed) Smith had grudgingly introduced the administration's farm-relief bill, and Huey Long was needling the old man for his lack of enthusiasm. Smith rose and "blew off," as he expressed it, suggesting inflation, printing-press money, as the cure for our farm distress. Senator ELMER THOMAS, Oklahoma, listening, was remembering how, as a young man of 20, in Indiana, he had been entranced by the silvery rhetoric of the silver-tongued Bryan. Now, he knew, was the time to make good on what Bryan dreamed. It wasn't the silver Senators or the Guggenheims who proposed the silver-purchase clause amendment to the Farm Act. Press reports at the time indicated that they feared there might be a bad reaction. But the Oklahoma disciple of the orator of the Platte triumphed.

We still have the silver. Probably 400 million silver dollars, worth about half that much, would suffice for China. The silver bloc is no longer potent. The total mined silver output in the United States, in 1946, was not equal to the 1947 wheat product of a single Kansas, Oklahoma, or Texas county. To be certain that our gift is understood, the coinage might bear a message from the United States of America to China.

It may be much more important and much easier to create an independent China as a going concern than to snatch Europe from the encroachments of the Russian bear. Thousands of years of experience have shown that the Chinese are fundamentally individualists, not naturally communistic, and on the township level, democratic. Their basic philosophy taught by Confucius and Lao-tsze is a good foundation on which to erect a state on the western model, a strong, bastion of Christian civilization. This achievement has been the objective of Chiang Kai-shek as he effectively asserted at the opening conference with General Marshall. Our naive expectation that democracy might be set up by negotiation or by a constitution, in a year or 5 years, is our fault, not Chiang's. If we can read the tragic lesson from India, we should readily see that it is impossible to deal with a vacuum, as Churchill once pointed out. Chiang is our best hope.

If he is guilty of errors, consider our own blunders; our silver-buying policies, our shameful sell-out to Russia, violating our pledged word to Chiang, our dawdling with the idea that an accommodation could be reached with the Yenan government, thus precipitating the dismissal of Stilwell, and finally, the disastrous delays in the later negotiations. Our public errors have been matched by our private columnists and superficial observers who undermined our faith in China. Our soldiers, observing inflation and the accompanying disorder, reported unfavorably. Only rarely was there a discerning military man, like Colonel Loren Thompson, for 4 years on Stilwell's staff, whom the writer met at table at Payne Field, Egypt, who sharply asserted that no one had done so much with so little as China.

This is the time to make valid the sacrifices of our sons in the Pacific war, and the Pacific is the ocean of the future. Now is the time to set the capstone on our hundred years support of Christian missions, colleges and hospitals in China. With Russia so intransigent, public support will rally to a realistic Chinese policy. We too can accomplish much with little.

Communism's Challenge to American Education

REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. KEEFE. Mr. Speaker, on the 28th of November last the Honorable John W. Studebaker, United States Commissioner of Education, delivered a remarkable and inspiring address at the annual meeting of the National Council for the Social Studies at St. Louis, Mo., on the subject Communism's Challenge to American Education.

This address should be read by every Member of Congress and it should be in every institution of learning in America. Because of its outstanding contribution to current thinking on this most vital subject, I ask unanimous consent that it may be included as part of these remarks, for printing in the RECORD.

The SPEAKER. Without objection, the extension may be made.

There was no objection.

(The address is as follows:)

In a very liberal sense education is the great conserving influence in our civilization. As trustee for posterity, American education serves to preserve, protect, develop, and transmit to each succeeding generation the glorious heritage of freedom and democracy that is ours as a people. Today, even more than in the past, the faithful discharge of that responsibility is imperative.

THE CHALLENGE OF COMMUNISM

We live in epic times. We are participants in a dramatic clash between two opposing sets of ideas, two contrasting philosophies of life and of social organization—those of democracy versus dictatorship, of free enterprise versus communism, of individualism versus collectivism. The conflict is where it always has been since man began to grope for realization of his God-given potentialities; it is the never-ending clash between democracy and totalitarianism, between the aspirations of the human heart to be free and the schemes by which relatively few men contrive through centralization of power in the State to suppress those aspirations. So it is totalitarianism in any form that is abhorrent to those of us who now enjoy the hard-won blessings of our American democratic way of life.

Having at great cost in lives and in treasure recently put an end, at least temporarily, to dictatorships of the Nazi and Fascist varieties, America is presently challenged by the menace of Communist aggression abroad and of Communist infiltration at home. It is for this reason that emphasis is here given to the Communist species of totalitarianism.

In view of all the portents, he is a blind optimist, indeed, who can regard with complacency the trend of events; who can fail to be stirred by the threat to our American democratic way of life inherent in the very character and tactics of communism. No amount of wishful thinking, no temptation to seek peace for our generation by appeasement or by retiring into a new isolationism, should obscure the precarious world situation in which America today finds itself. The issue must be faced. Democracy and Communist dictatorship represent two antithetical systems of belief and of government. We cannot have both. The differences are too wide to be bridged.

DEMOCRACY AND COMMUNISM COMPARED

Let us briefly review some of these differences. Democracy is devoted to the enhancement of the individual. Communism relegates the individual to the anonymity of the mass, the proletariat, the State. Although the Communists have loudly professed devotion to democracy and human freedom, their actions belie their words.

Democracy encourages tolerance and permits, even nourishes, heterodoxy. Communism insists upon conformity and party regularity. Under communism the monolithic State encompasses all interests and institutions of society. All the instrumentalities of communication and control are brought under its rigorous direction. Concentration camps, imprisonment or exile are employed against political dissenters. Education is corrupted and centrally controlled. Religion is first ridiculed and stifled, then made captive by the State.

Not content with despotic power at home, the dictator reaches out for power and con-

trol abroad. Communism becomes a creed for foreign propagation. The party establishes its own revolutionary international organization by which it supports and directs the various national Communist parties acting as its agents for revolution; for the propagation of its evil doctrines in every country; for the radical or revolutionary overthrow of all democratic, political, economic, and social institutions in favor of an ostensible dictatorship of the proletariat which in reality proves to be the dictatorship of a party clique. By the promotion of class strife; by the enforcement of strict and unquestioning obedience of party members; by teaching and practicing the evil arts of conspiracy and dissimulation; and by utilizing lies and organized violence and hate as means which it fully justifies by its ends, communism seeks to achieve its ultimate objectives.

WORLD-WIDE REVOLUTION AS A COMMUNIST OBJECTIVE

What are these ultimate objectives? Let me refresh your memory on this score by quoting briefly from part of a statement adopted at the forty-sixth session of the Sixth World Congress of the Communist International, meeting in Moscow in September 1928. This statement, in essence, has been frequently reiterated in recent years by Communist leaders. I quote:

"The conquest of power by the proletariat does not mean peacefully capturing the ready-made bourgeois state machinery by means of a parliamentary majority. The conquest of power by the proletariat is the violent overthrow of bourgeois power, the destruction of the capitalist state apparatus (bourgeois armies, police, bureaucratic hierarchy, the judiciary, parliaments, etc.) and substituting in its place new organs of proletarian power."

This ultimate objective of international communism, that is world-wide proletarian revolution and control of society, is shared by the various national branches of the Communist Party, including the Communist Party in the United States. Here, as elsewhere, the party has sought to win over for its purposes the naive and unwary. It has set up a variety of front organizations which, concealed behind high-sounding names, serve but to advance its cause. It has endeavored with some success to place its agents in key positions in labor, in youth groups, and in various educational and religious organizations, to control their policies and bring their influence to bear on public issues in ways which serve to promote the ultimate attainment of Communist objectives.

RUSSIAN PEOPLE DISTINGUISHED FROM THE COMMUNIST SYSTEM

I would not overemphasize, neither would I minimize, the potential domestic threat which is posed by the presence in our midst of many thousands of Communist Party members, pledged to follow the international party line and dedicated to the violent overthrow of our form of government and the destruction of the American way of life.

Neither have I any desire to arouse bitterness and resentment toward the Russian people themselves. With respect to the human impulse to be free, the teeming millions of Russia, aside from the relatively small percentage who are members of the ruling dictatorial party are, I am convinced, not very different from the people of the United States, representing as we do a melting pot of the nations of Europe and the whole world. While we were winning our freedom the struggling masses of Russia yearned for theirs.

American traditions are deeply embedded in the aspirations of our forefathers. You will remember Thomas Jefferson said, "I have sworn upon the altar of God eternal hostility against any form of tyranny over the mind of man." Thus it is that by inheritance our generation detests tyranny in any form or time or place. Consequently, we are bitterly opposed to the revolutionary objectives of international communism, which seeks by means of its fifth columns to destroy the free democracies of the world.

We, therefore, must be realistically aware of the potential domestic threat which communism holds for our American way of life, as well as being disposed to assist in the rehabilitation of the European democracies struggling to retain their freedom against the very present threat of Communist engulfment. And our millions of youth as well as our adults must be prepared to meet that threat. It is still true that eternal vigilance is the price of liberty.

WHAT CAN EDUCATION DO TO MEET THE CHALLENGE OF COMMUNISM?

Now what can American education do to meet the growing menace and the challenge of communism?

First and foremost, education can help to strengthen democracy at home. This is no new idea. It's almost bromidic, platitudinous. Yet it is basic, fundamental. This need has emerged again and again in the context of various pronouncements by government officials and others in recent months.

For one example, the President's Advisory Commission on Universal Training put this point first in outlining the elements in an integrated program for the national defense. Said the Commission:

"A strong, united nation is our No. 1 security requirement. * * * We must concentrate our attention on keeping democracy vibrant and alive to expanding social and economic needs. In particular we must be concerned with the following things:

"1. A healthy economy reflected in full production, full employment, industrial peace and the avoidance of recurring economic crises or inflation. * * *

"2. A high general level of education throughout the country with advanced schooling made the privilege of all who can qualify for it by their own merit. * * *

"3. Improved physical and mental health, not only for the happiness they would bring, but also to make available to the country, in peace or war, its full potential manpower resources. * * *

"4. An understanding of democracy and an increased sense of personal responsibility on the part of every individual for making democracy work."

As another example, J. Edgar Hoover, Director of the FBI, in a magazine article on how to fight communism in America, ends a list of "don't's" with these:

"Don't label anyone as a Communist unless you have the facts.

"Don't confuse liberals and progressives with Communists.

"Don't be a party to the violation of the civil rights of anyone.

"Don't fail to make democracy work, with equal opportunity and the fullest enjoyment of every American's right to life, liberty, and the pursuit of happiness." (Newsweek magazine, June 9, 1947.)

SOME CATEGORICAL IMPERATIVES

May I add to Mr. Hoover's excellent list of "don'ts" some suggestions of a more positive character addressed particularly to the educational profession. They are:

Do give young people a clear understanding of the essential elements of the American democratic way of life.

Do develop a true appreciation on the part of American youth of their glorious American heritage of freedom wrung from the bitter struggle of centuries.

Do contrast very concretely the philosophy and practice of democracy with those of dictatorship.

Do help young people to recognize the elements of Communist strategy and to be intelligent and skillful in thwarting that strategy.

Do give them a vision of the possibilities of a future world of freedom, justice, peace, and plenty.

Do give them an understanding and appreciation of the ethical and spiritual values, as well as the material benefits, of the American way of life.

Do inspire them with the resolve and with the zeal to do their full part in helping to improve the working of democracy.

To suggest that the working of American democracy can be improved is not a confession of failure; nor is it to belittle our accomplishments, as some people would erroneously suppose. Our American democratic ideals of government and society have produced the highest material standards of living for our people of any ever recorded on the face of the earth. Of our other accomplishments, in cultural as well as material affairs, we can rightfully be proud. We need make no apologies for the American way of life, for the ideals toward which we strive. While less than perfect, while in need of many improvements, our way of life has within itself the means for its peaceful and lawful fulfillment. No system involving fallible human beings will ever attain perfection. But measured against any rival system of society, American democracy is so far superior as to warrant our staunchest support against all enemies and traducers, either foreign or domestic.

The time is here when in the interest of national strength and security we must make a more determined and successful effort than ever before to inculcate in the minds and hearts of our American youth the basic principles and the fundamental ideals of our American way of life, to create zeal for American democracy. This is not to depreciate the work of our schools and colleges in the past. No one who knows what has been transpiring in the thousands of classrooms of America over the years can doubt the claim that the schools and colleges have been the greatest single force making for our integration as a liberty-loving people.

But educational agencies can and must serve more effectively than ever before in developing a zealous dedication to democracy. They can and must, in addition, make clear by contrast the threat involved in the Communist ideology, with its overt and covert effort to undermine and to subvert our western democratic civilization.

If in their universities of revolution the Communists can train men of other people's countries to be specialists in sabotage and destruction, democratic men ought to be able to counter the attack with concentrated training of specialists in resistance. If the Communists can graduate skilled disturbers to send into other men's countries to prepare democracies for slavery, surely American educational leadership and teachers can prepare wise and skilled defenders of the free society.

I have said that the schools and colleges of America have the responsibility of inculcating our democratic ideals and modes of conduct in every youth approaching the obligation of adulthood. Successfully to do so demands that we ourselves as teachers, all of us, must believe in democracy, believe in it with a flaming faith based on the clearest intellectual and moral conviction and that we unswervingly communicate our faith to the pupils in our charge.

RESPONSIBILITY OF TEACHERS OF THE SOCIAL STUDIES

All teachers at all levels and in all subjects and activities make or can make vitally important contributions to American citizenship. The elements of democratic faith and habits cannot be bottled up completely in any one subject matter field. But there is no other single group in America with so heavy a responsibility or so great an opportunity for the progressive realization of the

American democratic ideal as the social studies teachers. I am not implying that any of you have been derelict in meeting your professional responsibilities. You have done and are doing a good job in the main. But I believe all of you will agree that there is need for and possibility of very great improvement. If you and I didn't think such improvement possible, we would not be attending this meeting.

How can the social studies teachers help in the development of a more effective program of civic education which will result in a greater zeal for American democracy among the youth of the land? In addressing myself to that question, although what I shall say has mainly to do with the high schools and, to some extent, with the colleges, I do not overlook the basic contribution the elementary schools have made and can make to civic education, especially in the development of democratic attitudes in the field of human relations. Because the problems of civic education in the secondary schools and colleges are more complicated at the moment at least, than in the elementary schools, and because adequate solutions to these problems in the higher levels will require something resembling a major operation, I shall not at this time deal specifically with the needs in the elementary schools.

Unfortunately, there is some reason to believe that many pupils leave our high schools with very hazy notions about democracy. A few years ago the Educational Policies Commission published an excellent case book under the title, "Learning the Ways of Democracy." In preparing the book the commission asked some 2,000 pupils in 68 different classes in about 40 high schools to write brief statements explaining what "democracy" meant to them. Most of them thought of democracy in terms of rights and privileges—and these democratic human and political rights are important. But fewer than one-third of the high-school pupils questioned had any seeming sense of democratic responsibilities, any apparent concern about what they might do to make democracy more successful—particularly as to economic opportunities and matters of human relations.

Let me hasten to add that since the study referred to was made, many schools have greatly improved their emphasis on the various elements in civic education. Thus I understand that in the city of Tulsa, Okla., for example, the senior high-school course in American history now includes a unit called The American Dream dealing primarily with the American ideal of equal opportunity and all that it implies. I am informed that twelfth-grade pupils in the Roosevelt High School in my old home city of Des Moines, Iowa, study a unit of work dealing with Democracy and Its Competitors, which contrasts the principles of democracy with those of communism and fascism, and includes a consideration of ways of preserving and improving democracy in the United States.

Yet, in spite of these and other examples of innovating practices and new emphases in the social studies program of the high schools, I think you will agree that in too many high schools grave handicaps and deficiencies continue to exist. These extend not alone to the materials and methods of instruction in the social studies, but also to the limited time allotments and the general failure to focus instruction on problems of the contemporary national and international scene.

HOW MUCH AND WHAT KIND OF SOCIAL STUDIES SHALL WE TEACH?

More specifically, I refer to the fact that in the 26,000 high schools of this country there is little agreement as to how much or what kind of social studies shall be taught.

To be sure, a year of American history in effect is required of all pupils; and pupils on the average elect an additional year of social studies. But this elective course is one thing for some pupils—quite another thing for others. For example, some pupils take world geography; others, world history. Many pupils take problems of democracy, and smaller numbers elect courses in economics, sociology, social problems, and government.

Frankly, I do not believe that a year of world geography can be equated with a year of world history, or either of these courses with a year of problems of democracy. Nor do I believe that it makes no difference whether or not a pupil has had a chance to learn about the long struggle by which the rights of American democracy were secured. I believe that every pupil should have a chance to learn how difficult it was to establish freedom of speech and of the press, freedom of religion, the right of habeas corpus, and the other American freedoms. I believe that all American boys and girls need a year of world history to understand how precious is our heritage of freedom and to appreciate the role of the United States in today's world.

I don't believe that we can leave it to chance whether pupils in our schools learn about how modern man is influenced by his geographic environment, and how he in turn shapes this environment to his needs. Every pupil needs to understand the facts about natural resources and the need for conservation; about trade and manufacture, transportation and communication, and the interdependence of nations. I believe that every pupil needs to study the geography of the British Commonwealth, the Soviet Union, Latin America, the Far East, Europe, and the United States and its neighbors. The geographic treatment I have in mind is not the geography of the elementary grades. It is a course in world geography appropriate for high school pupils.

In the same way, I do not believe that we can leave to chance whether or not pupils learn about supply and demand, inflation and recession, taxation and governmental expenditures, how the great industries of this Nation have developed, the relation of economic freedom to civil liberties, and what stake each of us has in the economic well-being of all of us. All pupils need to know about how our social institutions have developed, that institutions exist for man and not man for institutions, and that serious social problems arise only when institutions break down. Finally, I believe that all pupils need to know much more about our government—Federal, State, and local, and of the responsibilities each of us must assume for making these governments function efficiently and democratically.

Obviously all of this necessary social studies instruction adds up to more than 2 years of course work. We shall do well if it is satisfactorily compassed in 4 years.

REVISION OF TIME ALLOTMENTS FOR THE SOCIAL STUDIES

What I am really advocating therefore is that we in education must take a step which is long overdue. I propose that we make a thoroughgoing reexamination of what the high schools ought to teach. When we do that I believe we will be convinced of the imperative need to bring up young citizens who really understand and cherish American democracy, who are well informed and skillful in thwarting the purposes of totalitarians, and who understand and accept their responsibilities in today's rapidly shrinking and increasingly interdependent world. I do not see how these needs can be met in less time than 4 years of required work in social studies in grades 9–12. I am thinking of a requirement for all pupils, and I have in mind courses which consist of five periods per week. And I would argue that all college students, also, should take a sequence of required social science courses, and that every effort should be made to provide for articulation between the secondary and college levels and to insure the development of a well-planned program which is challenging at each level.

I make the suggestion on time allotment for the serious consideration of all educational administrators, supervisors, and teachers. Just how to provide the suggested amount of time for the social studies will have to be determined. No doubt, a revamping of the entire program schedule as well as the curriculum is in order. Perhaps the customary number of periods of study per day or per week for all pupils will have to be increased, thus lengthening somewhat the pupils' school day or week. Possibly other subject fields may have to give way to some extent. In any event, I know the time has come when we can take no chances on the soundness of our methods of preparing youth for American democratic citizenship. We must now be certain that we know what product in citizenship our educational process is turning out. We must know this by using periodically, throughout the years young people are in school, ingeniously devised and dependable measurements of the developing adequacy of our products. No industrial manufacturing establishment—an automobile factory, for instance—could survive if it produced too many seconds. It will be equally fatal to American democratic life if we produce too many "seconds" in the quality of citizenship of American youth. I know too much about education to believe that our problem in measuring output is as easy as the manufacturer's; but, nevertheless, I emphasize the necessity for carrying further than ever before our techniques of measurement of our citizenship products and the improvement of our policies for preparing youth and for applying necessary remedial methods.

The days are gone when a combination of fortunate circumstances made it possible for us in this country to succeed with the evolution and progress of American democracy, even though our schools were not adequately supported and staffed; when we as citizens in general and as educators could tolerate some carelessness, so to speak, in preparing youth for citizenship. Now we face stern realities. Now when our pupils come off the education assembly line we must be sure that no one of them lacks anything essential to high quality performance on the highway of American citizenship. The public and all of us engaged professionally in educational work must be satisfied with no lesser achievement.

BETTER INSTRUCTIONAL MATERIAL NECESSARY

It goes without saying that a program of this kind cannot achieve the desired results if only presently available instructional materials are used throughout. I do not have time to develop in detail what I feel must be done to improve instructional materials, but I would like to make three general suggestions. (1) We need materials which are much more concrete and specific, detailed and up to date; less abstract, less generalized and less antiquated. Perhaps this goal can be achieved in large part by producing supplementary materials in pamphlet or magazine form. (2) We need materials geared to the abilities of all pupils who will attend our high schools. At the present time the needs of so-called non-academic pupils simply are not being met. (3) We need materials which are sharply focused on the important concepts to be developed and which do more than merely provide an encyclopedic and necessarily superficial knowledge of a subject field.

TEACHING PROCEDURES

With reference to teaching procedures, I will only hazard the point of view, which I believe all of you will accept, that social studies teaching must go far beyond the mere rote assignment of lessons, and the quizzing of pupils. Pupils must become proficient in the skills of inquiry and of discussion, and they must develop habits

of discriminating radio listening and reading. They must be afforded learning experiences geared to their maturity level; and these experiences must call for more than passive learning or absorption. The schools must help American youth to identify democratic values and to act cooperatively and efficiently in a wide variety of real life situations.

If a program of civic education is to be effective pupils must become expert, as I have said, in the techniques of inquiry and of group discussion. In the high school of Eugene, Oreg., for example, general classes are organized as "democracies" and run according to standard rules of procedure in handling group affairs. In Friends' Central School, Philadelphia, pupils take part in discussions at the student round tables of the Foreign Policy Association of Philadelphia and broadcast unrehearsed discussions of topics considered as an integral part of their class work. In New York City, Cleveland, Pittsburgh, Los Angeles, and elsewhere, high-school pupils have taken part in round-table discussions based on Nation-wide educational broadcasts sponsored by the major networks.

Pupils need instruction on how public opinion is formed, how it becomes effective, and how the individual citizen can help to shape sound opinion. There is a place also for teaching pupils how to use official reports and Government documents, how to fill in tax forms and other statements, and how to mark ballots or use voting machines. In some communities pupils have initiated and carried out successful campaigns to get out the vote in municipal and general elections.

Classroom discussions of the civil liberties need to be stimulated by using current affairs publications, the radio scripts in the Let Freedom Ring series of the United States Office of Education, and a variety of radio broadcasts and moving pictures. Pupils in Cleveland, Ohio, high schools, for example, study a unit, The Struggle for Personal and Political Liberty. In this unit they consider the following questions:

Are the liberties provided in the Constitution threatened today?

Are the constitutional guaranties of certain liberties ever used to secure unfair advantages?

Are laws relating to slander and libel consistent with ideals of liberty? Why?

Can you show that every liberty imposes a duty?

Are the people who demand personal liberties for themselves always willing to extend the same liberties to others?

IMPLICATIONS FOR TEACHER EDUCATION

The implications of all this for teacher education are far-reaching. Every teacher in every field should have a well-grounded understanding of American democracy and, during the period of preservice training, should become proficient in the use of democratic classroom practices. Furthermore, all teachers must keep reasonably well informed about the major issues of contemporary society. Greater attention must be given to the development by all teachers of skill in using the techniques of inquiry and of discussion—involving the use not alone of textbooks and library references but of the radio, classroom periodicals, newspapers, news magazines, and pamphlet literature as well.

UNITED STATES OFFICE OF EDUCATION WILL ASSIST

So much for some of the problems and possible lines of improvement that confront us in the social-studies field if we are to make our full contribution to the improvement of American democracy in the face of the emergent challenge of communism. It was because of a growing conviction of the urgent desirability of strengthening the teaching of democratic principles, of kindling a brighter-burning zeal for democracy in our American youth that the Eightieth Congress appropriated funds to enable the United States Office of Education to provide additional leadership to schools and colleges desirous of strengthening their work in this all-important field of education. It is too early to announce in detail just what assistance we shall be able to make available. We are now engaged in the important task of recruiting additional staff in the social-science fields at the elementary, secondary, and higher education levels. When the staff has been secured we propose, in cooperation with educational groups, such as the National Council for the Social Studies and others, and with the advice and counsel of lay groups and organizations, to plan in some detail the development and promotion of a program of action having certain immediate and long-term objectives in the improvement of education for democratic citizenship in the schools and colleges of America.

The effectuation of any program of action in this field will not be easy. As you well know—better than I—the problems are numerous and difficult. Much that is vital in this field is also highly controversial.

I shall not be surprised if, from certain quarters, perhaps anonymous, an effort is made to raise suspicion in the minds of educators and others and to stir up discord in their ranks respecting the propriety of any concerted program of this sort.

But in spite of the possibility of these and other difficulties, some of which we cannot now anticipate, we propose that the United States Office of Education should do its best to provide assistance to the schools and colleges to the fullest extent of its resources. I am convinced that a great majority of the American people, as well as of the educational profession, are desirous of forthright patriotic emphasis and of improved results in this field of instruction, and that with the cooperation of such groups as your own the effort can be of lasting value.

You know that as I speak I know that the United States Commissioner of Education has no authority to tell you to do anything. I am proud of the existing arrangement of Federal-State relations in education under which the State systems and institutions of education are entirely free of dominion by the Federal Government. Any ideas we have in the United States Office of Education must therefore, win acceptance in the States only on the basis of their merit and their adaptability to the needs of the respective schools and colleges and through voluntary acceptance by the appropriate officials and teachers in the local schools and institutions throughout the country. This is indeed democracy at work between the Federal Government and the States.

I have always done everything I could do as Commissioner of Education to insure the maintenance of the policy of Federal-State relations in education referred to. I hope the day will never come when any United States Commissioner of Education or any other person in the Federal Government will have the authority to tell you what you must do.

Note that I am not suggesting that we educators, much less the United States Office of Education, should undertake to provide children and youth with ready-made solutions of our current pressing domestic or international problems. That would be absurd. Each generation must, in the main, stand on its own feet, solve its own problems. It is to the present generation of adults, rather than to our youth, that society must look for solutions of today's vexing problems.

But upon us as educators, as I said at the outset, does devolve the largest share of responsibility for the development in the oncoming generation of youth of those understandings, skills, attitudes, and ideals which will make for effective and very active American citizenship and world cooperation for peace. These we educators can teach with assurance and enthusiasm, convinced that the understandings and competencies we develop in young people today will enable them to carry forward with unflinching determination the torch of freedom, justice, and humanity tomorrow.

IN CONCLUSION

The strong will prevail. And the free must be strong. A nation cannot be strong unless it is united in support of a common civic and social creed. The American creed is that of democracy and human liberty. That creed cannot be viewed with apathy and indifference. It must be propagated and supported with an individual and collective passion by all good Americans. The propagation of that creed is a fundamental objective of American education, the improvement and successful working of democracy our continuing goal and determination. Both as patriotic citizens and as teachers we shall rededicate our efforts to that end. This must be and is education's answer to the challenge of communism and to any other form of totalitarianism.

Grass Roots Reaction to Foreign Aid

EXTENSION OF REMARKS
OF
HON. P. W. GRIFFITHS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. GRIFFITHS. Mr. Speaker, under leave to extend my remarks, I include a letter from Wilbur D. Matson, of McConnelsville, Ohio, to the editor of the Wall Street Journal under date of November 17, 1947. A perusal of Mr. Matson's letter certainly ought to clear much of the fog from our muddled thinking in regard to aid to Europe.

GRASS-ROOTS REACTION TO FOREIGN AID

EDITOR, THE WALL STREET JOURNAL:

There is much skepticism among people of this rural community over the efficacy or the wisdom of the Marshall plan to save Europe from communism. There is a general agreement that as compassionate human beings we should give the starving what we can afford, and to help Europe save itself. But few there are who believe that pouring additional billions of good money on top of many, many billions of bad money, will save the less fortunate nations of the earth. We have fought two wars to that end and we have poured some $20,000,000,000 more since the end of the last war down the same rat hole. The skeptical may be pardoned if they believe that if Europe wants communism our dollars will not change their opinion.

During the past 33 years the American people have been told just about everything concerning foreign affairs that isn't so. For instance, we were told that the Rhine Valley was our first line of defense. Now we have moved the line into the Balkans, the powder keg of Europe, and the source of most of Europe's endless struggles. And lend-lease was to keep us out of war and instead of sending our boys to die on foreign soil, our dollars would turn the trick for us.

World War I was to make the world safe for democracy, and the Atlantic Charter was to be greater than the Beatitudes, the Bill of Rights, Magna Charta, and Wilson's Fourteen Points. The internationalists shrieked that because of our purblind adherence to isolationism and our refusal to join the League of Nations we were really responsible for World War II. When the UN was being fabricated at San Francisco, any doubting Thomas was silenced by being dubbed a "perfectionist" and a hide-bound isolationist who couldn't see beyond his own doorstep.

With the aims and ideals of all liberty-loving, peace-loving peoples of the earth, we are in wholehearted sympathy. God knows that above everything, this old world needs peace. But if the past 35 years have taught us anything, we should have learned the self-evident truth that wishful thinking and muddle-headed thinking do not keep you out of war; they get you into war and that no matter how badly you may wish for peace the world is farther from that goal today than at any time within the lives of any of us.

After all of our sacrifice in blood and billions, the Marshall plan is now offered the American taxpayers as a panacea for a clouded foreign situation. But what leads anyone to believe that loans other than those essential to stave off immediate hunger and deprivation, and such as help prostrate Europe to rebuild its shattered economy and thus enable it to help itself, will accomplish any permanent good to either borrower or lender?

Vide the British loan, and regardless of what we may or may not wish to do in the premises, how long can this Nation heap Ossa upon Pelion, billions upon billions, of debt? Is not the time long past when further expenditure of billions should be scrutinized in the light of further inflation, an already greatly impaired currency and a future made dubious by the necessity of unbearable taxation to maintain the national credit? Who will carry the tax load when, following a return to normal business conditions, corporate profits vanish beneath the crushing burden of high wages and unconscionable taxation? With war talk rife throughout the world, should not our national defense be built upon the rock of financial stability?

If the American taxpayer, now loaded to the guards with Federal, State, and local exactions, must save the wretched and the suffering of a world in travail (and whose heart does not bleed at the general misery with which much of the earth is afflicted), may he not be in the same case of the swimmer, who in seeking to rescue a friend from drowning, himself becomes drawn into the vortex?

WILBUR D. MATSON.
McCONNELSVILLE, OHIO.

Antilynching Legislation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. KEATING. Mr. Speaker, the burning of two Negro churches and a school building in the same county where in July 1946 two veterans of World War II and their wives were brutally murdered, serves to emphasize the imperative need for Federal legislation to enforce the provisions of the fourteenth amendment to the Constitution of the United States.

I hope that my bill, H. R. 4528, or similar legislation, to put an end to such vicious practices, punish the offenders and furnish at least monetary recompense to the victims or their next of kin out of the treasuries of those States or communities which permit such atrocities to continue, may have early and favorable consideration by the Committee on the Judiciary and the Members of this body.

Under leave to extend my remarks, I include a letter just received from Mr. Edgar G. Brown, director of the National Negro Council, and the telegram recently dispatched by that organization to the President of the United States:

NATIONAL NEGRO COUNCIL,
Washington, D. C., December 1, 1947.
Congressman KENNETH B. KEATING,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN KEATING: It has been most gratifying to note your introduction of H. R. 4528, to provide for the application and enforcement of provisions of the fourteenth amendment to the Constitution of the United States and article 55 of the Charter of the United Nations and to assure the protection of citizens of the United States and other persons within the several States from mob violence and lynching, and for other purposes, including denial of their civil rights.

The introduction of this legislation 4 days after the presentation to the Speaker on the Capitol steps of an antilynch petition by the National Negro Council bearing the signatures of more than 5,000,000 Americans from every State of the Union demanding immediate enactment of such a measure by Congress is most timely and heartening.

The most recent outbreaks of arson, terrorism and failure of local and State law enforcement officials in Walton County, Ga., the scene of the tragic multiple lynchings of two colored women and their veteran husbands, July 25, 1946, the Nation's day of infamy, demonstrated the inevitable vicious circle where heinous crimes go unpunished.

Certainly the burning down of the two Negro churches and a school building in Walton County, Ga., must be horrifying news. It must needs be as the night follows the day when criminals are winked at by those sworn to uphold the law and order and peace in high places. Two Governors of Georgia and every local official of Walton County have failed to ferret out, arrest, or convict a single one of the unmasked mob of 30 well-known members who lynched these four innocent persons in broad daylight more than a year ago. No semblance of justice appears possible.

The Governor of Georgia advised me yesterday of his conviction that all was well. No affirmative action was contemplated officially or otherwise than that so ineffectively pursued during the past year, which amounts to adding insult to injury.

No word has come from the President to whom we appealed (note enclosed telegram) in our extremity to assure the welfare of innocent and law-abiding citizens threatened by this wave of lawlessness and criminal assault.

We therefore urge you to use your good offices to have the present Constitutional Congress presided over by a Speaker from the State of Sumner, Garrison, and Shaw authorize an immediate congressional investigation of the bloody reign of terror, lynching, and arson in Walton County, Ga., in accordance with the fourteenth amendment.

We are grateful for your leadership and inspiring statesmanship.

Very sincerely yours,
EDGAR G. BROWN, *Director.*

The PRESIDENT:

It is tragically apparent from the Associated Press release, published in the Sunday papers of Washington, that a reign of unbridled mob violence, terrorism, arson, burning down two Negro churches and a school building has followed in the wake of the unpunished multiple lynchings of the two Negro women and their veteran husbands in Walton County, Ga., more than a year ago.

The National Negro Council, in the name of 13,000,000 loyal and patriotic Negro Americans, joined by Bishop William A. Fountain, Atlanta, Ga., senior bishop of the African Methodist Episcopal Church, and Dr. D. V. Jemison, Selma, Ala., president of the National Baptist Convention, call upon the President to send United States troops to Walton County, Ga., to immediately restore law and order and to guarantee under the Constitution protection to Negro Americans their legal and God-given rights to worship unmolested in the churches of their choice and also safety to themselves and their children in their homes and school.

The National Negro Council further urges the President to call upon all citizens to wipe out this blot on the escutcheon of democracy, in a voluntary contribution to a racial good-will fund to rebuild the two Negro Methodist and Baptist churches and the school building in Walton County, Ga., in a true American and spontaneous Christian spirit as has always followed in the wake of a national disaster to helpless and innocent people.

EDGAR G. BROWN,
Director, National Negro Council.

A Sound Soil Conservation Program

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. BRYSON. Mr. Speaker, some months ago I was honored by being invited to speak at the Greenville County (S. C.) Soil Conservation District annual meeting to be held at Mauldin High School on the evening of December 5, 1947. Since accepting the invitation the President has called the Congress into an extraordinary session. In anticipation of the meeting, I have prepared a speech for the occasion. Since the Congress is now debating the question of foreign relief, I feel that I should not leave Washington; hence I am compelled to forego the privilege of meeting with my many friends of soil conservation in my district tomorrow night. Under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a copy of the speech I have prepared:

It's a pleasure to attend this annual meeting of the Greenville County Soil Conservation District. I have been watching your efforts to build a permanent, paying agriculture. And I like what I have seen.

Some of the finest examples in the Nation of farmers working together to conserve and improve their land can be found right here in the Greenville County district. I am thinking of Fork Shoals road community, in which your district chairman, Mr. Huff, lives; of Sandy Springs, Jordan, Five Forks, Pleasant Grove, and Travelers Rest.

I'll have more to say later about the soil conservation work in Greenville County and how this fits into the national soil conservation program.

First, however, I want to congratulate the 10 farmers who have just received cash prizes in the pasture improvement contest sponsored by the district supervisors. Green-

ville County needs more hay and grazing crops. So do South Carolina and the entire South. My observation is that soil conservation, better pastures, and good livestock go hand in hand.

The farmers who tonight received certificates of merit from the South Carolina Bankers' Association also are to be congratulated. Each of these men has done an outstanding job in planning, applying, and maintaining a soil and water conservation program on his entire farm. Any farmer who saves and improves his land deserves the highest recognition his fellowmen can give him.

I want also to pay tribute to the farsightedness of the bankers in Greenville and Greer and the merchants and other businessmen in Greenville, Greer, Fountain Inn, and Simpsonville who provided the $600 for the prizes of the pasture contest. They know, as you and I know, that soil conservation is good business for everyone, not just for the farmers.

And our South Carolina Bankers Association, through its presentation of the certificates of merit, is adding to its already commendable record of supporting your conservation program with essay contests and the publication of a booklet for study by school children.

I think of the beautiful certificates presented tonight as decorations for heroic soldiers in the war we must fight and win here at home—the war against erosion and land wastage.

Right here I'd like to bring you another thought:

How quickly we win the war against erosion may determine whether we must face the unknown horrors of atomic war.

Our democracy was founded and grew strong on productive land. Our strongest bulwark against the isms which already have enslaved millions in Europe—and which are a constant threat to us—is productive land. Hungry people have less resistance to communism. That's why we have made, and are still making, such a sacrifice to send food to Europe.

We can't afford to waste any more land. Because of erosion, we already are short of good land—and we are losing more of it every year.

Unless we continue, strengthen, and speed our national soil and water conservation program, a day can come when even here in America we'll not have enough good land to feed our own people.

Dr. H. H. Bennett, Chief of the Soil Conservation Service, tells me that we have left in the United States today only about 450,000,000 or 460,000,000 acres of good cropland. And that includes between 80,000,000 and 100,000,000 acres which need clearing, drainage, irrigation, or other improvements to get the highest production from it.

And only about 100,000,000 acres of this cropland is not subject to erosion damage.

Around 110,000,000 acres of this good cropland is being damaged so rapidly by erosion that it must be protected within the next 10 to 15 years to prevent serious or irreparable damage to much of it.

About another 100,000,000 acres is being damaged at a rate that calls for treatment by 1970, in order to prevent much of it from being seriously cut into by erosion.

We in the United States actually are allowing a half million acres a year to be lost to practical cultivation as a result of erosion running wild. On unprotected land, the rate of depletion through soil erosion generally increases with every year of use. Subsoil erodes faster than topsoil.

That, in brief, is the picture of what is happening to the cropland on which we depend for food and clothing.

While our remaining good cropland is being moved toward the ocean, our population is increasing. I have seen estimates which say we will have 170,000,000 people in the United States by 1970.

Moreover, there's a shortage of good land throughout the world. Today, the world has left only about 4,000,000,000 acres of immediately arable land, as well as can be determined. The productivity of a great deal of this land is only fair to medium, and some of it is poor. Yet, we must count on that 4,000,000,000 acres to feed a population in excess of 2,000,000,000, and still increasing by 20,000,000 a year.

Nutritionists tell us that it takes at least 2½ acres of reasonably productive land per person to supply an adequate nutritional diet. With soil erosion continuing at the rate it has been going, here and throughout the world, it is not difficult to see where we are heading if we do not change our course sharply.

Fortunately there is a brighter side to the picture. That is the work now under way by farmers and ranchmen in the approximately 1,950 soil-conservation districts that cover more than a billion acres throughout the Nation. Your Greenville County district is one of them.

I am amazed how fast farmers and ranchmen have formed soil-conservation districts. Why, it was only 10 years ago that the Nation's first district was organized. Some States, including South Carolina, are solidly covered by these districts which landowners organized through the democratic processes of petition and referendum.

Farmers in these soil-conservation districts already have been assisted by the Soil Conservation Service to plan and begin applying complete soil- and water-conservation programs on more than 516,000 farms and ranches—more than half a million—covering almost 142,000,000 acres. These figures do not include the Service's assistance under other programs in which it has taken part.

During the last fiscal year alone the Soil Conservation Service through districts assisted farmers to plan and begin soil-conservation programs on more than 36,000,000 acres. This all adds up to healthy and normal progress in this important undertaking. It shows we are moving ahead with gratifying speed, and I hope that we may continue to do so in the coming year.

I have given you a summary of our national conservation progress to remind you in the Greenville County district that you are not fighting a lone battle against erosion and land wastage. You have friends and allies on your side throughout the United States, fighting with you to keep this the strongest Nation in the world.

Moreover, the soil conservation movement is spreading to other countries. Several of them have soil conservation services modeled after our own Soil Conservation Service. And they are working through soil conservation districts like your Greenville District. Many representatives of foreign countries, in America to study our way of controlling erosion and improving land, have visited Fork Shoals Road Community and have been inspired by what they found there.

What you are doing here in the Greenville County Soil Conservation District exemplifies the kind of soil conservation program we in Congress have in mind when we vote Federal appropriations for this work.

In recent months I have heard charges of duplication and overlapping in soil conservation work. We in Congress who approve the money for soil conservation certainly want no overlapping of agencies in this field. We are just as interested as you are in getting a dollar's worth of soil conservation on the land for every dollar spent. Therefore, I have looked into the charges of duplication of agencies in soil conservation.

I found no evidence of duplication or overlapping in the soil conservation districts of the Fourth Congressional District. But I did find plenty of evidence of dovetailing of agency work in soil conservation. This is good, and the way we in Congress want Federal money to be spent for soil conservation.

Soil conservation is so important that we can afford no confusion about it. Many of you, perhaps all of you, know the services performed by your soil conservation district, the Soil Conservation Service, and the Production and Marketing Administration. Yet I should like briefly to outline these services for you.

Your Greenville County Soil Conservation District is a governmental subdivision of the State of South Carolina, just as is a school district. Your district was organized by vote of landowners under authority of a State law. Your district is directed by a board of supervisors, all landowners. Your district is not responsible to or under the direction of any agency. You make your own program of work, with whatever assistance you require from agencies and others. Your district may make and carry out your own programs without the aid of any agency, if you so desired. Nothing in the whole framework of American life is more democratic.

And as long as the soil-conservation program is kept in the hands of men like your district supervisors—S. B. Huff, G. B. Williams, W. J. Verdin, W. A. McKelvey, and J. L. Lindsey—we can be certain that it is a program of, by, and for farmers. We've heard a lot about grassroot control of farm programs, but we find it to be a reality in soil conservation districts.

The Soil Conservation Service is a Federal agency, in the United States Department of Agriculture. This agency has a program of assistance to soil conservation districts, but it does not direct the affairs of any district.

The principal contribution of the Soil Conservation Service is technical assistance to individual farmers in planning and applying complete farm soil and water-conservation programs in districts. This is on-the-ground assistance, in your fields, woods, pastures—help like you get from Hermas Granade and his co-workers.

Everywhere I go in Greenville County I hear good things about Mr. Granade's work as a Soil Conservation Service technician. I think he exemplifies the type of skilled technician we need to help farmers with their erosion-control, water-conservation, and land-use problems. I think that the highest praise you can give Mr. Granade is to say that he is a "land doctor." He helps farmers diagnose the ills of their land, and then helps them to make complete plans for using each farm acre according to its capabilities and treating each acre according to its needs.

One time a farm magazine editor was visiting Fork Shoals Road community. "How," the editor asked, "did all this soil conservation happen to be on the land?" A farmer answered, "A 'Granade' burst in this community."

The soil- and water-conservation plans the Soil Conservation Service helps farmers to make, are incorporated in cooperative agreements between individual farmers and their local soil-conservation district. There is no form of agreement between the Soil Conservation Service and individual farmers.

In addition to technical assistance, the Soil Conservation Service also furnishes a limited amount of plants and seeds produced in its regional nurseries. These might be called incentive materials to get new plants usful for erosion control in areas where they were not grown previously. That's the way, for example, that kudzu and sericea were started on many farms, or the way in which the promising new grass, Kentucky 31 fescue, is being spread.

The Soil Conservation Service may also lend or grant equipment to soil conservation districts, but this assistance is extremely limited.

The plants and seeds from the nurseries and the equipment loaned or granted go to districts rather than to individual farmers. The Soil Conservation Service makes no payments or grants-in-aid to individual farmers.

I assure you that I will oppose any effort to weaken the Soil Conservation Service. I will vote to strengthen this agency and to increase its appropriations so that it can meet the demands of farmers for on-the-ground technical assistance in solving their soil- and water-conservation problems.

The Production and Marketing Administration is another Federal agency in the United States Department of Agriculture. This agency makes payments for application of soil-conservation practices on the land and also makes grants-in-aid of certain conservation materials. This agency extends aid to farmers who are cooperating with the districts and to others.

I have supported and will continue to support adequate appropriations for PMA.

Assistance rendered by PMA and the SCS is often on the same farm.

Where the Soil Conservation Service working in cooperation with a district helps a farmer with the planning of a soil-and-water program on his farm, Production and Marketing Administration may extend material aid to help pay for the application of certain of the practices provided for in the farm soil and water conservation plan.

Thus the Production and Marketing Administration contributes directly to the success of the work of the Soil Conservation Service in its assistance to the soil-conservation district.

The Soil Conservation Service and the soil-conservation district aid the Production and Marketing Administration by assisting farmers with the preparation of plans that use to best advantage the aid furnished by PMA.

This is not duplication. Nor is it overlapping. Instead it is a dovetailing of the soil conservation technical assistance of one agency and the soil conservation benefit payments of another agency.

And the best and most successful pattern of soil conservation results when both work together as I've outlined to you.

A careful study of an individual farm on which a complete plan of soil and water conservation is well along toward completion will illustrate the value of detailed planning in getting the most for the money PMA spends for soil conservation. Compare one of these farms having a district plan with an unplanned farm, which also has had the benefit of all grants from PMA. Study a community like Fork Shoals Road or Sandy Springs where a large block of farms have soil- and water-conservation plans well along toward application on the ground, and then compare one of these communities with another in the same county where no farm plans have been developed in cooperation with a soil-conservation district.

On-the-ground studies of what is happening on the land will show that the Soil Conservation Service is helping Production and Marketing Administration to get more conservation for the money spent, and that PMA is helping farmers in soil-conservation districts to get soil- and water-conservation practices applied faster after they are planned, by extending material aid to these farmers.

Fork Shoals Road community is a good example of the way these agencies help each other. About 60 farms in a solid block in this community have soil conservation district plans, and more than three-fourths of the planned practices are now on the land. In 1946, Fork Shoals Road community farmers earned approximately 92 percent of their PMA payments as compared with the county average of approximately 56 percent.

I do not need to remind you that soil conservation farming pays—almost from the very beginning. And the more nearly the soil conservation program is complete the greater are the benefits.

This fact was proved conclusively right here in Greenville County district last year in a study made by the Soil Conservation Service.

The Service obtained, from 56 cooperators with your district, detailed reports on their 1945 crop yields, livestock production, and income. The farms were similar in size and in other ways, with one exception. On 40 of these farms, 96 percent of all the necessary soil-conservation practices had been applied. On the other 16 farms, only 46 percent of the necessary practices had been applied.

Farms with the most soil-conservation work completed had the highest yields, produced the most livestock, and had the highest income.

Gross income per acre was $36.62 for the farms with 96 percent of the conservation program completed, as compared with $23.07 an acre for the farms with 46 percent of the conservation work finished. That's a difference of $13.55 in favor of more soil conservation.

Let me give you one or two examples which have come to my attention, of what this means to the individual farmer.

Drayton Hopkins is president of the Fork Shoals Road Soil Conservation Club and one of the first farmers in that community to work with the Greenville County district. This club now has 60 members whose farm-conservation programs are more than 75 percent completed.

When Mr. Hopkins began a soil-conservation program, his cotton yields were around 290 pounds an acre. He was harvesting about 74 bales from 134 acres. Now he averages 100 bales from 100 acres. The corn yields on his farm have jumped from 10 to 30 bushels an acre. Where he formerly averaged 20 bushels an acre from oats, the production now is 75 bushels an acre. Wheat yields have risen from 10 to 25 bushels an acres.

There are four new crop on this farm, where every acre of land is used according to its capabilities. One of the new crops is barley, which produces about 40 bushels an acre. Another is annual lespedeza, valuable for soil conservation as well as for its yield of 500 pounds of seed an acre.

Thirty acres of steep and eroded land are growing sericea lespedeza, which produces a ton of hay and 300 pounds of seed an acre, or which is used for grazing.

Fourteen of the 25 acres of eroded land in kudzu produce 2 tons of hay an acre, and the remaining 11 acres are used for grazing.

W. M. Kellett, who has a store out at Fork Shoals Road, can tell you about the same story of increased yields on his farm. So can his son, J. P. Kellett. And your district supervisor, Mr. Huff, has had remarkable success in increasing the productivity of his own farm through soil-conservation farming.

Yes, soil conservation is good business. It's good for the farmer himself, good for his merchant and his banker, good for the Nation, and good for the world.

I want to congratulate the Greenville County soil-conservation district on the completion of another year's successful work in saving and building the soil. Hold to the gains you have made. Speed up the work wherever possible, because the biggest part of the conservation job is still to do. Our remaining good land must be saved for the future prosperity, peace, and security, and general welfare of our Nation. You have my full support and cooperation.

The Legislative Outlook

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "The Legislative Outlook," delivered by the Honorable JOSEPH W. MARTIN, JR., Speaker of the House of Representatives, before the fifty-second annual Congress of American Industry on December 3, 1947.

This is a great speech. It is a complete answer to some of the confused thinking which is now being projected. I urge every Member of the House to read and study this clear exposition of the problems confronting the Nation, and the sound course which we must pursue.

The address follows:

Mr. Chairman and fellow citizens, a grave situation has been brought about in this Nation. We are asked to assume, because of no fault of our own, peacetime restrictions, controls, and regimentation as stringent as wartime controls were. We are asked to continue on under a staggering burden of taxation in order to pay reparations, as it were, to allies and enemies alike, following a war we won. To be added to the immeasurable sacrifices we made in blood and treasure during the fighting, we are asked to add more money.

Meantime, one of the arguments being made by those who propose these dangerous and staggering burdens is that there is too much money in the hands of the people. On the one hand, we see high wages. On the other, we see an effort to take those high-wage dollars out of the hands of the people who earn them by excessive taxation. On the one hand, we hear talk about preserving democracy here in America coming from the same lips which argue that we should, to some degree, abandon democracy in favor of stringent peacetime regimentation and controls. The same speakers who argue that prices are too high—and they are—contend that the only way to cure the trouble is to take away from the people more money in taxes so they will have less with which to meet living costs.

We must not allow economic freedom and self-reliance to be destroyed. If they are, the powers standing for liberty will be so weakened they will not be able to offer any effective resistance to the progressive extension of such destruction to constitutional government and the people's liberties generally.

If this resistance is gradually given up—the people might not even realize what is actually happening. Personal liberty, freedom of thought and speech, and the independence of business and of science would be exposed to a very great danger. We could lose the whole essence of the civilization we have inherited from generations which fought hard to lay its foundations, and for which many men even gave their lives.

It is proposed we increase Government spending when we should be curtailing it. Reports are being allowed to go out of the governmental circles that the next year's budget will be $40,000,000,000 or more.

Wild Government spending simply must be reduced, not increased. And the reductions which must be made cannot be accom-

plished unless we have the wholehearted support of the people who want to save the Nation from economic collapse.

One of the most acute problems given scant attention by the administration is keeping this country solvent. We all like to spend money; every human appeal finds in us a responsive chord. But the cold facts are there is only so much money available.

The only money the Government has to spend is money taken from the people in taxes.

The more the Government spends, the more it is obliged to tax the people. This fact must be brought home to the people.

That is why it is imperative that President Truman at the earliest possible moment shall tell Congress how much money he wants to spend abroad next year. And, how much he wants for spending at home.

With the total demands known, Congress can determine the proper distribution of the tax money.

The more money we send abroad, the less we will have to spend at home. And if the spending demands are excessive, then, of course, we cannot reduce taxes. We must be fully aware as to what the alternatives are.

There is one thing we must do, and that is to keep the budget balanced. With a national debt of more than $8,000 for every family in America, we cannot continue to go into debt.

American horse sense demands that the Government shall join with the Republican Congress in keeping this country solvent. It is high time the people demanded this brand of cooperation.

The great heart of America, as has been demonstrated in the last two years, will always respond to the call of the hungry. But we must guard ourselves against any who would fill their own pockets with American funds.

Feeding the world is an enormous task and it cannot be accomplished without the fullest cooperation of the people of every land. Waste and dishonesty must be reduced to the minimum.

American dollars alone cannot do this job. These dollars must be prudently spent. And we must have full cooperation from the nations which seek our aid. They must be ready and willing to go to work, to help themselves.

After all, American money is not inexhaustible. Our people will not go on indefinitely paying high taxes to help other peoples without evidence they are doing their best to help themselves. For the sake of those peoples themselves, they must thus cooperate while the money is available—and they have their chance.

This enormous job of rebuilding Europe cannot be financed entirely from the United States Treasury. We must enlist and encourage the aid of private sources willing to risk venture capital in rebuilding industries abroad.

There must be improved methods for the distribution of relief abroad. Good business executives should be selected to supervise the expenditures if we are ever to finish successfully the job we have started. The job should not be given to theorists and chairwarmers whose chief aim is to remain on the Government pay roll. Congress hopes to evolve a plan to meet these requirements.

And in all this, we must consider America, too.

All real Americans are united in wanting to preserve this grand, glorious, free, rich land of ours. You want your children's children to have the fair chance you have had. You want the young veterans and the rest of America's youth to know and make stronger the freedom and the richness of life in the America you love.

The administration wants a return of price controls and rationing.

Do you remember when the people were begging for bacon and butter and sugar? Do you remember the fruits and berries which were allowed to spoil for lack of sugar, because governmental price fixers and rationers appeared to be ignorant that they were deliberately wasting food by that sort of thing?

Do you remember those days when you stood in line and adopted a mighty meek attitude when the clerks in the rationing boards barked at you and acted as though you were some kind of a criminal because you wanted ration coupons for food?

Do you recall how the store clerks—if they liked you—would go down under the counter for scarce items while they blandly told other customers they were out of the commodities?

You will recall that before the OPA was abolished by Executive order of the President during the Seventy-ninth Congress, black markets were sprung up everywhere. Meat butchered under the trees with flies swarming on it was being sold to the helpless public. Everything from sugar to nylon stockings, from coffee to automobile tires, was going into the black market faster and faster. And prices were skyrocketing. And the OPA had been proved a dismal failure. Prices were high and the food difficult to secure.

The administration seeks the power to return to all that.

Now, fellow citizens, helping the rest of the world is commendable. But it must not be made the excuse for taking the brakes off governmental spending at home.

We started to cut reckless, wasteful governmental spending in the first session of the Eightieth Congress, and we are going to do it again in the second regular session of this Congress.

We saved $3,000,000,000 for the taxpayers by cuts where cuts could safely be made, but the bureaucrats don't like to talk about that.

Just while I am on this subject, I want to recall the record on the national defense. There is a growing propaganda emanating from officials high in the executive branch that the Eightieth Congress refused to appropriate sufficient money and wrecked our national defense. Several times within the past few weeks the charge has been made that our defense in the air is a hollow shell because Congress was too tight-fisted.

Now let's look at the facts.

The budget requests for the Army and Navy air forces were $1,379,000,000 cash and $553,000,000 contractual authority, a total of $1,932,000,000. Public Laws 202 and 267 containing the final action on these requests, show that Congress gave the air forces in cash and contractual authority an aggregate of $76,000,000 more with which to function than was originally requested in the President's budget.

The total effective reduction of defense budgetary requests, all items considered, was a net reduction of only $120,000,000 or 1.3 percent of the President's request. Significant factors to consider include the fact that funds for personnel both civilian and military were predicated on the Department's estimates of their ability to recruit. Reliable information is that the recruiting is behind schedule. They may not be able to spend all the money they have.

Since the national defense has been treated so generously one begins to wonder how it can be that a net cut of $120,000,000 or 1.3 percent, can wreck the national defense. What are they doing with all the billions which were appropriated? Certainly with proper supervision, the nine billion, five hundred and thirty-nine million should have provided adequate defense.

The revelations in the Ferguson Senate Committee are timely. The Michigan Senator should go even deeper into these questions. But the facts and figures which stand in the record prove the absolute falsity of the charges and insinuations that the Congress has embarrassed the national defense, much less weakened it, by reduced appropriations. The services may be embarrassed but if so it is not by being denied funds by the Congress.

Let me say to you, we had better keep uppermost in our thinking one very pertinent fact. It is easy enough to shackle the people of this country under governmental controls; price fixing; wage regulations, and regimentation by a bare majority of both Houses of Congress. But it will take a two-thirds vote of both Houses to strike off those shackles and recapture those delegated powers over the lives and activities of our people.

Of course, all the assurances these rationing powers and regimenting restrictions will not be used unless necessary are pure twaddle. They are like the lion saying to the lamb: "Come and lie down between my paws; I won't eat you unless I get hungry." Did you ever see a bureaucrat who wasn't hungry for power? You can bet your last dollar if those powers are granted to the executive department of the Government they will promptly be invoked and used. And when the people get tired of them and want to be freed, those bureaucrats will do exactly as they have done all along. They will fight to the last ditch to resist losing their powers. They will try to hold onto their fat jobs. It will require a two-thirds majority of both Houses of the Congress to break their hold.

It has not been so long ago that American business was struggling along trying to operate and help to win a war under 76,000 administrative regulations which had the force and effect of law. In many cases even recourse to the courts was denied. They were so contradictory, so inconsistent, and, in some cases, displayed such ignorance of business, of agriculture, as to astound the country. Do you recall the advice given by the New Deal bureaucrats to farmers to take the shoes off their horses at night to save wear? Can you remember when a solemn order was sent out that there should be no more butchering of "female steers"? Do we want any more of that sort of thing?

Controls throttle production. We know the salvation of America lies in a constantly expanding economy. For the sake of the wage earners, as well as of everybody else, we have got to produce more goods and services at lower prices. That cannot be done by raising wages, and then raising prices, and then raising wages and prices all over again. That, of course, is an inflationary spiral. The wage earners see that as plainly as other people do. We must employ our most skillful engineers to produce new techniques for us. We must increase the per man hour output. Lower prices and improved quality would give every wage earner, every farmer—every man, woman, and child in this Nation—an increased real income.

Deficit spending, currency inflation, and the inflationary effects of war production are responsible for high prices. War activities left the wages and salaries at home. The goods and services went overseas and were lost to us. Now the inflationary condition is being aggravated by the drain on our supplies—the billions of dollars worth of goods we have sent and are sending abroad since the war ended. Droughts and unusual winters have added to the burdens of the world. The law of supply and demand has coincided with and further aggravated inflation.

In the face of the stark fact that more of everything is needed by a suffering world, in many foreign countries. Communist strikes are now under way to produce less. Chaos is their objective, of course.

This whole issue is not a partisan problem, nor is it a partisan question. The demand of the President for a restoration of his wartime powers to ration supplies, regiment, prorate and fix prices and wages, is the gravest demand ever made upon the American people in peacetime.

It could easily mark the end of our American system of free government, free economy, and free society. It could start our slide into the abyss of the police state.

No man, no bureau, no clique—no party—is to be trusted with such power in peacetime, except as a very last, very desperate resort. No clique in Washington can run America as well as the people themselves can run it. Give them the truth, let them know the facts, and they will do a good job of governing themselves. Our danger is that citizens may be misled by clever, cunning, skillfully managed and well-financed propaganda aimed to bring the American people into subjection to a centralized power at Washington.

You may be assured the Congress is going to examine every one of those proposals most carefully. We are facing fateful decisions. We do not intend to make those decisions on snap judgment or insufficient information. Congress is determined to do its part to solve the problem of high prices—the American way. It is a problem we recognize. It must be solved the right way. That will take teamplay between the people, the administration, and the Congress.

America must be kept American. Our incomparable system must be perpetuated. We must stamp out the fifth column of communism in this country and lock to our liberties. We owe it not only to ourselves but to the world and to posterity.

If the torch of freedom is ever allowed to go out in America the world will be in spiritual darkness.

God forbid that.

America will stand.

America will lead the world.

America will continue to be the torch of hope and the beacon of progress for all the people of the world.

May God give us the strength and the wisdom to lead all other countries of this world to adopt and work under a world-wide slogan—"Pull Together for Peace and Progress."

Increased Compensation for Postal Workers

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. BUTLER. Mr. Speaker, I have introduced today a bill to provide for additional compensation for employees in the field service of the Post Office Department. Under the terms of the bill those employees whose rates of compensation are fixed at an annual rate would receive an upward adjustment of $800 per annum; employees paid on an hourly or part time basis would receive an adjustment in the amount of 40 cents per hour.

Mr. Speaker, in the light of today's unprecedented high cost of living, the postal worker finds his present wage scale inadequate. There is an utter sense of frustration prevalent among postal employees in all grades in their almost hopeless task of coping with present-day high living costs. This pinch is felt particularly by those postal employees in the low salary grades.

It may come as a surprise to some to learn that the starting wage for a regular letter carrier and postal clerk is $2,100 per annum—the take-home pay is considerably less, due to a 5-percent deduction for retirement purposes, in addition to the authorized withholding tax. I have been advised that the average gross salary for all employees in the field service of the postal service is approximately $2,708 per annum.

Unfortunately, the vast majority of postal employees in the low-salary grades are veterans of World War II. These soldiers, sailors and marines—many of them combat veterans, many of them decorated for unusual gallantry in action, and a sizeable number of them with service-connected disabilities—are disillusioned with their jobs in the postal service. These boys returned to civil life with promises of handsome treatment ringing in their ears. It was sweet music compared to the roar and din of the battlefield. But the handsome promises that sounded such sweet music have turned out to be almost empty gestures—gestures that now give off a hollow sound.

Several laws were enacted by Congress in previous sessions which provided for preferential treatment for veterans seeking Federal employment. I am now of the firm opinion that in everyday practice those well-meant laws are but futile gestures insofar as veterans in the postal service are concerned.

Unless these low-paid veterans are provided for in a more practical manner, along with their coworkers in the postal service, there will be every legitimate reason for the American people to think that we have forgotten these faithful public servants. Certainly, in the case of the veteran, it will be a case of out of sight, out of mind, as the saying goes.

Our First Responsibility Is To Protect Our Own People

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. VURSELL. Mr. Speaker, today I want to speak briefly with reference to European aid and the Marshall plan. This Congress is faced with grave decisions. We are being asked to take from the American people in money and supplies at a critical time of shortages on every hand, $597,000,000 for immediate emergency relief. Later we are being asked by the administration to enter into a 4-year contract to furnish some $20,000,000,000 or more in money and supplies to implement the Marshall plan. In the interest of our own people and Nation, we must not approach them in an atmosphere of hysteria and emotion; we must think as realists.

Mr. Speaker, we all want to stop or retard communism if we can. The State Department and the administration thinks we can stop it with emergency relief and with $20,000,000,000 or more to follow. Before this Congress follows their suggestions, in the interest of the American people the record of their past judgment, recommendations and results, should be studied and reviewed to determine if we can safely follow their recommendations now. Trial and error is still the best yardstick with which to judge the future.

In fact, most of our European problems today are due to the past mistakes of our State Department and the administration. The question is, Can we trust them to be right today in this expensive new plan they suggest?

MISTAKE NO. 1

Here is their past record:

Our State Department and Chief Executive, the late President Roosevelt, at Yalta agreed to allow Russia and Poland to move their boundaries west taking 25,600,000 acres of the best agricultural land away from Germany. This agreement put Russia in the driver's seat in Europe and placed her in a position to starve the rest of Germany which has cost the United States over a billion dollars to date in supplying food for western Germany. They further agreed that Russia should have reparations in Germany and Europe totaling about $15,000,000,000. Under this agreement Russia has dismantled and moved out manufacturing plants by the hundreds needed for the rebuilding of the economy of Germany and Austria. I believe it was General Eisenhower who once said "When Germany was divided at Potsdam for administrative purposes, Russia got the bread basket of Germany, England the industrial section, and the United States the scenery."

MISTAKE NO. 2

At the Quebec Conference, Secretary of the Treasury Morgenthau, with President Roosevelt, persuaded Mr. Churchill to agree that in the future Germany could not become a manufacturing nation as in the past, but would have to exist as an agricultural nation. Western Germany, with the great Ruhr coal mines is not adapted to agriculture and only produces about 50 percent of the food necessary to feed her 45,000,000 people. Because of this mistake since we occupied Germany it has cost us a billion dollars to supply them with food and other materials.

MISTAKE NO. 3

This was the failure to allow the American and British troops during the last weeks of the war to move right on in and capture the capital city of Berlin, rather than to hold them back to give Russia this honor. Had we done this we would have been in possession of so much of the territory of Germany that Russia would not now be in the driver's seat in a position to prevent the writing of a peace treaty in London, where they are meeting for the second time at this very moment. We would be the boss of the situation in Germany today had it not been for these three mistakes. These three mistakes have probably put Russia in a position to thwart and prevent the peace of the world. Those favoring the Marshall plan will argue that we must spend

$20,000,000,000 or more in western Europe to stop communism and to save the peace.

Mr. Speaker, let me suggest in all seriousness, if we lose the peace in Europe, it was lost at the Yalta Conference over 2 years ago because of the bungling of the State Department and the administration, who apparently now seek to balance off those mistakes and make a new try with $20,000,000,000. History now records the tragedy to America, Europe, and the World due to these three colossal blunders. In fact, the Yalta agreement went much further and by the power given Russia in Manchuria, she is about to overthrow the Chinese Government. Can we trust their judgment now?

All western Europe and our Nation admitting the mistake of the Morgenthau plan recently agreed to reindustrialize Germany with controls that will prevent her from waging war in the future. They now agree that western Europe cannot be rehabilitated unless Germany is allowed to produce the coal and steel so much needed in western Europe.

Mr. Speaker, we have lost 2 years at the cost of billions of dollars in preventing Germany from reviving her industry with the result that we will ship 38,000,000 tons of coal to England and western Europe by the end of this year, most of which could have, and should have been produced in the Ruhr district of Germany. We have shipped so much coal to the seaboards for export, that miners of southern Illinois and the Nation can only work part time because there are not sufficient cars to take the coal away from the pits.

Mr. Speaker, by holding up the false specter of starvation, the administration and the thousands of bureau propagandists and friendly commentators, over the air, seek to influence the American people and the Congress by the biggest barrage of propaganda ever turned loose on the public, to support the $20,000,000,000 Marshall plan.

As a member of the Herter congressional committee I spent 30 days in Germany with the subcommittee conferring with top United States generals and their civilian forces in the Army of Occupation, and conferring with the heads of the German state legislatures, making an extensive study of conditions. Nowhere in Europe did I hear of anyone starving or anyone who expected to starve. That propaganda is used here in the United States. I visited a number of schools and took pictures of the German school children. If you were not told otherwise you would think they were pictures of American children in our schools. It is true that Germany has suffered great destruction and that the people do not have all the food they need or want, but it is also true that through the efforts of the German farmers and those directing government we never saw or heard of anyone who was starving or about to starve for lack of food in Germany. The same is true elsewhere in Europe.

We are in a different position in Germany than in any other country in Europe. We are the victors and occupy a part of that nation. So long as our flag floats over a part of Germany as a symbol of our authority and their control, the call of humanity, and international law, places the responsibility on us, a victor nation, to see that no one starves and the people have a chance to establish and rebuild their own government with such aid as we see fit to render them. Given reasonable help, the German people who have not lost their will to work will do it.

Mr. Speaker, those who favor the Marshall plan will tell you that we must rebuild western Europe to stop communism. We all want to retard or stop communism if we can, but we must be honest with ourselves and honest with the American people we represent. We cannot stop communism taking western Europe unless we have the power to stop Russia and her armies. We held a serious conference with a group of high-ranking military men while in Europe whose duty it is to know what Russia can and may do. We asked the question as follows: "Suppose, under the Marshall plan or some other plan, we spend from $10,000,000,000 to $20,000,000,000 rebuilding western Europe and get those countries going in good shape in 4 or 5 years, is there anything then to stop Russia from moving in and taking a much richer prize after we have spent our money to build it up. The answer was "No." I do not believe any top military man in the Nation will make the statement that we can land and maintain in western Europe sufficient military forces to prevent Russia, if she so desires, from taking over western Europe. Germany will have no army. Italy, France, Belgium, and Holland will have no military strength capable of putting up any serious resistance if Russia should make such a move. You just as well quit trying to deceive the American people by telling them you can stop communism if you put over the Marshall plan.

If Congress sees fit to send immediate emergency aid to France, Italy, and Austria it may help these governments to prevent the Communists taking over now, and it may help if we aid other countries to prevent them from going Communist, but it is no insurance whatsoever that it will stop communism in western Europe because you cannot stop the expanse of communism in western Europe unless you have the power to stop Russia.

France has been given in loans and grants by our Government, none of which will probably ever be repaid, $2,100,000,000 since VJ-day. This is a lot of money that has already come out of the pockets of the American taxpayers.

If those officials directing the Government of France had been worth their salt France would need no coal, no wheat or food from the United States Government today. The new leaders of the French Government, it appears, are now trying to correct past mistakes which have brought about a serious condition in France. The American people, who have always been generous, might be willing to give some further emergency aid to prevent hunger which may occur in France and Italy between now and the next harvest. If some aid is provided by the Congress, it should be only for food to prevent hunger, and should be the minimum amount that will encourage the French and Italian people and their governments to prevent Communist elements from taking over those governments. About the same picture presents itself in Italy.

WHAT SHOULD WE DO?

First. We should kill the Marshall plan which provides that we enter into a 4-year contract with 16 nations to shore up their financial difficulties to the extent of some $20,000,000,000. We should kill this plan because we cannot supply the food, oil, steel, and hundreds of other products that would be required.

We should reject it because such a drain on the resources of this Nation would bring about such an inflation as might destroy the financial solvency of our Government. We are short of steel everywhere in the Nation today and millions of veterans, who at great sacrifice, won the war in the Pacific and helped to win the war in Europe, cannot get a roof over their heads because of the shortage of steel and the inflation that is upon us because we have shipped so much of our resources out of the country.

Mr. Speaker, we have a short corn crop and because of droughts at planting time in the great western Wheat Belt we will probably not have any surplus of wheat we could ship to Europe next year if we agreed to do so under the Marshall plan. We shipped out last year 611,000,000 bushels of grain and food. This action with the shipment of everything else is the cause of the high cost of living today even though Mr. Truman tries to tell the American people that such shipments have very little effect on increasing the cost of living. Everyone from the big businessman to the little merchant and the laboring man knows that statement is wrong. The administration policy of shipping out and giving away our wheat and supplies has increased the high cost of living by over 40 percent. The President should deal in facts instead of dodging the issue.

Second. Stop shipments to Russia. The administration sent millions in lend-lease to Russia after all lend-lease was supposed to be stopped. President Truman last week said, and I quote: "I see no reason to stop the sale of heavy machinery and farm machinery to Russia at this time." Well, I disagree with the President, and I believe you do. The Russians have purchased, in addition to what the administration gave them, $115,000,000 in goods from this country during the first 9 months of this year, including 216 freight cars and 145 locomotives, at a time when we are short of steel and freight cars in this country. We could and should stop shipping supplies to Russia when we are short of such supplies here. We should not forget so soon that we kept shipping scrap iron and supplies to Japan up to within a few months before she attacked us at Pearl Harbor. We should not repeat such fatal and tragic mistakes.

Mr. Speaker, when we were in Germany we found that the Marshall plan provided that 800 new locomotives be built in the United States and shipped

to Germany. We conferred with those in charge of railroad transportation and were told that they did not need any new locomotives, that they had 1,800 bad-order locomotives which they could repair with some extra steel and spare parts and that they were repairing locomotives and freight cars faster now than they were going bad order. They suggested we furnish some steel and that they would repair them at a fraction of the cost. That is just one sample of some of the things provided for in the Marshall plan.

Third. The President and the State Department could and should call upon Russia and England to stop the dismantling and tearing down of 682 manufacturing plants in western Germany which, under the new reindustrialization plan, should be put into operation for the manufacture of goods the Continent of Europe needs and which Germany could exchange with them for the wheat, flour, and foodstuffs that our Nation is giving to them today. This dismantling of these plants further proves the great mistake our representatives made at Yalta and Potsdam when they agreed with Russia that this should be done.

Fourth. Since Russia has broken practically all agreements made at Potsdam, if she prevents the reuniting of the four sections of Germany at the London Conference now in session so that Germany can be run as one economic unit as agreed to, then we should demand that Russia evacuate her zone and move out, so that Germany can be operated as one economic unit and a government in Germany established for the whole nation.

Fifth. Instead of writing a 4-year contract with 16 nations the Congress should develop a plan to give only such aid to a few nations in western Europe that need it as will compel them to put forth the maximum effort to rebuild their own countries. No plan should be entered into for more than 1 year and each nation should be considered separately. With such a plan, it would require only a fraction of the money visualized in the fantastic Marshall plan.

Sixth. Now, if you want to exert the strongest influence possible by the United States to retard, or stop the encroachment of communism on western Europe, take some of these $20,000,000,000 that you would waste in the Marshall plan, and spend them here at home in building the strongest air force with the greatest striking power of any air force in the world. Give more attention to cooperation in hemispheric defense with South America, strengthen our military departments where necessary to enable us in any emergency to strike promptly with power and effect. Mr. Stalin and his warlords, if they knew we were making such moves, would probably hesitate to move further into western Europe for fear they might precipitate a war with a powerful Nation that is prepared.

I would rather risk this course for the long pull future, and for the immediate effect it would have on Russia, than to tempt them by setting before them a $20,000,000,000 banquet table through the Marshall plan of rebuilding western Europe. Force is the only thing Russia understands.

Mr. Speaker, if we weaken ourselves by shipping away our resources, causing the cost of living to go higher and higher, and spending our Nation into bankruptcy, such action will bring smiles and great satisfaction to Stalin, Molotov, and Russia. Twenty billion dollars spent on our part in western Europe now, plus the efforts of the European nations should be worth $50,000,000,000 in a few years. It is too great a temptation to place before the Russian warlords.

Mr. Speaker, we can help these nations in a limited way and they will rebuild their own countries.

If we attempt to finance and supply the world we will bring destruction to our own Nation. We are $300,000,000,000 poorer than we were prior to the last war by shipping out and shooting away our natural resources, plus the sacrifice of the lives of 300,000 of our fine young men, with a million wounded, with many billions of dollars required in the future for hospitalization and care of our veterans.

Mr. Speaker, we are short of oil today and many materials so vital to national defense. The first responsibility of the Members of this Congress is to protect the interest of our own people and preserve the financial solvency of our own Nation. The greatest contribution we can make for the future peace of the world, is to keep America strong.

A Marshall Plan for Americans

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. DAWSON of Utah. Mr. Speaker, while we are discussing the Marshall plan and aid to starving Europeans, is it not about time we devoted a little attention to some of the starving in our own country? I refer to our first Americans, the Navajo Indians, who find themselves in dire circumstances in the western part of the United States.

We must not overlook the fact that these Indians are wards of the United States Government and entitled to our first consideration. At the present time the Latter-Day Saints Church and other charitable organizations are supplying these people with food and clothing to prolong their unhappy existence. It is indeed a reflection upon the integrity of this Government when we allow charitable institutions to supply the needs of those whom we are under obligation to support. Is it not about time we diverted our thoughts from assisting the rest of the world long enough to look after our own?

Under leave to extend my remarks, I include the following editorial from the Deseret News, of Salt Lake City, of November 25, 1947:

A MARSHALL PLAN FOR AMERICANS

While all America is urged to go wheatless and meatless to save starving Europeans, many of the Indian wards of our own Government face dire famine conditions and no one seems to be particularly concerned about their plight.

From a recent press hand-out of the Office of Indian Affairs of the Interior Department we cull this information: "Thousands of Navajo Indians in Arizona and New Mexico face hunger and privation during the coming winter months unless prompt and adequate relief can be provided, according to information released today by Secretary of the Interior Julius A. Krug. The information is based on a report just received from J. M. Stewart, superintendent of the 16,000,000-acre reservation." This Navajo Reservation includes a substantial area in southernmost Utah.

Mr. Krug says also that present attempts at relief are limited to two carloads of potatoes a month obtained from the Department of Agriculture—which bought them incidentally to support the price for potato growers, and not because they are a food that might keep some Indian from a journey to the happy hunting ground. He adds that some surplus canned foods acquired by the War Assets Administration may be obtained, but it is necessary to pay for them.

Now this is that Mr. Krug who devoted 30,000 words recently to showing President Truman that the United States could easily afford to give $20,000,000,000 in aid to western Europe without seriously impairing our resources or causing injury to our people.

This is also that Mr. Krug who by virtue of his appointment in that same Mr. Truman's Cabinet has under his control these very Indians whose resources are already seriously impaired, and who as a people are now suffering serious injury.

We are not suggesting that the Navajos seek citizenship with the French, the British, or the Italians in order to fall heir to some of the relief that Congress is being urged to authorize. That relief will go to aid those whose conditions of extremity have been imposed by others than us Americans.

But it does seem that where our own Indian population is concerned, a population driven from their native inheritance by us Americans ourselves, a population now confined by us to some of our most arid areas, a population of desert shepherds whose sheep-raising was sharply reduced by a recent Federal fiat, it does seem that we ought to be able to find more than a couple of carloads of potatoes a month to keep them from starving.

When, Mr. Krug, will the Navajos get a Marshall plan?

If anyone doubts the need of it, let him read the story and look at the pictures, taken within the past few days, that appear on pages 1 and 11 of this issue of the Deseret News.

Air Strength

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. LARCADE. Mr. Speaker, following unanimous consent for the extension of my remarks in the RECORD with authority to include a newspaper article, I find a most interesting editorial published in the Washington Post, of even date, entitled "Air Strength" and which I offer in further support of my H. R. 4565 providing for appropriations for the United States Air Forces, which bill was introduced by me on November 24, 1947.

The editorial mentioned is presented for publication:

AIR STRENGTH

The President's Air Policy Commission has heard a great deal of testimony from industrial leaders regarding the deterioration of aircraft production since the war. This testimony indicates that the country is woefully unprepared for the aircraft expansion that a world emergency would force upon it.

The virtual drying up of military orders, plus the cancellation of contracts for some civilian transport planes, has led to general retrenchment among manufacturers. Some subcontractors have withdrawn from the field, and the aircraft plants that remain in business have lost many of their engineers and skilled workers. Military aircraft production this year will total some 1,700 units. Air Secretary Symington has testified that we need an annual procurement of 3,200 planes for adequate security, and this is exclusive of the requirements of naval aviation. The problem has two sides: We must have a production rate that will supply the military forces with modern striking power and at the same time will be sufficient to keep the aircraft industry active.

General Spaatz's statement the other day that the Russians are believed to have 14,000 combat planes is not necessarily indicative of our own security requirements. The criterion is not numbers, but types and quality. We cannot be unconcerned, however, over the continuation of Soviet production while ours has slowed to a trickle. Nor do we have a reliable trump card in our fleets of stored B–29's. The B–29's are obsolescent. To be strong, our air power must be dynamic and progressive. Secretary Symington and General Spaatz both have called for a Regular Air Force of 70 groups and 6,869 first-line planes, plus 3,212 planes in the National Guard and an Air Reserve of 2,360 second-line planes, or a total of 12,441 combat planes. And even when this total is attained, planes will have to be constantly replaced.

In aircraft as well as in shipbuilding and other allied elements of our security, we are still relying on a cushion of time and distance which, as Secretary Symington has taken pains to point out, no longer exists. If we want an air force that is ready, then we must see to it that we keep the necessary minimum of aircraft production at all times. Our productive capacity is assuredly the greatest in the world, but ultimate capacity is no defense against attack. For the first time in our history we are living in the front line opposite any aggressor. We shall be living in a fool's paradise if we let our aircraft industry go to pot on the assumption that we shall have time to expanded it after the need for fighting aircraft has become acute.

Federal Expenditures

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of December 1, 1947:

NOT HEALTHY

According to the Associated Press "authoritative sources" place the 1949 Federal budget at forty billions and expenditures in excess of those for the present fiscal year by approximately two and one-half billions.

If these estimates are in any sense authoritative, they are bad news for the American people and the American economy. Neither the people—that is, the taxpayers—nor the economy as a whole can afford in the third full year of peace expenditures at the rate of forty billions, and a tax structure which was set up to meet the fiscal necessities, not of peace, but of war.

It is dangerous in a high degree for us to be lulled into a sense of security as regards the soundness of our national economy by the fact that tax receipts are at a record peacetime level and a balanced budget is in prospect even in the face of an anticipated increase in Federal expenditures.

The tax receipts which seem to create a sound budgetary situation are in large part product of the very inflation the administration is anxious to bring under control.

If it succeeds, revenues almost inevitably will drop well below expectations and, on the basis of budgeted expenditures, the Nation again will be unable to live within its income. On the other hand, if the anti-inflation effort fails—and it is more likely to fail than to succeed—higher costs and prices will be reflected almost inevitably in very high Government costs and we shall be caught up in a vicious circle from which escape will become increasingly difficult.

If there is any justification for keeping virtually intact a tax structure that was created to finance the extraordinary expenditures of war it is that as long as the national income remains at a high level every reasonable effort should be made to reduce the war-incurred debt as much and as rapidly as possible. To maintain wartime tax rates, however, to finance Government costs which are rising and threaten to get out of control is to be guilty of the gravest fiscal imprudence.

It will be argued, of course, by those who defend the upward course of expenditures that it is the cost of foreign aid that keeps the budget at its present high level and points to even higher Government costs in the years ahead. There may be merit in such a contention, but nevertheless, it would be wrong, we believe, for the executive department to budget expenditures of five millions, for example, for the Marshall plan before major policy in the matter of foreign aid has been determined by Congress.

The Senate is expected today to approve expenditures just under $600,000,000 for stopgap aid, particularly to France and Italy. Expenditures in this amount over the next few months ought to be sufficient to feed the hungry and to liquidate our obligation as a humanitarian nation to prevent suffering from cold and undernourishment.

This stopgap aid will not much affect the total cost of Government. Certainly it will not lift expenditures to a substantially higher level than now prevails. It is, thus, the long-term aid to Europe that threatens to increase expenditures in the early future to a point where the budget will again be unbalanced and where in an effort to help others we shall be in grave danger of undermining our own strength and of being unable to maintain our own sound position.

This editorial is in no sense a statement of Plain Dealer philosophy with respect to the Marshall plan. It is, however, a warning that we must be aware of the implications for our own economic stability of expenditures of forty billions a year and probably more for whatever purpose they may be incurred and of the maintenance of a system of taxation which has no place in a sound peacetime economy.

We are in danger of making the error the government of England fell into at the end of the war; of undertaking more in the way of public activity and expenditures than the economy can afford.

What Export Drop Means to Business

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the magazine World Report of November 25, 1947:

WHAT EXPORT DROP MEANS TO BUSINESS

(Reported from New York and Washington)

(Even with a full-scale program of aid for Europe, shipments of American goods abroad in 1948 will be less than in 1947. The Marshall plan is to slow the decline of United States exports, but will not stop it. Top men in American business and Government are not alarmed by the down-turn in overseas sales, however. It means a bigger supply of goods for Americans next year.)

Monthly exports of United States goods have gone down by 22 percent since May of this year. September shipments were the lowest since February.

Manufactured goods are especially hard hit. Exports of machinery, trucks, textiles and chemicals are down sharply. They may be headed lower still.

Here is what is happening to overseas sales of certain important products:

Electrical appliances are running into strong sales resistance abroad. This has been caused by import restrictions to save dollars in many countries and by satisfaction of demand in others. Exporters of radios, refrigerators, irons, and many other appliances are feeling the pinch.

Textile shipments from America to other countries are off sharply. The flood of cotton goods from the United States earlier this year seems to have filled the demand temporarily in some countries.

Cotton manufacturers abroad, especially in Brazil, are getting ready to take over a larger share of Latin-American markets. Textile firms in Japan are seeking the aid of American traders to find markets for their product, normally one of the cheapest in the world.

All this is making it hard for American makers of cotton goods to find buyers abroad.

Automobiles shipped out in the peak month of May 1947 totaled nearly 28,000. In September exports of passenger cars were down to a little more than 21,000. That's a drop of one-fourth in 4 months.

Trucks and busses sold to other countries slumped from 31,000 in May to 19,400 in September.

Tires sold abroad dropped from 474,000 in May to 280,000 in September.

Machine tools have fallen off more than a third since May, and manufacturers are pessimistic about the future.

Heaviest cutbacks, in general, are in lines in which the supply is plentiful.

Scarcer commodities, such as steel, grain, and fertilizer, on the other hand, are expected to continue moving overseas in large quantities since they are in heavy demand for European recovery.

Effect of export trade in 1948 will be to prolong domestic scarcities in some lines, such as steel, and add to the already abundant supply in others, such as radios.

What's ahead for United States trade with other countries next year can be estimated pretty closely.

Without the Marshall plan, American exports in the next 12 months would drop an estimated $5,000,000,000. Shipments in the latter part of 1948 would be running at an

annual rate of about $13,000,000,000. Present rate is $18,000,000,000.

With the Marshall plan operating on a large scale, shipments to other countries next year still will fall considerably short of the level they reached in the first half of 1947. The decline might amount to as much as 10 to 20 percent.

In 1948, despite the European recovery program the United States will export less than in 1947 by any standard.

Value of American shipments abroad next year is likely to be substantially less. Even with maximum aid to Europe, exports in 1948 will be around $17,100,000,000, which is $2,000,000,000 less than the amount likely in 1947.

Volume will decline even more, however, if prices go higher in 1948, as now seems probable.

Impact of exports on the American economy thus may be less than it was this year. A moderate increase in total production in the United States is considered probable.

Downward trend of sales abroad may continue for several years. Trade experts in Washington and New York see plenty of signs that American shipments to other countries won't return to the peak reached last spring for a long, long time. Here are some of the reasons:

Emergency financing of Europe's imports by the sale of dollar assets and gold can't go on much longer. By the second quarter of this year, European countries were obliged to finance almost one-third of their trade deficit with America in this way.

There is a limit to such expenditures. Most of the European countries are rapidly reaching that limit. They are simply running out of things they can turn quickly into cash, such as American securities and gold. When these last-ditch savings are gone their former owners will have to cut down on imports from the United States.

United States aid in 1948 is not to make possible any huge new exports to Europe. In many cases, interim aid and the longer-range European recovery program simply finance shipments already planned and orders already placed.

Much of the Europeans' estimates of requirements under the Marshall plan represent orders already on the books. For instance, nearly 60 percent of the figure for steel and an even higher portion for mining machinery are already on order.

The interim aid for Italy, Austria, and France also is aimed at maintaining shipments, not expanding them. The $597,000,000 President Truman requested of Congress for the short-term program is not intended to increase food shipments, for example, but rather to make it possible for Austria, Italy, and France to get their share of the supply available.

Although 37 percent of the money for interim aid would be for coal, it would not pay for as much coal as the three countries have been receiving from American mines in recent months.

Bulk of United States trade is with non-European areas. The Marshall plan will not stimulate declining exports to other areas to any great extent. Europe's share of American exports actually fell from 45 percent in 1946 to 38 percent in this year's second quarter, when shipments were at their peak.

The largest proportionate increase in exports has been to South America. That area now takes 16.2 percent of all American shipments abroad, compared to about 10 percent in the period 1936–40. Well over 40 percent of United States exports are going to Western Hemisphere countries.

Thus, aid to Europe affects only one sector of the world market for American products. The European recovery program will not do much for trade with Latin America, for instance.

Latin America's contribution to the Marshall plan, on the contrary, may ease the drain on United States exports considerably. Under present plans, a substantial percentage of Europe's Marshall plan dollars are to be spent outside the United States.

Meat and grain from Argentina, coffee from Brazil, copper from Chile, oil from Venezuela, sugar from Cuba—all are expected to be thrown into the struggle for European recovery.

Lower tariffs on American goods, promised by 15 countries at the recent International Trade Conference at Geneva, Switzerland, normally would stimulate American exports. Under the present abnormal circumstances, however, tariff cuts are virtually meaningless. For it is the dollar shortage, not high tariffs, that is keeping American goods out of many world markets today. Most of the countries that have granted tariff concessions counteract the effect of lower tariffs by severely restricting imports of American goods.

Effect of the new tariff schedules on United States exports is expected to be negligible in 1948, although United States imports may be increased. That would tend to correct the present lopsided situation in which America is exporting about twice as much as it imports.

Effect on American consumers of lower exports in 1948 is that they will have a little more of the things they want. Supplies of many important items will continue to be tight. But the over-all supply situation will be easier.

Steel available for domestic use will be somewhat more plentiful in 1948, but there still won't be enough to make all the automobiles, freight cars, and other steel equipment the country needs.

Freight-car supply probably will be somewhat larger in 1948. The supply of railway passenger cars will not be affected by exports.

Farm machinery and tractors are to be more plentiful, despite heavy exports. A substantial increase in production of such equipment is planned.

Food supply will continue to be tight. Prices of food may go still higher. The Government's food-conservation campaign may have to be intensified next year, especially if crop prospects are poor.

Beyond 1948, if the European recovery program is successful, the outlook is for some additional decline of exports to a level more nearly in balance with imports. Unless the world's economy once again gets completely out of kilter, American exports may never again go as high as in the spring of 1947.

Last Chance in China

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following excerpts from an article by George Sokolsky in the Washington Times-Herald of December 4, 1947:

THESE DAYS

(By George E. Sokolsky)

I recently came across a review of Freda Utley's Last Chance in China, by Harold R. Isaacs. Apparently the editor of the New York Times book review operates like a town hall debate, getting someone who dislikes a book and its author to give the other side.

Differing from the town hall, however, he permits no rebuttal, making it possible for an antagonistic reviewer to kill a book.

Now Freda Utley is a well-informed lady, an ex-Communist who has lived in Russia and China and knows what she is talking about. Long before the present converts to the "Russian menace," who are hopping on the bandwagon of anticommunism fast, Freda Utley recognized the danger and said it out loud.

In those days that was a daring thing to do, because if one risked telling the truth, the galleons of propaganda roared upon the truthteller with hatred.

So, Isaacs says that Utley's point of view is:

"She believes that no present evil in the world, like the Greek monarchy, the Turkish dictatorship, or a corrupt Chinese officialdom, is comparable to the Russian evil; that nothing was more naive than the notions that led President Roosevelt at Yalta to sign an agreement that launched Russia on its new drive for power in Asia."

With that he disagrees. His view is:

"We can share Miss Utley's urgent fear of Russian totalitarianism. But it is more difficult to see how we are going to exorcise the menace by joining hands with the Chiang Kai-sheks and Chen Li-fus of China or of any country. If these are only possible allies of democracy, then Miss Utley's too is a program for darkness."

In other words, he holds that the United States can afford to pick and choose its allies and not use what is at hand. He makes the further point that Freda Utley says that it might cost us $15,000,000,000 to support Chiang. She actually said that $3,000,000,000 or $4,000,000,000 would probably suffice. She does make the point, however, that China's importance to us is so great that $10,000,000,000 or $15,000,000,000 would not be too great a cost.

I have my own doubts about all these billions just as I have my doubts about the billions for Europe, but Isaacs clearly misquotes and misrepresents Miss Utley's position which he has no right to do. I found another such misrepresentation but do not choose to give it space.

What Has Happened to the Dollar?

EXTENSION OF REMARKS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 28, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the East Minneapolis Argus, published on Friday, August 29, 1947, which quite appropriately points out that the real interest of labor lies in job security and in the purchasing power of the dollar:

WHAT HAS HAPPENED TO THE DOLLAR?

Labor's drive for ever-increasing wages, without compensatory increases in production, is a tragic example of economic futility.

A pictogram in the United States News vividly demonstrates what has happened to the American dollar. In terms of purchasing power, an income that had a net worth of $2,500 in 1939 is worth only $1,535 now. An income that was worth $4,952, after taxes, in 1939, is worth only $2,815 now. So it goes, up and down the income scale.

This is not, of course, entirely the result of increased wages. Many other factors, notably taxation and prodigal Government spending, must bear their share of responsibility. But it is an obvious fact that the cost of labor represents a very large proportion of almost everything produced in this country.

In the past, we raised wages and lowered prices. We accomplished that because output per man increased along with pay. Since the war, the exact opposite has occurred. Most basic industries report that, while wages are much higher than before, production per man-hour is lower. The consequence of that can be expressed in a single word—inflation.

The real interest of labor lies in job security—and in the purchasing power of the dollar. In self-defense, if for no other motive, labor must cooperate with management to get the goods out, to increase production, and to so control prices. Endless wage demands coupled with decreased production per man spell ruin for the American economy. That is the hard truth of the matter.

Revision of Tax Laws

EXTENSION OF REMARKS
OF
HON. HAMILTON C. JONES
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. JONES of North Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD on the subject of revision of the tax laws, I include herein an editorial by J. A. Daly, financial editor of the Charlotte News, Charlotte, N. C., which appeared in the November 29, 1947, issue of that newspaper. The editorial contains much sound thought and is worthy of careful consideration by the membership of the House of Representatives:

Equity capital is the essence of dynamic economy. Only Government capital does not require an equity behind its debts.

Currently, venture capital seems lost sight of and languishes, whereas private debt mounts—bank loans, consumers' debts, mortgage debts—creating a heavy superstructure of obligation, whereas what is required is a broadening of the base on which our economic society rests—venture capital.

To enable the capital markets to perform their economic function properly is not to invite a repetition of the practices of the 1920's. Effective controls preclude this possibility.

It is most desirable, however, to reverse the trend of the dormant and stagnant 1930's and to resume the path of economic progress which characterized the American economy.

MUST ACCUMULATE FUNDS

Funds for business expansion cannot be met entirely through generation of funds through corporate internal sources. Tax laws must be revised to make it possible for the groups which are the traditional source of venture capital to accumulate funds and to provide incentive for them to invest such funds profitably.

The only other course is to have the Government provide the funds. Nowhere has this policy been compatible with the maintenance of initiative and incentive and, in the end, freedom.

Ample data emphasize that the capital markets are not functioning properly and support the conclusion that this malfunctioning is due mainly to tax inequities discussed previously.

There is evidence of a continued flow of stocks which have to be absorbed by the securities market although they do not represent company financing or new ventures. Because of difficulties in accumulating capital in the last decade or more, capital has aged, and, in order to pay estate taxes, assets have to be turned into cash. The assets to be liquidated are likely to be the most marketable, that is, securities having good markets.

The effect is that funds are diverted to purchase securities in well-established companies that might otherwise have been used in venture capital enterprises—nor do the funds raised by such necessitous selling add to capital available for business expansion.

The current price level and the expansion of industry required to meet our domestic requirements and position as the world's chief supplier of goods seem to assure the continued appearance of the "capital wanted" sign. Almost every important industry has indicated that large plans for capital expansion are under way. It remains to provide equal assurance that such financing can be done soundly. This will be true only if a sound condition prevails in the market for equity securities.

Any number of common stocks or sound companies are available at prices where the indicated yield is 6 percent or more. A continuation of this condition may well cause corporate executives to hesitate about carrying out their expansion plans. Such hesitation, if it develops into cancellation, would jeopardize the continuance of high employment.

Unfortunately we have been lulled into complacency by the size of liquid resources, the reported profits remaining after dividends, and the accumulated savings of individuals. Nevertheless, because of the need of carrying larger inventories at inflated valuations and the continued rise in commodity prices, the relative cash position of industry is deteriorating.

Underdepreciation of fixed assets is resulting in fictitious profits. Replacement costs at the new price level are not recovered by depreciation charges based on historical cost, so that net income is really overstated. Savings of individuals have been declining rapidly; business savings are much smaller than available data disclose on the surface; and personal savings are concentrated in groups where their contribution to venture capital is small.

Inflation

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Russell Weisman from the Cleveland Plain Dealer of December 1, 1947:

AN ECONOMIST'S POINT OF VIEW—THERE WAS NOTHING IN PRESIDENT'S ANTI-INFLATION MESSAGE STRIKING AT SOURCE OF OUR INFLATION

(By Russell Weisman)

Probably the most important economic development on the domestic front in the weeks that have elapsed since this column was suspended on October 21 has been the change which has come over the money market.

All too tardily the easy credit policy which prevailed over the entire war period and before has been sharply modified. To be sure rates remain and will remain under the thumb of the Federal banking authorities, but fortunately their first concern is no longer the cost of Government borrowing and the price of Treasury obligations. At long last they have taken cognizance of the implications of official credit policy for the processes of inflation and, consistent with tradition, are moving to lock the stable door after the horse has been stolen.

ARGUED AGAINST EASY CREDIT

Before the war, during the war, and since the war I have, in my own weak way, inveighed against the easy credit policy which was adopted, first, for the purpose of promoting inflation and then adhered to because it was the policy of the Government to keep down the cost of servicing a public debt which expanded moderately throughout the 1930's and very rapidly after we entered the war in 1941.

I am not given much to I-told-you-so techniques. I want, however, to recall to the minds of regular readers of this column, and to groups before which I have spoken for a decade and longer, that I have said, and said repeatedly, that the time would come when the easy credit policy of the 1930's would go down and sometime be recognized as the gravest error of that unsound and unhappy era.

CRITICAL OF TREASURY POLICY

Again throughout the war when the Government was stressing the importance of preventing inflation with various kinds of controls, on the one hand, and, on the other, was making an inflation of grave proportions certain and inevitable by financing a very substantial portion of the war's costs through the sale of short-term Treasury obligations bearing negligible rates of interest to the commercial banks, I was so critical of Treasury policy that I was on a few occasions charged with obstructing the war effort.

What I was doing, of course, was merely putting two and two together and adding to four. That inflation was inevitable in the face of a rapid and enormous expansion of the medium of exchange was apparent to everyone who knew the first principles of money and price. The surprising fact, then, is not that we are confronted today with an inflation that is advanced and of dangerous proportions but that we seem to be surprised at the product of our own handiwork and even now are unwilling, generally, to recognize it as such.

NOTHING STRUCK AT SOURCE

There was nothing, for example, in the President's message of 2 weeks ago which was designed to strike at the root source of inflation. There was a bit of patter about the importance of saving at this juncture and of holding down loans and of restricting credits from this time forth, but there was no forthright declaration of an obvious fact that the inflation we have is product of the greatest fiscal imprudence in financing the war, and that it can be curbed only as we reverse the processes that were responsible for a threefold expansion of money and credit over a relatively short period.

Reading the President's anti-inflation program of 2 weeks ago one is forced to conclude either that he has no comprehension of the processes by which inflation is generated, or he is more fearful of the consequences of deflation and of the resulting reaction from it, than he is of continuing on to a probably more serious inflation. There were intimations of this latter value as far back as 2 years ago when maintenance of the wartime rate of take-home pay became a primary must of top administration policy.

More Pay for Less Work, the Way to Depression

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the United States News of December 5, 1947:

MORE PAY FOR LESS WORK, THE WAY TO DEPRESSION—ECONOMIC SYSTEM HEADED FOR COLLAPSE AND DEPRESSION UNLESS LEGISLATIVE ACTION TAKEN IMMEDIATELY—LABOR UNION REGULATION OF MAN-HOUR OUTPUT CAUSING BOOM-BUST INFLATION—INCREASED PRODUCTION ONLY ANSWER

(By David Lawrence)

We are in a period of inflation and boom now.

But it will not last indefinitely.

The crash will come as certainly as day follows night unless—

What is the "unless" that can save us from the miseries of closed factories and unemployment?

The answer is: Unless there is an effective enforcement by law of the principle that no man or group of men in any industry shall fix prices or regulate output.

Today output is regulated and the American people are being asked to pay for the things they buy at high prices. Imbedded in these prices are high costs due to an extortion unparalleled in our history.

Everybody, for example, is familiar with the fact that veterans and others cannot build houses at low cost today. But the reasons have not been emphasized. Building costs are high because there is a conspiracy in the building trades to do less work and insist on more money. It is true of other trades, too.

In the November 21 issue of the United States News there was disclosed a table based on a survey among contractors in 60 cities. It shows that the average worker employed in home building is turning out about 38 percent less work than in 1940. The average worker on the basis of United States Bureau of Labor Statistics figures is being paid 76 percent more for each hour of work than he was paid in 1940.

LESS BRICKS, MORE WAGES

Take the case of bricklayers. A man who was paid $13.68 per day to lay bricks before the war on an 8-hour-day basis laid 1,000 bricks a day. Now he lays 540 bricks a day and gets $18.96 for an 8-hour day.

Tile setters are doing 50 percent less work per day than they did before the war.

Plumbers are doing 44 percent less per day.

Carpenters are doing 43 percent less per day.

Lathers are doing 43 percent less per day.

Electricians are doing 41 percent less per day.

Painters are doing 40 percent less per day.

Plasterers are doing 37 percent less per day.

Cement finishers are doing 36 percent less per day.

Note the virtual uniformity. All those workers in the building trades seem somehow by coincidence or otherwise to have struck somewhere near 38 percent as an average of less work done per day than before the war.

Yet the pay increases for these same workers amount to about 76 percent more for each hour of work. That is why building costs are 184 percent higher than in 1940.

America cannot lick inflation by a formula of "more pay for less work."

Inflation has been defined as the existence of a large enough purchasing power that brings a greater demand for goods than can be fulfilled by what is being produced.

INFLATION CURE—PRODUCTION

To cure inflation it is necessary to increase the available supply of goods.

But if a small group of dictators say the supply shall not be increased and if it is apparent that this is concerted action, then the Government must move in on such a group whether they are employers or unions.

Sixty years ago when Congress passed the Sherman antitrust law, the American people set their legal hand on monopoly, namely, "restraint of trade."

The term was not easy to define but gradually the courts declared it to mean any substantial restriction on the free flow of goods from producer to consumer—any concerted action to restrict output or fix prices by collusive steps among sellers.

It came also to mean a substantial domination of the total volume of goods in a given industry by a single producer.

But somehow along the line as political pressure came into the picture, not all monopolies were restrained by law. Labor unions lobbied for and obtained legal exemption.

A group of citizens calling themselves a union can assume the right to dictate how much goods shall be produced by the workers. One dictator recently ordered a whole industry to close down unless a labor-saving device was eliminated or a royalty paid his union for work not done by the union members.

By fixing the number of hours that shall be worked at straight time, the labor unions have managed to limit the amount of work that may be performed. All overtime work is penalized at payments ranging from time and a half to double and even triple time. Then Congress by law in 1937 legalized the overtime penalty idea.

By reducing the workweek from 44 hours to 40 hours and then in many instances down to 35 and even 30, various union groups under the guise of a spread-the-work movement have actually extracted a higher and higher total earning for less and less work.

Another device has been to secure the "closed shop" which is an exclusive monopoly on manpower hiring. The union says who shall or shall not be hired. This means that the worker owes a continuance of his job or the getting of a new job to the union. Here is a power that transcends that of government itself.

The Taft-Hartley law, to be sure, forbade a union to strike for, or an employer to grant a closed shop. The employer is left free to hire whom he pleases and at the end of 30 days the worker must join a union. This is called a union shop and can be voted by a majority of the workers in a plant or unit.

This, however, has not deterred certain unions from using their economic power to threaten employers who want to obey the law. This is a situation which requires immediate attention by the National Labor Relations Board.

SLOW-DOWNS DEFRAUD EMPLOYER

But of what avail is it even to comply with the union shop requirement if the union discipline and codes of behavior can limit the amount of work that is to be done by each worker?

Control of output even on piecework is notoriously a labor-union strategy. It restricts not only the work done but the freedom of the individual worker who may wish to give for each day's pay an honest day's work.

The present system makes of the worker a conspirator to defraud his employer. He knows he is paid to work faithfully and steadily, but the union tells him he must not work up to standard—he must loaf on the job or slow down to conform to a pattern set by the union.

Likewise wherever labor-saving devices are introduced, unions usually insist either on standby workers or on slowing down the machine. Here is a blatant exercise of monopoly power—a regulation of output per man-hour.

CONSPIRACY TO RESTRAIN TRADE

The closed shop has been used as a means of promoting a scarcity of manpower. By specifying who shall or shall not be admitted to membership in unions, the number of apprentices available for replacement or to meet increased demand is determined by a union formula.

It is a crime against society for any group of citizens deliberately to create scarcity in order to promote either a price rise or wage-cost rise or a monopoly of employment.

It will be too late to lock the door after the horse is stolen.

It will be too late to correct by legislation these abuses once the economic system has been forced into collapse and depression.

The time to take preventive action is now and it is the duty of the Eightieth Congress to emancipate the American people and the workers, too, from the small group of dictators who have promoted the idea of more pay for less work. This is a brazen conspiracy to restrain trade.

The antitrust and antimonopoly laws should be amended so that no group by concerted action may restrict output.

The individual has the right to regulate his own output—he cannot, of course, be required to work against his will.

But no organization has the moral right nor should it have the legal right to influence individuals to withhold their best efforts from the job.

Resolution of the Pacific Coast Association of Port Authorities

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. BRADLEY. Mr. Speaker, in connection with legislation quit-claiming the marginal sea areas of the United States, the lands under rivers and harbors, and so forth, which I hope will be considered by the Congress within the reasonably near future, I submit herewith resolutions covering this subject adopted by the Pacific Coast Association of Port Authorities ,the National Institute of Municipal Law Officers, and the National Association of Attorneys General:

Resolution by the Pacific Coast Association of Port Authorities urging adoption of legislation by Congress quitclaiming to all the States of the Union lands beneath tidewaters and navigable waters.

Whereas on June 23, 1947, the Supreme Court of the United States rendered its decision in the case of *United States* v. *California*, Original No. 12, and in said decision it was determined, among other things, that California is not the owner of the 3-mile marginal belt along its coast, and that the Federal Government rather than the State has paramount rights in and power over that belt, and incident to which is full dominion over the resources of the soil under that

water area, including oil, and in said decision the court stated, "we cannot say that the Thirteen Original Colonies separately acquired ownership to the 3-mile belt or the soil under it, even if they did acquire elements of the sovereignty of the English Crown by their revolution against it," and "this court has followed and reasserted the basic doctrine of the Pollard case many times. And in doing so it has used language strong enough to indicate that the court then believed that States not only owned tidelands and soil under navigable inland waters, but also owned soils under all navigable waters within their territorial jurisdiction, whether inland or not"; and

Whereas the Supreme Court of the United States, in approximately 54 prior decisions rendered over a period exceeding 100 years, held that such lands belong to the States or to their successors or grantees and that they have full and complete title and ownership thereto; and

Whereas municipal harbor developments and port authorities throughout the Nation, in reliance upon said decisions, have invested untold millions of dollars of public funds in the construction of ports, harbors, and other public improvements on lands reclaimed from the sea and from inland navigable waters; and

Whereas the decision of the Supreme Court of the United States is of extremely far-reaching importance, not only to the State of California, its cities, ports, and harbors located upon said navigable waters, but to all coastal States, cities, ports, and harbors in the Nation similarly situated, and is detrimental to the best interests of these municipalities and port authorities throughout the Nation which have invested vast amounts of public funds in the construction of said improvements; and

Whereas House Joint Resolution 225 was adopted by the Seventy-ninth Congress, but subsequently vetoed by the President, to quiet the title of the States, their successors, and grantees, to all lands beneath tidewaters and navigable waters, whether along the sea coast or inland, within the boundaries of the respective States, in order to remove the cloud on said titles created by the attack made by the Department of Interior upon the rule of property law settled by said decisions of the Supreme Court of the United States; and

Whereas it is imperative to protect the title and interests of the States, municipalities, and port authorities so adversely affected by said decision that corrective Federal legislation be enacted similar to House Joint Resolution 225, introduced in the Seventy-ninth Congress, to rectify the injustices and damage to port authorities, municipalities, and States by reason of said decision and in order that there may be restored to the States, their successors and grantees, title to their rightful property; and

Whereas such legislation would not interfere with the constitutional paramount power of the United States to control navigation or to provide for the common defense: Now, therefore, be it

Resolved, That the Pacific Coast Association of Port Authorities urges the Congress of the United States, during its next session, to adopt legislation similar in substance to House Joint Resolution 225, to correct the injustices which would follow from the Supreme Court's decision and restore to the States, their successors and grantees, their property rights and titles in accordance with the law of property established by the Supreme Court of the United States in a long line of decisions handed down throughout 100 years, to the effect that the States and their grantees hold complete title and ownership to all lands lying beneath tidewaters and navigable waters within their respective boundaries; and that this organization lend its cooperation and full support to securing the enactment of such legislation.

That a copy of this resolution be sent to the President of the United States, the Secretary of Interior, each Senator representing the States of Washington, Oregon, and California, and each Member of Congress representing said States.

Resolution No. 3, title to tidelands, by the National Institute of Municipal Law Officers

Whereas the Supreme Court decision in the case of *United States* v. *State of California* held that the rights of the Federal Government to the land underlying the 3-mile ocean belt are paramount to those of the State of California; and

Whereas this decision has created multiple conflicts of opinion as to the validity of the title to these lands in the States and their several grantees: Now, therefore be it

Resolved, That the National Institute of Municipal Law Officers urge the Congress of the United States, during its next session, to adopt legislation to correct the injustices which would follow from the Supreme Court's decision and restore to the States and their municipalities their property rights and titles in accordance with the law of property established by the Supreme Court of the United States in a long line of decisions handed down throughout 100 years, to the effect that the States and their grantees hold complete title and ownership to all lands lying beneath tidewaters and navigable waters within their respective boundaries; and that this organization lend its cooperation and full support to securing the enactment of such legislation.

Resolution on tidelands by the National Association of Attorneys General

Whereas after over 100 years of undisputed possession and ownership by the sovereign States of the lands beneath navigable waters within their respective boundaries, executive agencies of the Federal Government have made attacks upon and attempts to take such lands from certain States, asserting Federal ownership in addition to the well-recognized Federal powers of navigation, commerce and national defense; and

Whereas to recognize and affirm such State ownership and protect the States against endless attacks, litigation, loss of revenues and investments, the Seventy-ninth Congress passed House Joint Resolution 225, which was vetoed by the Chief Executive on the ground that the Supreme Court should decide the question of ownership of said lands in the then pending case of *United States* v. *California*; and

Whereas the Supreme Court of the United States, in *United States* v. *California*, refused to find ownership of such lands in the Federal Government, and limited its decision strictly to the declaration of paramount Federal powers over the submerged lands for national defense, commerce, and international affairs; specifically refusing to include proprietorship or ownership in its decree in favor of the Government; thereby leaving the entire question of ownership of such lands for future litigation or action by the Congress; and

Whereas the Supreme Court specifically recognizes that this whole question of ownership and division of State and Federal powers on the disputed lands is a legislative matter, in the following words of the Court: "We have said the constitutional power of Congress in this respect is without limitation. * * * Thus neither the courts nor the executive agencies could proceed contrary to an act of Congress in this congressional area of national powers"; and

Whereas the Court recognizes that many former Supreme Court decisions have uniformly indicated "that the Court then believed that States not only owned the tidelands and soil under navigable inland waters, but also owned soils underneath all navigable waters within their territorial jurisdiction, whether inland or not," citing *Pollard* v. *Hagen*, 3 How. 212, a Supreme Court decision which has been followed with approval by 52 Supreme Court decisions and 244 Federal and State court decisions; under which the States and their grantees have made improvements totaling billions of dollars in good faith; and

Whereas the theory of State ownership of lands under inland navigable waters is the same as that relating to coastal waters and the extent of State control over all submerged lands is left uncertain by the Supreme Court's failure to define the extent of the paramount Federal powers thereover; and

Whereas to avoid endless litigation and future attempts of the Federal agencies to usurp all powers of the States in navigable waters and submerged lands, it is necessary for Congress clearly to define such rights and powers and recognize State ownership, subject only to constitutionally delegated Federal powers; and

Whereas such legislative action has been supported continuously for several years by the National Association of Attorneys General, the Governors Conference, the Council of State Governments, Association of Port Authorities, National Water Conservation Association, and American Bar Association: Now, therefore, be it

Resolved by the National Association of Attorneys General in conference assembled at Boston, Mass., on this the 28th day of October 1947, as follows:

1. That we continue to urge the adoption by the Congress of an act recognizing that ownership of lands beneath navigable waters within the several States is and shall continue to be vested in the respective States, subject only to the paramount rights of the Federal Government in a national emergency in commerce and national defense, the exercise of which shall never of itself vest any proprietary interest in such lands in the Federal Government; but recognizing the right of the Federal Government to take any of such property necessary for national defense by priority purchase or due process of law.

2. That the President of the United States be urged to give his personal consideration to this matter of such grave importance to the States to the end that he will support the States, directly, or by indirection, through leaving the matter to Congress rather than to continue the fight being made by the Attorney General of the United States against the States.

3. That we resent the efforts being made by certain Federal departments to divide the States by offers of compromise to the inland States and other offers which invade the legislative functions of the Congress, and agree that we shall stand united against all compromises which offer less than full recognition of State ownership of submerged lands and their resources.

4. That we vigorously oppose the announced agreement between California oil interests and the Departments of Justice and Interior under which these interests would be relieved of accounting for past oil runs and have present State leases converted to Federal leases; and oppose any proposed legislation which will permit the Department of Interior or any other Federal agency to lease lands beneath navigable waters.

5. That the president of this association immediately appoint a committee large enough properly to plan and accomplish the association's part of the above purposes, with an executive group of five members to handle the details of such work; and that the association offer its cooperation to the Governors' Conference in this fight and urge the Council of State Governments to continue full use of its facilities for the accomplishment of the purposes of this resolution.

Moscow's Aims in France

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two articles by Edgar Ansel Mowrer:

MOSCOW'S AIMS IN FRANCE—PART I

LONDON.—The fate of Europe is being decided not at the Four Power Conference on Germany here but in the streets of Paris. What Molotov plans to accomplish in London pales besides what he is planning for France.

During the last 3 days the delegates and newsmen gathered here have been asking themselves and each other just what the French Communists believe they can accomplish by their legal insurrection.

Few believe they can make a revolution and install a Soviet regime. They still look too puny. But why then should they go all out with the sort of an uprising, which if pushed too far, will mean their obliteration for 10 years as a party?

Moscow has always considered individual Communists, particularly non-Russian Communists as expendable but what can the French comrades have promised their Soviet masters that would justify the suppression of the French Communist Party? Outside of Russia, the French branch is the strongest in the world.

An exceptionally important figure in French political life offers the following explanation: The French Communists, he believed, have indeed small hope of overturning the French Government. Their present offensive has two goals. The strategical goal is thwarting the Marshall plan and bringing about the withdrawal of disgusted or impotent America from Europe. Then the way to the conquest of the entire Continent would be open to Russia. Britain, as the Communists see it, would have to join with the Soviets or become a United States dependency. The loss of the strong French Communist group counts for nothing beside such glorious stakes.

The tactical and immediate aim is the destruction of the French Socialists. If this can be accomplished, any labor come-back—believed inevitable by Moscow—must be staged under the Communist banner. The French plan to destroy French socialism by forcing the French Socialists to stain their hands with the blood of French workers. The French people accept violence in politics. Street manifestations and fights with the police are traditional and accepted weapons.

But though the police may ride down or club demonstrators, it may not shoot them down. When, under Premier Daladier, the police on February 6, 1934, shot down rioters on the Place de la Concorde, it was finished. Daladier practically slunk from office 2 days later.

The present Minister of the Interior in charge of maintaining order is a Socialist. Whatever measures the police take can be ascribed to him. He and his party can be made the targets for popular hatred.

Therefore, the Communists aim, according to this opinion, at increasing the number and violence of the strikes, disorders and rioting to the point where the French police are provoked into firing on the crowd. That volley, as the Communists believe, will doom the French Socialist Party. People who stain their hands with the blood of the workers are social traitors who can never again be trusted. They will become tabu. But the Communist tradition, if not the party, will remain with increased popularity. Since it alone will incorporate the aspirations of the French working class, communism will sooner or later revive.

Therefore, the Communists hope this time, or at a second uprising within the near future, to force the Socialists either to resign and make common cause with the Communists, or to shoot into the mob.

That the fall of the present French Cabinent will bring the Government under Charles de Gaulle, the Communists are convinced. Ever since the French municipal elections, the Communists have taken the general's coming as virtually certain. They know that his coming will mean virtual suppression of French communism.

But, this very distinguished Frenchman believes, the manner of De Gaulle's coming is more important than his arrival. If big Charley becomes Premier in the way he desires, then he will so transform France as to postpone a French Communist revolution indefinitely. France will cooperate fully in the Marshall plan for European recovery and the formation of the western European bloc.

But if the lanky general can be forced to take command within the setting prepared by the Communists, his reign will be quickly over and he will vanish, leaving nothing permanent behind. Therefore, the French Communists are feverishly plotting to create the setting that will leave them new opportunity within the foreseeable future.

What this setting is I shall describe in the following column.

MOSCOW'S AIMS IN FRANCE—PART II

LONDON.—The suicidal plan of the French Communists to upset the Marshall plan even at cost of their own political existence demands that General De Gaulle shall either take charge or that he shall do so under conditions that will condemn his efforts to failure. This, according to our exceptionally distinguished Frenchman, is the second half of the tactical scheme behind the present legal insurrection. His argument runs as follows:

Charles de Gaulle has sworn never to come to power or govern except by legal means. What the general promises, he keeps. This is his great handicap in the struggle with Communists for whom legality is a mere convention to be observed until violence promises success. Therefore, the Communists desire his advent to coincide with a crisis so intense that it will prevent an accomplishment of fundamental reforms such as a new constitution, a new electoral law, etc.

Let us suppose that the French crisis came gradually. The fiscal paralysis, the inability of party-bound men to balance the budget or restore faith in France or produce adequate merchandise for farmers to buy, will—according to this view—lead a mounting demand for General De Gaulle. One day—probably after the new Communist Party provocation—this demand will become irresistible. The question is how can it be legally met?

Under the present French constitution, the only method is by utilizing one brief phrase in article 6, which says that the Assembly can establish its own duration. According to the Socialists and Communists, this means only that the Chamber of Deputies will decide how long it will meet each year. According to the growing band of Gaullists, it means that the Chamber can dissolve itself by simple majority when the members wish. Under this interpretation, the present body could first vote a new electoral law abolishing proportional representation and returning to something like the American system that diminishes the number of parties and assures a more stable majority. Then the Chamber would dissolve itself. President Auriol would hold a new election. The Gaullists would get a solid majority. This majority would enable De Gaulle to suppress the Communists, drop any number of allegedly disruptive social experiments, release controls on the movement of goods, restore confidence in the French franc, get the Marshall plan started, and finally, when France had stabilized, obtain the adoption of a new constitution creating the strong executive De Gaulle believes is necessary to keep France afloat.

Such a procedure is perhaps difficult, but if accomplished, would doom the Communists, prevent a revolution, and bring semi-rupture with Russia. The present Communist troubles are calculated to disturb such a relatively calm development.

They aim either at preventing De Gaulle from ever becoming Premier or forcing him to take power with the present badly divided and unconvinced Chamber of Deputies with the present electoral law that splits majorities and with the present constitution that leaves the power in hands of the Chamber—facing, perhaps, the gravest social uprising that has occurred in France since 1789.

Under these circumstances—the Communist strategists are believed to figure—the general might, indeed, suppress strikes with the army; he might even outlaw the Communist Party and purge the administration, the army, and the police of Communist sympathizers and agents. But before he got very far, his insistence on a new electoral law and new constitution would bring him into conflict with the Chamber of Deputies, whose members would probably lose seats in a new election and whose three major parties—Communist, Socialist, and MRP—owe their prominence to this electoral law and their power to this constitution.

The outcome of this conflict would be either De Gaulle's resignation in disgust, his elimination from French politics, or his becoming a dictator like Napoleon III—something most French people abhor. Therefore, the Communist disorders must be prolonged until the general accepts power with the present Chamber.

This explanation is merely that of one exceptional Frenchman. But it would explain the apparent suicidal urge of the French Communist Party and present French crisis.

It is always possible the present French Government will cope with this crisis, gradually restore order, and checkmate the Communists. In which case both Communist ambitions and De Gaulle's coming to power would be indefinitely postponed.

Relief for Whom?

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from an editorial which appeared recently in the Bristol (Pa.) Courier. The editorial follows:

SECRETS IN CONGRESS

Can a matter which is set forth clearly in a bill laid on the desk of every Congressman, and printed in full in a number of large newspapers, be considered in any sense a secret?

Under ordinary circumstances, of course not.

But these are not ordinary times, nor are the methods of the United States Government in this period the ordinary methods of free and democratic government.

For all practical purposes, it may be said that, fantastic as it may sound, a great deal

of the stopgap relief program is being kept a well-guarded secret from the American people.

How many take the trouble to read a law and try to understand what it means? Not so many as you might think—even in a legislative body, which is about to pass it; and of course far fewer among the general public.

The tendency is to accept what leaders and statesmen say about the law, and then plead surprise when, as has happened so often after the law is passed, it turns out to be quite different from what everyone had expected.

In the case of European relief, there has been a tremendous build-up. Practically every national spokesman, including President Truman and Secretary of State Marshall, as well as a host of commentators, analysts, interpreters, and subjective reports has given his version of what is in the proposed statute.

In the case of President Truman, Secretary Marshall, and the rest of those who are trying to sell a bill of goods as part of the campaign for reelecting Truman next year, it is not surprising that they should put the best possible face on the questionable features of the measure.

What is the big secret?

It is that the American goods and money are to be turned over to the weak, incompetent, and largely socialistic governments of certain European countries. These tottering governments are to be strengthened by allowing them to sell the American goods to their starving citizens.

This is no program of giving food and fuel to the destitute. Such an idea is merely an illusion which the backers of the plan are trying to build up in the minds of the American people, those who are going to have to foot the bills.

The food and fuel are to go to those who have money enough to pay for them.

The reason they can't buy the food and fuel elsewhere is that their money is bogus money, inflated, fiat money ground out by these European governments.

This is no relief program, it is a scheme to bolster up foreign currencies at the expense of the American people.

And it is a scheme to support and keep in power the very socialistic European governments which adulterated their currencies in the first place, and which ought to be thrown out for having done so.

The simplest proof that this is the true nature of this stopgap version of the Marshall plan lies in the fact that resentment is so bitter over any effort to accomplish the relief itself without the tricky, political refinancing included in the program.

Millions of Americans visualize the Marshall-Truman plan as a sort of angel-of-mercy program whereby the American goods they are to provide by their own sacrifice (and higher prices) are to be laid down on the doorstep of starving, shivering families, while gaunt children dance with joy, and Uncle Sam is hailed around the world as a generous, unselfish, and noble cross between Santa Claus and the good fairies.

Direct relief was the basis of the Hoover food program in Europe after the first war. It has been the basis of Red Cross work and Friends' Service activities, and of virtually all other emergency relief since the time of the good samaritan—who, according to the Bible, is not recorded to have looked into the purse of "him that fell among thieves" before deciding to help him.

All these thoughts are most important, because one of these days, as the stage is now being set, thousands of women's aid societies, church groups, and a host of other associations, will be writing tons of letters to their Congressmen demanding quick action on the Marshall program—letters from millions of persons who have never read the act, who know nothing whatever of what it provides, who assume it to be a charitable program of direct food and fuel relief, and who have no faint conception that the recipients of the American generosity can, under the plan, be required to pay someone else for every cent of the commodities the Americans send them.

Mail Charges for Overseas Aid

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. KING. Mr. Speaker, I have today introduced a resolution authorizing and instructing the House Committee on Post Office and Civil Service to formulate legislation to reduce postal rates for the mailing of private relief packages sent by individuals, churches, or welfare agencies of the United States to individuals, churches, or welfare agencies in the various foreign countries of the world. In this connection, I desire to set forth an article appearing in the Southwest Topics Wave for November 2, 1947, as follows:

MAIL CHARGES FOR OVERSEAS AID SCORED

Need for easing of the burdensome cost of mailing private relief packages overseas, highlighted in recent news articles and letters from readers of Wave Publications, has been carried to the President of the United States.

Voters Council of Faith Lutheran Church, South Broadway at Ninety-fifth Street, formally petitioned the President and the Postmaster General "to direct the reduction of postage on overseas packages containing food and clothing for war victims."

The council resolution pointed out the feeding and clothing of war victims has been fully endorsed by the President; that American citizens have been called upon to conserve food in the interest of helping the starving people of the war-devastated world; and that the humanitarian program of private relief is in harmony with the political welfare the United States favors for conquered nations and the entire world.

Sending of packages of food and clothing by individuals, churches, and welfare agencies is discouraged, however, the council declared, through excessive postal rates on overseas packages.

The resolution will be sent to all Lutheran churches in southern California and if feasible throughout the entire Nation so that "the sentiment made vocal throughout the land may direct a course in keeping with the expressed will of the churches and the public in general."

The Reverend Carl Walter Berner, pastor, pointed out members of his local church, through the World Friendship Guild, had taken the lead in packaging food and clothing for war victims. Shipments this year included 3,624 units of clothing, 489 pairs of shoes, 286 pairs of hose and socks, 1,137 packages of food, 474 cans of food, 88 bars of soap, 22 towels, 21 hats, 8 blankets, and 66 pieces of household equipment.

The church maintains a food and gift counter for war victims for the convenience of churchgoers who are encouraged to buy extra articles for overseas relief while shopping for their own families.

Substantial extent of food and clothing shipments overseas from Southwest sources was revealed a few months ago in an article in this newspaper.

Based on an interview with Stanley Winninghoff, superintendent at post office Station H, 1041 West Manchester Avenue, and local residents appearing at the station to send their package to friends and relatives overseas, the article disclosed not only the high cost of such shipments but the considerable amount of red tape involved.

Local post office officials operate, of course, under instructions from the Postmaster General and other high officials in the Department headquarters at Washington, D. C.

Report on Europe

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Cowles, from the Minneapolis Sunday Tribune of November 30, 1947:

AID PLUS FACTS CAN BEAT RUSS IN "COLD WAR"
(By John Cowles)

After looking at conditions in England and France, and talking with scores of European and American newspapermen, government officials, businessmen, and economists, many of them intimately familiar with the situation in all parts of Europe, these are my conclusions as to what the United States should do:

1. We should give to France and Italy at the earliest possible moment (provided they have not gone Communist in the meantime) food, fuel, and fertilizer as emergency stopgap aid. Unless we do this there will be real suffering this winter. In addition, the slowing down of production and employment as a result of the lack of food and fuel might result in such social and political disintegration as to make probable a successful seizure of power by the Communist minority.

2. Congress should appropriate immediately at least $50,000,000 additional for the United States Information Service. The Voice of America should be enormously expanded. It is now little more than the Whisper of America. We should tell the people of Europe what we have given and are giving in food, fuel, and fertilizer. Wherever possible, our products should be marked with the American flag. Russia has claimed credit for much of the aid that we have sent, either directly or through UNRRA, to Europe. Almost no Europeans have the slightest idea of the volume of aid America has furnished and is furnishing.

NEED HARD-BOILED PROPAGANDA

Since we are obviously engaged in fighting a cold war with Russia to win men's minds in Europe, there is little point in feeding their stomachs if they think that Russia is their benefactor.

Much of the press of continental Europe is now, as it always has been, venal and corrupt. Many editors or owners are now on the Russian pay roll.

We need a competent, hard-boiled propaganda organization in Europe, to get to the people with the facts about the United States and about Russia. The present personnel of the State Department is not doing—or even attempting—the kind of a job that needs to be done.

Our Government also should have ample funds to support and protect those political leaders and their families, now living inside the iron curtain, who would rejoice at a chance to escape to a place of refuge where they could tell the world of the Moscow terrorism, without endangering their lives.

An American like Col. "Wild Bill" Donovan, who successfully organized and conducted OSS during the war, would be invaluable in the American set-up in Europe.

WE SHOULD TELL STORY OF RUSSIA

We not only should inform the people of Europe of the aid the United States is giving them. We should tell them, day after day, of the millions of slave workers in Russian concentration camps. We should tell them the fact that Russian workers are only a fraction as well off, in terms of what their wages will buy, as are the poorest people in America. We should tell them how the Russians have looted the countries that have gone Communist.

3. We should do everything possible to unify the American, British, and French zones of Germany and to get western Germany to producing again. Before the war, the Ruhr was second only to Britain as the source of coal for Europe. Recovery in western Europe is impossible until German coal and steel production is greatly increased.

4. We should disabuse our minds of the amazing number of fallacies and misconceptions that are currently held in regard to proposals for our aiding Europe. We should then have a thorough national discussion and congressional debate as to what we should do, and how, in connection with the long-range Marshall aid plan.

WHAT AMERICANS MUST KNOW

Here are some of the things Americans need to understand: A. Terrible as the war destruction in Europe was, the problems confronting Europe today stem less from the physical ravages of the war than from the ideological consequences of the war years.

The economic policies which almost all the European governments are following today are actually retarding recovery. These policies are based in part upon the sincere but mistaken views of the governments currently in power. They are based in part upon the fact that the governments are too weak politically to do anything other than continue on their present course, even though they may privately recognize its unwisdom. The Communists, moreover, in their determination to prevent western Europe's recovery, seize every opportunity to throw sand into the gears.

B. We should realize that it is naive to assume that we will necessarily stop the spread of communism permanently in western Europe simply by pouring in our dollars for a few years. Too many Americans suppose that our financial aid will achieve that greatly to be desired result. Loans or gifts may help greatly, but most people are inclined to oversimplify the problem.

C. We should rid our minds of the idea that there is anything even remotely scientific in the report of the Paris 16-nation conference that western Europe needs $25,440,000,000 to cover its prospective dollar deficiency and to provide currency stabilization in the next 4 years.

No one can have the slightest accurate information as to what the cost would be. It depends upon the future economic policies of the different governments, the weather and crops in the next 4 years, the world price level, what actions the Communists may take, and many other unknown factors.

D. We should abandon the widely held idea that we ought not to attach conditions or stipulations to our aid. It is senseless even to consider large-scale aid unless we do attach conditions, and thus give ourselves a chance, at least, to accomplish our purpose. Aid from the United States will have only a temporary value, if that, unless the country aided changes the policies that are retarding or preventing its economic recovery.

E. We should rid our minds of any idea that the proposed Marshall plan loans will be repaid. They won't be.

F. We must not think that most Europeans understand our motives in connection with aid to western Europe—they do not. Many officials and businessmen in Europe regard the Marshall plan as a clever scheme whereby the United States, under the guise of altruism, can export unmanageable surpluses, and in that way, postpone a serious price recession and business slump in America. Europe has not the slightest understanding of the fact that the commodities which we are sending abroad are contributing to our price inflation here at home.

After we have clarified our thinking in this way, we must concentrate on deciding in what ways we can help European recovery most effectively and with the minimum harm to the United States own economy.

The more one sees of Europe, the more one realizes that preserving a strong and sound United States is the single most important contribution we can make toward world recovery.

SHOULD SPEND DOLLARS ABROAD

We can, however, materially help world recovery under the Marshall plan if we are intelligent in what we do and in how we do it.

For example, Congress ought to stipulate that, insofar as possible, we should spend the American dollars abroad, and not within the United States, to buy the commodities which we propose to give to Europe. If we can buy grain in Argentina, for example, instead of in the United States, it will reduce the serious inflationary situation that confronts us here at home.

Congress should set up an independent agency, responsible to it, but working under the general direction of the State Department, to procure all the commodities we intend to give to Europe. By following a unified procurement program, we can avoid the inflationary effect which would follow competitive bidding for American supplies by various foreign nations.

The agreement made by the 16 countries at Paris should be an integral part of any arrangements we make with the separate nations.

In the Paris agreement each nation, at least in general terms, undertook to do certain things and to cooperate in certain ways for the recovery of western Europe. If a nation is not doing what it promised to do, and if it is not meeting its production targets, we should be in position to turn off the spigot and stop further aid.

Great tact and diplomacy, in addition to basic economic intelligence, will be required of the individual who has charge of our European aid program. Lewis Douglas, the American Ambassador in London, could probably perform this function better than any other individual.

The basic European problem is lack of production.

Governmental economic and fiscal policies are retarding production in almost every country in western Europe.

CURRENCY RATES ARE UNREALISTIC

Perhaps the single most important thing that western European nations could do to stimulate production and trade would be to make their currencies freely convertible into other currencies. All of these currencies are now overvalued in relation to the dollar. All have fixed rates, for conversion into the dollar and into each other, that are completely unrealistic. International trade and production both would be enormously stimulated if the currencies were allowed to find their true levels.

Inflation is growing rapidly throughout Europe. We ought to insist that governments receiving American aid adopt policies that will stop or at least slow down the rate of further inflation. We ought to insist, within reason, that the European nations meet the production targets set up at the Paris conference.

There are strong reasons for believing that the amount of American aid which has been suggested is excessive. It is entirely possible that more good could be accomplished if the amount were reduced by one-quarter or one-third from the totals suggested by Secretary of State Marshall and Secretary of Commerce Harriman.

Only a detailed analysis would disclose how much this reduction should be. It would be most unfortunate, however, for the public to assume that it is unpatriotic or an act of isolationism to suggest that the administration's proposals should be carefully scrutinized and probably reduced.

American aid can be extremely helpful in getting western Europe back on its feet if the aid is wisely given and if it is used as an incentive to encourage European nations to do those things which are essential for recovery.

Every American should understand, however, that simply pouring goods and dollars into western Europe, unless the program is administered with great wisdom and ability, will neither insure economic recovery nor stop permanently the spread of communism.

Community Life in a Small Town

EXTENSION OF REMARKS

OF

HON. HADWEN C. FULLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. FULLER. Mr. Speaker, there are approximately 70,000,000 Americans living in small towns today and to my way of thinking they are experiencing a richer life than many of their fellows crowded in metropolitan communities.

The big cities are glamorous, I admit, and are a powerful magnet for our young people, but after age and experience have tempered the impetuousness of youth, reason tells us that the happiest place to live for most people in this great democracy is in a small town.

Recently it was my pleasure to hear an address by Oren G. Hunter, postmaster of Parish, N. Y., and president of the Parish Businessmen's Club. In it he paid tribute to the people of this typical small town and pointed out the advantages of living in his community.

As his very able remarks apply also to thousands of other communities in America, I am pleased to bring them to the attention of the House and country as follows:

RUNNING AWAY FROM HAPPINESS

Many Americans live in small towns, and I am sure there are times when some of us feel we would like to leave and go to larger places or the cities to live.

There is usually a trend for young people to go to the city for employment with an idea they can enjoy life more and also have more excitement and happiness than they can get in their home town. The fact is they are really running away from the happiness they are seeking.

Of course, the glamorous city life, theaters, recreation centers, etc., lure them for a while. But when they have chased rainbows and have lived high for a time, they usually are ready to settle down in almost any good town. They realize the arrow they shot in the air dropped right down in the town they left.

Personally, I do not think we value the importance of all the various jobs in the small town, or the people who take care of

these positions. Most people take for granted all the services that help make up the American way of life.

For instance, the man at the depot, waiting for a late train, which is his job, always has in mind that he is doing something worthwhile in the community. At times he is asked to mail a letter essential to his friends which must go out on the late train. He is very courteous in doing this.

Down the street we glance in a window and see the telephone operator and her various employees at work, bringing messages and voices together from all parts of the world, and also giving out other information such as the correct time, the weather, etc.

JOBS ARE BIG IN IMPORTANCE FOR PUBLIC GOOD

If we think seriously about small-town life, we will discover many jobs that are not big in salary, yet are big in importance to our safety and comfort.

It would be impossible to get along without the police telling us that the center of the street is a poor place to park when we run into the stores for a minute. The devotion to duty of the volunteer firemen who undertake any risk to save our lives and property is a matter of pride to all of us.

The plumber or tinsmith is a very handy man when we have trouble with a leaky roof or faucet. The town mayor, with the village trustees, holding weekly meetings; the justice of peace holding court; the attorneys, bankers, insurance men; the friendly merchants and courteous clerks who serve us faithfully with pride each day; the local ministers who give us spiritual advice and consolation when we are troubled; the principal of our school and his faculty with whom we trust the education of our children; our good family doctor who knows almost everyone's life history and who is ready to come at a moment's notice when we call him, regardless of the time of night or day, to give us pain-killing drugs—all are ready and willing to serve.

On one of the side streets, near the edge of town, works the genial blacksmith. No one can value his worth to the nearby farmers or the townspeople. Various garages are busy repairing cars, trucks, and so forth, the electrician and radio repairmen are always busy working for the comfort of all.

THE AMERICAN FLAG FLIES EVERY DAY

On our main streets we see the United States flag waving each day and a sign on this building reads "U. S. Post Office." Here we find the rural carriers, clerks, and postmaster working at all hours, early and late, through rain, heat, sleet, or snow, efficiently and courteously bringing news from people in all parts of the world, keeping business and pleasure on a normal scale, seeing that all mail is dispatched and delivered promptly.

Then there is the town-news editor who follows us all through life, recording our record of birth, marriage, various undertakings, and finally death. How often we take him for granted. He is usually present at all local happenings, and gives an interesting account of our local events.

There are also other morale builders, the librarian, who adds tremendously to our local culture; the village barbers, beauticians, drycleaners, shoe repairmen, public stenographers, the dressmaker and the people who work long, late hours in hotels and restaurants.

But, friends, wait a minute. Do you think that all this cannot be bought in a large city? Of course it can, but there are things we have in a small town that cannot be bought anywhere else, and these are the friendly deeds and personal touch we enjoy and feel when we obtain these services.

When our friends and neighbors come to us, open-hearted, helping us to share our sorrows and joys, nothing can take their place. The touch of neighbors and friends, which brings a small town together, exists to a superlative degree in any small town.

They come to us individually without hesitation or invitation to help lighten our burdens and share our joys and sorrows.

Yes, friends and neighbors, there are a few things we have in all small towns that a mint of money cannot buy in a big city.

An Editor Looks at a Hungry World

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 4, 1947

Mr. MacKINNON. Mr. Speaker, under leave to extend my remarks, I include the following speech given by Gardner Cowles, president and editor of Look magazine, to the Grocery Manufacturers Association in New York City on November 12, 1947:

Most of you have been sitting through three solid days of speeches at this GMA convention. You must be about fed up with words. I'll be brief, but I want to talk very seriously for a few minutes about the world food shortage and our foreign policy.

At the height of the war, I had the good fortune to fly around the world with Wendell Willkie, which included talks with Stalin in Moscow, with General de Gaulle in Syria, and with Chiang Kai-shek in China. Last year I visited Germany, Austria, and Italy, as the guest of the War Department, to study our governments of occupation. And this last June I flew around the world again on the inaugural flight of the new Pan American service, talking with top officials in England, Turkey, India, Siam, the Philippines, China, and Japan.

The basic fact in the world today is that, although the fighting has stopped (except in China), there is no real peace anywhere. I frequently think of the old Will Rogers cliché: "America never lost a war and never won a peace." Certainly we haven't won this peace yet, and the mistakes made at Yalta and Teheran and Potsdam are making the winning of the peace much harder.

Unless you have actually seen it personally, it is hard for an American to appreciate the extent of the economic dislocations and physical destruction which the war has left in every part of Europe and Asia. The result is a world short of everything. It lacks food. It lacks fuel. It lacks clothing. It lacks housing. And it lacks the machinery to produce these essentials.

The people are tired and discouraged just trying to stay alive. They have lost all optimism about the future. They feel they were promised during the war a higher standard of living as soon as the fighting ended, and now that they don't have it—but rather a much lower standard of living—they feel cheated and frustrated.

The wonder is that under these conditions communism has not made more progress—particularly with the specter of the Red army looming over the horizon. Yet in no country in Europe unoccupied by the Red army has a majority of the people voted for communism. Its highest total in any election was 38 percent in Czechoslovakia. And recent events indicate clearly that the Communists are losing—not winning—in western Europe.

It is well to remember that 20,000,000 have fled from east to west in Europe to get away from the Soviet regime. Several million have fled from Manchuria to China for the same reason. No one flees toward Russia.

The people in Europe and Asia realize even better than we do that the United States is the No. 1 power in the world today. They want to be our friends. They like the United States. But they want to be reassured on five points:

1. That we will remain militarily strong—particularly with an adequate Air Force—so long as Russia threatens further territorial expansion in all directions. And that we will have the will to use our military might, if necessary, to prevent any further invasion of western Europe.

2. That our economic system isn't going into a terrible "bust" which will further depress the world.

3. That we will assist with the reconstruction of the war-torn countries.

4. That we will adopt a permanent, nonpolitical foreign policy which offers the protective arm of Uncle Sam to freedom-loving people everywhere. Memory of prewar isolationism in the United States still makes friendly nations hesitant to rely on us as an ally.

5. And finally, they want to be assured by us that, as their production is restored, we will not adopt such prohibitive tariffs and trade barriers as to cut them off from the American market.

Now, that we are the No. 1 power in the world and a great creditor nation, I think we can give the world affirmative assurance on all five of these points. Such a foreign policy for the United States is in our interest and necessary for world stability.

But our immediate problem is how to help western Europe get her production restored quickly without exporting such a vast quantity of our goods as to cause a disastrous upward spiraling of prices here in the United States. Continued stability in the American economy is just as important to world peace as speed in restoring production in Europe. That is why I hope the businessmen of the country—and particularly the food industry—will participate dominantly in the debate just starting on the size and character of the Marshall plan.

It isn't dollars but production which the world needs. Anything which helps production here at home or among our friends is good. Any policy which retards production is bad.

The needs of the world are so gigantic that any adequate program is going to entail sacrifice here in the United States. I think Americans should know that, and not be kidded into thinking it can be done on our "fat" or out of our so-called surpluses.

The more that production can be stepped up in the United States, the more goods we can give or lend Europe without causing calamitous inflation here at home. During the depression, in order to spread work and reduce unemployment, we cut the standard workweek in the United States to 40 hours and instituted penalty hourly rates for work beyond 40 hours. Months ago that wise statesman, Bernard Baruch, suggested that the United States go back to a 48-hour week at straight-time wages for a few years as one sensible way to increase production and still prevent inflation. But Washington was deaf to the idea. The suggestion, however, still makes great sense.

Recently Dave Lawrence offered a variation of the Baruch proposal. Lawrence suggested that American workers be encouraged to lengthen their hours—and that they be given the incentive to do so by having the Government make tax-free all their income earned at straight-time wages beyond 40 hours.

No proposal in this area seems to interest the Truman administration; yet the only cure for inflation and the world's problems is greater production. Our Government admits there are not enough goods available to supply the world demand, but nevertheless it fails to offer any plan to stimulate still greater production of goods here at home. Instead, it is about to propose a new set of "allocations" and "controls" and possibly

ceiling prices on wheat and steel. These, in my judgment, will dislocate the economy and retard production.

Coal is critically short the world over. It is one of the big items in the Marshall plan. Yet, ironically, the coal miners of the United States, of England, and of Japan are each working shorter hours than they worked before the war.

We cannot put all the blame on Russia for lack of production in Europe. Our policy in Germany, adopted at the Potsdam Conference, of wanting to turn that industrial nation into a virtual goat pasture, should make us blush with shame. And this mistaken policy, launched then, has been only partially rectified.

We have deliberately held down production in Germany—although every expert on European conditions admits there can be no real recovery in western Europe unless German nonmilitary production is substantially restored. Certainly that patient beast of burden—the American taxpayer—should not be asked to shoulder the Marshall plan unless Germany is permitted and encouraged to produce peacetime goods to the maximum. In the present world product famine, there is not the slightest justification for any artificial restriction of production anywhere. And the quicker German industry gets to producing, the quicker the American taxpayer will be relieved of the German occupation cost. This cost, incidentally, will be $1,000,000,000 in 1948 if we assume the deficit in the British zone in addition to our own.

The leaders of the great American food industry, you men in this room tonight, have a more direct stake in seeing that the Marshall plan is sound than does any other group in the country, because nearly half of the contemplated Marshall-plan exports from the United States consists of food. Unless this tonnage of food is available for export, there is not much hope of success for the rest of the Marshall plan. Also, if such vast exporting of American food causes a sharp further rise in food costs to the American housewife, you leaders of the food industry will be blamed even when you don't deserve it.

I feel the Truman administration should be doing more to expand food production. I do not think it has an adequate program to persuade farmers to change their feeding practices to save grain, nor an adequate continuing program to persuade the public to eat more of foods in plentiful supply and less of foods on which the supply is certain to be short.

Few people realize that, contrary to general opinion, the world's population is increasing more rapidly today than ever before in history. By next year, there will be 200,000,000 more people on the earth than prewar. That increase is equivalent to the population in the North American Continent. Yet food production world-wide for next year is estimated at 7 percent less than prewar. This means that per capita the world will have in 1948 from 10 to 12 percent less food than prewar. The experts predict a great many thousands of people will die of starvation next year around the world even if harvests are up to average.

In the United States our basic capacity to produce food has increased only slightly faster than our population. We have 13,500,000 more mouths to feed here than we had in 1939.

Last year Truman appointed a Famine Emergency Committee. After a few months the administration said the emergency in Europe was over and that there would no longer be a food shortage.

As early as July this year it became obvious that grains for export this fall from the United States would be desperately short. But for some reason the administration waited until October to appoint the Luckman committee and to attempt to conserve grain. This committee is temporary and just has the assignment of trying to save 100,000,000 bushels this fall. Chuck Luckman has announced he hopes to complete the assignment by January 1.

I felt the confusion about the world's food supply was so great that, 2 months ago, I asked Look's Washington bureau to prepare a comprehensive article on how much food we had exported during the war and what we would probably be able to export in the years immediately ahead. To my amazement, we found the Government has no record of over-all food exports. After fruitlessly searching the Department of Agriculture, we finally got the Brookings Institution to find us an independent expert to help us put together, for the first time, the food export records of the Army, the Navy, lend-lease, UNRRA, and various other agencies so that the American people might read the record and have a true picture from which to draw conclusions about the future.

The United States was able to export a fantastic quantity of food during the war, and since, because (1) we started with a large carry-over grain surplus, (2) we put 17 percent more acreage into wheat, and (3) we had 7 years of fantastically good crop weather. This last point is really the most significant one to remember—because the chances are we have used up our luck. Agricultural records—running as far back as Civil War days—suggest the recurring truth of that Biblical adage that after seven fat years must come seven lean ones. This could make a fatal difference to the world.

If our analysis of the Marshall plan is correct, the United States will be called on to export next year 11,000,000 tons of grain to Germany and western Europe. We also have commitments to the occupied areas of Japan and an established Latin-American market for flour which will boost our total exports to 15,000,000 tons. And this does not include any emergency food for China or India, although their needs will be great.

One of the basic reasons in the Marshall plan for such large shipments to Europe is to build up livestock production over there. But if we in the United States get only an average crop next year, or a short crop, and are exporting in accordance with the Marshall plan suggested schedule, there will have to be a substantial cut in livestock production here.

It seems to me reasonable to contend that a limit should be set on the extent to which the United States decreases its production of livestock products so that western Europe can increase its production of livestock products. If this isn't done, the American food industry is likely to find itself disrupted by a series of emergencies that will be rough on the food industry, rough on the American consumer, and rough on American land.

My fear is that next year we will have a succession of emergency food committees parading through Washington, and with the appointment of each committee the President will tell the American people that a new crisis has just arisen—each time a crisis which he will claim could not have been foreseen. Washington seems to like crises.

If Washington were completely frank, we would be told today that the Marshall plan, in its present size, means less meat and less bread on the tables of American families for a long time ahead. The Look survey concludes that it may well be as much as 15 percent less next year.

That doesn't mean that Americans cannot continue to eat well, but I think the public is entitled to know all the facts as they debate and decide the size of our foreign promises.

Undeniably the need in Europe is great. Every European country today is rationing bread, fats, sugar and milk. Most are rationing meat and some even potatoes. In France each person is now rationed down to two-fifths of his average pre-war consumption of bread.

But I want to stress the fact that the world food crisis is not temporary. Those who have studied it most thoroughly think the export demands on the United States will probably be severe through 1952.

That is why I hope you leaders of the food industry will tell the country and the Congress how large a Marshall plan commitment on food we can wisely make, and the extent to which the large export program will impinge on the cost of food to the American consumer. And I hope you will insist the administration adopt an adequate program to stimulate production and to conserve the use of grain.

It is easy to find fault with the other fellow. It is easy, for example, to say we shouldn't help England because more people in Britain today are selling dog and horse racing betting tickets than are working in the coal mines.

But we in the United States have our faults, too. We seem unable to get the cost of Government down to sensible size. Despite the widespread rise in food prices, it still costs more in the United States today for Government than for food. We are actually paying more to be governed than we pay to eat.

When we are told that we can't have both the Marshall plan and tax reduction without unbalancing the budget and causing inflation, I think it's about time to cut down the size of our domestic Government spending, so that we can pay for the Marshall plan and have tax reduction and have a balanced budget so as to avoid inflation. A tax cut within a balanced budget would be much less inflationary and much more sensible than another round of wage increases.

We Americans are having difficulty learning our new role of taking leadership in the world. With leadership go both opportunity and responsibility. We must remember we control 50 percent of the world's production. We are the only major country not physically damaged by the war. We have become the one great creditor nation.

In our position, a wisely conceived and executed Marshall plan would make sense even if the Russian threat did not exist. Helping to restore western Europe is humanitarian, it is "good business" for long-term trade reasons, and it helps to preserve western culture which is the great heritage on which our civilization is founded.

A Marshall plan of the right size is essential. This is no longer debatable. And it must be unpartisan. Wisely, Speaker JOE MARTIN sent a special committee to Europe this summer under the able chairmanship of Congressman CHRIS HERTER. Both Republicans and Democrats are now agreed a comprehensive, continuing plan is the answer.

Food is the heart of the plan. You leaders of the food industry are best equipped wisely to outline just the size and character of the food program to Congress and the American people. How much can we export and still hold the price line here at home?

I hope you speak out. As an editor, I can predict America will listen to you eagerly. The Nation and the Congress need your guidance.

Our First Generation of World Politics

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. BENDER. Mr. Speaker, under permission granted me earlier, I should like to have inserted in the RECORD a copy of an address by Mr. Robert R.

Young, chairman, Chesapeake & Ohio Railway Co., before the annual governors' luncheon conference of the New England Council, Boston, Mass., on November 20, 1947:

The Spanish white man had established his culture in Texas long before the time of Plymouth; so the cow country in which I grew up regarded the New Englander as a newcomer and a tenderfoot.

Little we knew of New England, except from our school books and required reading, Snow-Bound, The Scarlet Letter, The Essays of Emerson. Stories we heard of your elms and rose gardens were credible, but those autumn leaves we were told to paint in our kindergarten we never quite came to believe.

The first war came, and, shoulder to shoulder in the mud of France, the Texan found the quiet New Englander to be just as tough-footed as he; while his comrade learned that, secretly, the Texan dreamed of Walden Pond. Again, in another war, on the spume-blown and shell-torn beaches of the Pacific, the same sandpiper whistled for them both just as plaintively as he did back home at Gay Head or Rock Port.

Now, if a Texan's allegiance can ever die, I come before this distinguished gathering of New Englanders as a supplicant—not to pretend to the birthright of a Yankee—but to say, here, in this so green land by the storm-bound coast, is my adopted home. Here let me end my days in peace.

My prospects of doing that, however, are not particularly bright.

We were all cruelly shocked even in this last week by reading: "Britain to draft non-workers—women as well as men. Peers and poor. Conscripts to go into coal mines or other essential industries. Shirkers to be imprisoned."

I wonder if a hairdresser or a caddy is to be called a shirker.

If that law were not British, it would be Fascist.

The State of New York in withering contrast rewards people for not working. Headlines that same day uncovered: "Gross negligence in New York State relief policies. Vice condoned. Community degraded."

That exposure was of conditions under an administrator who, on his record, seeks elevation not only to national but to world relief.

When I read that last headline, I was sure that the scandal related only to some corrupt municipal political machine. Imagine my surprise when I found that 60 percent of this waste was chargeable to the State of New York, 20 percent to the Nation, and only 20 percent to the city, and that when the relief bill was passed in 1946 at the request of the Governor, he stated, "This is a humane and efficient plan." That, in substance, was exactly his recent description of the Marshall plan. You will note the identity of words in both cases—a humane and efficient plan, when home relief is referred to, and Marshall plan for overseas. I had hoped that we had seen an end to that kind of planning.

This same State of New York is the leading proponent of rent controls. It is too bad that some of these people who are paid by New York State not to work are not put to work building houses. Certainly we will not get houses built by rent controls—by taking the incentive out of building and owning one. As long as one can live in someone else's house for less than it would cost him to own his own, who on earth is going to be foolish enough to build?

Looking ahead a few years in America and presuming oneself to be the archeologist clambering about the heap of rubbish situated at the mouth of the Hudson River, one would conclude that the most notable feature of this extinct atomic people had been its wondrous ability to produce—and that the decline in its culture began with the advent of controls.

I can see this pitiable, unkempt being scratch his atom-addled head, and hear him ask the $300,000,000,000 question: "How could this great national genius which brought forth such an infinity of material things have fallen in those last agonizing days into an economy of scarcity?"

Yes, business, farmer, labor, and all of us have retreated into a dangerous state of complacency about alarmingly portentous things. We assure ourselves it will all work out in the end; we muddle through. But the trouble is, on the record, things work out more and more badly—requiring more and more risky remedies.

Relief brings inefficient labor, confiscatory taxation, and high prices; and high prices bring controls. Controls bring further shortages and still higher prices, occasioning the necessity of more relief and more controls.

If we are to believe our headlines, England, the originator of the dole, and the world's champion exponent of controls, has not muddled through. The common man, there, has never been more hungry and miserable than he now is—not in a thousand years of British history. Certainly, never before has he been dropped down a coal mine. I wonder how you and I would like that. As one views the rapidity of England's descent from the day of Kipling's "Tumult and the shouting," one is constrained to pray with him, "Lord God of Hosts, be with us yet—lest we forget."

If the same forces make futile anything we can do to halt our own collapse, then complacency well becomes us; there is not need to veil our last days in tears, to trouble our ears with moans; indeed, we may, like Thoreau, withdraw into our own Walden. But, that is not the way of life. We must continue our divinely inspired struggle on up from the dust.

I come to you today with the portfolio of business. It is a noble calling, numbering its unsung heroes by the millions. Dynasties and dictators may rise and fall; history books may be written, burned, and rewritten, but the marts of trade grind on, in fair weather and foul, providing as best they may for man's needs. Those who play this game of business find it more fascinating than cards or dice, for fate is not a test of any man. Here a man is what he is; some make the grade and some do not. Certain qualities assure success—admirable qualities such as your own Ben Franklin's: industry, integrity, and economy. Careless promises and padded pay rolls bring ruin, not re-election, in business.

As I look back on the history of this realm of ours, and the 10,000 vainglorious empires which preceded it, a pattern is inescapable. Republic or tyranny, their periods of rise were marked by businesslike methods, their periods of fall by loose ones. Some were rich and powerful enough to endure abuses for long periods but eventualy the termites got them. There comes a time in the affairs of nations, once the principles of good business are abandoned, when their demise becomes clearly predictable.

Now, when I burn this incense at the altar of business I come not like Miles Standish wooing Priscilla by proxy. I am not nominating a businessman for President, but I am advocating businesslike principles. A soldier, a lawyer, yes, a haberdasher can make as fine a President as Solomon made a wise king. The question is one of integrity, not of trades. Give me a woman, a Catholic, a Jew, a Protestant, or a Negro and a bootblack, and give me integrity, and I will hurry to the polls; but give me two men who yield to party pressures, who outbid each other for selfish votes, and I will retire to Walden, or the Texas Panhandle, as bare of hope as September on election morn.

Time is running out with dizzy speed. What was scoffed at as a crackpot bottle-of-milk-on-every-doorstep Wallace plan just a year ago has become conservative United States Treasury policy. Last week I stood on the ocean's edge and watched a jet plane pass overhead. For a split second, as the distance that separated it from the horizon diminished, I thought it was speeding into, not over, the sea, but hardly had that rocket-like sigh died in my ears when it merged into the far rim of the sky on its straight course, swift as sound. So is it with today's events. Terror and regicide trod fast upon the heels of the Czars, the hangman's noose cut short the strident voice of the German conqueror, collaboration mocked the glory of France, and the sun was once said never to set on the British Empire—only two costly victories ago. Let us beware of our third victory.

There was a time when war was a profitable pursuit; but that was before the last frontier and democracy's mass conscription. No aristocracy of birth or business, no system save anarchy, can survive that keeps flying back into the flame of war.

The conflict of our own time was foreshadowed in the Intimate Papers of Colonel House, the Hopkins of that era, published in 1926. Colonel House and the German Kaiser met on June 1, 1914, just a few weeks before the invasion of Belgium, and agreed that Russia was England's greatest menace and that it was to England's advantage that Germany should hold Russia in check. Yet it was not long before this same House had us dismembering Germany.

In 1945, 1946, and 1947 our own latter-day Houses despite British and other warnings have with equal ambidexterity been busy dismantling what little was left of Germany's manufacturing plants and delivering them to Russia, along with her richest farms, her ablest scientific minds, and some million prisoners of war (God help them), in violation of international law, common sense, and human decency—all for not so much as a thank you. The American military government in its most recent bulletin, lists for dismantling no less than 82 nonmilitary plants.

Will we be told after this orgy of destruction has been completed that our steel must be diverted from housing to Germany to hold the Reds in check?

Once upon a time we could call our children to us and say, "Prudence shall one day have this of my possessions, and Jonathan that." That was the time that the good clippers manned by Yankee traders sailed the seven seas—always a little heavier laden in-bound. Our new-style subsidized merchant marine deals only in cargoes outbound. Since 1916 our vital resources, reduced now to less than 25 years' supply, were exchanged first, for war debts, and after 1920 for German, Italian, Japanese, and Peruvian bonds. It was default of these bonds which helped along the banking panic of the thirties. Our enemies got our wheat, oil, and steel; we were done out of our labor, our deposits, and our investments; and a small group of New York international syndicateers profited twice, first on the sale of the goods, and next on the misrepresentation and sale of the bonds.

Public indignation was such that for a period we took nothing but gold. Then, by cornering all the gold in the world and thus destroying any basis for exchange, we made fertile the soil which sprouted the growths—Hitler and Mussolini. Now, in our third stage of degeneration, we shrink even from taking paper.

How can anything but communism be expected from maritime nations dependent for centuries upon world trade for as much as 40 percent of their national income, when, neutral or belligerent alike, their ports were bottled up by Anglo-Saxon fleets for 11 out of the past 33 years, and boycotted by our preferential tariffs all the rest of the time? It will take peace and two-way trade, not just a smattering of butter and eggs, to rid these people of the taint of communism.

The only intelligent charity is to give our neighbors a market, not the smug hand-out of a meal. Until we take back the goods of others, the things they are best able to give even now, in exchange for our goods, we are not only being unbusinesslike, we are not even being kind. Such an enlightened policy of common sense, accompanied by tax reform, would forever put to death the fear of inflation and controls in this country.

Only yesterday I read in the paper that our Export-Import Bank is lending Canada $300,000,000 because she is short of dollars. Well, so are we taxpayers short of dollars. If Canada is a subject of relief, we had better start the congressional investigation now.

To domestic prices already beyond the means of many we are urged to apply the pressure of new and bigger exports even to Canada, as if war taxes were not already pressure enough. Then to quiet the pangs of our own hunger, price controls are to come goose-stepping and footpadding back—the thing free enterprise most fears and abhors, the thing Russia most hopes to see. In a profitless economy, all incentive to production crushed, we will then indeed be comrades—in poverty.

The most significant and worth-preserving street in the world today, perhaps, is the one made up of those few historic blocks between Trinity Church and the East River called Wall Street. There is the last citadel of private enterprise. Wall Street, with its environs, is a large and honorable community that renders the Nation, in return for an inadequate reward, a sound, though sadly diminishing, economic service. This honorable and diligent Wall Street, like the Nation, has suffered from the excesses of a few. It was this few who brought down upon us the great panic, the indignation-born New Deal, the Securities Act, the Wagner Act, and other legislative restraints which more conscientious businessmen impose voluntarily upon themselves.

It was members and lawyers of the Morgan syndicates loaned to the War, Navy, and State Departments of all administrations, who have steered the ship of state into the rocks and shoals of our first generation of foreign politics.

It was they who were responsible for the amazing inconsistencies in Republican strategy which have cost the party four, and perhaps five, elections, organizing or condoning as they did on the one hand, depression, high tariffs, lend-lease, hot war, Marshall plan, high prices, and now cold war; but who on the other hand, doggedly opposed their inevitable corollaries: the depression's unemployment relief, taxes, wage increases, debt, and controls.

Democrats can at least say that when they go out on a jag, they are ready to reach for the check.

The small group I refer to traditionally turns coat on the Republican Party by joining up with the Democrats in legitimizing its foreign economic atrocities in the public mind by an infusion of prominent but pliable businessmen as accessories to the unbusinesslike facts, just as their joint diplomatic and military outrages—Yalta, Hiroshima, and Potsdam—were foisted upon a shocked public by a ringing round of pseudo-Republican "Yeas!"

There is no more profit to the people in deals to gag all opposition in foreign policy, than there is in noncompetitive agreements in any other line of business. If error of the magnitude so monotonously made since 1914 is the price of unity, give me disunity.

Until Colonel House gave the witches' cauldron an extra stir in 1914 by his meddling, the four war-born horsemen astride their nightmares, taxation, inflation, depression, and communism, were virtually unknown in Europe. If they plagued us at all, they were light attacks, as of measles, not the cancer that today eats at our own vitals, having already gutted Russia, Europe, and now England.

If peace through war was really our objective, we have already twice made and frittered away an investment big enough to finish the job. The genius of business, the sweat of labor, and the tragic sacrifice of youth, have twice laid the resources on the line. Twice, our policymakers have bungled their part of the job.

The capital attracts to its crisis-welcoming corridors a motley crew of political adventurers, more numerous now even than in wartime. Deep though the love of the President for his country may be, his party loyalties to his bureau chiefs, mushroomed across the Potomac, require that they come first. Policies thus become designed not to preserve the people but the policymakers.

Does some new House or Hopkins now know that the war tempo is to rise to a still higher crescendo just before the 1948 ballots are cast? Will we again be plunged into the stream and advised not to change horses?

It is as unbusinesslike for us to permit reelection to place a premium upon crisis as it has been folly to allow the public treasury to be suborned. Even free enterprise is not potent enough to go on subsidizing its own subversion. Reelection to the Presidency must be barred by law. His term of office should be longer. There should be no second term.

That would be one step forward and this would be another:

Conclude now that the cure for the world ills is not a world WPA, call it Wallace plan or Marshall plan, or what you will.

Neither Republican endorsement nor a uniform make the Wallace plan any more palatable.

It may be necessary to help our European friends with temporary and emergency aid. But if they have a farthing's worth of goods to exchange for our foods and machinery—even a token—let us take it, establish the principle of payment in kind, and save our neighbor's self-respect. Europeans are praying not for a meeting of an international charity committee—led by an American political social worker now able to practice on a world scale—but of a businesslike committee of the highest integrity, and completely disassociated from either politics or the New York international banketeers, that would, by freeing up raw materials and opening up the world's markets, provide the means of making Europe a going business concern. Then, and then only, would we lay the red specter of communism.

We certainly cannot do it by imitating them, by hamstringing incentive, hence production, by controls, or by increasing debt and taxation which are already at the explosion point.

As matters stand now we will be either hated or cheated by every capital of the world. Unless there is an immediate return of sanity and integrity, the most one can see is one more chance; but, another war, one more depression, and then—?

The vast margin of safety left to us by our fathers has been squandered. Coin by coin it must be replaced, or the American eagle, like the American bison, may vanish in the gloom of some near November day.

We Must Think Things Through

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 4, 1947

Mr. ROBERTSON. Mr. Speaker, there has never been a time since the inception of the American Government when there rested upon the body politic a greater responsibility than today. Surely it is the time to think seriously and wisely. It could be disastrous to follow dangerous thinking processes.

Recently the Department of Agriculture has asked of the Congress complete authority to be the sole buyer of any agricultural crop which they deemed was in short supply. This is a very serious demand, and while it may have a political significance it is dangerous to the great Nation we have built. We can never submit to the principle of a general control over the lives of people by any department of government.

Under unanimous consent, I include herewith an editorial from the Fargo Forum which touches in a most intellectual manner on this important question, the title of which is Dangerous Thinking Still Crops Up:

DANGEROUS THINKING STILL CROPS UP

In the day-to-day life of America, criticism directed at the national administration in Washington is discounted to a large extent by the average citizen as just politics. But here's a little comment on the dangerous kind of thinking indulged in by administration higher-ups, which should be discounted by no one, especially North Dakotans.

The Agriculture Department asked Congress the other day for authority to be the sole buyer of any agricultural crop which it deemed was in short supply to the extent that it might disrupt the national economy or upset the administration's export program. Presumably, after the Government had bought the entire crop, it would then parcel it out wherever it saw fit, and, also presumably, at whatever price it saw fit because with complete control over an entire crop, the Government could establish a monopoly price.

It, for instance, could do as Argentina is now reputed to be doing. Argentina, you know, is the sole buyer of wheat raised in that country; it is paying the farmer $1.75 a bushel and is known to be selling it for $4 or $5 a bushel on the world market with the Government keeping all the profit.

If Congress should approve the Department of Agriculture request and if drought should wither the 1948 wheat crop, as is expected by some crop forecasters in some areas, then the Government could declare itself the sole buyer of wheat.

By the scratch of some bureaucrat's pen, the entire economy of the State of North Dakota would be made dependent upon the whims and fantasies of the superplanners in Washington. The North Dakota wheat farmer could sell to the Government at the Government's price, or perhaps go to jail for dealing with the wheat black market which would be as certain to bob up as bootleggers under prohibition.

Talk about your collective farms in Russia and feeling sorry for those peasants because everything they raise belongs to the Government even before they feed their own families. Things would be no different here if this particular piece of the administration's planning is enacted into law.

We have no fear that Congress will grant this request, but by all that is holy in this land of America, how can these Washington planners ever dream of strapping such fantastic controls on our farmers and our whole economy?

Food and World Peace

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. JOHNSON of California. Mr. Speaker, under permission granted to me, I include in my remarks a speech which I made in Modesto, Calif., on Armistice Day 1947 to a group interested in the study of international problems:

Armistice Day has always had a sort of sacred meaning to many of us. On that day some of us listened to the last gun fired in the World War. We knew a new day had dawned. Never again would the nations of the world be so foolish as to get into another war. Around us was devastation and ruin. The sacred ground of the Argonne was a sort of informal cemetery, as there were hundreds of places where battlefield burials were mute testimony to the savage fighting. What did these men die for? What did these men want, as a result of their sacrifice? I think I can truthfully say that what they most wanted was world peace.

Little did any of us who had gone through the fury and fire believe that we would ever live through another war. The Air Forces, of which I was an inconspicuous part, laid the pattern that in 1943, 1944, and 1945 made that war in 1917–18 seem like a mere popgun war. It has been my experience to see the war devastation of every large city except Warsaw. You cannot realize how terrible it is unless you have seen it.

We are to some extent following the pattern we did after the First World War. In some respects it is different. Here is one difference: Following the first war most of the belligerents were internationally minded. They wanted the League of Nations to succeed. We were nationalistic. We decided to return to normalcy, which was to mind our own business and keep out of foreign entanglements and foreign activities that might get us into commitments. It was a natural relapse from the terrible strain and suffering of war. We had licked the Kaiser and the German will to war had been crushed. Why should we be worried about Europe's troubles or the conflict over imperial ambitions of European states in Africa and Asia. We would stay home, act as a friend to all and be neutral in the event of trouble.

It was the custom in the 1920's and 1930's to point out how terrible war was. The inference was that the nations simply would not make war, because it was too terrible and too costly. That thesis had been advanced in 1910 in a book entitled "The Great Illusion." The author, Norman Angell, a Stanford man, convinced me, as a college student, that war was so costly, so economically unsound that no nation would even contemplate it, unless it wished to commit financial suicide. The history of the last 35 years shows how wrong this writer was. If nations had common sense, and if they really acted like prudent and intelligent citizens do, his thesis would have been correct.

But nations do not act that way, at least the large ones. They act upon the proposition that whatever they can take and hold that they are entitled to take. Might and power is the basis for their action. The cost in men and money is immaterial providing the aggressive nation believes it can win. As incidents to what such a nation does, take the course pursued by Germany in the last war. She rode roughshod over poor Poland, Finland, Norway, Denmark, Holland, and Belgium. Why? Not because she has any special quarrel with them. But to accomplish her mission, which was to crush and conquer England and France, she felt it was militarily necessary to take and hold these small countries as an assurance that she would win against her real enemy.

There are well informed men who today feel that if another war should befall the earth it would result in financial, moral, and physical bankruptcy for all the belligerents. The reason is that the tremendous increase in the destructive power of weapons has made is possible for the people of the world to practically commit murder and suicide. The increase in the economic cost of war has made it financially impossible to conduct a war of the future without resulting in financial bankruptcy. Let us illustrate the point: The Spanish-American War cost practically nothing, at least in debt. The World War cost about $25,000,000,000 and in the twenties we were worrying about the terrible national debt. The war 25 years later cost over $270,000,000,000; over 10 times as much as the earlier one.

With these vast changes in the cost of war, time and space have been compressed, so that now we have no cushion of time, space, climate, or geography. Remembering that the trouble spots of the earth are practically all north of the 30° N. latitude an examination of a globe will demonstrate the point. Another commonly known physical fact, not generally recognized, is that the world is round, especially to the airman. We can make a trip from Denver to Moscow across the North Pole, that is about 1,800 miles shorter than the orthodox route across the continent, then the Atlantic, and then overland to Moscow. Another practice in war that was developed in the last one is that nations do not go to the trouble of declaring war, they simply strike and strike to kill. Pearl Harbor was an amateur exhibition of what we may expect in the future. To accentuate the awful possibilities of war in the future remember that planes are getting greater and greater fuel capacities and speeds. Today we can leave California late at night and have breakfast in Hawaii; 10 years from now the trip will be made in less than half that time.

This means that the old problem of our security, where we rely on armaments is out of date, ineffective, and futile from both the financial and military standpoint. I've talked to most of the military and naval leaders of the United States, both military and civilian. They all admit that the only real security system that will result in peace is one based on collective security—one based on the adjudication of disputes by law. But they all say it may be impractical as of today and perhaps unattainable in the near future.

Thus the most important problem of this generation is to work out a system of collective security that will be effective; if not 100 percent then as near that as possible and which can work up to that perfection. This cannot be done by wishing, or praying, or talking about the brutality and prohibitive cost of war.

I believe it can be accomplished or a substantial start made by looking realistically at the world, as it is today and making plans and policies to meet the situation. Agreements—especially bilateral ones—are worthless, unless there is the power to compel obedience or punishment for a violation of the agreement. The Kellogg-Briand Pact was a noble statement of principles—but it had no method to compel compliance, was ignored by the nations who signed it (except us) and was really only a scrap of paper.

I believe at the present moment food is the most important commodity in our struggle for world peace. At the present moment it is not so much of a strugle for permanent peace as for any kind of a peace. In order to illustrate what I mean about the importance of food, I will comment on a trip which I have recently made with some of my colleagues on the Armed Services Committee. We made an extensive trip and visited Germany, Austria, Trieste, Greece, Turkey, Iran, Saudi Arabia, Egypt, Italy, Switzerland, France and England.

With the world very small and still shrinking we must all realize that the problems of the world are the problems of America. We are economically the strongest and militarily the most powerful nation in the world. Whether we want it or not we have emerged from the recent war as the world's twentieth century colossus whose mission, I believe, is to lead the nations of the world into an era of continuing peace. In 1945 I made a similar trip. This is mentioned as I want to briefly compare the situation as I found it in 1947 with my impressions of 1945. There are several very striking differences which give one a feeling of despair and hopelessness. In 1945 there seemed to be much more optimism in France and Belgium and Italy. In Germany all the people looked pleased and happy and they were physically well because they have been living off the fat of Europe for 4 years. In 1947 things seemed to be more chaotic, confused, and uncertain than they were in 1945. Although we were out of the war for 2½ years, many situations looked very hopeless. This was largely due to the fact that one of our allies has refused to cooperate in trying to develop a peace formula to be written into the treaty. Also, all the way from the Baltic to the Caspian Sea we found that, wherever the ideology of the Soviets met the general political ideology of the western European countries and our own, there was pressure and conflict. The hottest spot that we found was Trieste. Here the Yugoslavs, who are only today an independent nation because of the help that we gave them and the military success of our forces, are massing armies along the border of Trieste and Italy. Our soldiers are not permitted to enter the country just as they are not permitted to enter any part of the Russian zone. To see this conflict with our allies is a tragedy that none of us will forget. It is a repetition of the seething conflict that some of us saw in Korea in 1946.

To add to the discouraging picture, Europe has had two of the worst crop years within the history of any living person. The result is that just when they should have increased production in order that they may take care of themselves, they are producing less than ever before. Nature gave as great a wallop to our hopes of peace and stability as man did by the military conquest.

That is why I believe that, at least for the immediate present, food is the one key that may unlock the door to peace. How much we should give or the mechanism of giving it I shall only discuss very briefly. I came away with the distinct impression that America had to and should do something about this situation. In the first place I do not believe that our country would, from the humanitarian standpoint, turn its back on a starving people. You simply can't walk away from one hundred and fifty to two hundred million people and permit them to starve themselves into chaos and revolution. Secondly, and more practical from the standpoint of enlightened selfishness, we should not do it.

Our first concern is for our allies and the liberated countries such as Austria. Next we must consider the conquered country, Germany, the one that planted the seed and spread the ruin and death over Europe which is unmatched in the history of the world. The ruin which we wrought was merely the necessary ruin to conquer the world murderer that ran riot in Europe from September 1939 to April 1945. However, in addition to feeding millions of displaced persons, which now has been reduced to about half a million, we have had to partly feed the conquered Germans.

There are three things that will play an important part in the stabilization of Europe. They are food, fuel, and fertilizer. Ther are intertwined and interdependent. As you know, the Germans have been getting approximately 1,500 calories per day for several years. That is too small an amount to sustain an adult and keep him in condition to do a normal day's work. The result has been that the production of Germany has fallen very badly. I am thinking primarily of coal, manufactured goods, and agricultural products. The unit production and the total production is way down. Previous to the war the coal mines in Germany produced roughly 470,000 tons per day. At the present time the amount produced is only 240,000 tons per day, which will climb, we are told, to 300,000 tons and over within 6 months, and perhaps in a year it might attain 400,000 tons. We found that, by raising the caloric content of the German diet for the miners, we had a rapid increase in production. Without going into detail I believe I can say that the economic recovery of Europe depends to a very large extent upon the production of German coal. German coal goes to France and Italy for use in their steel and allied industries. If the production of coal continues upward and Italy and France obtain the necessary amount, it will have a marked stimulus upon their manufacturing activities. This is also true in some of the smaller countries of Europe and primarily for Germany. Her manufactured goods got her the money to buy the food she did not raise. Her manufactures today are nil.

The food situation in Italy and France also is very bad. This reflects itself in low production in these countries. The whole effect has been to stagnate these countries.

I need not tell you that all this produces chaotic, pessimistic, and confusing conditions. Therefore, if we can find a way to furnish food to these people I believe it will reflect itself in a marked uptrend in the production. It is obvious that, with all the uncertainty and pessimism as to the future, these countries are fertile fields for communism. There are militant and active groups in Italy and France and some in Germany who are trying to spread that doctrine. They feed on distress, hunger, and misery, and the more these characteristics are intensified the greater opportunity the Communists have for gaining control. Just think of the situation in Rome as an illustration of what is going on. Rome, the eternal city, is the capital of the Catholic world. The one great group that is fighting communism every day and everywhere is the Catholic Church. At the very moment we were in Rome the Communists were pounding on the gates of Rome and came within a hairsbreadth of capturing the government of that city. Since then we have seen how militant, vicious, and annoying these people are. They insulted the elected officials of Rome and caused riots intended to humiliate and discredit them. Therefore, I say to you that for our own selfish interest we must find a way, if possible, to alleviate the distressing food situation in Europe. I say this because it is my firm conviction that the Soviets are determined to dominate every country in Europe if they can. If France should fall into their lap, then undoubtedly Italy, Greece, and Turkey would soon be theirs and the Mediterranean would be a Soviet lake.

But I think we should recognize that we cannot wean America so dry that our own economy becomes seriously affected. We must try to handle this matter so as not to permanently impair our own economy, which is now badly strained. We must find a way to do this or do it within such limits that we will retain our relative economic strength.

Up to now we have shipped goods to Europe to take care of the displaced persons, the Germans and others, on a caloric formula. In other words, we simply figure out how many calories an individual must have and we buy the food that will give us the most calories per dollar. However, this year corn has been very short at home. The result is that there are domestic demands for wheat, so the shortage of corn has produced a shortage in two main crops with the resultant increased prices for these two crops. Inflation is a dangerous thing and is running riot in Europe and China, and we certainly hope it does not get out of control in America.

I believe that we should not give European countries dollars. We should give them credit. If we give them dollars we should have some control over the manner in which they are spent in our country. It seems to me, to illustrate with our California crops, that it would be futile to allow Europe to buy food products with a total disregard for our situation. They might, as in the past, buy the very things that are scarce and thus accentuate the inflationary spiral that we must stop. If we give them credit we should have some agency handling this credit in this country. We should also have the right to make a check at our discretion to determine whether what France or Italy might request was something that was scarce in our country. If they do attempt this, they should be told that they could not have any of that product or a limited amount and we should suggest that they take what articles of food there are in surplus. To illustrate—prunes and citrus fruits are in surplus. We have provisions for supporting prices for various agricultural products. It certainly would be silly to permit those benefited by our generosity to take the things that are scarce and to let the United States Government take off the hands of our farmers surplus crops that could be used in feeding the people of Europe. What happened with potatoes last year is a good example. By sending them articles which are surplus we could help the starving people and at the same time keep firm the American market in those products. This would reduce the payments the Government by law is required to make to support these surplus commodities.

Another illustration is that of pears and emperor grapes. Before the war some 23 percent to 30 percent of the crops of certain types of pears were exported. In order to have a healthy market in emperor grapes and pears, fair to producer and consumer alike, a foreign market was essential and had been developed by the pear and emperor growers. We might utilize a part of our relief program to stimulate the foreign trade which we will require to keep our markets firm and which we did require before the war. These are merely illustrations of what I mean by meshing our foreign-relief program with our own agricultural economy for the benefit of both the recipient of our aid and ourselves.

Another thing which I think that we should emphasize and which very few foreigners seem to understand is to let it be known that the relief to them is temporary and only given to help develop their production so that they can take care of themselves. Our resources are limited. We are not a modern Midas that has unlimited resources, as many foreigners believe. Perhaps a specific date cannot be set for the termination of this help, due to the unpredictable conditions of weather, plague, etc. But we should make it known in no uncertain terms that there is a distinct limit to what we can give and we propose not to exceed it.

Another matter that impressed itself on our minds as we talked to people in the countries we visited, including Iran and Egypt is that the battle against the desperate economic plight of the future cannot be won by austerity, by merely tightening the belts of the people of these various countries. We emphasized to the people in Italy, France, and England this fact. We said to them, in effect, that we admire the stringent steps you are endeavoring to take and have taken, but we think it is more important that you use your efforts and ingenuity to step production up. The only way to stop starvation, inflation, and misery is by increasing production. You should put more stress on increasing production than you do on saving and reducing what people get to eat and wear.

For this reason, and, of course, in the time that I have I can only give you a sketchy view of the matter based on the observations and the conversations we had, you can see how important the matter of food is.

Also, I believe that if requests are made for machinery and other such goods we should endeavor to make them on a bankable basis. If the buying agency gets machinery to help production and makes profits, we should recover a part or all of the cost for these. If the foreign government gets heavy machinery to rebuild public utilities, highways, and things of that kind we should endeavor, as far as practical, to obtain recovery for that kind of help. That can be done without making us look like a Shylock and to me if it is administered with firmness and fairness could bring us more good will than being merely a Santa Claus.

We must not overlook the main purpose of our sacrifice. To me and to many of my colleagues it is quite obvious that if Europe should relapse into chaos and revolution the Russians would take over. Perhaps they could not handle the situation but they would probably, by strict dictator methods, control it like Mussolini developed and controlled Italy. If they should happen to do this there is little doubt in my mind that Russia might strike.

I shall illustrate this by the testimony of two witnesses before our committee during the hearings on the universal military training bill. Father Walsh of Georgetown University, who is the head of the international department of that university, has devoted his life to teaching international problems and to the spread of religion. In advocating universal military training as one of the steps which he believed would help us build a world peace organization he made some very telling points. He has been a long and thorough student of communism; has traveled widely, has met and knows men in almost every country of the world. He stated to us in substance in response to questions by members of the committee: I wish to say as emphatically as I can that you need not have any doubt about Russia striking us provided she feels she could give us a devastating and fatal blow. If she thinks she can, she will strike.

This brings me to a point that is tied tightly to the problem of furnishing food to distressed Europe. What card is the best one we can play to help accentuate the utility of our contribution in food and other products to Europe? In my mind it is to retain and build up our military strength. It is sad to contemplate, but I think we all must realize that it is true that the great nations of the world are still motivated by brutal force. They look at a potential competitor with these thoughts in mind: Does he have the will to fight? Does he have a large air force, a large navy, and a powerful army? Does he have a strong scientific research development program? Does he have the production line to accentuate the power of his military might? If he does have that strength, these nations will respect that force or that potential force. It is that road that we must travel, contradictory as it may seem, to enter the highway to world peace. If we maintain our patience, continue to bargain, perhaps even accept insults without losing our temper and poise, it is possible and even probable that those who are now obstructing the pathway to peace will change their tactics. They may finally agree among

themselves that they might better find a way to compromise for their own benefit. That is what I hope we can and will do. Another war, considering the development of devastating weapons to date and what is being planned for the future might result in the suicide of the civilized people of the world. It is possible to do this, according to our scientists, by our development of these lethal weapons. We have heard these witnesses in our committees.

Some of this information is known to the public and some of it which is more powerful for the future devastation of any future enemy is not known to the public. The overpowering problem of this day and the future is to find a way to turn these scientific developments to peaceful purposes. It is to find the mechanism through international organization and collaboration to make it impossible for any country to use these lethal and destructive weapons in trying to adjudicate these disputes. I personally think it is possible to do this. I believe that in the broad program on which we are embarked that we are on the road to accomplish that purpose.

The matter of giving relief is one of the steps that will put us in a position to start the accomplishment of that program. Retaining our military strength will be another stone in that edifice. If we can do this the next two or three decades could very well be the most important period in the history of the human race. Failing, the decades could be the darkest page in human history.

As long as I remain in Congress I wish to work toward that end. Without its accomplishment there will be a perpetual cloud hanging over our national life and over the life and business of every institution in our country. We must rely on the collaboration of other countries to accomplish this. We can and, in our position, must be the leader. But without the collaboration of others, so that we may have collective action through which the group will subdue any international murderer who may arise, we will fail.

This has not been a very optimistic discussion. My main purpose is to try to stimulate your thinking and perhaps to get you to understand the broad outlines of the major problem which faces us. We can do the expedient thing. We can do the easy thing by washing our hands of the problems of the rest of the world by merely saying they do not concern us. But if we do, as sure as the sun rises tomorrow, our children and their children will face the disappointment and the tragedy in much larger and terrible proportions than we faced tragedy and possible destruction from 1941 to 1945.

Where, Oh Where, Is the Steagall Amendment?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, many prominent persons in Government, like Secretary of Commerce Harriman, Mr. Eccles, of the Federal Reserve, and even Secretary of Agriculture Anderson, advocate a rejuvenated OPA to be placed on the farmers of America. Some advocate a meat-price fixation, as if that was a cure-all.

Do you suppose they need a ceiling on chicken prices in the Midwest, where chickens are selling at 50 to 60 percent of parity when the law clearly states 90 percent of parity? Ninety percent of parity is 24.8 cents per pound. The following are chicken prices in the Midwest:

Poultry markets

	Cents
Dickinson, N. Dak., Nov. 27, 1947:	
Heavy hens	16
Light hens	10
Heavy springers	18
Light springers	15
Cocks	7
Eggs	45
Wahpeton, N. Dak., Nov. 25, 1947:	
Heavy hens, 4½ pounds and up	19
Light hens, under 4½ pounds	12
Cocks	8
Spring, 4½ pounds and over	19
Springs, 2½ to 4 pounds	17
Leghorn springs	13
Eggs	36
Huron, S. Dak., Dec. 1, 1947:	
Heavy breed springs	17
Leghorn springs	14
Heavy hens, 4½ pounds	17
Cocks	8
Light and Leghorn hens	12
Eggs, extra grade A, large	50
No. 1 eggs	37
No. 2 eggs	25
Aberdeen, S. Dak., Nov. 17, 1947:	
No. 1 heavy hens, 4½ pounds and up	19
No. 1 hens, under 4½ pounds	13
No. 1 Leghorn hens	13
Old roosters	8
Heavy breed springs	20
Leghorns	16
Eggs, extras	46
No. 1 eggs	36
No. 2 eggs	27
Oelwein, Iowa, Dec. 1, 1947:	
Leghorn hens	13

Leghorn cocks	8
Heavy cocks	8
Springs, over 5 pounds	18
Springs, under 5 pounds	13
Leghorn springs	13
Eggs, hennery	50
No. 1 eggs	34
No. 2 eggs	29
Muscatine, Iowa, Dec. 1, 1947:	
Heavy breed hens	19
Leghorn hens	15
Heavy breed springs	23
Leghorn springs	16
Cocks	12
Eggs, grade A, large	50
Eggs, grade B	40
Eggs, grade C	28
Northfield, Minn., Nov. 13, 1947:	
Light hens	12
Heavy hens	19
Light springs, under 4½ pounds	20
Heavy springs, over 4½ pounds	22
Stags	10
Cocks	10
Eggs, No. 1	45
Eggs, medium	34
Eggs, undergrades	28
Wadena, Minn., Nov. 13, 1947:	
No. 1 hens, 4½ pounds and up	20
No. 1 hens, under 4½ pounds	13
Roosters	8
Springs, colored	21
Leghorn springs	14
Eggs, grade A, large	46
Eggs, grade A, medium	35

There is not one example in this list of markets where chickens, or eggs either, are bringing the legal lawful price. The present administration has the power, authority, and money to control prices and the above is the responsibility of this administration.

Sales Prices of Commodities for Relief Purposes

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 5, 1947

Mr. ANDERSON of California. Mr. Speaker, considerable discussion took place on the Senate floor last week regarding the sales price at which commodities acquired under the price-support program by the Commodity Credit Corporation will be sold for relief purposes. An amendment, introduced by Senator KNOWLAND, was passed by the Senate and reads as follows:

Notwithstanding any other provision of law, any commodity heretofore or hereafter acquired by the Commodity Credit Corporation under any price-support program may be disposed of by the Corporation, for use in carrying out this or any other act providing for assistance and relief to foreign countries at such price as may be determined by the Corporation, which price may be the equivalent of the domestic market price of a quantity of wheat having a caloric value equal to that of the quantity of the commodity so disposed of.

The effect of this language on the Commodity Credit Corporation has been discussed with officials of that Corporation. This amendment could result in a tremendous drain on the financial resources of the Commodity Credit Corporation. Unanimous consent is asked to insert a table showing the effect of this amendment on the sales price of various price-support commodities in the raw-material form as well as in the processed form. Illustrating its effect, Commodity Credit Corporation paid $1.26 per pound for dried eggs purchased under its price-support program, and could sell them for 32.5 cents per pound, consisting of 9½ cents representing the wheat-equivalent basis of the raw eggs and 23 cents representing the processing costs.

If the minimum prices authorized by the Knowland amendment were followed in the disposition of all price-support food inventories now in the hands of Commodity Credit Corporation, it would incur a loss of about $50,000,000. The Commodity Credit Corporation should not be expected to absorb costs of processing raw foods into a form suitable for export. Even without absorbing these costs, however, the financial position of Commodity Credit Corporation will be seriously affected.

Although the language of the Knowland amendment is authorizing only, and Commodity Credit Corporation is not directed to sell its commodities at a price which may be the equivalent of the domestic market price of a quantity of wheat having the same caloric value, it will be a temptation on the part of State Department, Department of Army, and others to bargain with Commodity Credit Corporation and defer its agreement to use such commodities until such time as Commodity Credit Corporation agrees to the lowest price authorized by

this amendment. It should be made clear that the Commodity Credit Corporation is not expected to sell all its surplus commodities at this price, nor will it be expected to absorb any processing or other costs necessary to convert an item purchased under its price-support program to a form suitable for use in one of the relief programs.

It is believed that most Congressmen favor the main purpose of the Knowland amendment, namely, relieving some of the pressure on bread grains and increasing the utilization of certain less scarce substitute foods. The point should be made, however, that the losses of Commodity Credit Corporation under this program will not be a true measure of the cost of price-support programs. Funds appropriated for farm programs should be distinguished from funds appropriated for foreign aid. The farmers should not be saddled with huge costs of programs where they are not responsible. The Commoity Credit Corporation should be reimbursed for any losses incurred as a result of selling commodities in line with the price equivalent to the domestic market price of a quantity of wheat having an equal caloric value or for any price less than it could obtain otherwise.

Estimated quantities of selected commodities available for export through June 30, 1948, with cost comparisons based upon their calorie equivalents in wheat [1]

Commodity	Unit	Quantity available for export			Cost per "processed" pound		Estimated price per pound (cents), WEB [6]	Estimated net sales loss per pound based upon—	
		From CCC stocks [2]	From commercial sources [3]	Total (3)+(4)	At point of farm production (cents) [4]	After processing (cents) [5]		Columns (6-8) (cents)	Columns (7-8) (cents)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
Eggs:									
Dried	Tons	14,580		14,580	103.00	[7] 126.12	9.45	93.55	116.67
Frozen	do	30,627		30,627	27.50	[7] 32.34	2.50	25.00	29.84
Fruit juices, citrus:									
Orange, concentrate, 65-percent soluble	1,000 gallons		2,500	2,500		25.00	3.56		21.44
Lemon, concentrate, 40-percent soluble	do		2,000	2,000		22.50	2.52		19.98
Grapefruit concentrate, 65-percent soluble	do		1,000	1,000		20.45	3.53		16.92
Orange, single strength	1,000 cases 24/2's		2,000	2,000		6.08	.58		5.50
Grapefruit, single strength	do		6,000	6,000		5.07	.57		4.50
Dried fruits:									
Prunes	Tons	60,000	30,000	90,000	7.26	9.06	4.15	3.11	4.91
Raisins	do	72,301	40,459	112,760	6.14	8.14	4.47	1.67	3.67
Apples	do		5,000	5,000		16.00	4.28		11.72
Peaches	do		7,500	7,500		13.75	4.10		9.65
Figs, white	do		4,000	4,000		13.75	4.17		9.58
Potatoes, raw, white	Hundredweight	1,250,000		1,250,000	1.90	3.30	1.08	.82	2.22
Sweetpotatoes, raw	Bushels	[8] 153,603		153,603	2.65	3.00	1.64	1.01	1.36
Canned vegetables:									
Beans, green and wax	1,000 cases 24/2's		500	500		7.37	.25		7.12
Peas, green, standard quality	do		3,000	3,000		7.00	.83		6.17
Sweetpotatoes	do		1,000	1,000		8.42	2.01		6.41
Juice, tomato	do		2,500	2,500		8.33	.32		8.01
Onions, dehydrated	1,000 pounds		2,500	2,500		40.00	5.03		34.97

[1] The total number of calories contained in quantities listed in column 5 is approximately 870,542 million, which would cost in processed form an estimated $142,988,000 or an average cost of 16.43 cents per 1,000 calories. The same number of calories would be contained in 9,884,000 bushels of wheat (whole grain basis, 90 percent or over extraction) which if purchased at an average price of $3 per bushel would be equal to 3.4 cents per 1,000 calories. In other words, the cost ratio of the above commodities when compared to the calorie equivalent for wheat is 4.83 to 1.

[2] Includes CCC stocks on hand or under negotiation to purchase.

[3] Additional quantities of commodities which are estimated to be available from regular commercial outlets.

[4] Estimated farm price for a pound of "processed" product. Entries are shown in this column and column 9 only for those commodities with respect to which CCC now has stocks on hand. The per-pound differences between columns 6 and 7 represent costs of processing including packaging, storage, etc.

[5] Actual per-pound cost to CCC, including transportation, packaging, storage, etc., for commodities either on hand or under negotiation to purchase as shown in column 5, plus estimated cost of additional, available quantities shown in column 4.

[6] "Wheat-equivalent basis": Estimated sales price per pound based on the calorie equivalent in wheat, assuming a $3-per-bushel price for wheat and the calorie content based upon whole grain at 90-percent-or-over extraction.

[7] Additional costs would be incurred in drying the frozen eggs for export. The frozen eggs are currently being offered for sale domestically at not less than cost. The dried eggs are being offered for export at a price of 65 cents per pound.

[8] CCC stocks as of Nov. 15, 1947.

No Need To Give Up Ships

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, December 5, 1947

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the Congress the following very meritorious editorial which appeared in the New York Sun on Monday, November 24, 1947:

NO NEED TO GIVE UP SHIPS

In drawing up their lists of wants and how these might be met, the European participants in the Marshall plan estimated that moving supplies to Europe would impose a dollar drain of $1,214,000,000 in shipping costs and suggested this might be offset by the transfer of surplus American vessels to foreign owners. The National Federation of American Shipping promptly questioned these figures and observes now that its position has been sustained by the report of the President's Committee on Foreign Aid—the Harriman report—which says the drain will be nearer $300,000,000. This is only about 2 percent of the anticipated aggregate cost of the Marshall plan, and the Harriman committee concluded that the limited financial savings are not sufficient to justify the drain on United States resources for national defense which such transfers would involve.
